But he is also an individual of intelligence and integrity who follows his own commonsense rather than conforming to dogma and prevailing cliches. In that sense, there are millions of good Anglo-Saxon Latin Americans in the States—which is the secret of his effectiveness. Were he a professional Latin American of the kind found only too often, he would be dismissed in the States as a screwball; as things stand, by simply appealing to the American people's God-given commonsense and human integrity, he has become a world figure who is turning United States public opinion against the dictatorships whose macabre machinations he is exposing by sticking to his last and dealing merely with the one isolated instance (out of thousands) that is officially his business.

PORTER will forgive me when I call him a little boy—albeit the most famous and powerful little boy in history. You remember the Anderson story of the charlatans who offered to make the emperor a suit of clothes out of cloth with the magic property that it could be seen only by wise men, not at all by fools. When the suit was finished, and the emperor couldn't see it, he not only kept prudently quiet but even said "how beautiful." When he paraded down Avenida Ponce de Leon in his finery, all the people hid their chagrin by exclaiming "How beautiful." Until one little boy snatched the scales from their eyes by simply calling out "But mamma, he hasn't any clothes on at all."

Too long has Trujillo been clothed, in the United States, in the gaudy raiment of anti-communism, friendship for the United States, and support of United States official policies in the United Nations. To PORTER that raiment was so flimsy as to be invisible when it came to covering the man underneath, and had, moreover, nothing to do with the question at issue: What happened to an Oregonian named Gerry Murphy? So he said that the emperor hadn't any clothes on at all, and millions of people said, "By God, he is right," and the United States Department of State got into the act, and now we seem well on the way to a new Latin American policy.

The idea that dictators should be supported because they are anti-Communist is now rapidly breaking down under the realization that they actually strengthen communism. There must be millions of their subjects—"zombies walking in well-ordered graveyards"—who long for communism as an alternative to what they have. The real bulwarks against communism are democracy, freedom, the chance to walk erect as men and women, to be individuals of intelligence and integrity, and, as such individuals, to contribute to the collective whole and strength. And that is no more Latin American than is Representative PORTER. It is American, Asian, European, African, Australian. It is human, and so, also, the secret of PORTER's success.

Eisenhower and Humphrey Unite to Oppose General United States Pay Raise

---

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. MULTER. Mr. Speaker, the following article by Jerry Kluttz, which appeared in the Washington Post and Times Herald of June 25, 1957, is worthy of the attention of our colleagues:

EISENHOWER AND HUMPHREY UNITE TO OPPOSE GENERAL UNITED STATES PAY RAISE

(By Jerry Kluttz)

The administration hauled out its big guns yesterday to try to stop Congress from

approving bills to raise the salaries of the Government's 1,500,000 classified and postal employees.

President Eisenhower took personal charge of the campaign by declaring "general pay increases at this time would seriously impede our progress" toward reductions in Federal taxes and the public debt.

George M. Humphrey, Secretary of the Treasury, said bluntly that general pay raises would bring about either an unbalanced Federal budget or higher Federal taxes. Either would be a bad thing for the Nation, he declared.

Robert E. Merriam, assistant director of the Budget Bureau, based his argument against general pay raises on the belief that Federal employees must be rather well satisfied because the job turnover in Government is much lower than it is in many private industries.

Arthur E. Summerfield, the Postmaster General, will take the stand today to oppose a general pay raise for his 500,000 postal employees. He will be the windup witness.

The President made known his strong feeling against a Federal pay raise in a letter to Chairman MURRAY, Democrat of Tennessee, of the House Post Office and Civil Service Committee. MURRAY read the letter to his committee yesterday after its existence was revealed in the Federal Diary last Thursday.

Humphrey and Merriam made personal appearances before the committee, which will meet Wednesday to approve a postal pay raise bill and to set up hearings, probably starting next week, on bills to raise the salaries of the nearly million classified employees.

Some committee members are predicting approval of a 10-percent postal raise, and some of the more liberal members say a flat $600 across-the-board raise for each postal worker will be approved. Most members of the 25-man committee already are committed to higher postal salaries. A 3-man Senate subcommittee has approved a flat $500 across-the-board postal raise.

VETO A POSSIBILITY

The President's letter raises the distinct possibility that he will veto general pay raise bills if Congress approves them.

Humphrey was asked by Representative CHARLES PORTER, Democrat of Oregon, if the President would veto such bills. Humphrey replied that he had not discussed the matter with the President and he would not speculate on what he might do.

In his letter, Mr. Eisenhower recalled a number of recent benefits given Federal employees, and concluded: "Incidentally, it was only 2 years ago that general pay raises were approved."

He added that "I cannot at this time, in keeping with the national interest, recommend enactment of legislation for pay increases for postal workers."

Humphrey leveled his criticism at H. R. 2474, a bill by JAMES H. MORRISON, Democrat of Louisiana, which he estimated would raise the salaries of postal employees by about 40 percent, or a billion dollars a year. He said other Federal employees, military personnel, and retired employees would demand similar increases which would cost several billions a year.

The Secretary repeated his warning of a serious depression if the Government returns to deficit financing. He also said that the very basis of our life can be injured if present high tax rates are continued.

He urged Congress to approve a bill to provide higher postal rates and to put the Post Office Department on a pay-as-you-go basis.

Merriam held out the only hope for approval this year of a very limited pay raise. He suggested that it might be a good idea if the starting rate for college graduates were lifted from grade 5 ($3,660) to grade 7 ($4,525). He also suggested greater flexibility in the Federal pay structure.

HEARINGS ON ANNUITIES

Meantime, Representative GRACIE PFOST, Republican, of Idaho, announced that her subcommittee would start public hearings Thursday on the 150 bills before the House to raise the annuities of the 300,000 civil-service retirees and survivors who were on the rolls before last October 1. Members of Congress will be heard first.

The administration will oppose the retirement bills.

In another employee development, Chairman MURRAY and Representative EDWARD H. REES, Republican, of Kansas, introduced identical bills to carry out the Federal employee recommendations of the Commission on Government security, which made public its report over the weekend.

Dial Telephone Service on Farms and Ranches

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Eight Montana Cooperatives Are Bringing Dial Telephone Service to More Than 10,000 Farms and Ranches." The article was written by Mr. Ray Ozmon, and appeared in the June 15, 1957, issue of the Montana Farmer-Stockman.

Government loans to REA electric and phone cooperative borrowers are among the soundest investments which the United States has ever made. These loans are making possible a wonderful modernization of rural America. The loans are being paid back, with interest, ahead of schedule. Yet the Eisenhower administration, which is making interest-free loans to commercial utilities and loaning money to foreign governments for 2 percent, would increase the rate for REA borrowers from 2 percent to more than 3 percent. I am sure that the Congress will not countenance this move to weaken the REA program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EIGHT MONTANA COOPERATIVES ARE BRINGING DIAL TELEPHONE SERVICE TO MORE THAN 10,000 FARMS AND RANCHES

(By Ray Ozmon, roving reporter)

The "voice with a smile" is being replaced by modern, automatic telephone equipment in rural Montana. The old crank-type phone is giving way to up-to-date dial phones made of attractive, colored plastic that matches the living-room drapes.

No longer will rural folks have to count the number of short and long rings before answering the telephone, and Junior can call his girl to make a date without fearing that everyone on the party line is listening in on the conversation.

But the automatic equipment is coldly indifferent to the subtleties of courtship. To prevent monopoly of the telephone on a party line, a conversation is automatically cut off at the end of 6 to 8 minutes, so Junior will have to minimize the preliminary small talk that usually precedes the big question, "Wanna go to a show Saturday night?"

EIGHT CO-OPS IN 27 COUNTIES

Through Montana's 8 rural telephone cooperatives, many farm families in 27 counties of the State are now enjoying this modern dial service, and when present construction plans are completed it will be available to nearly everyone in these areas.

REA loans to Montana telephone co-ops as well as to some private companies, total more than $7 million. The funds have been allocated for construction of about 9,000 miles of telephone line to provide service to nearly 9,800 new subscribers and modern dial service to about 1,400 present subscribers who are using obsolete equipment.

Telephone bills run from $5 to $6 a month. For this fee the services of a doctor, veterinarian, or machinery repairman are "as close as the telephone." If a farmer can save one animal by calling his veterinarian he will have saved many times over a year's cost for the phone.

NATIONAL PROGRAM

This modern, automatic dial service being made available to rural Montana is part of a nationwide program to modernize the entire telephone system. When the program is completed a person in Circle will be able to call a friend or relative in New York, San Francisco, or Helena as easily as he can call his next-door neighbor.

Those small buildings about the size of a one-car garage sitting off by themselves along the countryside are the automatic unattended dial exchanges. Each exchange is a complete unit containing the automatic dial equipment, tone signal control, frequency carrier, test board for locating noise or a broken line and stand-by batteries to operate the equipment in case of a power failure.

Montana's telephone construction program has been made possible through a 1949 act of Congress which authorized the REA to make loans to existing telephone companies and cooperative, nonprofit associations. In communities not served by a local company, REA offers technical assistance to an organized committee of local residents. Where service is available through an existing company, loans are made for improvement and expansion of its service. REA loans bear 2 percent interest and are to be retired within 35 years.

ONE THOUSAND DOLLARS PER SUBSCRIBER

Actual cost of providing srvice to a single subscriber averages around $1,000. He must pay an installation charge of $40. The monthly phone bill helps to retire the REA loan and pays for service and maintenance of the equipment.

If a farm is located in an out-of-the-way place and special lines are needed to bring phone service to it, the installation cost may be somewhat higher. Special permission must be granted by the Rural Telephone Administration for such construction, or the subscriber may be required to pay the additional costs.

With the improved, modern facilities, the telephone co-ops realize additional revenue through long-distance toll calls. The co-op gets 41 percent of the cost of incoming and originating toll calls. Jim Turnland, manager of the Valley Rural Telephone Co-op at Glasgow, says they have had long-distance calls from as far away as Japan and Belgium and average around $500 a month from toll calls.

PARTY LINES

There is a maximum of eight parties on a line. Not all the lines are loaded to capacity, and there may be cases where there are only a couple of subscribers on a line. As new subscribers are added, the lines will be filled up.

Seven conversations can travel over the same pair of wires simultaneously by hav-

ing each conversation transmitted at a different frequency, similar to radio broadcast signals.

Before REA loan funds can be released to the cooperatives for construction of telephone facilities, subscribers must put up equity funds totaling 6 percent of the loan. Fifty percent of this money must be collected for release of the loan. This has not always proved an easy job.

Mark Curtiss, manager of the Three Rivers Co-op at Fairfield, says that some persons are reluctant to sign up. Some are just plain hard pressed for cash. Others have gotten along for years without a phone, and they see no necessity of spending money for a new-fangled gadget.

WANT IT NOW

Then when the neighbors get phones installed, they suddenly decide that they want a telephone too. And they want it immediately—today. Curtiss says the folks who signed up on the original canvass probably had to wait a couple of years before they could get service.

Persons desiring telephone service must make application prior to construction. As soon as plans and specifications for construction are drawn up, all late applications are deferred until a later date.

George Johnson, president of the Northeastern Montana Telephone Co-op at Scobey, says they have had some problems in getting right-of-ways for putting up poles and lines. "Most are anxious to get telephone service," he says, "but only if the line runs on someone else's land."

Here is a summary of the information available to Montana Farmer-Stockman on the status of the various telephone co-ops in the State:

RANGE TELEPHONE CO-OP, FORSYTH

Loans totaling $245,000 have been granted for construction of telephone facilities to serve 315 subscribers in Rosebud, Custer and Powder River counties. Fifty-four miles of line serving 25 subscribers near Ashland will be acquired from the United States Forest Service as well as one mile of line serving a private telephone company toll pay station near Rosebud. Twenty-three farmers owning their own lines and two toll stations of the company will dismantle their facilities at no cost to the cooperative and take service from the co-op. The completed system will have 362 miles of line. President of the co-op is Orval W. Gentry. Robert Laramore is manager.

BLACKFOOT TELEPHONE CO-OP, MISSOULA

Modern dial telephone service will be made available to 651 farms for the first time and improved service to 40 users of obsolete equipment through loans totaling $586,000. More than 700 miles of line will be constructed to serve subscribers in Missoula, Powell, Sanders, Lane and Granite counties. In addition, the co-op will operate the lines serving the Flathead Indian Agency at Dixon and the old Blackfoot line which serves Ovando and Helmvill. President of the co-op is Nick E. Ginoff, Jay W. Preston is manager.

TRIANGLE TELEPHONE CO-OP, HAVRE

Loans totaling $1,625,000 have been approved to provide telephone service to more than 2,200 subscribers in Hill, Liberty, Chouteau, Fergus and Blaine counties. The completed project will have around 2,000 miles of line. Thomas Staff is president of the co-op. Harold C. Ebaugh is manager.

NORTHEASTERN TELEPHONE CO-OP, SCOBEY

Modern dial service is being made available to nearly 500 users of obsolete equipment and around 2,100 new subscribers through REA loans totaling $1,937,000. About 2,000 miles of line are being constructed to bring service to rural families in Sheridan, Daniels, Roosevelt and Valley Counties, and in Divide County, N. Dak., George H. Johnson is president of the co-op and H. J. Schaefer is manager.

MID-RIVERS TELEPHONE CO-OP, CIRCLE

Loans totaling $1,638,000 have been granted for the construction of 2,043 miles of line to bring modern dial telephone service to subscribers in Dawson, McCone, Garfield, Prairie and Richland Counties, and parts of McKenzie and Golden Valley Counties, N. Dak. C. R. Thiessen is president and Ellis Jones is manager.

NORTHERN TELEPHONE CO-OP, SHELBY

More than 1,000 new subscribers and over 100 users of obsolete equipment in Toole, Liberty, Glacier, and Pondera Counties will receive modern telephone service through loans totaling $800,000. President of the association is Riley W. Childers. Ben F. Culley is manager.

VALLEY TELEPHONE CO-OP, GLASGOW

Around 763 subscribers in Valley, Phillips, and Roosevelt Counties will be provided with modern telephone service through REA loans totaling $504,000. President is Peter Nyquist, and James Turnland is manager.

THREE RIVERS TELEPHONE CO-OP, FAIRFIELD

Two loans totaling $2,023,000 (the latest approved May 21) will make possible new and improved service to 2,457 subscribers in Cascade, Teton, Chouteau, Judies Basin and Pondera Counties. The system will include 1,740 miles of line and 12 exchanges.

Michigan Tax System

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. LESINSKI. Mr. Speaker, the fracas in Michigan about the relationship between taxes and industry has shown how far and how low some people in politics will stoop. Just because big business could not defeat the governor, they are using their own mistakes as arguments against him. Following is a statement by Governor Williams which clarifies the air on their perverted story. Following that statement is an article from the Detroit Times of June 16, 1957, which corroborates the Governor's remarks.

The statement and article follow:

EXCERPTS FROM ADDRESS BY THE HONORABLE G. MENNEN WILLIAMS, GOVERNOR OF MICHIGAN, DETROIT ROTARY CLUB, DETROIT, MICH., JUNE 5, 1957

As you know, this State has been subjected, during the last 60 days to a deliberate and cunning campaign designed to prove that high State taxes are driving business out of Michigan.

This campaign has done our State immense and probably irreparable damage. Nobody can saw how many business firms canceled planned moves to Michigan, or dropped plans to expand in Michigan, because of this mass libel on the reputation of our State.

About that you and I can do relatively little. There appears to be no way to restrain those, in high and low places, who for purely political reasons, or in a short-sighted effort to influence our legislature, are making these irresponsible charges.

But as reasonable citizens of the seventh State in the Union, and in many ways the greatest State in the Union, we can at least avoid being taken in by this hysteria ourselves. If some of our big-business men, operating on a global scale, feel no loyalty or responsibility to the State where they have their homes and got their start, I am sure many of us whose lives are permanently tied up with Michigan's future have a different viewpoint.

The propaganda charge against our State is a false charge, but it is not an easy charge to refute. It has all the advantages of the big lie over the complex and difficult truth. Any businessman who wants to turn his company's operations to a political purpose can issue a statement saying he has decided not to put a new plant in Michigan because our taxes are too high. A company may be making fur parkas for the Eskimo trade, but if it moves to Alaska to be nearer its market, somebody is sure to claim that it was driven away by Michigan taxes.

Let me give you just one example of how phony this campaign really is. Last week we had the misfortune to get an adverse decision from the Army on a $119 million tank contract. The Army, in the face of Detroit's chronic unemployment, decided to have Chrysler build these tanks in a Delaware plant instead of at the Government-owned tank arsenal on Mound Road. The Army cited a cost differential of about $2 million, as between the Michigan plant and the Delaware plant. Most of this differential was due to transportation and tooling costs. But $300,000 of the $2 million was due to taxes. Michigan has a tax called the lessees' user tax, which applies to companies operating in Government-owned plants. Delaware does not have a similar tax.

Immediately, the loss of this contract was blamed on the existence of this Michigan tax. The many other factors in the Army's decision were virtually ignored. The impression was left with the public all over the Nation that this $300,000 Michigan tax drove that contract to Delaware.

Among those who joined in the hue and cry was the mayor of Detroit. He hit page 1 of the Sunday papers by charging in connection with this tax that the executive department of the State government is hostile to business.

In direct quotes the mayor said: "At the State level it seems that everything possible is being done to make it difficult to do business in Detroit."

Now let's look at the facts. The facts are that the tax measure in question was lobbied through the Michigan legislature by Mayor Cobo himself. The mayor himself came to Lansing in 1953 and personally lobbied for the adoption of the bill. He insisted that the city of Detroit could not sur-

vive, unless it was able to put on the tax rolls in this indirect manner the Government-owned plants which were then being operated in Detroit free of local taxation.

At the personal urging of Mayor Cobo, and other spokesmen for Detroit, the legislature adopted the bill without dissenting vote, and I signed it.

In 1956 the Federal Government and Borg-Warner Corp. sued the city of Detroit to avoid payment of this tax. The city of Detroit defended the suit all the way through the Michigan Supreme Court and won a decision that the tax was valid and collectible. I understand an appeal to the United States Supreme Court is now pending with the city of Detroit fighting all the way to collect this tax.

Yet the mayor of Detroit tells the newspapers that the existence of this tax, which he personally promoted, indicates a hostility to buisness on the part of the State government.

Now mind you, I am not criticizing this tax law which, in effect, requires the Federal Government to help pay the costs of local services when it owns industrial property in our State. I can't see anything inequitable about that kind of a law. My point is simply to illustrate how far this propaganda campaign has wandered from the truth.

In all of this it is well to remember that the taxes about which some sections of business are complaining today are their own brand of taxes—not mine. The legislature has never accepted my tax recommendations. The principal business tax in Michigan is the business activities tax. It was written by lobbyists for Ford, General Motors, and the chain stores, and jammed through a legislature that did not know what the bill said. Lobbyists were permitted on the floor of the house chamber to explain the bill because nobody else knew what was in it.

You will remember that I refused to sign that tax, although I had to let it become law without my signature or see the State go into bankruptcy. I said at that time that this business activities tax is grossly unfair to new business and small business, and I would not have my name on it.

This year I tried to persuade the legislature to exempt about 26,000 small-business firms from the business activities tax—which could be done at relatively small loss of revenue. That recommendation, too, was rejected.

Now the same business leaders whose lobbyists wrote the business activities tax are complaining about its effects. If it has had any deterring effect on new business, those responsible for its enactment should answer also for its results.

The truth is, however, that there is no real factual basis for the charge that business has been fleeing from Michigan. I asked the department of economic development to make a careful study of the actual movement of business and give me the answer to this question: Has business really been moving out of Michigan?

Here is the answer from the department-of-economic-development records:

In the 5-year period 1952 to 1956, inclusive, 35 plants moved from Michigan to other States with a loss of 5,369 jobs. This does not include such companies as Kaiser-Frazer, Packard, and Hudson, which did not actually move to other States, but were absorbed in mergers. It includes only genuine movements from Michigan to other States.

During the same 5-year period, 104 plants moved into Michigan from other States with a gain of 12,525 jobs. In the same period, also, companies already operating here built new plant facilities equivalent to about 143,000 jobs.

By adding and subtracting these figures, we get a net gain, in the 5-year period, of a little more than 150,000 jobs from the movement of industry.

It is noteworthy that of the 104 plants that moved into Michigan in this 5-year period, 10 came here from Ohio and 13 from Indiana. These two States have been pictured as tax-free industrial paradises, into which Michigan business was fleeing as fast as it could pull stakes. The fact that 23 of these companies moved out of those States and into Michigan raises a suspicion that the pastures on the other side of the fence may not be as green as they look.

It is true that Michigan does have some serious problems. Our largest city is burdened, as all of you know, with industrial slums. I am glad to see that at long last there seems to be some action to correct that. Detroit also has a very high tax on industrial property. These factors combine to create a really dangerous situation in Detroit, and it behooves all of us to work together to solve it.

We are also suffering from the long-range trend toward monopoly of ownership and decentralization of plants in the automobile industry. The independent automaker has been virtually squeezed out of business and the big three tend to put their new plants closer to their regional markets. The best answer to this is to bring in other types of industry—chemicals, for example—which can take the place of lost auto production.

And we have a serious problem of recurrent unemployment in the auto industry because of the industry's seeming inability to make any sense out of competitive production schedules. Ultimately, the auto industry will have to correct this and find some way to avoid throwing masses of our people out of work every time somebody miscalculates the market or forgets to put fins on the new model.

All of these things we can solve if we will just quit complaining and squawking to the national press, and work together as neighbors in a great community.

We have done a great and good job here in the last few years. We have united the State physically with the world's biggest bridge, and we shall reap the economic benefits for generations to come. We have built a great hospital system so that every citizen can get decent care whether he is physically or mentally ill. We have a system of public higher education which is the finest in the Nation. We have shown the whole country how to reduce traffic deaths. We are beginning the greatest highway-building program in history. We still have many problems, but we have met, reasonably well, the needs of a population which has grown by 1 million people since 1951.

Everybody agrees that we must not go too far too fast, and I agree most thoroughly that the necessary costs of our services must be equitably distributed. No group should be required to bear an unfair burden. But I most emphatically insist that we must not go backward.

The best way, in the long run, to attract business to Michigan is to continue, with prudence but with determination, to build Michigan—to continue making our State a better place in which to live and to make a living.

I say let's quit carping at each other, let's quit giving our own State a national black eye, and let's get down to work as partners and neighbors to do that job.

OUR MICHIGAN EXPANSION

(By James Boynton)

In the boiling controversy over Michigan's tax treatment of industry, it is important to remember that Detroit is not known throughout the world as Detroit the Dynamic for nothing.

Its 6,100 factories annually turn out in excess of $12 billion worth of goods.

It gives employment to 1,275,000 persons and its auto-factory workers are among the best paid in industry, averaging $101.50 a week last year.

Its companies are spending scores of millions on expanding industry. For the State as a whole, there is about $2 billion worth of new construction underway, notably in the chemical and paper industries and in public works.

Detroit is the Nation's third largest commercial banking center, being exceeded only by New York City and Chicago. Resources of its banks total $4,369,000,000, a healthy 32-percent increase since 1950.

And nearly 200,000 of its citizens have built new homes since 1950.

Its foreign-trade dollar volume has increased 77 percent in the last 6 years.

The metropolitan Detroit population has soared to 3,670,000, a 21-percent increase since 1950. And thousands of these new Detroiters are really new for Detroit now has the highest birth-rate level since 1916—32.5 per 1,000 population.

These 3,670,00C regard Detroit as home, just as General Motors, the world's largest industrial corporation, considers Michigan its home State, according to GM President Harlow H. Curtice.

Inflation and Freight Rates

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a study on the inflationary effect of railroad freight rate increases, prepared by Dr. Dan H. Mater. Dr. Mater is Chief of Economics and Statistics for Transportation and Public Utilities Service in the General Services Administration.

Even though this study may not reflect the position of any of us in all respects, it is an interesting and informative examination of an extremely difficult question. The subject of inflation is very much with us these days, and I commend Dr. Mater's study, therefore, to every Senator.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

INFLATION AND FREIGHT RATES

(By Dr. Dan H. Mater)

The relation between inflation and increases in railroad freight rates is as close as is the relation between transportation and the general welfare. It is common knowledge that this Nation has been experiencing inflation for a number of years. Although we have come to live with it such familiarity in no way lessens the danger. Indeed, the populace seems to sense that the limit of evolutionary change in the monetary system may be near. Certainly the margin of safety has long been too thin, and cer-

tainly the relation between freight-rate increases and the jackscrew of inflation deserves the concerted attention on the part of various agencies of Government in order that more adequate controls may be brought to bear. The general welfare and the railroads are parties of interest.

There are only a few primary functions of government within the democratic concept. Primary and few as they are, however, their interrelation is so close that even partial failure in the carrying out of one of them increases enormously the burden of fulfilling the others. One of the primary functions of government is the provision of a sound currency or medium of commercial exchange. The soundness of a currency system suffers when its unit value fails to remain constant or virtually so. In fact, soundness is virtually synonymous with stability or constancy.

A slow, small constant rate of decline in the value of money seems of late to have become almost financially fashionable. On the other hand, even the slightest amount of deflation has always been most unpopular and depressing. The entire economic and social fabric of any modern nation can be shaken to unproductive rubble by its currency becoming either valueless or all-valuable. Further, the more prosperous and highly developed the nation, the greater its dependence upon the medium of exchange and the more dangerous are deviations from constancy in the value of that currency.

Many people in this world have spent much time trying to understand money. The control of inflation is not one of the easier aspects of the problem. Numerous metaphors have been used to explain or describe this imponderable situation.

Many people think of inflation as resembling a fire; to be most useful it must neither smoulder nor roar, but burn brightly—constancy in the rate of devaluation being thought by some to be more desirable than constancy per se.

One of the reasons for the dangerousness of inflation lies in the fact that there is profit to be made from misery. No deflation could be so abject as not to benefit some people; and even the wildest degree of inflation would be welcomed by others. Within these extremes the mildest of either deflation or inflation is financially disadvantageous to broad segments if not the majority of people—whether or not they are aware of the matter.

The degree of inflation now present is of the variety that negates the interest rate on savings; that almost imperceptibly but continually filches pennies from savings too small to invest and from the small incomes of those too old or otherwise unable to resist; that urges millions to spend today because they can get more for their money today than tomorrow; and that encourages debt today to be paid for with tomorrow's smaller as yet unearned dollar.

The variations on the theme are beyond one person's imagination even to catalog. But one of the points which marks the quickening of pace toward the edge of disaster lies the minds of people generally. Each individual carries in his mind a knowledge of values covering the particular goods and services with which his way of life is associated. The keenness of his or her knowledge of values is dulled by rapid change. And, inexorably, as his knowledge on this subject is clouded, prices rise.

The economy is so interrelated that, like a circle, the beginning and the end are difficult to locate. In general, however, all things spring from the soil or the sea. And thus, although the mine, the forest, and the farm require machinery and other paraphernalia in order to produce, one may consider these points as the beginning of the production cycle.

Most production and consumption actually take place, however, along the way between the soil and some one's standard of living; nevertheless, all of the intermediate producers' and consumers' process is also geared inescapably to the dollar in the pocket of the man in the street. What he and his family consume of the necessities and luxuries of life explain and command all peacetime economic effort.

This man-in-the-street or shopping-bag vision of the economy sharpens the appreciation of how the validity of all prices depends so heavily upon the knowledge of values held in the minds of householders. Permit currency to change so rapidly as to weaken people's grip on these absolute and relative values, and the magic spell of the American economy will be in imminent danger.

All production consists of moving things—moving them about in the sense of changing the relationships of materials. In the present context, however, a more formal version of transportation is the chief interest. In this respect, it is fitting to reflect that in today's economy very little production is consumed on the spot. Instead, a formal transportation movement occurs in many cases between each two stages of production.

This repeated application of a given service in the production cycle is not peculiar to transportation. Labor, for example, is also applied at each and every step along the production way. But public transportation has the further mark of key importance in the fact that from early times it has been declared to be affected with the public interest. Thus, not only is transportation the connecting link between producer and consumer, but it is also frequently, if not generally, the connecting link between each two of the many stages of production.

The full flower of transportation's importance is virtually paradoxical to that of the handmaiden-to-production concept or that of carrier of the fruits of economic division of labor. In reality, transportation and production are the most virulent and merciless of competitors. This struggle is generally much keener than the noisier variety within, between and among the various modes of carriage.

It is difficult enough to predict the effect on railroad revenues of an increase in freight rates. It is much more difficult to predict the effect on the general price level of an increase in railroad freight rates. And yet, in both cases, it is necessary to do so.

The question of many many transportation movements on the average occur between the farm, the forest, or the mine and each of us as ultimate consumers probably has never been determined. Yet the ultimate or real effect of an increase in railroad freight rates depends partly upon this degree of specialization.

Not many goods move directly from the basic producer to the ultimate consumer. Even the farmer buys almost everything he uses. Although such products as oranges, potatoes, and watermelons may incur only one transportation movement from producer to consumer, the production in the background included the transportation of fertilizer and machinery and steel and coal and ore and so on. Furthermore, in such cases, watermelons, for example, approximately three-fourths of the price paid by the ultimate consumer is occasioned by transportation costs.

In the case of other products two transportation movements are necessary. Cattle move to the packing plant and then to the retail points. Frequently, these 2 are preceded, however, by 1 of calves to farmers who specialize as feeders.

Most products require several transportation movements. Logs move to mills—although this movement is often more local than intercity in character. The lumber, say for furniture, is milled into parts and perhaps shipped as such. Other plants assemble and finish, or perhaps assemble only, leaving the finishing to someone else. Finally, there usually is at least one movement of the furniture in finished form.

It is quite important not to forget that much of the Nation's economic effort is not expended directly upon the standard of living of the man in the street. In the background there is the capital goods portion of the productive composite, which creates and distributes the tools of work and the machines that make the tools—all of which partake heavily of both raw and finished goods. There probably is just as much transportation required for this hidden part of the economic machinery as for the up-front portion.

Thus, a product typically moves once in completely raw material form or forms; once as "building blocks" or finished materials; once as finished but unassembled or assembled but unfinished; and once or twice in final form to either wholesaler or retailer or both. Thus, a total of three movements from forest to furniture or farm to table would appear to be a most conservative estimate.

In a rough sort of way, therefore, an increase in freight rates has its effect three times before its strength is spent. This does not quite mean that a 10-percent increase in freight rates would really amount to a 30-percent increase—although the ultimate effect might be of that magnitude. It is true, for example, that the faster the inflationary pace, the more completely increased costs are passed on rather than absorbed. Also, freight rates are thought by the populace in general to be set by the Government. This makes the freight-rate increases more readily acceptable in the first instance and the "passing on" of them a little easier in the second instance. Finally, this "passing on" of increases in freight rates or other costs is accompanied more and more by pyramiding in the compound-interest sense.

Ultimately one comes to the problem of estimating what the effect would be on the cost-of-living index of a given percentage increase in freight rates. The present request of the carriers is for an increase of 22 percent. When allowance is made for lesser increases on some commodities and some territorial differences, the effective increase will amount to about 16.4 percent. This figure is in line with the methods of estimation used by both the Interstate Commerce Commission and the Association of American Railroads.

This figure becomes 49.2 when multiplied by the conservative factor of 3 for the revolving effect through the economy.

Next the 49.2 percent "full increase" of freight rates needs to be applied to the economy in the proportion to which freight rates are a part of the total economic costs. In 1953, gross freight revenue amounted to 5.64 percent of the total destination wholesale value transported by class I railways.[1] One might at first think that the 5.64-percent figure would be increased by an increase

[1] Interstate Commerce Commission, Freight Revenue and Wholesale Value at Destination of Commodities Transported by Class I Line-Haul Railways, 1953, Statement No. 550, p. 5.

in freight rates. In time of inflation, just the reverse is the case. And instead, the real damage arises from the fact that the degree of absorption lessens as the pace of inflation quickens. In other words, the "base" or commodity price level rises as freight rate increases are "passed on."

To continue with the calculation: multiply the full measure of freight-rate increase (49.2 percent) by the extent to which freight charges in 1953 were of the wholesale value of goods transported by railroads (5.64) and the result (2.77) is the number of percentage points which the Consumer Price Index would be raised if the railroad petition for a 22-percent increase in freight rates were granted.

This would raise the present index figure of approximately 119 to 122. This increase in the index figure, of course, would not take place instantly, but assuming little or no absorption of the increase in freight rates would get around through the pipeline of the economy in a matter of probably a few months. Both the degree of absorption and rate of "passing on" of increased freight charges depend upon the extent of inflation. Where the economy is along that road is difficult to ascertain; but every step along it seems to make the next one more certain.

It should be realized that inflation is a kind of race—a price-raising race. And it is just as needless as it is dangerous. In fact, if all industries, firms, unions and individuals were equally able to raise prices, there might be no inflation—at least there would be little or no advantage in it for anyone. But one of the tragic aspects is that industries are not equally able to raise prices; and, therefore, those who stand to suffer most are those who are least able to raise prices, successfully or profitably. The railroads are an example. Actually they could help themselves more by endeavoring in every way possible to prevent inflation, rather than to increase inflation by increasing freight rates, because obviously they are less able than others to compete successfully in a rapidly rising price economy. Of course, they could pay off their funded debt with smaller and smaller dollars, but more importantly they would lose in the struggle for traffic. And they already complain of being unable to borrow on favorable terms.

The only true philosophy of rate making which will maximize the profits of the railroads or any other business over the long run is value of service in its most intelligent definition and application. For this reason, if for no other, a percentage increase in freight rates is most suspect—especially when inflation is present and continuing.

An increase in freight rates, petitioned for on the basis of increased prices paid by carriers for labor, materials, taxes and other expenses is not even supported by unit costs or increases in the general price level. And finally, a buyer may listen feelingly to the merchant's explanation for increasing prices, but, generally speaking, the merchant's price tags are the most influential.

When one traces a freight-rate increase through the economy and senses the full damage to the economy which this kind of aid to the railroads would cause, one turns determinedly to a requestioning of the entire situation. The plight of the railroads almost certainly is less serious than would be the cure—both to the railroads and the economy. To whatever extent their case is justified by need, by the spirit of fair play and by their value to the economy in peace and war, some method should be found which will not be as inflationary as an increase in freight rates.

Georgetown University Forum on How To Elect the President

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. MUNDT. Mr. President, proposed legislation on the subject of the election of the President of the United States is before the Congress again. In that connection, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio forum on that subject. The Georgetown University forum on "How To Elect the President" was held on June 9, 1957, and I was privileged to participate in it.

There being no objection, the forum was ordered to be printed in the RECORD, as follows:

THE GEORGETOWN UNIVERSITY FORUM—HOW TO ELECT THE PRESIDENT?

(Participants: Hon. KARL E. MUNDT, Republican Senator from South Dakota; Mr. J. Harvie Williams, trustee, American Good Government Society and Director, Alexander Hamilton Bicentennial Commission; Dr. Howard Penniman, Department of Government, Georgetown University. Moderator: Mr. Matthew Warren.)

Mr. WARREN. "How to Elect the President?" is the topic for the 551st consecutive broadcast of the Georgetown University Radio Forum, another in a series of educational and informative programs from Washington. The Georgetown Forum was founded in 1946.

This is Matthew Warren speaking by transcription from the Raymond Reiss Studio, on the campus of Georgetown University, historic Jesuit seat of learning in the Nation's Capital.

Today's discussion will be, "How to Elect the President?". The participants are Hon. KARL E. MUNDT, Republican, Senator from South Dakota; Mr. J. Harvie Williams, trustee, American Good Government Society and Director, Alexander Hamilton Bicentennial Commission; Dr. Howard Penniman, Department of Government, Georgetown University.

Transcripts of today's broadcast are available. Send ten cents to cover the cost of printing and mailing, with your name and address to Georgetown University Forum, Washington 7, D. C. Please mention also the subject matter of the transcript desired.

Both major political parties have come out for a reshaping of the present method of electing the President. Legislation has been proposed in Congress. What are the pros and cons? Today, we of the Georgetown University Forum bring you a discussion by a panel composed of an interested and most competent Senator, a Professor of Government, a keen student of practical politics.

Now to our discussion. Mr. Williams, would you explain our present system of electing a President; how it got started?

Mr. WILLIAMS. The President is elected by 531 Presidential electors, who correspond numerically to a Joint Session of the Congress. They are in turn elected by the people in the several States. The electoral college, or the so-called electoral college system is necessary in a constitution of separated powers. Otherwise, without the cardinal principle of separation, the legislative branch would elect the chief executive as is the case under all parliamentary systems. But the separation of powers is cardinal in our system, so the founding fathers established an electoral system whereby each state was represented in electing the President the same way it was represented in the Congress of the United States.

Mr. WARREN. As I understand it, this evolved rather than having taken shape from the Constitution itself?

Mr. WILLIAMS. It evolved in this way. Of course, in the Senate each State is equally represented as a coequal society of two Senators. That is the Federal principle of representation. In the House, the Representatives are according to the population of the State and vary all the way from Delaware's 1 to New York's 43. So if Delaware has 2 Senators, 3 electoral votes, New York with 2 Senators, has 45 electoral votes. The majority party in each State, as the party system began developing in the early 19th century, the majority party through the action of the State legislature allocated itself the full electoral weight in electing the President. So that by 1836, the presidential electors were elected by slates, 1 vote, for example, in each State was cast for the whole slate of electors, whether it be 3 or 25, whatever it was. At the same time, the voters still elected their representatives in districts. That was the beginning of the imbalance in the form of constituency of the executive branch and the legislative branch of Government.

Mr. WARREN. Senator MUNDT, I believe in January you introduced a resolution to amend the electoral system. First, would you tell me, is it necessary for Congress to make this change or to change the Constitution in any way?

Senator MUNDT. Yes, this requires a constitutional amendment. My resolution, Senate Joint Resolution 4 provides for that kind of constitutional amendment, which in turn, has to be referred back to the State legislatures.

Mr. WARREN. Would you tell me about the amendment itself?

Senator MUNDT. Yes. The amendment proposes to restore the original concept of the electoral college, whereby they were originally elected by congressional districts.

As Mr. Williams has pointed out, practical politics being what it is, as we evolved from a young country, one State found out it could have more influenuce in the electoral college if it cast its electoral vote as a unit, in a bloc. And because it decided to do that, other States through their legislative action to keep their position of authority and power in electing a college, went to the same system. This constitutional amendment simply says this, in layman's language: That since each State has a number of electors to which it is entitled by its number of Senators and number of Congressmen, that instead of electing them in a bloc so that they vote in a unit, that we will elect them precisely in the same manner that we elect in each State the Senators and the Congressmen. In other words, take any typical State. Take Kansas or South Dakota. There in a presidential election under our reform amendment, the members would vote, the people would vote for 2 electors-at-large, representing the 2 Senators. Then within each congressional district they would vote for 1 congressional, presidential elector. So that they would have electors to the electoral college chosen precisely by the same con-

stituency in the same election and in the same manner as they vote for their Senators and Congressmen. Thus, you would give both the minority point of view and the majority point of view in each State the representation. I know that in certain States like the States of the deep South, where they are trying to develop a two-party system, in the States of New England, where they are trying to strengthen the minority parties to have a workable two-party system, this gives vitality and validity to the two party system of America and to actually having representative votes cast for the President of the United States.

Mr. WARREN. Senator, I am not certain I understand why this would give better representation to the two-party system.

Senator MUNDT. I can point it out this way: Almost all States of the Union, with very few exceptions, in certain Southern States at the moment and certain States in New England at the moment, you could say certainly as far as 40 or 42 States of the Union are concerned right now, there are congressional districts which are contestable, which are marginal, which sometimes go one way and sometimes go another in every State of the Union. Every State has districts of that kind. Those districts frequently occur in a State where you can predict in advance that the State vote is going to be either Republican or Democratic. If you select your electors by congressional districts, then you would have a split vote at the electoral college. Perhaps Kansas, for example, might have X number of votes cast for a Republican President in the electoral college and X number of votes for a Democratic candidate. I think New York State is the best illustration of that because of its size and magnitude and its importance. It has 45 electoral votes in the electoral college. As elections are now based, all 45 of the votes must go either Republican or Democratic. So that the winner-take-all theory gives the winner not only the votes that he gets but he adds to his votes the votes of the loser. So that 45 electoral votes, a tremendous bloc go for the winner under the present system.

Let's look at it under the so-called Mundt-Coudert amendment. Under that system you would have as many of the votes of New York as are chosen by Republicans in Republican districts go for the Republican candidate for President and as many of the votes of New York as selected by Democrats and votes that go Democratic by Democratic districts. And historically you would find that the spread would never be over about 8 or 10. That there might be, let us say, instead of 45 votes all going one way, you might have 18 votes going one way and the other 27 votes going for another candidate. So you would get direct representation and each district gets to have its vote counted in the electoral college in conformity with the way that the people wanted them to be counted when they voted.

Mr. WARREN. Would this tend, Dr. Penniman, to eliminate the possibility of a President being elected by an electoral vote and yet lose the popular vote?

Dr. PENNIMAN. This has seldom happened, Mr. Warren, at any time in our history. It is true that a President twice in the last 40 years has—50 years—had less than the popular majority. But as a matter of actual fact, it has only been 1 time in the last 70 years that you have had a President who had less than a plurality at least of the popular vote who was elected President under our existing system. It would still be conceivable, though somewhat less likely, that the same thing could happen under the proposed amendment which Senator MUNDT has put up, that is to say, since it isn't exclusively by districts, and you do have the senatorial votes in there, it would be conceivable if there were three parties, say, contesting an election that you could get a man with more popular vote getting the nomination in the electoral college. I think this is unlikely but it is at least conceivable. As I understand the amendment, there would even be a situation where you could not get a majority of the electoral vote, in which case it, and here again I believe there is a change in your proposal, Senator, that instead of going into the House of Representatives where it now goes under the present arrangement, if no candidate has a majority of the electoral college vote, it would go into a joint House-Senate arrangement.

Senator MUNDT. That is correct, with each member of the joint session casting one vote. In other words, this is all built on the idea that instead of having what we now have, which is a presidential constituency and a congressional constituency voting in America, sometimes in conflict with each other, and frankly having a President of one party and a Congress of another, you would have the same constituency voting for both the Presidency and the Congress in the same election at the same time. And thereby tend to eliminate these incongruous situations which frequently results in stalemated government or a failure of the popular vote to prevail.

Mr. WARREN. Campaign tactics could change conceivably?

Senator MUNDT. They would change entirely, because now a candidate for President desiring to be elected has to figure out what kind of appeals to make, what kind of a platform to present, what kind of campaigning to undertake to appeal actually in 8 great States of the Union which have 12 tremendous large cities. A candidate, either a Democrat or a Republican, who can direct his appeals successfully to win the votes of those people in those crowded cities, the 12 big cities in the 8 tremendous States is almost certain to win. As a consequence, you find that whenever the Democrats have a national convention or the Republicans have a national political convention, they ask themselves at convention: Who can carry the votes of the 12 big cities in the 8 large States? They don't really consider seriously candidates for President in any of the other areas. So, going back almost until the memory of man runneth not to the contrary, you will find that in recent American history, since the urban development has taken place, that both political parties select as candidates for President people from the large populous areas. You go back and ask yourself, the home town or the home State of our recent Presidents, with the sole exception of Harry Truman, who ascended to the Presidency through the Vice-Presidency, these have been people coming from California, or from Massachusetts, or from New York, or from Illinois, or from the big States, because they know those are the States they have to win. This would change all that. We would have 435 electoral districts, each equally important, each casting the same strength in the electoral college. Each voter would, in turn, have what he should have in America, in my opinion, equal voting strength. We now have a situation wherein in New York, for example, every man who votes exerts 45 pounds of presidential pressure in the electoral college, because his vote puts in motion 45 voices in the electoral college, and an equally intelligent and able and patriotic and competent voter in the State of Delaware, when he votes for President, puts into motion only 3 voices. He exerts only 3 pounds of presidential pressure because he has 2 Senators and 1 Congressman, whereas in New York State they have 2 Senators and 43 Congressmen. There is something basically wrong in a constitution dedicated to the concept that men are created equal, that States like New York and Delaware should have such a disparity that a voter in New York State has 15 times as much importance as an individual as a voter has in Delaware. You can relate that to every State in the Union. Unless you live in New York State today, you are a second-class American when it comes to voting for President. We would make all voters first-class Americans by giving them 435 elector districts, each with equal power, equal authority, and as to the campaign tactics, that would mean both parties, both candidates for President would have to appeal nationwide issues to people across the country because each would vote with equal strength.

Mr. WARREN. Evaluating Senator MUNDT's proposed amendment, Dr. Penniman, what questions come to your mind?

Dr. PENNIMAN. There are a number of questions that have been raised by various Members of Congress in debating it a year or so ago. The present proposal which the Senator has is a modification of that, and I think to some extent has taken care of it. One of the problems raised, Senator, was that problem of gerrymandering, that is, the suggestion was made that since the rural areas have a greater voice in State legislatures sometimes than their numbers might suggest, at least in one house of it, that your proposal would make it possible for greater imbalance and greater representation of the rural areas, smaller towns, smaller cities, than at present exists.

Senator MUNDT. You are exactly right, Doctor. That was one of the criticisms raised when we had this bill up for a vote in the Senate a year ago. Where, incidentally, it received a majority of the Senate vote but not the two-thirds' majority required for a constitutional amendment. So we have reintroduced it, modified, changed it to eliminate some of those criticisms with regard to gerrymandering, for example.

The new amendment provides that the elector district for president shall be of compact, contiguous territory, and have approximately equal population. So that you have a constitutional mandate to the legislatures to conform to that provision. But talking about gerrymandering, may I suggest that no system of gerrymandering could conceivably be devised which could be as unjust and as unfair and as unequal as the present one where, for example, you have gerrymandered a situation so that a single citizen voting in the State of New York has 15 times as much power, as much influence, as much importance, as a voter in the State of Delaware, or in the State of New Mexico, or Arizona, or South Dakota. There it is about 10 or 12 times. It is overly powerful from the standpoint of New York's influence against any other State in the Union. Even the next 2 larger States, Pennsylvania and California, have only 31 electoral votes. So they, in turn, have been gerrymandered out by the present system as against New York State.

Mr. WARREN. Mr. Williams, would you tell us about this gerrymandering and what it is, how it came about?

Mr. WILLIAMS. The word "gerrymandering" is a manufactured word that describes the situation where the elective majority in a State caused representative districts in favor of the majority party by torturing geography and picking areas so that the majority party in the legislature can elect and reelect a representative from that district. It began in Massachusetts under a governor named Gerry; during his administration, congressional districts were drawn long and snakelike, and described as a salamander because they resembled the salamander, which is a reptile. So the term "gerrymander" began then, and it comes on down to date.

Dr. PENNIMAN. Senator, there are a couple of other proposals that have been made, one of which has little chance of any serious consideration, which would be a popular election of the President on a national basis. The second one would divide the State votes

on the same basis as the electoral college, but at the same time, abolish the electoral college. It is argued, I believe, that if you had a statewide vote, divided proportionately, that you would force in the South, for example, or in any of the one-party States, North or South, you would force both of the parties to work a lot harder at their own business of getting out voters than you do under the present system where Mississippi is sure Democrat and Vermont is sure Republican.

Senator MUNT. That is, of course, correct. The present amendment that we are discussing aims in that direction. Now the reason we prefer that to these other suggestions which you have mentioned, the popular vote, would, of course, erase all State lines, would sound the death knell to States rights and would tend to vitiate the concept we have in the United States Senate that each State is entitled to equal representation in the Congress. That could never be adopted by the State legislatures of States, most of which are smaller States than a State as large as New York. The proportionate representation theory has something to recommend it, except for this: It injects into the American electoral system the concept of proportionate representation which has practically destroyed free democracy and representative government in Europe. Because it tends to fragmentize the parties, fragmentize your electorate up into ten or a dozen different parties when you start counting fractional measures. We wouldn't want to bring that system which has failed in Europe, in my opinion, over to the Western Hemisphere.

May I point out there are at least 6 specific advantages, I think, of the so-called Mundt-Coudert amendment, this Senate Joint Resolution No. 4. In the first place, our system more nearly reflects the will of the people, because the vote of the people in 435 electoral districts would have equal authority and equal power. In the second place, it would be an added incentive to individuals to vote in the presidential election. There is something wrong with the system when it attracts only about 55 percent of the electors to the polls. The reason they don't go in many areas is they recognize that either their vote won't be counted or it counts so small that if you live in a State of less than 2 million people population as against New York State, you think it is a rather futile thing in order to vote. The third advantage is that it would broaden interest nationally in obtaining the best people possible as candidates for President and Vice President on both the Democratic and Republican tickets. At the present time it is still true that any American boy or any American girl can hope to be President. You have to modify it. They can hope to be President if they live in New York, Massachusetts, Pennsylvania, California, Illinois, Ohio, Michigan, or New Jersey. Otherwise, it is a futile hope because you have to select candidates from big States to even have a chance. Of course, under the present system no good Democrat from the South would even get the Democratic nomination for President because they have been ruled out by the mass of influence of voters in the large States.

The fourth advantage is it would give the President and the Congress the same constituency, voting at the same time and the same place and the same district. The fifth is that it would restore the electoral concept of the Founding Fathers in writing into our Constitution the district system that they used and which was used successfully until practical politicians seeking for political advantage swung over into using the bloc system or the unit system. The sixth is it would equalize the individual voting power of each citizen, regardless of his home State. It would give us first-class American voters in every State of the Union. There are many other advantages, but those, it seems to me, are overwhelming and prevailing and justify the attention of intelligent Americans all over this country to taking this needed step to reform the process by which we elect the President and the Vice President of the United States.

Mr. WILLIAMS. It seems to me your proposal would appeal to the States where you do not have a large city of the sort like New York, or Chicago, or Los Angeles, and so on. But I wonder what are the chances of its actually being passed by the Senate and the House and later ratified, since you do quite frankly seek to reduce the power of some 12 major cities.

Senator MUNDT. I am glad you asked that question because what you actually reduce is not the power of those States. They keep the same electoral vote they have. They count them up differently and divide them differently. All you do is reduce the power of the pressure groups in the big cities. Actually, we had some votes in the Senate when we voted before from these eight States because the rural votes, the votes outside of the great metropolitan areas, are interested in having their influence enhanced. In this way they, in turn, from their congressional districts can be heard and their votes can be counted. When you get to the House of Representatives or the State legislature, I am sure the people representing the outlying districts from the large metropolitan areas will be as enthusiastic for this kind of corrective as are the people even in the smaller States.

Dr. PENNIMAN. There is one other point, I think, that ought to be pointed out here, and that is that the Federal system of government, our Federal Union of States is altogether different from anything that had happened before or since. Personally, I regard it as the greatest development in statecraft, that our great contribution to statecraft is our Federal system. And our political house, the presidential house and the congressional house, are altogether different. They should certainly be based upon the same plan of architecture, although they live in separate houses.

Senator MUNDT. I agree our Federal system is tremendously important. I have often said that in my opinion the 10th amendment is the most important single amendment to the Constitution. It protects our Federal system by giving the rights of States the importance that they have. It is the crowning arc. The one big differentiation between our system of democracy and the way it operates in any other area of the world is because we do have that 10th amendment, because we do have this Federal Union of Commonwealths or separate States, and it destroys the tendency to have overly powerful centralized government that we see looming up in every other country of the world and which even in our own country is a constant peril, but we do have the protection of the 10th amendment.

Dr. PENNIMAN. Senator, it would seem to me from what you have just said, and I haven't checked votes—are the votes supporting this coming from all the other States except the big ones, and even in the big States, are they coming from the non-city votes, so to speak?

Senator MUNDT. In the House of Representatives, that is true. But, I am happy to report, even in the Senate, where your Senator represents the rural areas and the big areas, we have votes from Pennsylvania, from Illinois, from Ohio, from Michigan, from New Jersey, people who recognize in those States, too, the people who do not live in the big flesh pots of humanity, are also Americans, also have a right to be heard, their votes should also be counted, and we should not yield only to pressure groups operating in certain selected 12 big, gigantic American cities.

Mr. WARREN. Thank you very much, gentlemen. I am sorry, but our time is up for further discussion of "How To Elect the President." Our thanks to the Hon KARL E. MUNDT, Republican, Senator from South Dakota; Mr. J. Harvie Williams, trustee, American Good Government Society and director, Alexander Hamilton Bicentennial Commission; Dr. Howard Penniman, Department of Government, Georgetown University.

You have attended the weekly discussion program, the Georgetown Radio Forum, broadcast of which was transcribed in the Raymond Reiss Studio on the campus of historic Georgetown University in Washington, D. C.

Next week you will hear discussed "Foreign Aid, the People Speak." Our panel at that time will consist of the Honorable EDITH GREEN, Democrat, Oregon; the Honorable PETER FRELINGHUYSEN, JR., Republican, New Jersey; the Honorable RAY J. MADDEN, Democrat, Indiana.

We welcome your comments and suggestions. Address the station to which you are listening.

Study of the Effects of Insecticides

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "METCALF Seeks Extensive Study of Effects of Insecticides," which appeared in the June 19, 1957, issue of the Great Falls, Mont., Tribune.

This editorial tells of the support, from wildlife organizations and the Fish and Wildlife Service, of legislation which would provide for a comprehensive study of insecticides and their effect on people and wildlife. The proposed legislation was authored by my distinguished colleague from Montana, Representative LEE METCALF.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

METCALF SEEKS EXTENSIVE STUDY OF EFFECTS OF INSECTICIDES

A bill introduced in Congress by Representative LEE METCALF of Montana, providing for a comprehensive study of insecticides, has been endorsed by several wild life groups and by the Fish and Wild Life Service.

Both the Agricultural Department and the Public Health Service have done considerable research on the effects of various insecticides as they relate directly to humans and to birds and insects. This research has established that DDT in amounts used is relatively harmless to bird life so far as its direct effect is concerned. But there are reports of damage to fish and much expressed concern over killing of varieties of insects which are considered beneficial.

A court fight, unsuccessful so far, has been instituted over the Department of Agriculture's gigantic DDT spraying program in several Northeastern States.

It is difficult to gage the indirect effects of such a program through a comprehensive study would of necessity take those into account. The Salt Lake Tribune pertinently comments that a significant lesson emerges from the insect pest controversy aside from the possible poisonous effects of DDT. Citing some examples, the Salt Lake paper adds:

"The gypsy moth was deliberately brought to the United States from France less than a century ago with the aim of cross-breeding it with silkworms to improve silk production. The experiment failed, but the gypsy moth lived and multiplied to the extent that it has done tremendous damage to woodlands throughout Northeastern United States.

"Australians imported a few bunnies from Europe in 1778 to provide meat and game. Away from their natural enemies, the rabbits multiplied so that a few years ago they were reported eating forage that would support 40 million sheep and destroying millions of dollars worth of crops.

"Then to cut the rabbit population the myxomatosis virus from South America was introduced. It did the trick in Australia but wrecked the business of furriers, gunsmiths and hotel keepers in Europe when it was used to reduce the rabbit overpopulation there."

The elm bark beetle from Czechoslovakia was not introduced to this country deliberately. But arriving in a shipment of furniture wood in 1924, it has all but eliminated this country's elm trees.

The dangers of upsetting nature's balance cannot safely be disregarded.

Omission of Funds For Purchase of Strategic Minerals

EXTENSION OF REMARKS

OF

HON. GORDON ALLOTT

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Tungsten: A Word for Tomorrow," published in the Pueblo, Colo., Tribune of June 8, 1957.

The editorial points out the lack of wisdom in cutting out of the urgent deficiency appropriation bill $30 million for the purchase of strategic minerals.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TUNGSTEN: A WORLD FOR TOMORROW

Continuing efforts of a stubborn group in the House Appropriations Committee to thwart the Mineral Purchase Act of 1953, designed to protect United States production of strategic metals against imports from low-wage foreign countries, assume graver proportions as new Communist diversions appear in Formosa, in Japan, in Latin America, and the Red threat continues to grow in Korea.

The purpose of the act originally passed in 1953 was extended by new legislation in 1956, authorizing the expenditure of $91 millions for the purchase of tungsten, fluorspar, columbium-tantalum, and asbestos through 1958. But the extension merely authorized the expenditure; it did not appropriate the money. Just before adjournment, Congress appropriated $21 million for the balance of 1956, promises $30 million more for 1957 and the balance of $40 million for 1958.

Since 1953 America has been able to develop a tungsten mining industry capable of making us independent of foreign sources—in Red China, Korea, and elsewhere behind the Iron Curtain or close to it—sources that hostilities would quickly cut off. But, since January, and at a time when tungsten is fast becoming our most critical defense material, there has been no money. Most of our tungsten mines are closed, others are closing and hard-rock miners are idle or drifting away to other jobs.

Three times the Senate has sought to keep faith on the promise of 1956. Twice that willful group in the House committee has cut the $30 million strategic minerals item out of the $300 million urgent deficiency appropriations bill. At this writing, it is back in committee, among those who are deaf to the earlier pledges of their honorable body, and blind to the facts of defense. This obstinate opposition has claimed that but 20 pounds of tungsten is used in a modern jet engine when the fact is nearer 145 pounds (in the J–57). To produce the higher speed, higher temperature engines of the future, and the planes they will drive above Mach 2 alloys of 50 percent of tungsten or more are the engineers' best bet to crack the heat barrier. In the light of predictable demand, the 6-year stockpile of last June is now estimated as sufficient for a year and a half. When it takes 1,500 pounds of tungsten to build a 5,000-pound engine, a year's production could use up as much of this metal as was mined in the United States in our best year.

Tungsten is synonymous with tomorrow. And the gentlemen of the committee must let us have a tomorrow—even if it does cost $30 million.

The Rifle and Our Defense Program

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 25, 1957

Mr. PHILBIN. Mr. Speaker, there are some theorists who hold to the erroneous views, in my opinion, that the rifle as such has been perhaps outmoded by atomic bombs, guided missiles, rockets and other modern innovations in war weapons. I think that no one would question the fact that because of these new weapons any future war would be decidedly different and would be fought in a different way than previous wars. As I have pointed out many times, modern warfare definitely requires drastically revised, new concepts pertaining, not only to weapons, but to organization, techniques, logistics, and practically every other phase of the military.

We can no longer fight a modern war with personnel trained in close order formation operating under the Maginot line principle. There must be an entirely new approach to military manpower problems, and, as I have stressed so many times, it must, of necessity, be based upon professionalized career forces.

In a word, we must have specialists in many military fields who are mostly career men, well paid, highly trained, and who understand and can master the complexities of new scientific methods, immediately available in key places for instantaneous service in the event of an emergency. We must also have behind them adequate replacements, and civil defense and home guard units.

However, the foot soldier with his rifle will always be needed and, in my judgment, he will be very urgently needed in readily conceivable circumstances, to mop up and occupy whole territories. The foot soldier with his rifle and small weapons, and the great mobility which modern transportation gives him, is truly indispensable, and that is why the Army, the Marine Corps, and to an extent, the Navy and the Air Force must have men trained in the use of rifles and small arms ready to perform the vital work that will be necessary after major attacks have been successfully made to reduce the enemy and occupy territory. Riflemen will also be required for defense, military and civil, and to reestablish and maintain public order.

For this reason the rifle is most essential. It must be up to date, the very latest and most modern in weapons of its kind, that can operate like a machine-gun in an automatic manner, and fire many more rounds of ammunition than older rifles.

In the light of information I have about the present status of our standard rifle, I am prompted to ask whether the Defense Department in its scientific research and development program, and in its rifle procurement program, is doing everything necessary to provide our Armed Forces with the latest, up-to-date types of rifle in sufficient quantities to meet all requirements of this Nation and our allies in the event of war or emergency.

While the Army last month announced adoption of the new T–44 rifle as the future standard rifle for its troops, volume production and issue of the rifle will not begin until 1960, so I have been informed.

It is balance and poise, comprehensiveness and ready effectiveness that I urge for our Armed Forces—ultra-modern weapons, powerful, supersonic aircraft, long- and short-range rockets and missiles—all ready to be put into action at an instant's notice, and, in my opinion, any program that leaves out of consideration full utilization and early implementation of the M–14 rifle is inadequate to a very dangerous degree.

If we do not soon awaken to the fact that we need the modernized rifle in early production in order to have well-rounded military striking force and defense, and arrange to procure and distribute it in sufficient quantities, we may well be soon confronted with the serious, unwelcome conditions already developing of the dispersal of the essential personnel skills for making this weapon.

As a member of the House Armed Services Committee, I am genuinely alarmed about our failure to bring forth, procure and put in the hands of our related armed forces, a really modernized rifle. To me, the delay in the Defense Department in rifle research development and procurement is one of the disturbing features of our present defense setup.

It is, to my mind, a glaring deficiency and could be very costly to us in the event of sudden war.

Since I have pressed the Department on several occasions as vigorously as I could and pointed out the genuine urgency of an adequate modern rifle procurement program, I am very much

disappointed that more progress has not been made up to this time.

I am particularly upset by what appears to be the halfhearted efforts and certainly the slow progress of development and test product runs for the new Army rifle. I have urged adequate budgetary provision for research development and production of up-to-date Army rifles. But the fiscal year budget made no provision for this purpose.

The Army used carryover funds from the 1955–56 budget to purchase some 50,000 M–1 rifles that were contracted for last year. If we could get immediate test production runs of the M–14 where the M–1 guns are manufactured, skilled workers would be retained. As it is, the Army does not contemplate production of the new rifle until the fiscal year 1959 budget is approved.

I am informed there is a large number of M–1's in stock but, of course, they are now outmoded by newer models of the M–14 and the Belgian rifle accepted for NATO use. Since the M–14 is generally regarded by practically all military experts to be basic to the national defense and basic to military operations, I simply do not believe we can afford to be so slow and so casual about the conduct of the procurement program for new model Army rifles, and I must again most vigorously urge the Department of Defense and the Army to get together and integrate their plans and viewpoints, eliminate the differences in their consultative proceedings and authorize production test runs on the new rifle at an early date.

I urge with all the sincerity and earnestness that I can possibly command, that the Department move in a forthright, expeditious way to bring this vital program to reality, and get real substantial procurement underway at the earliest possible moment, before what is left of the American rifle manufacturing industry become further demoralized and stripped of most important essential personnel and managerial skills.

In this connection, I desire to compliment and thank Hon. F. H. Higgins, Assistant Secretary of the Army, and his staff for the attention which they are giving to this vital matter.

I hope that the new rifle program will be accelerated and pressed to early implemention.

Activities of Paul A. Siple in the Antarctic

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a clipping from the Washington Daily News of Saturday, June 8, 1957, entitled "Scientist Leads Antarctic Worship."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCIENTIST LEADS ANTARCTIC WORSHIP
(By Robert Tate Allan)

Living in temperatures which are sometimes 100 below zero has not chilled the religious enthusiasm of a Washington bible class member.

Dr. Paul A. Siple, leader of the scientific phase of the United States Naval Antarctic Expedition (Operation Deep Freeze) is teaching a Sunday school class and helping conduct worship services there regularly every Sunday.

TOPICS

"During the last month we have discussed the significance of the following: Orderliness, goodwill, space, and energy," Mr. Siple wrote Dr. Clarence W. Cranford, pastor of Calvary Baptist Church, Eighth and H Streets NW.

The message, transmitted by short wave and telephoned to the church by the Red Cross, said the April weather at the South Pole was between 70 and 90 degrees below.

Mr. and Mrs. Siple, who live at 131 North Jackson Street, Arlington, are members of the Friendship Sunday School Class in Calvary's adult department. Mr. Siple helped organize Calvary's young adult department in the late 1940's and was the first teacher of the inquirers' class.

PHONE CALLS

Mrs. Siple told the News she has received about a dozen telephone messages from her husband directly to their home, through the cooperation of ham radio operators.

Mr. Siple left here last October and is expected back late next winter or early in the spring.

The 17th Annual Convention Banquet of the Department of Pennsylvania, Catholic War Veterans of the United States, Scranton, Pa., June 22, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. VAN ZANDT. Mr. Speaker, the city of Scranton, Pa., played host last week to the Catholic War Veterans of Pennsylvania and the ladies' auxiliary when they observed the 17th annual convention, June 19 to June 22.

The highlight of the convention was the annual banquet, Saturday, June 22, which was attended by church dignitaries as well as representatives of the city of Scranton and various veterans' organizations of the State of Pennsylvania. It was my privilege to address the convention banquet on the subject, Our National Defense in the Nuclear Age.

My address follows:

OUR NATIONAL DEFENSE IN THE ATOMIC AGE

(An address delivered by the Honorable JAMES E. VAN ZANDT, of Pennsylvania, at the 17th annual convention of the Catholic War Veterans, Department of Pennsylvania, on Saturday, June 22, 1957, in the crystal ballroom of the Hotel Casey, Scranton, Pa.)

Right reverend and very reverend monsignori, reverend chaplains, department commander of the Catholic war veterans, madam president of the ladies' auxiliary, Mr. Toastmaster, ladies and gentlemen. It is an honor to be accorded the privilege of participating in the program of the 17th annual convention banquet of the Catholic war veterans and the ladies' auxiliary.

As you know, I have a long record of activity in organized veterandom.

With such a background I feel perfectly at home here tonight because as former comrades in arms we speak the same language.

It is a happy coincidence that, like the Knights of Columbus founded 75 years ago by the Reverend Father Michael J. McGivney of Hartford, Conn.—your organization owes its origin to the wisdom and foresight of a World War I chaplain in the person of the Reverend Father Edward J. Higgins, of Astoria, Long Island, N. Y., who guided its destiny through its infant years.

Father Higgins conceived the two-fold idea of enlisting Catholic war veterans in an organization to promote the best interests of our veteran population and at the same time to bring into being a militant Catholic action group, in opposition to godless communism, whose prime objective is to destroy mankind's faith in Almighty God.

With the personal blessing of His Holiness Pope Pius XI, with whom he conferred in Rome, Father Higgins upon his return found no difficulty in obtaining the united support of bishops and priests in the United States.

With the election and installation of Pope Pius XII in 1939, as successor to Pope Pius XI, the Catholic war veterans have functioned with the approval and blessing of two Roman pontiffs distinguished for their efforts to achieve universal peace, and for their courageous and relentless opposition to the scourge of communism.

It is significant to observe that the password of the Catholic war veterans is "peace," because the name "Pius" stands for peace.

It is recorded that on his deathbed the last words of His Holiness Pope Pius XI echoed the purpose which dominated his reign, "Peace, peace of Jesus."

It is said of his successor, the present supreme pontiff that he, too, selected the name of Pius in honor of the late Pope Pius XI.

Pope Pius XII is so deeply conscious of the need of achieving world peace that in proclaiming the year 1950 as holy year which was observed worldwide by the Catholic church, the supreme pontiff included universal peace as one of the four main intentions of the observance of holy year.

During 1956 I had an opportunity to visit Rome while in Europe as a delegate to the United Nations Conference on Atomic Energy at Geneva.

As members of the congressional Joint Committee on Atomic Energy, we were accorded the privilege of an audience with His Holiness Pope Pius XII at which time we discussed the development of atomic energy.

During the discussion we were particularly impressed by the 80-year-old spiritual leader of the Roman Catholic population of the world.

His engaging personality, his brilliant mind, his fluency of speech, his analysis of world conditions in this nuclear age, and deep spiritual fervor made an indelible impression on all of us.

I was personally impressed by his intimate knowledge of the United States, disclosed by his ready reference to cities and States, and above all, his humility and simplicity.

At the conclusion of the audience we were unanimous in our opinion that Pope Pius XII is an active and ardent advocate of peace.

Thus you Catholic war veterans in your crusade for peace through prayer have a stanch ally in the Supreme Pontiff of the Catholic Church who, as a worthy representive of the Prince of Peace, is constantly striving to achieve a just and lasting peace among all nations.

The efforts of our Nation to achieve world peace are well known and, as Americans, we can point with pride to our various programs designed to restore tranquillity to a troubled world.

To support our Nation's efforts to fashion a durable peace there exists the necessity of our country's maintaining at all times an adequate national defense.

For that reason I deemed it appropriate on this occasion to select as my subject "Our National Defense In the Atomic Age."

When speaking of natonal defense I share the conviction of the Catholic war veterans that an adequate national defense is vital if we as a nation are to maintain our position and strength in order to preserve the cherished principles of liberty and freedom.

In discussing the subject, our national defense in the atomic age, it is of interest that Congress is currently considering the administration's request for a $38.5 billion defense budget, the largest in 2 years.

These funds are required for the maintenance of our Armed Forces at their present strength and for the development of a wide range of new, powerful weapons.

In examining this request many of us ask ourselves whether or not such enormous expenditures are really necessary for our national security.

We wonder if this huge and expensive defense establishment is becoming an unbearable drain on our national economy.

Some critics contend that it is a waste to continue our national-defense program at its present level now that Stalin is dead.

They further state the present Soviet leadership has no intention of attacking the United States.

In addition, they argue that the Russians have altered their doctrine and strategy and hence are no longer determined to communize the world.

Fellow Americans, let me assure you that this is not true.

Today the Soviet Union and Communist China maintain the largest military force in history.

Excluding the armies of North Korea and Viet Minh, the Russian and Chinese Communist forces number well over 11 million men.

The Russians alone have an army of 2½ million ground troops.

The security of Western Europe is continually threatened by 31 Soviet divisions stationed on satellite territory.

Since World War II the Soviets have reequipped their armed forces with a complete new family of powerful small arms, artillery, armor, and transportation equipment.

They have constructed a fleet of over 450 submarines and are aiding Red China in modernizing the huge Chinese army.

The Communist bloc is also pushing ahead rapidly in the development of guided missiles and in the buildup of their atomic and hydrogen stockpiles.

For example, since the first of this year we have knowledge of a series of atomic-bomb tests by Russia.

The Soviets are training scientific and technical personnel at a rate which will seriously threaten the lead of the West in scientific skill within a few years.

If the Soviets have changed their nature since Stalin's death there are few signs of it.

Witness their sly maneuvering in the Middle East where they are fanning fanatical nationalism through antiwestern propaganda.

Certainly the Communist ideology has not changed since Stalin's death.

The Soviet leaders still preach the incompatibility of the Communist system and western society.

As a matter of fact, only 2 weeks ago Mr. Khrushchev, in a television program viewed by millions of Americans, predicted in a boastful manner that our grandchildren were certain to become Socialists.

This is the same Mr. Khrushchev who, after having labeled Stalin a murderer and tyrant, recently stated that he was, nonetheless, a great Marxist and fighter of imperialism in the class war.

Khrushchev said quite openly that in this respect the present Kremlin leadership is Stalinist in its attitude.

With this attitude on the part of Soviet leaders, the quest for peace remains increasingly difficult.

No one realizes more than I do the folly of an arms race.

Certainly every effort should be made to reach a sound agreement with the Soviet Union on the reduction of armaments.

But sound agreement involves international control and inspection.

It, therefore, follows that until such an effective system can be established for the entire world we must remain constantly alert in our defense and push ahead with our weapons development.

We cannot afford to take a chance on any weak disarmament plan based solely on the good faith of the Soviets.

A mistake in judgment on this crucial issue could mean our destruction.

Confronted as we are with Soviet hostility and with their refusal to cooperate on a sound disarmament system, it is horrifying to imagine what might happen to us if we do not maintain and develop our defense.

We must remain vigilant.

We must be prepared at all costs to oppose Communist aggression in any form.

Therefore, let us now consider what we need to defend the United States adequately.

We cannot forget the impact of atomic-hydrogen weapons on our defense system.

Surely we have all been made aware of the new scientific age in which we are living.

In this connection the President's plan for the peaceful uses of the atom has provided some indication of the revolution in living which we will experience when the effects of nuclear power are fully felt.

Until now, however, primary emphasis on nuclear research has stressed the destructive aspect of the atom in the weapons field.

The effect of the atom on military strategy has completely altered former concepts of defense and war.

Today we cannot think of an adequate defense system without first taking into full consideration the destructive force of atomic-hydrogen weapons.

I believe that there are two major requirements for a sound defense policy in this atomic age.

First. We must maintain and develop our capacity to retaliate massively against any power that launches a thermonuclear attack on the continental United States.

Second. We must maintain and develop our capacity to fight small or limited wars with the use of either tactical atomic weapons or of conventional arms, as the circumstances may require.

Let me further develop these points.

We are living today under the shadow of atomic and hydrogen bombs.

In testimony before the Senate during its inquiry into air power last year, the Nation's top military experts pointed out that the Soviet Union now has the capability of striking a devastating blow at the United States.

Gen. Nathan Twining, Chief of the Air Force, said in part:

"In looking to the future our plans and programs must be oriented toward countering the Soviet capability.

"As the Soviet war potential increases, particularly in intercontinental striking capability, this becomes even more valid.

"Such a potential will give the Soviet a continuing ability to attempt to deliver at any time of his chosing with or without warning a crucial blow against us.

"Thus, for the foreseeable future we must maintain in constant protected readiness a retaliatory force of sufficient strength to deter an attack or to insure ultimate victory if general war occurs."

Therefore, it is evident the maintenance of atomic-hydrogen power as a deterrent force requires the stockpiling of sufficient quantities of fissionable material and the development of airpower as a means of delivery.

From information released to the public it appears that both the United States and the Soviet Union have reached the position of being able to wage atomic warfare.

Our Strategic Air Command today is the means of delivering our thermonuclear power.

From bases encircling the Soviet Union our Strategic Air Command can strike the Soviet Union within hours after an attack on the West.

To maintain and develop our Strategic Air Command as our first line of defense, we must steadily push research and experimentation in weapons, piloted aircraft, and guided missiles.

Above all, we must keep pace with Soviet advances.

Bases circling the Communist bloc must be maintained.

Because it is upon this first line of defense that our national survival may depend.

The second requirement of a sound national-defense policy is the ability to cope with local aggression in small wars.

We must take into account the possibility that small tactical atomic weapons may be used in a local conflict rather than conventional arms.

This means that our Armed Forces must develop offensive and defensive tactics geared to the use of a variety of small atomic weapons.

At the same time we must also be prepared for local attacks that are confined to nonatomic weapons.

According to the estimates of military experts the Soviet Union will soon possess a capability for atomic destruction equal to that of the United States.

This will establish a nuclear stalemate.

In such a stalemate the United States may find that it will be difficult to initiate the use of tactical atomic weapons if the Communists use only conventional-type weapons.

When the Soviet Union is able to bomb the United States with nuclear weapons, the risk that a local atomic war might spiral into an all-out conflict would be too great.

This means that our Armed Forces must possess a dual capability, namely, (a) the capability to fight with conventional arms, using conventional tactics for some types of conflict; and (b) with atomic weapons, using atomic tactics for other types of combat.

Therefore, it is necessary to maintain our Armed Forces at their present strength and to continue to supply them with conventional equipment.

We must also train them in the use of tactical atomic weapons and supply them with the latest models in our small atomic weapons system.

Now let us turn our attention to our existing Defense Establishment and the problem of its continued development.

Testimony by leading Defense Department authorities has given convincing evidence that we do have a balanced defense system and at a cost which our national economy can support.

During the recent hearings in the House of Representatives on the Department of Defense appropriation bill for 1958, Adm. Arthur W. Radford said in his testimony:

"I feel that we have a Military Establishment today which is responsive to almost any situation that can be foreseen and within a reasonable period of time we can take care of anything and we are respected. Our power is respected."

Fellow Americans, as a member of the House Armed Services Committee and the Joint Congressional Committee on Atomic Energy I agree with Admiral Radford, because it is a matter of record that our present retaliatory deterrent force is much more powerful than it was a year ago.

Under plans outlined in the President's 1958 budget this force will be strengthened in both power and effectiveness.

The present number of bomber wings in our Strategic Air Command—11 wings of B–52's with 45 bombers per wing—will be maintained.

Plans have been made to accelerate the fighter program.

Increased stockpiles of more powerful and more diversified nuclear weapons are being made available to the Strategic Air Command at bases all over the world.

Research in the ballistic-missile program now highly accelerated and on atomic-powered aircraft holds great promise for the future capabilities of the Strategic Air Command.

It is our hope to be first in developing the intercontinental ballistic missile, which will enable us to strike the enemy with pilotless craft armed with atomic or hydrogen warheads.

The development of ground-to-air and air-to-air missiles for our continental defense system is also being accelerated.

The Air Force has developed the Falcon and the Navy the deadly Sidewinder, both of which are now in quantity production.

The Air Force is currently concentrating on the Bomarc, a long-range missile of supersonic speed, while the Army will further develop both the Nike and the Talos.

The Armed Forces of the United States have a total strength of over 2,800,000 men and women.

The Army, according to Secretary Wilbur Brucker, represents the most "thoroughly equipped and superbly trained Army," that this Nation has ever put into the field.

These forces together with our strategic reserve are ready to fight at any moment should the need arise.

This readiness on our part constitutes an impressive deterrent against aggression.

In support of our mutual defense alliances and other arrangements, 40 percent of our Army is stationed overseas in 73 countries.

Army missions in 44 nations in Europe, Asia, and Latin America are directly engaged in helping to train more than 200 allied foreign divisions a large part of the free world's military strength.

Considerable progress is being made in matters of organization, research, and development in the Army.

Under plans now being implemented the major combat units of our ground force are being reorganized into the so-called pentomic divisions, which improve the ability of the Army to fight effectively under conditions of atomic warfare without losing the ability to conduct conventional war.

We are also organizing atomic support units which are particularly suitable in providing atomic support for the forces of our allies in combat.

Research and experimentation are progressing in the development of new weapons systems.

As a result we are stockpiling our arsenal with an adequate variety of atomic weapons precisely tailored to our needs which can be used accurately against close or distant targets.

At the same time emphasis is being placed on the continued improvement of conventional weapons needed to accomplish many tasks for which atomic weapons would be wholly unsuitable.

The element of flexibility is similarly being stressed by the Navy.

The most important offensive weapon developed by the Navy is "the mobile airbase" the new carrier *Forrestal*.

In the event of global war this type of ship will serve to defend the continental United States and at the same time project our air striking power into the enemy's territory.

In case of local war it will supplement our land-based airpower where land bases are limited or nonexistent.

The Navy is also pushing its aircraft and missile development program.

Several types of advanced aircraft operating from mobile carrier bases have already been added to the fleet.

Of particular importance is the new Skyhawk, a light attack plane with high-speed and high-altitude performance, capable of carrying atomic weapons.

The development of seabased ballistic missiles will prove to be immeasurably important by adding variety and dispersibility to our deterrent capabilities.

The Navy is making the transition from guns to missiles very rapidly.

The cruisers *Boston* and *Canberra* have been converted and a third, *Galveston*, is being readied.

Under the present program the Navy plans a total of 21 missile ships before the end of 1958.

The Navy is also making the transition to nuclear power as rapidly as possible.

The submarine *Nautilus*, the pioneer ship in this development, has now steamed more than 55,000 miles without a single disabling casualty.

Its reactor has now been refueled after 2 years of service.

The nuclear-powered submarine introduces a new weapon into naval warfare.

It can sink ships; it can serve as a radar picket ship; it can seek out and destroy enemy submarines; and, most important of all, it can serve potentially as a base for the launching of ballistic missiles.

The present program of the Navy and Marine Corps serves to maintain a high state of immediate readiness while instituting some very basic and revolutionary changes in naval weapons systems and strategy.

The readiness of the Navy was strikingly demonstrated during the recent Suez crisis by the rapid deployment of a large part of our fleet and by the evacuation of our nationals from Egypt.

While we review the progress made in building an adequate national defense it is reassuring to learn from further testimony by Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff that:

"Up to now Communist nations have not been able to match the superiority of our airplanes, our pilots, our designers, or our industry, nor have they been able to match the extent to which we employ them privately, commercially, or militarily.

"But because of the developments which I have described, I cannot guarantee that this will always be the case."

Despite this deterrent to war we have no alternative but to acknowledge the reality of the cold war we have been waging.

We must recognize that a trigger-happy enemy to the American way of life could in the twinkling of an eye plunge us into a nuclear world conflict.

A conflict that would leave even the victorious nation slightly short of complete destruction.

These weapons of the nuclear age are costly, and while we are paying billions of dollars annually to maintain our Armed Forces, in my opinion, it is well worth the price of defending the American form of government.

While we are reluctant to continue the cold war, preferring to live in peace with all mankind, nevertheless, we have no choice, because we recognize Russia's fixed goal is world domination by means short of an all-out war.

We have no alternative but to acknowledge the reality of the cold war, and to continue to develop nuclear power so massive that the Kremlin will find it impossible to keep pace with its cost.

As I have previously mentioned, these nuclear weapons are costly, yet the price is insignificant in preserving the priceless legacy of liberty and freedom bequeathed to us by those who died in defense of our flag.

They made the supreme sacrifice in the belief that no contribution was too great if it meant the perpetuation of American institutions and ideals.

If we fail in our mission we defile the memory of every hero who wore the uniform of his country.

We likewise forfeit our right to the precious legacy of patriotism and devotion that we have received from generations of courageous Americans.

Address by Secretary of Agriculture Ezra Taft Benson

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. REECE of Tennessee. Mr. Speaker, in all my experience in public life, I have seen no one more honestly, fearlessly, or effectively meet his responsibilities as a public official than Ezra Taft Benson, the Secretary of Agriculture, and I think everyone who has opportunity of meeting him and hearing him explain his deep interest in agricultural problems and his proposals for resolving them in the interest of the farmers and the country cannot help but be deeply and favorably impressed.

On June 19, 1957, he addressed the Tennessee Farmers Convention at the University of Tennessee, Knoxville, Tenn,. at which he was introduced by President Brehm, who himself has shown a great interest in agriculture as well as all other phases of education.

Mr. Benson's speech is one that I feel should be made more widely available, not only to the Members of Congress but to others, and for this reason I am taking opportunity to place it in the RECORD.

Mr. Benson has met challenging problems in a challenging way, representative of his training and religious background.

The address follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE THE TENNESSEE FARMERS' CONVENTION, UNIVERSITY OF TENNESSEE, KNOXVILLE, TENN., JUNE 19, 1957

This is a distinct honor, a high privilege, and a challenging responsibility. One of the real pleasures of my office is to meet first hand with farm groups like this one.

There is something about a farm audience, whether in Tennessee or Illinois or Idaho,

that makes me feel at home. Farm people have a special way of looking at things. They know better than any other group that "as a man sows, so shall he also reap." They know the meaning of hard work. They feel the satisfaction that comes from producing our most important single commodity—food. Working as they do with growing things, they understand life and they feel close to God.

These things come to me through my own rural and religious background. I treasure them as a part of my heritage and I am lifted up when I recognize them in other people.

It is refreshing to get away from Washington and meet face to face the people I serve. A public official must do this if he is going to keep his perspective.

I have been told that this is the 84th annual session of the Tennessee Farmers' Convention and that yours is the oldest meeting of its kind serving farm people in the South. That would trace your beginning back to 1873.

What tremendous changes have occurred during the lifetime of this organization.

When this organization was founded, the farm people of Tennessee were bravely reconstructing an agriculture which had been shattered by a long period of war and upheaval. They were reaching out to learn more about scientific farming, then just beginning to be born.

The census shows that there were 64,000 work oxen on Tennessee farms in 1870. Muscle, human and animal, was the farm powerplant. Plant and animal diseases ran their course uncontrolled. "Blight" was the common epitaph for crop failure, as were "colic" and "pip" for the loss of farm animals.

When this Convention was founded, 84 years ago, soil conservation was little practiced. Farmers plowed up and down hills and the topsoil washed down into the valleys after every rain. There were no county agents, no 4–H clubs, no home economics clubs, no vocational training.

Farm life was hard. Many lives were shortened by typhoid, diphtheria, and other diseases which ran their courses unchecked. There was no electricity and there were almost no paved roads. When the Tennessee Farmers' Convention began, the average farm boy or girl in this State received only a few years of schooling.

Those were what we sometimes call "the good old days." They may have been good in some respects. But they were not good enough.

Since 1873 agriculture in this State and Nation has been literally transformed. There have been more changes in agriculture during these 84 years than in all the previous years since Bible times. And you helped bring these changes about.

Tractors and trucks are rapidly replacing horses and mules as a source of power. In 1920 Tennessee had 2,000 tractors; by 1955 there were 90,000.

Farms are more diversified today than they were in years past. Livestock farming has come forward rapidly in recent years. In 1924, the dairy enterprise brought in only 4 percent of your farm income; now it brings in 14 percent, which is more than the income from tobacco. Thirty years ago cattle brought in only 6 percent of your income; now they bring 15. Cotton, which has long been the top income producer among your farm enterprises, continues to lead but by a slender margin.

Farms have grown larger and fewer as mechanization has made it possible for a man to take care of more acres. Since 1935 the number of farms in Tennessee has declined 26 percent. By 1950 only one-third of Tennessee's population lived on farms, compared with about three-fourths when your organization was founded.

As Tennessee has become more industrialized, part-time farming has become an increasingly important part of the rural economy. Nearly half the Tennessee farmers supplement their incomes with off-farm employment. Taken together, part-time and residential farms constitute about 40 percent of all Tennessee farms.

Today's farmers are doing a better job than their fathers or grandfathers ever dreamed of doing. They are conserving their soil, rotating their crops, applying fertilizer, controlling plant and animal diseases. They are growing twice as much cotton and tobacco per acre as they grew 25 years ago. They are keeping better livestock, and more of it.

The whole level of rural living has been lifted. Ninety-three percent of Tennessee's farm homes are electrified. Rural boys and girls in Tennessee now average more years of better schooling. Life expectancy in the State has increased from about 40 to 70 years.

All this has been accomplished because men and women like yourselves caught a vision of what could be done. For thousands of years farm people had borne with resignation the problems laid upon them by the vagaries of nature. Then came the revolutionary idea that science and technology could help solve these problems. Science was put to work and the progress has been astounding.

Yet we must not be complacent.

Agricultural progress has been tremendous, yes. Many of our farm people have done well. But there are whole areas that have been by-passed in the march of progress. There are areas where the people farm and live much as they did 84 years ago.

There are a million and a quarter farm families in the United States, about one-fourth of the total, with cash incomes from all sources of less than $1,000 a year. Though farm people total only 13 percent of the population, they make up 30 percent of the group with seriously low incomes.

There are concentrated areas of generally low rural income in the Southeast, in the Southern Appalachians, in the Cutover Area of the Great Lake States, in the Northwest and in scattered Intermountain areas of the West. In fact, rural people with low incomes are found in almost every agricultural county and in almost every community.

This is a human problem, not just an agricultural problem. When incomes are low and opportunity is restricted, inertia sets in. Participation diminishes in community, religious and civic affairs. People with seriously low incomes do not share fully in our economic or social progress. Nor do they contribute fully to the Nation's production of goods and services.

Farm legislation since the 1930's has been much concerned with programs of price-support and acreage allotments. Such programs lack meaning to farm people who have little to sell. Price support means little to a farmer with only a fraction of an acre of tobacco or only a few acres of cotton. If he got 200 percent of parity he would not have enough for the kind of living we should have in America.

If we had spent half as much money and effort during the past 25 years to develop agriculture's human resources as we have spent supporting the prices of farm products, both the farmers and the non-farmers would be better off.

Research and education have been used effectively by those who have already greatly improved their economic position. I recognize the merit of what has been done for our farmers on the larger, mechanized units. But we must not overlook the needs of those rural people on the bottom rungs of the economic ladder.

In the race we must all run, each man should have a fair place at the starting line. We should not all expect to breast the tape at the same instant. I believe in equality of opportunity. This is economic democracy. I do not believe in equal rewards for unequal contributions. This is pure socialism.

Why has the technological revolution by-passed so many rural people?

Many of them lack the opportunities which others of us have enjoyed.

Many of them are on small unproductive farms.

Many of them have not had adequate education.

Many of them have lived so long with restricted opportunity that they have become resigned and apathetic. One's natural desire to improve his lot can become dulled by repeated disappointment.

There is one explanation which I reject: That people in the low-income areas are chronic ne'er-do-wells and that efforts to help them will be unavailing. Everything I have learned about human nature as a county agent, as a church worker, and as a public official, tells me that these people will respond to enlightened programs based largely on self-help.

You people in Tennessee know that they will respond. President C. E. Brehm and Dean J. H. McLeod, whom you have just honored, have given constructive leadership in helping rural people in low-income areas. Tennessee experience, particularly with community development, was an important guidepost in planning the rural-development program. This is a new undertaking, especially designed to meet the needs of rural people in areas of low income.

This program is now 2 years old, and I want to tell you about it.

The purpose of the program is to open wider the doors of opportunity to those rural people with the lowest incomes. The intent is to help them meet the objectives to which they themselves aspire. It is a voluntary, grassroots program. A major concern is for the young people who are in the best position to take advantage of new opportunities.

For those rural people who have the desire and the ability to develop an efficient farm unit, there are supervised credit, adapted research, adult education, and technical assistance aimed at their special needs.

For those who choose nonfarm employment there are vocational training in the trades and industry, job information, and programs of industrial development.

For all people in the area there are programs to improve education and health, programs of community development and better living.

The program is decentralized. For every dollar and every decision supplied at the Federal level, many dollars and many decisions are made at the State and local levels. On the committees which guide the program in the counties there are many more private citizens than government workers.

The program has been launched on a pilot or demonstration basis. That is, pilot counties are named and experience gained thereby is used in other counties. This is the experiment-demonstration approach which has long been used successfully in the cause of agricultural betterment.

The program is a cooperative one. Not only the Department of Agriculture but other departments of government—both State and Federal—are participating. The farm organizations, the service clubs, the churches, and business groups, all work together with government. The program is headed by the Under Secretary of Agriculture, True D. Morse. Just 2 weeks ago Mr. Morse was here at Knoxville to speak at a rural development workshop.

Tennessee was one of the first States to name pilot counties—one of the leaders in this work. For more than a year the program has been going forward in Hardin, Grainger, and Macon Counties. More re-

cently two more counties that wanted to get started were added—Houston and Marion.

All five of the Tennessee pilot counties have broadly representative rural development committees composed of leaders from both farm and nonfarm segments of the county's economic and social life.

Nationwide, there are 49 counties and 8 areas participating in the rural development program with the Federal Government on a demonstration basis. These counties and areas are in 24 States.

Already we have accumulated enough experience to point up several significant facts.

1. We have found that good research and extension programs, coupled with supervised credit and technical assistance, can help an enterprising farmer get ahead. If a man has the desire and the management potential, he can be helped to lift himself to a higher income bracket and a better level of living. He can do this even though his capital resources are limited. It is being done every day. There are many people in this audience who have done it.

2. We have found that nonfarm employment offers a good opportunity to increase income in many areas. Income from nonfarm sources is today the largest single source of earnings for farm people. Last year it totaled more than $6 billion, equal to one-third of our total net income of the farm population from all sources. The next largest source of income was from the sale of cattle, which brought in a little over $5 billion.

We have worked hard to develop the income opportunities presented by producing and selling cotton, tobacco, wheat, and cattle. But here is an income earner, larger than any of these, which we have taken for granted, or to a degree, even resisted.

Here, in eastern Tennessee, you have beautiful lakes, hills, and mountains—a wonderful setting for recreation and residential development. Here are good income opportunities for local people.

A dollar will buy just as much health, just as much education, just as much good living if it is earned in off-farm employment as if it is earned growing crops or livestock.

3. We have found that rural people often do not have to leave the farms in order to take off-farm jobs. With better roads and with the growing industrialization of rural areas, many farm people can take part-time or full-time jobs and continue to live where they want to live, which is in the country.

I share the concern expressed by so many, that too great a shift to industrial centers and urban life could cause us to lose some of the stability, strength, and character that we had as a nation of farmers. But this need not occur. We can add it the incomes of rural people by dispersing industry and bringing more jobs within their reach. It often is easier to develop industry where the people are than it is to move the people 1,000 miles to where industry happens to be located.

A heavy investment is required to bring a young man or a young woman to a productive age. According to research at the University of Tennessee, an average of from $5,000 to $8,000 is spent to bring rural young people to 21 years of age. This is in addition to the cost of public programs such as education.

If your young people leave the country or leave the State in order to find the opportunities they feel entitled to, they take this investment with them. This is a huge subsidy to industrial areas of the North. If you can develop local opportunities for your young people, you can keep your investment, and your young men and women, near home. That's where they would like to be. But they will not stay near home unless there are good opportunities.

4. We have found that the betterment of low-income areas must be a long-range job. At best it is a slow process. We must not expect quick success. Problems which have been 100 years or more in the making cannot be solved overnight. There will be setbacks and disappointments. But economic development of rural areas is already underway.

President Eisenhower said: "We must open wider the doors of opportunity to our * * * farm families with extremely low incomes."

When I recommended the launching of the rural-development program, I said: "The problem is more basic than low incomes expressed in dollars * * * it embodies human values—the lives and welfare of people and of families. * * *"

We are much concerned, and rightly so, with foreign economic aid, technical assistance, and point 4. Point 4, let us remind ourselves, can be effective at home as well as abroad.

I have emphasized the need for a program to lift the level of living for those rural people on the lowest rungs of the economic ladder. But I wish to say also that we need changes in legislation which primarily affects the farmers who produce the bulk of our farm products.

The old basic farm legislation enacted in 1933 sought to control production with acreage allotments in order to achieve a high level of price support.

In the light of 25 years' experience, we must conclude that acreage allotments and marketing quotas have not controlled production as intended. Farmers have selected their best land, fertilized heavily, and adopted all the improved practices they could. I do not blame farmers for doing this; it is perfectly natural. But it does not result in controlling production.

The acreage-control price-support program has cut acreage, taken decisions out of farmers' hands, priced our crops out of the market, reduced income from the basic crops, piled up farm surplus stockpiles, and increased costs.

In a letter to Senator ELLENDER, chairman of the Senate Committee on Agriculture, I made three points:

1. Controls are not effective in reducing overall agricultural production, despite the severe restrictions they impose on farmers' freedom to produce and market.

2. Agricultural products are likely to continue to be abundant. Under such conditions they cannot be successfully priced as if they were scarce.

3. The present legal formulas governing acreage allotments and price supports are proving obsolete.

Farmers are being subjected to the forces generated by the technological revolution. They are adjusting from wartime to peacetime demands. Their markets are burdened by surpluses which result at least in part from past wartime programs. Obviously, farmers must be protected from the harsh price effects which would result from their exposed economic position, their weak bargaining power and their abundant production. This is a proper function of government. But our efforts should help our farmers rather than hinder them.

We are in the midst of great scientific changes. Agriculture is able to produce abundantly, and appears amply capable of meeting our needs for food, feed and fiber as far into the future as we can see with confidence. No production controls acceptable to American farmers appear capable of choking off this abundant flow.

Since we cannot legislate scarcity, nor would we want to do so. We must learn how to live with abundance.

If any product is abundant, it cannot long be priced as if it were scarce.

If farm products are abundant, the need and the challenge is to build markets so that this abundance can be used. We cannot build markets by pricing ourselves out of them.

It is possible to show that in any given year, with a given volume of production, a higher price means more farm income. But if, over a period of years, the high price drives the commodity into Government hands and drives the trade to other sources of supply, then the high price means reduced farm income. This is what has happened: A quarter century ago, before the program of restricted production, the basic commodities brought in 26 percent of our farm income. Last year this share was reduced to 23 percent.

The agricultural budget submitted for the coming fiscal year totals in the neighborhood of $5 billion. During the recent debate on the corn bill it was pointed out on the floor of the House that this is the equivalent of nearly half the net income of our farm people. This is equivalent to more than $1,000 for every farm in the United States. Part of this $5 billion, of course, is in the form of loans which will be repaid, permanent improvements in the agricultural plant, and other activities which should not be considered as expended for the primary purpose of supporting farm prices and farm income.

Commodity loans to a few individual farming units under the price-support program have exceeded a million dollars, highlighting the fact that most of the dollars are going to those at the upper end of the income scale.

Few would object seriously to heavy costs if these costs were temporary and if the program were moving toward a solution. Instead, however, with formulas in governing legislation, costs seem likely to continue high with little progress toward a permanent solution

I have recommended to the Senate and House Committees on Agriculture that farmers be given more freedom to make their own decisions with respect to the acreage they wish to plant. I have recommended that the old formula in the basic law be eliminated, that is, the formula which would boost price support levels and pile up another surplus as soon as our present surplus is moved. I have recommended that there be wider latitude in the establishing of price-support levels.

I commend this whole matter for your most serious consideration. See that you get the facts. In a representative government, the ultimate decisions lie in your hands. I trust those decisions if they are based on the facts.

I have been talking about changes that have occurred and other changes that should take place. But in this changing world there are some things that do not change.

Truth does not change.

The principles of freedom, on which this country was founded, do not change.

You cannot help a man permanently by doing for him something that he could and should do himself. This basic fact does not change.

The old virtues—honesty, thrift, reverence, and responsibility—these do not change.

The things that make a people great, that make a Nation great, these are the same today as when this organization was founded. And they will be the same in the years to come, when a new generation picks up the task where we leave it.

There is a firm foundation of principle which governs the affairs of men. We must be careful what things we endeavor to change. We must change what we cannot accept. We must accept what we cannot change. May God give us the judgment to distinguish wisely between these two.

Postal and Federal Pay Raise

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I am inserting into the RECORD a statement I submitted to the House Post Office and Civil Service Committee expressing my views in support of pending legislation for an increase in salaries for postal workers and Federal employees.

The text of my statement is as follows:

STATEMENT BY CONGRESSMAN VICTOR L. ANFUSO, OF NEW YORK, TO THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE

Mr. Chairman and members of the committee, I wish to thank you for giving me this opportunity to express my views on pending legislation concerning an increase in salaries for postal and Federal employees.

Among the many bills before your committee there are two which I introduced in the current session. One, H. R. 1907, provides for an increase in the rates of basic compensation for all postal workers. The other, H. R. 4738, provides for a salary increase of $1,000 per annum for all classified Government employees. I believe that the proposals contained in my bills are not out of proportion. If anything, present postal and Federal salaries are out of proportion and should be increased to a more realistic level.

I shall be glad, however, to support any measure recommended by your committee, provided it advocates adequate compensation for all Government and postal workers.

When Congress enacted Public Law 68, 2 years ago, postal and Federal employees were well aware of the inadequacies of that law. They were especially aware of the fact that the salary increases provided in that law were too low. It is a well-established fact by now that pay increases granted in recent years by the Government have not kept pace with the steady upward movement of the cost of living, which in the past few months has reached its highest level.

In many instances it was found that the wage scale for postal workers and the salary rates for Federal employees have lagged behind those doing comparable work in private industry. In some instances, unskilled laborers in private industry were being paid higher wages than postal workers. For example, in 1939 the average weekly wage for all factory workers was $23.86, while the entrance salary for postal workers at that time was $30.76. At the present time, the average weekly wage for factory workers is $82, but the entrance salary for letter carriers and postal clerks is only $70.36. Thus, in 1939 postal workers' salaries were about 30 percent higher than the wages paid to factory workers, today postal workers receive about 15 percent less pay than factory workers. This is a substantial difference.

Under these circumstances, it is not surprising to find that our Government agencies and the Post Office Department encounter difficulties in recruiting competent employees. Low salaries are no inducement for a family man to make a career in the postal or Government service when he can earn more money in private industry and provide his family with a better standard of living.

In order to augment their earnings, it has become customary for many postal workers in recent years to take on a second job or to encourage their wives to seek employment. Many employees in the lower-income brackets find this situation intolerable as they struggle to maintain their family, upkeep of the household, education of the children, and a decent standard of living.

Adequate pay increases for postal and Federal workers are long overdue. These people are a conscientious, loyal, and hard-working group. They deserve greater consideration. They deserve fair remuneration for the important services they perform in keeping our Government functioning smoothly and efficiently. I think we take them and their services too much for granted.

Congress should grant them a substantial pay increase and afford them the fullest opportunity to maintain a decent standard of living commensurate with the rest of the country. Your prompt action today will be worth more than all the promises of tomorrow.

Poland's Recovered Lands

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. LESINSKI. Mr. Speaker, there have been many misleading comments and so-called historical affidavits attempting to show that Poland's western boundary should be on the Vistula. The real evidence disputes that and although Poland originally extended beyond the Oder Neisse, no claim is being made for any area beyond that point. The following article from the Polish American Journal, of June 22, 1957, verifies what all of us who are familiar with the subject have known—that the Oder Neisse should be the western boundary of Poland:

HISTORICAL VIEW: POLAND'S RECOVERED LANDS

World War II brought much suffering and injustice to the Poles and only one act of historical justice—the recovery of ancient Polish from Germany.

Of course, the West Germany and her friends in the United States and elsewhere question Poland's right to her recovered territories, citing many things which allegedly prove the German character of these lands.

Yet the fact remains that originally not only the territories in question but much more were Polish or at least Slavic.

For example, in the History of Berlin, published in the latest "Berlin Speaking" guide which is being distributed in West Berlin, it is admitted that "a small group of Slavic peoples settled near the island in the Spree River and made their living by fishing, sometime during the first 500 years of the first millenium" and "the German colonization of this area began in the twelfth century when Albrecht the Bear (a noble of the House of Askanier in the Hertz Mountains) acquired territory between the Spree River (in the east) and the Havel River (in the south)."

And a letter from Frederick Barborossa, the German Emperor, to Willibald, Abbot of Corvey, said: "On August 22d (1157) despite the opposition of the Poles who were lying in wait, with our entire army we crossed the river Oder, which, like a wall, surrounds that State; and sweeping through the bishoprics of Breslau (Wroclaw) and Poznan, we laid waste the whole country with fire and sword."

Poland's historic claim to the recovered territories is substantiated by the mass of evidence.

The basic fact is that the areas in question have been Polish from the earliest times.

The Polish people sprang from the region lying between the Oder and the Vistula.

Piece by piece they were gradually wrested from them by remorseless German pressure until all were lost with the final partition of Poland in 1795.

Traveling through Silesia, Pomerania and East Prussia, one is constantly reminded of this fact by dates engraved on buildings, the tombs of Polish princes, municipal records, and so on, that these lands were part of Poland. Any Polish child can tell you that the first dynasty, the Piast, originated in Silesia.

Further, despite intensive and often ruthless colonization, as attested by the following statement by Bismarck in 1863 "Beat down the Poles until they have no spirit left in them. * * * All we can do is to exterminate them altogether." The Germans were never able to drive out the Polish population completely. It should be recalled that after liberation in 1945, no less than 1 million Poles were found living there, descendants of the original Polish population. No Germanization, however persuasive or oppressive by turn, could make them surrender their nationality or forget that the country was theirs by right of inheritance.

In early medieval times, the Oder rather than the Vistula was Poland's main artery of trade; Szczecin (Stettin) was already a Polish port in the 11th century. In the 13th and 14th centuries, the growing German principalities began to press the Poles eastward. Similarly, the Teutonic Knights in East Prussia forced them away from the Baltic seacoast. At the battle of Grunwald, however, the Poles defeated the Knights, regained Pomerania and access to the Baltic, which they retained for several centuries.

At the beginning of the 18th century the Prussians had overrun this region again; by 1720 the Szczecin area had fallen into German hands, followed, 20 years later, by the whole of Silesia. In 1772, with the first partition of Poland, Prussia appropriated the whole of Pomerania.

By the terms of the Treaty of Versailles, 1920, when Poland had become once more an independent state, she received back a portion of the western lands with a corridor through Pomerania to the Baltic coast. A million and a half Poles were left under German domination in Silesia. This decision was bitterly protested by th Poles, and did not even mollify the defeated Germans. As all know, it was where the Second World War started.

In arguing the various claims in this complex issue, it must be admitted that if the Soviet Union has the right to the Curzon line areas in the east on historic grounds, then logically Poland has every claim to hers in the west. If, as has been conceded, the Soviet Union must be compensated by Germany for the terrible loss and destruction she has caused her, then Poland must be so compensated. In any case this was the principle laid down at both the Moscow and Potsdam Conferences.

Finally, if Poland has the right to nationhood at all—and no one would dare deny that right in the face of history and her age-long struggle at fearful cost to remain a national entity—she must be left with an economic land area sufficient to support her people. After the cession of the east, what was left was a cruelly devastated area, largely agricultural with such meager industrial potentialities as to doom the nation to eternal poverty, never able to achieve a decent standard of living. The Poles, unlike the Germans, have committed to crime against humanity as would earn them such a fate. To the contrary, their story is one incessant struggle for freedom for themselves and other nations throughout the ages and in all parts of the world. It surely can never be forgotten that they were the first to try and call a halt to German aggression in 1939.

Problems of National Defense in 1957

EXTENSION OF REMARKS
OF

HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. JOHANSEN. Mr. Speaker, at a recent airpower banquet of the Michigan wing of the Air Force Association held in Battle Creek, I heard an exceptionally able address on the subject Problems of National Defense in 1957, by Maj. Gen. Otto L. Nelson, Jr., United States Army, retired. General Nelson was deputy commander of the Mediterranean theater during World War II.

I was particularly impressed by General Nelson's comments on the economics of national defense and the urgency of balancing the factors of "what we need and what we can afford."

Under permission to extend and revise my remarks, I include General Nelson's address:

PROBLEMS OF NATIONAL DEFENSE IN 1957

Tonight I wish to stress and perhaps overstate what I conceive to be changes in national defense policy required by present and future trends.

The most dramatic development of our times has been the very rapid progress of new and more devastating weapons and weapons delivery systems. I am revealing no classified information when I remind you that both the United States and Soviet Russia can make H-bombs of unlimited size restricted only by the limitations of the weapons carrier systems. The 20,000-ton atomic bomb has been replaced by the hydrogen bomb in the power range of millions of tons of TNT. A whole family of nuclear weapons, varying from the very small to the very large, has been incorporated into our military structure. It is important to recognize that in any future war nuclear weapons will and must be used. Without them our armed services are impotent, and in war there can be no substitute for the use of overwhelming force. Fully as important as the tremendous increase in power and quantity of our nuclear weapons are the great strides made in improving our weapons delivery systems in terms of range, speed, and load-carrying capacity. The intercontinental ballistic missile will most assuredly be with us in the not too distant future. This means, of course, that in any major war the United States will be exposed and will be subject to attack throughout the length and breadth of our entire country and so will Soviet Russia. Each of us has the weapons and weapons delivery systems to destroy the other.

Another significant development is the highly strained, virtual brink-of-war relationship existing between the United States and the Soviet Union. It has persisted now for more than 10 years; it could last for many decades. To a country such as ours that characteristically goes all out for a military build-up only after war has started and then, with even greater enthusiasm, goes all out for dismembering its armed forces as soon as peace comes, this need for continuing military strength over a period of many years is difficult and vexing. We must spend a high percentage of our national income on defense or we risk military defeat; if we spend too high a percentage over a long period, we risk economic defeat. To me, this need for continuing military strength over a period of many years is nearly as revolutionary in its impact on national security policies as the advent of nuclear weapons.

A third most significant development, is the military requirements aspect of our foreign policy or, perhaps better, our foreign policy confusion. Most citizens recognize and approve our country's role as the responsible leader of the free world. This has carried with it the necessity to bolster faltering nations that we think are or may be our friends with economic aid and military assistance items. There are undoubtedly many sincere Americans who believe that because of these relationships and treaty commitments, the strength of our Armed Forces can be reduced. This may be true but there is the other side of the coin which too many wish to ignore. It is this. Each one of these treaty obligations or understandings brings with it a contingent liability to our Armed Forces who must face up to the possibility as to what are the military requirements now, insofar as the Armed Forces of the United States are concerned, to be in a position to carry out treaty obligations involving the use of United States forces in a come-to-their-aid situation. As you all know, we have this obligation, either implicitly or implied, in almost every corner of the world. In this area, governmental policy and public support seem to be at such variance that, temporarily at least, the United States seems to want to have its cake and eat it too. By this, I mean that we all want the advantages and benefits of possible support and help by other countries in an emergency, but we are reluctant to face up to the military requirements which our Armed Forces need now in the event our country must go to their aid with military forces in an emergency of "brush fire" war in which they may become involved.

With these three significant and highly important developments in mind, let us now turn to a consideration of national defense problems and policies that arise or ought to arise as a result of these changes, developments, and trends. At the risk of oversimplification let me outline what I conceive to be a few important aspects of the problem.

The most important and far-reaching implication of these significant developments is the change in emphasis in the mission of the Armed Forces. From time immemorial, the historic prime mission of the Armed Forces has been to win a war when and if war should come. In this era of more and more devastating weapons, it will do little good for our Armed Forces to win a war after the United States and the Soviet Union have largely destroyed each other with atomic weapons. Increasingly, the prime mission of our Armed Forces and the principal objective of national defense policy must be to maintain the peace by deterring the Soviet Union and anyone else from breaking the peace. Deterrence—deterrence—deterrence is a concept that needs to be repeated over and over again so that everyone understands that in this age of nuclear weapons and supersonic long-range weapons delivery systems, deterrence must be the prime mission and objective of our Armed Forces and national defense policy.

At this point, many of you may be thinking to yourself, isn't this pretty well recognized and accepted? My answer would be that the deterrence theme, while it is certainly not new, has only been partially accepted or carried out. Certainly the Air Force is to be commended for the effective way whereby the Strategic Air Command has continued to be a powerful deterrent to the Soviet Union against breaking the peace because of SAC's immediate readiness and continuing ability to deliver massive and devastating retaliation any place in the Soviet Union or the rest of the world.

Even at the risk of restating the obvious, this deterrent mission role carries with it important modifications in our thinking about national defense policies. In the future the United States must not only be sufficiently strong militarily and economically so that we think it will deter the Soviets from breaking the peace but also, and this is quite different, we must be able somehow to make the leaders in the Kremlin think this too. Figuratively speaking, Uncle Sam needs to learn how to display impressively but not belligerently his national security muscles in a manner where both the word gets around and the picture gets understood by the Soviet people and their satellites and by their leaders. This means an extension of the techniques sometimes employed by all the members of the armed services to dramatize their prowess, particularly for the benefit of Congress at the time the military budget is introduced. Specially, the recent around-the-world flight of SAC bombers is an excellent illustration. It was well handled, particularly in the reporting of the event. It was thus impressive, not only to this country and the Congress but, more important in this nuclear weapon age, to the military leaders and political dictators in the Soviet Union.

Let me put this point another way. If our national defense system is to exercise the strong deterrent influence against breaking the peace which is required in this atomic era, the United States needs to develop a national defense public relations policy and program somewhat analogous to that required by any large business concern. In any large business, public relations experts reiterate that a company must not only put out good products and service and generally live right, but most importantly it must get credit for this in the minds of the general public. Similarly the United States must not only be strong in terms of military strength but it must get credit and respect for this military strength in the minds of those who might be tempted to risk an atomic war with us.

Obviously such a philosophy requires substantial revisions in our thinking on national defense policies. Changes will be necessary in our present overreliance in classifying nontechnical military information and actions as "confidential" or "secret" and our habitual disposition to advertise our national defense weaknesses and vulnerability rather than our strength.

Let me hasten to add, however, that no advertising or public relations activity can be effective in making the leaders and the people of the Soviet Union sufficiently conscious of our military strength to deter them from starting a war unless the United States is, in fact, strong militarily. This means that if deterrence is accepted as the prime mission of the Armed Forces, both national defense policies and organization must be overhauled to emphasize immediate and continual readiness.

To reiterate, immediate and continual readiness on the part of the Armed Forces is the only way and the sole method of exercising any effective deterrence. Some progress has been made in this direction by our Armed Forces but we still have a long way to go. Again, the Strategic Air Command should be mentioned as an outstanding example of the kind of readiness that is needed. Likewise the Army, Navy, and Marine Corps can be cited for specific instances where unit readiness has reached the point of exercising the required deterrence effect. But I must hasten to add that, in my opinion, too large a part of our military effort and expenditures are devoted to what is now an obsolete carryover from World War II concepts. Military forces that take from 6 months to a year to make ready are of little or no value as deterrents. I would assert that our entire Reserve and National Guard program needs to be reexamined in an effort to see what can be done to increase their immediate readiness

and thus make them a part of our deterrent effort.

Before leaving this theme of deterrence through readiness, I should like to discuss briefly what seems to me to be an important corollary or counterpart to it. It is this. Weak spots in our overall defense setup tend to neutralize strong points as deterrents. The United States cannot be outstandingly strong in every phase of its national defense activities; the cost and drain on economic resources would simply be too great. But this does not mean that we can afford to tolerate significant weak spots in our defense setup which undermine the deterrent effect of great strength and readiness in other parts of our Armed Forces. To make my point more specific, let me cite one example.

As most of you know, the great vulnerability of our centers of population and industry to nuclear attack and the lack of operational readiness on the part of civil-defense forces throughout the Nation are such as to almost invite attack. Certainly, this weakness must make us a tempting target. To the extent that this becomes a driving psychological force in the minds of the Kremlin leaders, then to that degree the great deterrent influence exercised by the Strategic Air Command is offset, neutralized, or wasted. Somehow we must strengthen the entire area of nonmilitary defense in which, of course, I include civil defense. This is a comprehensive subject all by itself and I shall not attempt to go into details. Several questions can be raised, however. In the entire area of nonmilitary defense, must not our expenditures, activities, and efforts be focused on that which will contribute to the deterrent effect goal? Is there much point, in a thermonuclear age, to spend a great deal of time, energy, and money on measures involving potential strength that will take months to develop after war has started? Should we not relegate from a primary to a distinctly secondary or minor role those activities and measures relating to postattack rebuilding of industry and cities? In effect, what I am trying to say may be sumarized by the question, "Should we not, in furtherance of the deterrent goal, concentrate on those measures which will make it more difficult for the Soviets to knock out our centers of population and industry rather than those directed at helping industry and cities get back on their feet after they have been knocked flat?"

Let me turn now to the second important determinant of a proper 1957 national-defense philosophy. As I have already stated, the highly strained brink-of-war relationship existing between the United States and the Soviet Union may continue for decades. This, along with the circumstance that in any major war the United States will be subject to thermonuclear attack through the length and breadth of our entire country, certainly has far-reaching implications on national-defense policy. Above all, it means that somehow the United States must achieve and maintain an effective national defense year in and year out on a cost basis that our national economy can afford. This requires an efficiency and a coordinated effort that will provide essential readiness strength and avoid costly overlapping and duplication. I would assert that this requires some pretty basic rethinking of our military policies.

Admittedly, it will be difficult for our country to achieve the happy balance between adequate and excessive national defense spending. As a start, I should like to see some better techniques and analytic methods developed to assist us in this task. In the past the typical situation in wartime is where every element of the Armed Forces is pressing forward to do their utmost. In the process they ask for everything possible in the way of funds and equipment. Typically, the only limit has been our country's ability to produce or furnish it, with cost being of no concern. In war, of course, cost is not a matter of concern; the problem is only how you allocate all that the country can strain itself to make available.

This kind of criteria is not very helpful to us in this present year-in and year-out spending for national defense at a sustained high level which, for both political and economic reasons, must be considerably under an all-out wartime effort. Must we not now relate dollars and manpower costs to military readiness and deterrent effort? Must we not develop some marginal utility measurement as to what each added billion dollars will buy in the form of additional readiness and deterrent influence, and how should it be distributed among the many component parts of both our military and nonmilitary defense establishments? As an example, say the minimum total figure for national defense is $27 billion a year but this is not adequate to provide the essential deterrent effort. So you add another billion dollars to make it 28 billion. What should this added billion be spent for to make its maximum contribution—the Strategic Air Command, the guided-missile program, a Navy rocket ship, a shelter program, an addition to the Reserve or National Guard program, or provide incentives for population and industrial spacing?

Actually, the United States does not have a national defense organization that is suitable for this thermonuclear age or that can efficiently and economically resolve some of the questions and problems which I have posed. Pertinent to this statement is the testimony of President Eisenhower, when as General Eisenhower he appeared before the Senate Military Affairs Committee in November 1945 and said:

"It is not feasible to arrive at the size or composition of each arm (of the armed services) without simultaneously considering the others. Each arm supplements the other, and no single service can be independently considered. * * * The era of atomic bombs, pilotless missiles makes unity of concept, indoctrination and training more necessary than ever before. * * * If we do not integrate the executive management of the three members of our fighting team, our postwar security establishment will become the patchwork improvisation that is inevitable where independent departments, at different times, compete before separate congressional committees. With integration we can buy more security for less money. Without it we will spend more money and obtain less security. * * * Finally, there is no such thing as a separate land, sea, or air war; therefore, we must now recognize this fact by establishing a single department of the Armed Forces to govern us all."

It is only fair to say that much progress has been made since the President uttered these words some 12 years ago. The Defense Department has been established and has achieved some improvements in unification and coordination. However, interservice rivalries seem as keen as ever. With the rapid development of new weapons and weapons systems, it is perhaps natural for each service to fight for the control or exclusive use of these new weapons. Certainly, the United States learned in World War II that in the overseas fighting areas our forces had to be grouped into effective task forces including all elements of the armed services with integrated command and control. This lesson has not yet been learned here in the United States even though it is clear that in any future major war the length and breadth of the United States will be subject to enemy attack.

Now that any future major war will bring theater of operations and battlefield conditions to every part of our country, there is the need, I believe, to achieve here in the United States the unification and coordination which was learned in overseas theaters during World War II. More particularly, there is the need to coordinate and integrate nonmilitary defense with military defense. This is needed primarily to remedy the present situation where the lack of nonmilitary defense is such a significant weak spot that it neutralizes deterrent strength in other areas.

To me it is fortunate that the present Federal budget and, more particularly, the national defense budget has attracted this year so much citizen interest. It is and it should be a matter of citizen and political concern because only in that way can needed changes and improvements come in national defense effectiveness and in economy. For a number of reasons which I will not attempt to discuss, most of the needed improvements cannot be achieved from within; particularly those that relate to substantial shift of functions and funds from one service to another. Part of the problem stems from the circumstances that the old historic basis of division of duties is ill-suited because of weapons progress. The old prime organizational determinant on the sea, in the air, or on the land is probably not nearly as effective or econmical as would be a national defense establishment organized on the basis of functions or missions.

Because national defense expenditures must take into account both what we need and what we can afford, I believe that it is particularly pertinent for businessmen to inject the business angle of what do we get specifically in military readiness for our money in terms of item-by-item expenditures for national defense. Our new weapons are tremendously expensive and it is appropriate for the businessman-taxpayer to view these costly weapons somewhat in the manner he views the purchase of costly new equipment for his own firm. In business you buy expensive equipment like electronic computers because they reduce unit costs. In defense I believe there is the similar obligation that in adopting very expensive new weapons you make the other adjustments, such as business commonly does, to compensate by cuts elsewhere or by organizational changes so that the expensive new weapons pay their way by making other economies possible.

Closely allied with what we have been discussing on the economics of defense spending-is the problem of what the armed services should prepare to take care of their contingent liabilities resulting from our many treaty commitments and understandings. I shall refer only briefly to this third major development affecting national defense policies. Certainly it is good for the United States to have other nations as friends and allies. Likewise, it is desirable to assist free nations and others who are threatened with economic penetration and political domination by the Soviet. But I am troubled by the problems thus posed for our national defense establishment in terms of what additional military requirements are imposed on our armed services by these commitments. At least it is important that the advantages and disadvantages of each treaty commitment be spelled out and priced up in terms of national defense budgetary costs. From a military point of view we should not wish in this way to acquire "additional weak spots" that reduce our deterrent strength. Likewise, it is extremely doubtful whether the United States can afford to have two kinds of defense forces—one with obsolete weapons to fight the so-called brush fire war, and another to fight a major thermonuclear war. And above all, the United States should be wise enough after Korea to remember the old military maxim, Choose your own battlefield carefully.

Finally, let me reiterate that I have tried to place emphasis not on the old and accepted but on the needed new. I hope that to some small degree your interest and vision has been stimulated to the point where you will contribute your thinking an energy to

effecting changes and improvements to meet new needs and requirements. It is difficult to bring about changes and improvements rapidly enough to keep in step with significant developments. Progress will never come rapidly enough unless there is an ample cheering section of interested and experienced friendly critics urging Congress and the armed services to discard the old and to get on with the job of keeping up to date in this world of rapid change in circumstances and technical advances.

Carmine G. DeSapio on James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Carmine G. DeSapio, secretary of state and Democratic national committeeman from New York State, at the 25th anniversary meeting of the Affiliated Young Democrats of New York, held on June 21, 1957, at the Hotel Piccadilly, New York City. Mr. DeSapio is a member and an honorary member of the organization and joined in paying tribute to the guest of honor, Hon. James A. Farley, former Postmaster General and former chairman of the Democratic National Committee and the New York State Democratic Committee. General Farley was presented with a plaque by the Affiliated Young Democrats for his great assistance to the organization as a member and an honorary member for the yast 25 years. The address is as follows:

My good friends, I am very happy to be here with you this evening and to share with you in this 25th anniversary celebration of an organization which, throughout the past quarter century, has grown and developed as one of our city's most active associations of politically alert young people.

And it is my privilege to extend to the entire membership of the Affiliated Young Democrats and to you, State President Harold R. Moskovit, the warm personal greetings and sincere good wishes of Governor Averell Harriman, who has asked me to express his deep regrets at being unable to meet with us tonight.

As many of you ladies and gentlemen may realize, the steady progress which has marked the establishment of the Affiliated Young Democrats as a significant element in the affairs of our Democratic Party in New York has been a particular source of gratification to me, personally.

For, in a very real sense, you have helped to prove my own very strongly held belief that the future of our party depends to a great extent upon our ability to attract and to deserve the interest and support of the young people of our community for the philosophy, the activities, and the goals of our partisan organization.

And I believe that it is particularly fitting that you should choose this occasion—the silver anniversary of the Affiliated Young Democrats—to pay tribute to one of the very greatest young Democrats in the entire history of our party.

If we insist upon evaluating youth only in terms of years, then we cannot truthfully call our beloved friend, Jim Farley, a youngster; for in point of time, he has been a familiar and respected leader in our partisan councils for many decades.

But, if youth—as the philosophers tell us—is basically a state of mind, then, ladies and gentlemen, none of us can fail to be inspired by the razor-sharp perception, the remarkable vigor, the fresh, vibrant spirit—and the very great personal warmth—of this wonderful man who is so young beyond his years.

I doubt that there is anyone present here this evening who can remember a time when there was no Jim Farley upon whom we Democrats could confidently draw for practical assistance and guidance, for down-to-earth political and human wisdom, for encouragement and for inspiration.

And certainly few Americans of any era have been able to look back upon a record so tightly packed with meaningful personal achievement and distinguished public service as is our General Jim.

But perhaps most gratifying of all—to every man and woman who shares his profound dedication to the ideals of compassionate, forward-looking political democracy, which comprise the living spirit and heritage of our Democratic Party—is the knowledge that for many, many years to come we will continue to enjoy the very great privilege of his counsel and of working side by side with him in the very exciting business of politics.

Jim, it is my very great personal privilege to thank you—from the bottom of my heart—for your friendship and to present you, on behalf of the entire grateful membership of the Affiliated Young Democrats, this beautiful plaque—which is inscribed as follows:

"AFFILIATED YOUNG DEMOCRATS, INC., OF NEW YORK, MERITORIOUS CITATION TO HON. JAMES A. FARLEY

"In appreciation for faithful, unswerving, untiring, and extraordinary service as an honorary member of the Affiliated Young Democrats, Inc., for 25 years.

"Loved, venerated, admired, and honored by our members for your outstanding assistance by helping us to promote the highest ideals of the Democratic Party.

"Presented this 21st day of June 1957, at New York, N. Y.

"HAROLD R. MOSKOVIT,
"State President.

"God bless you."

Increase Pay of Postal Employees

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. DOLLINGER. Mr. Speaker, the following is my statement to the House Post Office and Civil Service Committee on June 18, 1957, urging that increases in salaries of postal employees be granted:

STATEMENT OF REPRESENTATIVE ISIDORE DOLLINGER, OF NEW YORK, TO THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, JUNE 18, 1957

Mr. Chairman and members of the Committee on Post Office and Civil Service, it is a disgrace that we have allowed the present situation regarding postal workers' pay to continue as long as it has. Our grossly underpaid postal workers have endured real hardships; they cannot meet ever-increasing living costs. Postal salaries are far below those being paid in private industry; present salary grades in the postal field schedule do not provide an adequate level of living.

I am told that in the New York City post office, low wages have compelled more than 60 percent of the postal employees to seek outside employment in order to meet the high cost of living. What kind of career service is this which requires a man to work 12 or 14 hours a day—8 hours in his post office job and 4 or more hours in the other job? What kind of life can such an employee have? His existence is actually all work; he has no time or energy or inclination for recreation, family life, or hobbies or any of the things that makes life pleasant and worth living and which should be everyone's reward at the end of a normal working day.

The turnover rate in our post offices is increasing rapidly and it has already reached alarming proportions in the New York post office. The post office is finding it increasingly difficult to retain their experienced workers and eligibility rosters are becoming smaller and smaller, because of the low wage scale, and the resultant lack of interest in the postal service as a career.

The administration's attitude in opposing postal pay increases is unrealistic and unwise. Inasmuch as the Federal Government has been unable to control substantial wage and price increases which affected prices which Government employees must pay for living necessities it is now the duty of Congress to adjust the pay of postal employees so they can have at least a decent existence.

The morale of our faithful postal employees has reached a low point; what to them appeared to be a good career has become a most unrewarding job. Unless our postal workers are paid adequate salaries, enabling them to enjoy a reasonably good standard of living, the efficiency of our postal system will be seriously undermined. We owe it to this fine and important group of workers to give them adequate pay for the duties they perform.

I urge the Committee on Post Office and Civil Service to take favorable action providing for adequate pay increases for our postal workers without further delay.

Flood Insurance

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Flood Insurance," which appeared in the East St. Louis (Ill.) Journal on June 24, 1957:

FLOOD INSURANCE

The House of Representatives last week refused by a vote of 218 to 186 to appropriate a $14 million fund which the administration had settled on as a start for a flood insurance program.

A flood-insurance law, enacted last year, calls for up to $5 billion in Federal flood insurance.

Advocates of the program have abandoned hope for action by Congress this year.

Recent floods in the Midwest and elsewhere in the Nation point to a very real need for some form of insurance against such disaster. Yet, private insurance companies

contend that the risk could not be spread sufficiently to pay claims except at extremely high premium rates. In a 1952 report the Insurance Executives Association stated:

"It is our considered opinion that insurance against the peril of flood applicable to fixed property cannot successfully be written, and that any specific promise of indemnity for loss by flood must therefore be regarded as in the nature of a subsidy or relief payment, which is quite outside the scope of private business and/or insurance."

In order to meet the obvious need of governmental action to insure against loss by flood, President Eisenhower this year asked Congress for $36 million to pay flood losses and for $14 million to reimburse insurance companies for selling and servicing policies.

The current action by the House, which stops the program for another year, is a shortsighted view of an urgent problem that is a recurring hardship in certain parts of the Nation.

New Idaho Senator Has Silver Tongue

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mrs. GREEN of Oregon. Mr. Speaker, on Wednesday, June 19, a truly magnificent speech was made by a new Member of the Senate of the United States. It was a maiden speech, and it concerned a topic with which countless Oregonians have been deeply concerned for some time, the bill to authorize the construction of a high comprehensive development Federal dam in Hells Canyon on the Snake River. At the conclusion of that speech by Idaho's junior Senator, FRANK CHURCH, veterans of many years in the Senate spoke of their deep admiration for the eloquence and the persuasiveness with which this brilliant Idahoan set forth his cause.

Two days later the Portland Oregonian, a leading newspaper of my congressional district, featured on its editorial page a tribute to that speech in the form of an article by A. Robert Smith, the Oregonian's Washington correspondent.

Under unanimous consent, I include this article in the RECORD, as follows:

NEW IDAHO SENATOR HAS SILVER TONGUE
(By A. Robert Smith)

WASHINGTON.—The United States Senate, which cherishes the richest tradition of fine American oratory but finds it a dying art, discovered this week a new orator of the old school in its youngest Member. He is Senator FRANK CHURCH, 32-year-old Idaho Democrat, who from this day hence may well be called the boy orator of the Snake.

Waiting 6 months to rise for his maiden address, Senator CHURCH had honored the Senate tradition that freshmen are to be seen but not heard. But when he took the floor Wednesday he had among his audience of enraptured listeners some whose Senate service nearly matches his years.

His topic was Hells Canyon Dam, for which he made an ardent and cogent plea.

What makes splendid speechmaking a rarity in the Senate in this electronic age is that running for public office today no longer makes full-lunged demands upon the candidates. The microphone and the high-powered amplifying system have been the equalizer for men not naturally endowed with richness of voice and a commanding manner.

But the Senate, like the Supreme Court, is one of the last sanctuaries where electronic gadgets have been forbidden. The House of Representatives uses an amplifying system. The Presidential press conference room is amply equipped with mikes and loudspeakers.

But not the Senate. And so some of the best known men in public life today—HARRY BYRD, of Virginia, or ESTES KEFAUVER, of Tennessee—are often hardly audible from the galleries above, or in the far corners of the chamber itself. They are essentially mumblers, not speakers in the tradition of Webster and Calhoun.

Not since the death of Senator Alben Barkley of Kentucky and retirement of Walter George of Georgia last year has the Senate heard fine oratory. None of those who remain are capable of it as were these veterans. Some, like young ALBERT GORE of Tennessee, show promise. Others, like DIRKSEN of Illinois, MORSE of Oregon, O'MAHONEY of Wyoming, NEELY of West Virginia, and KERR of Oklahoma, can command the Senate with their speaking brilliance.

But the rare combination of a man of commanding demeanor, powerful, measured delivery and sparkling flow of artfully expressed ideas is no more.

And yet young CHURCH showed genuine promise of, in time, developing all these talents in which he demonstrated ability.

As a college student, he starred on the Stanford University debating team. In 1941, at age 17, he won the national American Legion oratorical contest, and in 1947 he was winner of the 53d annual Joffre debate and was awarded the Medaille Joffre in San Francisco.

Whatever may happen to Hells Canyon, Senator CHURCH has once again put Idaho—the State that gave the Senate William Borah—back on the national political map by reviving the oratory for which the Senate has always been honored.

Recommendations of the Commission on Increased Industrial Use of Agricultural Products Pursuant to Public Law 540, 84th Congress

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. COAD. Mr. Speaker, the possibility of using our agricultural surpluses for industrial uses is a plan which certainly merits the full consideration of every member of the Congress. I have recently introduced two bills (H. R. 8125 and 8130) which would assist small-business men enter such a program.

Within the past few days the full report of Commission on Increased Industrial Use of Agricultural Products has been made public and is available in Senate Document No. 45. This Commission has been studying the problem of using agricultural surpluses for industrial uses pursuant to Public Law 540, 84th Congress and I am presenting their recommendations as follows:

RECOMMENDATIONS OF THE COMMISSION ON INCREASED INDUSTRIAL USE OF AGRICULTURAL PRODUCTS PURSUANT TO PUBLIC LAW 540, 84TH CONGRESS

FIRST RECOMMENDATION

The Commission proposes as its first and most necessary recommendation that the funds for industrial uses research be increased to not less than 3 times the amounts currently ($16,145,000) available; and that additional sums be provided as herein suggested for new crops research, trial commercialization, development and incentives.

SECOND RECOMMENDATION

The Commission recommends that Congress declare as a matter of policy the obligation to foster basic research in agricultural products and their uses, and that the administrators, in the allotment of funds at their disposal, be directed to place appropriate emphasis upon research projects having as their objective the discovery of new basic knowledge of farm products.

THIRD RECOMMENDATION

The Commission recommends that administrators be authorized, in addition to using the facilities of the Department of Agriculture, land-grant institutions and experiment stations, to contract also with other universities and colleges, nonprofit or profitmaking research organizations, private corporations, and foreign institutions especially in countries where Public Law 480 funds may be available.

FOURTH RECOMMENDATION

The Commission recommends that the administrators be given authority to share research costs on specific projects with private industries or with other public research agencies where in their judgment such sharing will bring desirable results economically and efficiently.

FIFTH RECOMMENDATION

The Commission recommends that the administrators be directed where appropriate to provide research grants, student fellowships, scholarships, and similar aids which, while accomplishing research projects, will also increase the supply of trained scientists. These funds should be so allocated that graduate training may be strengthened in each of the four major agricultural regions.

SIXTH RECOMMENDATION

The Commission strongly recommends that an adequate annual investment in research and development for new crops be favorably considered, along with suitable authority to the administrators of the program to provide incentives where essential to bridge over the awkward stage of establishment.

SEVENTH RECOMMENDATION

The Commission recommends that the administrators of the industrial utilization and new crops program be empowered to enter into appropriate contracts for development of research results into trial commercial-scale operations, and that an adequate proportion of funds be authorized to be used for this purpose.

EIGHTH RECOMMENDATION

The Commission recommends that the administrators of the industrial utilization and new crops program be provided with authority and funds to extend suitable incentives to farmers or to industry where appropriate to hasten the establishment of a new crop or of a new industrial use, where such appear likely to lead to durable additional markets, and for rapid disposal through industrial channels of accumulated surpluses.

NINTH RECOMMENDATION

The Commission recommends the creation of a nonpartisan Board with 5 members, to be appointed by the President by and with

the advice and consent of the Senate, 1 of whom shall be an Assistant Secretary of Agriculture; the Board shall be known as the Agricultural Research and Industrial Board.

TENTH RECOMMENDATION

The Commission recommends that 15 percent of the annual gross receipts from customs revenues be allotted to the administrators of the industrial utilization and new crops program for carrying out the proposals herein described. Authorization should be provided whereby such funds could be carried forward in amounts not to exceed $150 million. Continuity of funds will greatly improve the ability to plan and execute both research and followup actions.

The Time Has Come for the United Nations and the United States To Act on the Communist Rape of Hungary

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an editorial from the New York Times of June 26, 1957:

CONSCIENCE ON HUNGARY

Immediate reconvening of the General Assembly of the United Nations is now in order to consider the scathing report that has just been issued by its special committee of inquiry into Soviet Russia's savage suppression of the Hungarian revolt.

The unanimous finding of the committee, composed of representatives of five independent powers from as many continents, could leave no trace of doubt in anyone's mind that the "spontaneous national uprising" in Hungary, "caused by long-standing grievances," was crushed by a "a massive armed intervention by one power on the territory of another with the avowed intention of interfering in its internal affairs." The brutality of Communist imperialism, as thus once again revealed, is matched only by the cynicism of official Russian and Hungarian attempts to laugh off this measured judgment of the free world. The question now is, as it always has been: What to do about it?

Certainly the least that can be done is for the Assembly to resume its suspended session for the express purpose of taking up this report. The revulsion of the civilized world against Russia's aggression in Hungary must be emphasized and reemphasized; the contempt of every free state for the Kadar regime must be underlined; whatever moral weight the opinion of free peoples may have—and we believe it has, cumulatively, a great deal of weight—must be brought to bear against the degradation of the human spirit that the Russian masters have forced on Hungary.

We hope that Ambassador Lodge, chief of the United States delegation, will urge these points at the meeting today of the 24 countries that originally sponsored the Hungarian investigation. The Senate Foreign Relations Committee yesterday unanimously urged the reconvening of the General Assembly at this time to consider the problem of Hungary; and we trust that the Senate itself will quickly endorse that action. The United States can and should take the leadership, but in ths matter the decision does not depend on us alone. There are, however, certain things we could and should do on our own initiative to show our practical sympathy for the Hungarian people.

Instead of congratulating ourselves, as the administration persists in doing, on the admission of a mere 32,000 Hungarian refugees during the past 6 months, we ought to be searching out new ways to give help and give it generously. One way would be to relieve the increasingly desperate condition of a few thousand Hungarian teen-agers who fled their country last fall and are now stuck in Austrian camps where they are fast losing their future. A few hundred of these unaccompanied minors have relatives in the United States who would like to take them in, but who are stopped (just as are relatives of Jewish refugees from Egypt) either by our immigration laws or by the administration's interpretation of them, or both. Fourteen hundred of these Hungarian children are already reported to have gone back or to have disappeared. Will official indifference—on the part not of some remote European bureaucrat, but of our own American Government—kill all hope for those who remain?

A Judge Beside Himself

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. HIESTAND. Mr. Speaker, in view of the recent decision of the Supreme Court as to what congressional investigating committees shall decide they need by way of information, Raymond Moley's very interesting and intriguing article in the Los Angeles Times, entitled "A Judge Beside Himself," is most revealing.

Mr. Speaker, under unanimous consent I include the article in the Appendix of the RECORD:

A JUDGE BESIDE HIMSELF

(By Raymond Moley)

In considering the cases recently decided by the Supreme Court, in which various methods of the control of communism are dealt with, it may be well to begin by differentiating among the cases.

Most of the cases involved matters which clearly had to do with the proper function of the courts in their interpretation and application of the laws. This involves what is called the science of jurisprudence, which the standard dictionary defines as "the science by which the laws and the constitutions of States, written or unwritten, are reduced to system, and their principles analyzed, methodized, expounded, and judicially applied."

This aspect of public policy was involved in the case of the conviction of the five California Communists under the Smith Act.

The Watkins case, however, involved another science, the science of politics, which is defined in the same dictionary as "that branch of civics that treats of the principles of civil government and the conduct of State affairs; the administration of public affairs in the interest of the peace, prosperity, and safety of state; statecraft, political science: in a wide sense embracing the science of government and civil polity."

I venture to suggest that the Watkins case was a matter in which the Court usurped jurisdiction and that Congress has every right under the Constitution to ignore it. The Supreme Court, in decreeing what the procedure of a congressional committee should be, was outside its province and was crossing the boundary separating the branches of government.

For a very special reason I will quote from Mr. Justice Frankfurter's concurring opinion in the Watkins case:

"* * * The scope of inquiry that a committee is authorized to pursue must be defined with sufficiently unambiguous clarity to safeguard a witness from the hazards of vagueness in the enforcement of the criminal process against which the due process clause protects."

In other words, the Court is assuming the right to dictate to Congress what its methods of inquiry should be.

Now since there is a more apt reply to this at hand than anything I might write, permit me to present a quotation therefrom:

"The proper scope and methods of procedure appropriate to congressional investigations depend on the conception of the part they play in enabling Congress to discharge its basic duties."

The authority goes on to say that there is no legal protection due to unfettered speech, only moral and social pressure.

"For the same reason, congressional inquiry ought not to be fettered by advance rigidities, because in the light of experience there can be no reasonable doubt that such curtailment would make effective investigation impossible * * * the procedure of congressional investigation should remain what it is. No limitations should be imposed by congresstonal legislation or standing rules.

"The power of investigation should be left untrammeled, and the methods and forms should be left for determination of Congress and its committees as each situation arises. The safeguards against abuse and folly are to be looked for in the forces of responsibility which are operating from within Congress, and are generated from within."

My authority, upon which I am willing to rest my case, is Prof. Felix Frankfurter, writing about the Walsh and Wheeler investigations in the early 1920s. The article, entitled "Hands Off the Investigations," was published in the New Republic May 21, 1924.

Prof. Frankfurter and Mr. Justice Frankfurter are the same person, looking in the one case at a labor union official who refused to identify certain alleged Communists and in the other at certain businessmen and public officials.

Alice in Wonderland Economics

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. EVINS. Mr. Speaker, in their anxiety to do everything possible to destroy the TVA, Bonneville Power Administration and other national and local public power developments, the spokesmen of the private power monopolies sometimes seem to find conventional economic concepts and logic inadequate to support their propaganda and are driven to torturing words, facts, theory, and logic to extremes as paradoxical as some arguments in Alice In Wonderland fiction. The June issue of Public Power magazine comments editorially on one such flight of loose logic and free economics by the private power lobbyists. Because I feel that others will

find the editorial refreshing and factual in an area where there is much use of incredible, confused and distorted statistics, I ask unanimous consent that the editorial be reproduced in the RECORD.

The editorial follows:

POWER SHORTAGES AND ROADS

A critic of public power last month carried one of the favorite arguments of some detractors of publicly owned electric service to its logical—if somewhat ridiculous—conclusion. In an address disarmingly entitled, "The New World of Economics," Dr. Emerson P. Schmidt, director of economic research for the United States Chamber of Commerce, assailed Government agricultural programs and continued:

"On scores of other fronts, we have seen similarly, that when the free market is set aside chaos takes over. The only recurring electric power shortages are in regions where we have publicly owned power. The reason is obvious. When kilowatt-hours are underpriced, demand tends to exceed supply. Yet the political demand for public power, with its deceptive pricing, continues. The only reason we have fabulously wasteful highway and street congestion, which seems to be beyond correction, is because we have socialized streets and highways. If we had privately owned streets and highways, operated as private enterprises, this accentuated problem of congestion would never have arisen and would be self-solving. The railroads, for example, accommodate their rolling stock to their roadbeds, or vice versa."

Although some private power companies have had something akin to power shortages which Dr. Schmidt would have a difficult time attributing to underpriced power, we presume he is referring to the Tennessee Valley and the Columbia Basin, where there have been shortages or near shortages on several occasions in recent years. The record of the Federal wholesale power supply systems in these regions, as well as that of the power distributors they serve, does not support the charge that their power is underpriced. On the contrary, the Tennessee Valley Authority is not only repaying the entire Federal investment in its power facilities but has realized more than enough to cover the cost of money to the Government and the income taxes that would have been paid by a private power company. And TVA shows a $43 million profit to the people of the United States above all that. Similarly Bonneville Power Administration is far ahead of schedule in repaying the cost of Federal projects in the Northwest.

If this is deceptive pricing, then it may be that power from Federal projects in these areas, however low in comparison with most private companies' rates, actually is a bit overpriced.

There would be no threat of a power shortage in the Tennessee Valley if we taxpayers weren't saving millions of dollars annually in the power bills paid for our atomic energy installations and other Government defense activities which consume more than half of TVA's power output. In the Columbia Basin, any shortage threat similarly would be alleviated (at a cost to taxpayers) by cutting back on Atomic Energy Commission power loads or those of aluminum potlines that figure so importantly in defense production. And, of course, there would be no threat of shortage in either region if Dr. Schmidt's United States Chamber of Commerce and other private organizations would cease their attack on proposals for orderly expansion of Government-power generation in those areas.

But the fact remains that residential, farm and commercial electric consumers, as well as industry, do use more electricity in the regions of lower-cost power. Homes, farms and businesses in these regions use more electric appliances and other electrical equipment than those in other regions. And we believe that it is a sign of desirable progress that forecasts indicate that residents of such cities as Chicago and New York and Boston in the not too distant future may reach the standard of electric living found in such communities as Chattanooga, Tenn., and Tacoma, Wash.

This argument is elaborated by Dr. Schmidt when he blames our traffic jams on "socialized streets and highways." "If we had privately owned streets and highways, operated as private enterprises," he explains, "this accentuated problem of congestion would never have arisen." Does Dr. Schmidt mean that private enterprise would have provided us with sufficient highways and streets to cope with today's traffic? Apparently not, for he continues with the example of railroads limiting their rolling stock to their roadbeds.

What Dr. Schmidt is saying—and we won't quarrel with it—is that if we had private enterprise roads, we'd have fewer roads. What he doesn't add is that we'd have fewer cars and trucks, and a downgrading from today's standard of living in all those fields of activity where automobiles are necessary. By the same token, we'd have no power shortages if everyone limited his use of electricity to the level of residential usage in some communities in New England.

All this strikes us as a strange thesis for a spokesman for chambers of commerce including businessmen engaged in such activities as selling electrical appliances, building roads, selling and servicing cars and trucks, operating filling stations, etc.

The fallacy of this entire theory of a free market in electric power or highways is that there never has been a free market in this country in these fields. Electric service, streets and highways and railroads are monopolistic utilities. Because of this, Americans have long employed their Federal, State and local governments in helping provide these services—without sacrificing their belief in private competitive enterprise.

In electric power, four communities set up municipal electric systems in the first year of central station service. It has been suggested that the origin of the TVA may be traced back to a report in 1824 recommending improvement of Muscle Shoals. That report was made to President Monroe by his Secretary of War, John C. Calhoun.

The railroad roadbeds cited by Dr. Schmidt are in many cases located on lands donated by the people through their Government in order to encourage the building of railroads.

We do not believe that Americans are likely to abandon the chaos of public roads in order to return to a free market that has never existed. And we believe that they will continue to utilize their local, State and Federal governments in helping provide their growing requirements for electric power.

After all, as Dr. Schmidt's arguments so inadvertently emphasize, governmental programs in utility fields have a long and honorable history in this country. In fact, they are a part of the American way.

Washington Tells Its Story in Summer Jubilee

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include an item entitled, "Washington Tells It's Story in Summer Jubilee." Also a letter from Mr. Orville Crouch, chairman of the summer jubilee committee, a new list of jubilee key cities and a news release entitled, "Look for the Jubilee Key to the Nation's Most Exciting Vacation."

WASHINGTON TELLS ITS STORY IN SUMMER JUBILEE

Mr. Speaker, the Nation's Capital is the most beautiful city in the world. We who serve in the Congress of the United States are well aware of that. So, I am sure, are our constituents. In the course of our busy days, however, I am just as sure that too many of us fail to realize all the tremendous attractions Washington has to offer, and we fail, therefore, to properly inform and educate the folks back home accordingly.

Every American wants, at least once in his life, to visit his Nation's Capital. Today, with the travel market booming, many millions of our citizens are taking vacations with their prime purpose of "seeing America first." This is a welcome sign, for the more the citizen sees of his country, the more he becomes imbued with its beauties, its shrines and its history, the better and more patriotic American he will be. And assuredly today, in this troubled world, we need a new surge of patriotism, a reaffirmation of the traditions that have made and kept America great, a re-dedication to the ideals without which we could not long remain great.

But I am not making a patriotic speech. I want to call to the attention of the Congress a new spirit that has evidenced itself in the District of Columbia. It is manifested in the development, by such organizations as the Washington Convention and Visitors Bureau and the Hotel Association of Washington, in cooperation with the city's civic leaders and its business community, in the Washington "Summer Jubilee."

Certainly, the Jubilee, which began June 15 and lasts through Labor Day, has commercial overtones. Visitors to Washington bring dollars to spend, and the convention and tourist business is vital to the District's economy. Frankly, second only to the Federal Government payroll, it provides the largest income for the local economy. It is only natural, therefore, that promotions be devised to attract more people to our beautiful Capital City.

The Summer Jubilee, however, has a much broader aspect. With the millions of Americans enjoying summer vacations, eager to see their own country, where better can they begin than with a trip to Washington? No other city, no other area, has more to offer. Here are the shrines, the monuments, the very atmosphere of history past, present, and in the making for the future. Here the visitor walks the hallowed ground where once walked Henry Clay, Daniel Webster, John Calhoun, and Washington, Jefferson, Lincoln, and all the rest. Here are the symbolic, the traditional, and the spiritual that best give the citizen that immense and fitting feeling of pride in the words, "I am an American."

If Washington's Summer Jubilee can help distill that pride, that reverence, in the hearts and minds of a million or more additional summer visitors, it has well been worth the effort. But, for a moment, let us put this aside. Even Members of Congress, you, and you, and I, can learn a bit more about our city. It is our home away from home, you know, just as it is every American's other hometown, and we should learn to relax in it, to take advantage of all that it has to offer.

Here in my hand I hold a brochure on the Summer Jubilee, prepared and distributed around the country by the Washington Convention and Visitors Bureau. Within its pages it lists a calendar of events for the period of the Jubilee. I have personally been amazed, in glancing through it, at the varied kinds of entertainment available in the Nation's Capital. There are fine free concerts at the Watergate, and on the steps of the Capitol itself. There is topflight entertainment under the stars in beautiful Carter Barron Amphitheater, in Rock Creek Park. I need not go into the long list; suffice it to say, there is something for everyone, young and old, something to fit every purse and pocketbook as well as to suit every taste.

And, always, of course, there are the shrines, the monuments, the public buildings, even the Congress itself when it is in session. There are the popular shrines, and the lesser known but still as important to our history. There is "More to do, More to see in Washington, D. C.," says the Summer Jubilee slogan. Mr. Speaker, none of us can doubt that.

None of us can doubt, either, the value, culturally and spiritually, to the citizen who has visited here. Let me compliment, therefore, the persons who are making the Summer Jubilee possible, and let me suggest that every Member of Congress join in and spread the word to his constituency. We will all be better for it.

JUBILEE KEY CITIES—NEW LIST

This is a new Jubilee Key cities list. Please note the changes. The cities which are in parentheses have been recently added or have replaced the old ones.

Albuquerque, N. Mex.; Atlanta, Ga.; Asheville, N. C.; Birmingham, Ala.; Boise, Idaho; Boston, Mass.; Bradford, Pa.; Bristol, Tenn.; Buffalo, N. Y.; Charlotte, N. C.; Chicago, Ill.; Cincinnati, Ohio; Columbia, S. C.; Dallas, Tex.; Dayton, Ohio; Daytona Beach, Fla.; Denver, Colo.; Detroit, Mich.; Erie, Pa.; Houston, Tex.; Indianapolis, Ind.; Jacksonville, Fla.; Kansas City, Mo.-Kans.; Los Angeles, Calif.; Louisville, Ky.; Miami, Fla.; (Milwaukee, Wis.); Minneapolis, Minn.; New Orleans, La.; Newark, N. J.; New York, N. Y.; Norfolk, Va.; Pittsburgh, Pa.; Portland, Maine; (Portland, Oreg., instead of Helena, Mont.); Reno, Nev.; Richmond, Va.; St. Louis, Mo.; St. Paul, Minn.; Salt Lake City, Utah; San Antonio, Tex.; San Francisco, Calif.; Savannah, Ga.; Seattle, Wash.; (Spokane, Wash., instead of Butte, Mont.); Tampa, Fla.; Worcester, Mass.

These changes have been made in order to facilitate the distribution of Summer Jubilee Calendar of Events. Milwaukee, Portland, and Spokane have more travel offices than Helena, Butte, or Des Moines.

The attached letter was mailed to the Congressmen of the "Jubilee Key" cities and "Jubilee Key" States. A complete list of "Jubilee Key" cities as well as explanatory press releases which were sent to the travel editors of these cities are also enclosed.

WASHINGTON CONVENTION AND VISITORS BUREAU,
Washington, D. C., June 10, 1957.

DEAR CONGRESSMAN: One of your constituents may be formally presented with a golden key to the Nation's Capital. The golden-key presentation will highlight the summer-jubilee program sponsored by the Greater National Capital Committee, June 15 through Labor Day. To mark this occasion, the city will assume a gay, festive air with flags and banners spelling out a hearty welcome to its jubilee guests.

Concerts at the Watergate, and in the shadow of the Capitol; parades, Fourth of July celebration, President's cup regatta, Woodlawn Mansion ceremony, and other outstanding attractions will be recorded in a calendar of events. This comprehensive brochaure of things to see and do in the Nation's Capital is jointly published by the Washington Hotel Association and the committee. Airlines, bus lines, and railroads servicing Washington will handle the calendar distribution. Fifty of these calendars will contain a golden insert with the replica of a jubilee key. Residents of the cities scheduled to receive a marked copy of the calendar will be advised to that effect through newspaper, radio, and TV publicity. They will be told to visit their travel offices and to ask for their copy of the calendar of events. One of the calendars will bear the jubilee key insignia.

The finder of the marked copy will become an official guest of the Nation's Capital. We are also urging the travel editors of the jubilee key cities to sponsor a courtesy key to be delivered by the finder as a good will message from his city to the Nation's Capital. Upon his arrival to the city, the finder will be presented with a golden key which will guide him through a week of summer jubilee fun.

A list of jubilee key cities, a copy of the calendar of events, and a press release describing the jubilee key program are enclosed with this letter. You might want to drop a line to the constituents of your key cities inviting them to visit you. You might particularly like to have the key finder as your guest.

Sincerely,

ORVILLE CROUCH,
Chairman, Summer Jubilee Committee.

LOOK FOR THE JUBILEE KEY TO THE NATION'S MOST EXCITING VACATION

WASHINGTON, D. C.—There's a magic key hidden in your city. Find it, and you will discover the pass to an unforgettable week of "Summer Jubilee" fun in the Nation's Capital. Airlines, railroads, and bus lines carry a supply of the Washington Calendar of Events. In one of their city offices you may find a marked copy of the Calendar—and the mark will be that of the golden Jubilee Key.

The benefits to which this golden symbol entitles the finder are representative of the many wonderful features of the "Summer Jubilee," June 15 through Labor Day. Sponsored by the Greater National Capital Committee, this summer-long holiday offers unusual values in entertainment and economy.

A week's stay for two with breakfast is the key's first reward. The Burlington, Jefferson, Raleigh, and Sheraton-Park Hotels are offering their air-conditioned comfort to the lucky finder of the Jubilee Key. Their rates, listed in the Calendar of Events, reflect the special family plans initiated by most Washington hotels during the summer months. Children under 14 are admitted free. In some cases, swimming-pool privileges, free garage space, and breakfast are added to the plan.

All that Washington has to offer is at the disposal of the key winner and of the summer visitor: Band concerts in the shadow of the Capitol or at the Watergate steps, Fourth of July celebration with its elaborate fireworks displays, and the speed-shattering powerboat races of the President's Cup Regatta. The key finder will be a guest at the rustic Olney Theater, featuring Broadway shows and musicals. He will also receive two passes to the romantic open-air Carter Barron Amphitheater where Jimmy Durante, Bob Hope, Harry Belafonte, and Jerry Lewis appear in the Entertainment Under the Stars series. Add to this two tickets to big-league baseball and a moonlight cruise on the Potomac River and you will catch the glimpse of an exciting weekend awaiting the key finder as well as the visitor.

Seeing the Nation's Capital is a delightful and rewarding experience. Graceful monuments and memorials, stately White House and Capitol Building, surrounded by shady trees and green laws are truly beautiful. The Jubile Key finder will be taken on a complete sightseeing tour of the city, courtesy of the Gray Line. From Union Station to Rock Creek Park, one building after another will unfold in a majestic succession. The climax of the trip will be a visit to George Washington's home—Mount Vernon.

The international flavor of Washington emanates not only from the presence of foreign dignitaries and the impressive embassy row, but also from the cosmopolitan nature of the city's restaurants. Their cuisine will please the most refined gourmet palate. The Jubilee Key finder is invited to dine in seven different restaurants—one for each day of his stay in the Nation's Capital.

Inquire about travel to Washington, ask for your copy of the Calendar of Events at the travel offices of airlines, railroads, and bus lines. The Calendar that you pick up might contain your lucky Jubilee Key. Visit the Nation's Capital gay and festive in its summer jubilee attire. Be a guest of the city and let the city treat you to an unforgettable vacation.

IT'S SUMMER JUBILEE TIME IN THE NATION'S CAPITAL

WASHINGTON, D. C.—Flags, banners, and festive decorations will greet the visitor upon his arrival to the Washington Summer Jubilee. Sponsored by the Greater National Capital Committee, this summer-long holiday offers unusual entertainment and economy values.

A red carpet of welcome extending from the Union Station to the Rock Creek Park is laid out by the air-conditioned hotels featuring special family-rate plans. Children under 14 are admitted free. And in some cases, swimming-pool privileges, free breakfasts and garage space are included in the Summer Jubilee rates.

"There is more to do, more to see in Washington, D. C." reads the summer slogan of the city. Against the green expanse of its many parks, Washington is more beautiful than ever. The Jefferson Memorial, the Lee House, and the Presidential Mansion, encompassed by blooming flowers and spacious lawns provide a rare sightseeing experience for the entire family. Culminating in a visit to the stately Mount Vernon, a Potomac cruise on a sunny day is leisurely and refreshing.

For music lovers there are summer-long concerts at the Watergate steps or in the shadow of the Capitol Building. Harness racing and big-league baseball are Washington's favorites and a must for the visitor. A pre-Broadway world premiere of the West Side Story is opening at the National Theater in August. Beginning with mid-June Bob Hope, Jimmy Durante, Harry Bellafonte and

other nationally known entertainers will appear in the romantic open-air Carter Barron Amphitheater. Add to this solemn post parades, military ceremonies as well as numerous gallery exhibits and you will capture a glimpse of the forthcoming Jubilee attractions.

The special events of Washington are particularly well-known. Gigantic firework displays illuminating the graceful skyline of the Nation's Capital are part of an elaborate Fourth of July celebration. Speed-shattering powerboat races attract an international group of spectators to witness the breathtaking battle for the coveted trophy. Swimming meets, canoe and sailboat races constitute additional competitive events of the President's Cup Regatta. A closing feature of the "Summer Jubilee" program, the Candle Light Tour of the Woodlawn Plantation is enchanting in its simplicity and symbolic of the Nation's historic past.

A complete list of Washington summer events as well as the Summer Jubilee hotel rates are incorporated into a calendar of events. This brochure, jointly published by the Greater National Capital Committee and the Washington Hotel Association, can be obtained either from the carriers' offices or by writing to the Greater National Capital Committee, 1616 K Street NW., Washington, D. C.

Tattered Battle Flag Flies Again

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. JOHANSEN. Mr. Speaker, recently the city of Kalamazoo, Mich., in my district, was linked with the great Republic of the Philippines by a colorful ceremony held in the home of the famed Gen. Emilio Aguinaldo.

The story of this ceremony, involving return to General Aguinaldo of a battle flag captured in the Philippine Insurrection and long a prized possession of Spanish War veterans and later the Public Museum of Kalamazoo, is described in the following newspaper article from the Kalamazoo Gazette:

Under leave to extend and revise my remarks, I include the following article:

TATTERED BATTLE FLAG FLIES AGAIN—KALAMAZOOANS RETURN TREASURED RELIC OF PHILIPPINE REBELLION

MANILA, June 12.—Gen. Emilio F. Aguinaldo, the 89-year-old rebel chief who became president of the first Philippine Republic, today saw a tattered battle flag from his fight for freedom fly over his hometown square through the efforts of a group of Kalamazooans.

The flag, taken in battle more than half a century ago, was returned to the aged hero of the Philippines in a colorful ceremony this morning (Manila time) by United States Ambassador Charles E. Bohlen. The presentation took place at Kawit, Cavite Province, in Aguinaldo's home where Philippine independence from Spain was declared June 12, 1898.

SENT BY PRAUS

The tri-colored flag was sent to Aguinaldo by Alex A. Praus, director of the Kalamazoo Public Museum, at the request of its former owners, the members of Richard Westnedge Camp, United Spanish War Veterans, of Kalamazoo.

The flag had been a treasured memento of the Philippine campaign and had been given to the post by the late Frank Riley who brought it home from the island war.

In making the presentation before a gathering of diplomatic notables and aged veterans of the Philippine Insurrection, Ambassador Bohlen said in part:

"The director of the Kalamazoo Public Museum recognized that what to the people of Kalamazoo was a prized acquisition, was to the people of the Philippines a sacred symbol of their long and glorious struggle for national independence.

RIGHTFUL PLACE

"Therefore it was decided that since those who once bore arms against each other are now united in the bond of fraternal friendship, and since the independence movement which you led at the time this flag was made—almost six decades ago—has achieved its goal, the flag's rightful place is in your hands."

Congressman AUGUST E. JOHANSEN, who helped arrange the presentation, wired Aguinaldo:

"Warmest greetings on the return of your battle flag, long a prized and honored possession of the citizens of the Third Congressional District of Michigan. I join my constituents in saluting both a great patriot and the cordial Philippine-American relations he has helped build."

After the presentation Aguinaldo and Bohlen stood on the balcony of Aguinaldo's home and watched a parade of Philippine veterans pass in review. The flag was then taken to the Kawit town plaza and raised as a 69-year-old former rebel sounded reveille.

Hon. R. Gregg Cherry

SPEECH
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. KITCHIN. Mr. Speaker, I wish to join with my colleagues in paying tribute to the Honorable R. Gregg Cherry, a great American and former governor of North Carolina, whose death occurred yesterday. North Carolina has lost an outstanding leader who contributed so largely to the growth and prosperity of our great State.

His death has brought sorrow to thousands of North Carolinians who had known him and who had labored with him, and it has brought particular sadness to those who were so closely associated with him in his public service in the State. He was a man of deep loyalty and devotion to friends, party, State, and Nation.

Early in life Gregg Cherry entered the practice of law in Gastonia, N. C., and likewise began his public-service career, first as mayor of Gastonia, representative in the North Carolina General Assembly, speaker of the North Carolina General Assembly, and later as State senator.

When he became a candidate for governor his public service and other positions of trust caused the people of the State of North Carolina to conclude he would make a good executive and he was elected governor in the fall or 1944.

He was proud that he was a son of a democratic State and represented democratic people who had placed him in a position of prestige and power. He liked people. He was at home among people in all walks of life.

As soldier and governor he fought that all men might have a fairer and better opportunity and that those who inherited the land might enjoy its fruits, their rightful heritage.

During his lifetime he accomplished much as an administrator and as chief executive of the State of North Carolina.

With the death of this North Carolina statesman, there has passed from the scene a great American.

Fallout Peril—A Proposal

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. MAY. Mr. Speaker, the Hartford Times editorial on fallout peril from nuclear weapons points up very well the concern of many constituents in my district in Connecticut. I believe a nonpartisan discussion of this issue is healthy at this time, in view of the international concern developing over disarmament.

President Eisenhower's most important goal has always been a lasting peace. The public backed him overwhelmingly and rejected Mr. Stevenson's use of this issue as an emotional stimulus to his campaign, which was obviously inappropriate at that time, as recent Russian atrocities in Hungary and elsewhere have clearly demonstrated.

It behooves us to examine all aspects of our foreign and domestic policies. The President can be counted on to make a responsible and wise decision with all of the pertinent facts and world conditions in proper perspective.

The editorial follows:

[From the Hartford Times of May 25, 1957]

FALLOUT PERIL—A PROPOSAL

The number of thinkers who believe man is committing murder and suicide by making tests of nuclear weapons is growing daily. These men include philosophers, theologians, physicians, physicists—men of many occupations and all political beliefs. They are desperately afraid.

Their fear is that test explosions of nuclear weapons have been creating, and are still creating, clouds of radioactive dust in the upper air, dust that settles in a gentle, deadly fallout over the whole earth. This dust cannot be disposed of. It will be dangerous for many generations to come. It poisons water, food, the very earth itself. Settling into the bones of humans, especially children, it starts incurable cancers.

Who are these fearful men? Dr. Albert Schweitzer, the medical missionary who works in isolation in Africa and has been given international recognition as a moralist an a musician. Pope Pius XII, voicing his thoughts through radio, public audiences and the columns of the Vatican newspaper. The Atomic Scientists Association of England. Dr. Linus Pauling, a chemist at Cali-

fornia Institute of Technology and a Nobel Prize winner. An association of German physicists, banded together to beseech their government's opposition to continuing nuclear tests. The Japanese Government, which sent a special envoy to London and Rome for a similar purpose.

There are many others, whose knowledge and authority cannot be gainsaid. All are afraid—not for themselves but for humanity.

Every nuclear explosion carries aloft many dangerously radioactive elements. Some of these elements decay very quickly, a few in a matter of seconds. Some are dangerous for several lifetimes. Others will be deadly for as much as 200 million years. There is no way to rid the earth of them. They fall into rivers, fields, and oceans, and are absorbed by plants and eaten and drunk by animals. When a fish dies from their lethal emanations, the radioactivity does not cease. It can kill another fish or a human.

Never before, until now, has man had in his hands the means of bringing about his own total destruction. Knives, clubs, guns, fire bombs, all the weapons of the past—these can kill only in the vicinity of the place in which they are used. Once used, they are harmless until used again.

The dust from nuclear bombs can kill again and again and again, and there is no way to stop it from killing. Every nuclear explosion is more dangerous than the last, because the accumulation of dust is that much heavier.

Spokesmen for the Atomic Energy Commission say the danger is not yet great enough to menace mankind. They cannot deny that it exists. The layman, without scientific training or physical equipment to assess the peril, may hope that the AEC is right, but he must give great weight to the opinions of the men who disagree. And the terror is contagious.

Atomic Energy Commissioner Willard F. Libby announces that the United States now has a "clean" H-bomb, in which health hazards are "minimized." He does not say they are eliminated. The difference is only one of degree. Each H-explosion adds much or little to the accumulation of poison.

Is there any hope for mankind under this terrible and progressively worse threat of death? Yes. Man can survive the present level of artificial radioactivity. Thousands will die, but man will live. Dr. Pauling says 10,000 persons have died or are dying from the effects of the explosions already set off, but the prospect of cancerous death is not yet universal. It is only an increase in radioactivity, contributed by more and more explosions, that can kill the human race.

Protection, then, lies in a halt to nuclear explosions large enough to throw deadly dusts into the upper air. This means stopping tests of the H-bomb.

Up to now, H-bombs have been tested by three nations, Russia, the United States, and Great Britain. It is unlikely that any other nation can develop an H-bomb. Therefore, if Russia, the United States and Great Britain stop testing their bombs, humanity will be safe from the effects unless war breaks out and the bombs are put to military use.

The horribleness of the H-bomb is the best deterrent to its use. The problem of nuclear disarmament is outside our scope in this discussion of the tests and their effects. But there is a way to approach an international halt to testing.

It would not involve any great danger to any nation's security. There would be no need for international inspection of nuclear production. There need not even be a formal agreement. All that is required is a statement from President Eisenhower.

"The United States will not again explode any nuclear device capable of poisoning the atmosphere unless it has evidence that such a device has been exploded, after this date, in a foreign country."

What would happen if the President made that statement? In one short sentence he would take a long step toward safety. Russia would be put into a position in which, if she is sincere in her many protests of horror at the continued poisoning of the atmosphere she must do the same thing or lose great face. Great Britain would be in a similar position. Who would wish to be responsible for continuing the pollution of the world?

Would the security of the United States be endangered? There might, of course, be some risk. But we now have a usable H-bomb, big enough to serve our military purposes in a future war. If Russia stops testing, we are still ahead. If she does not stop, we can resume our tests.

Would there be danger that Russia might outstrip us in the arms race if tests were stopped in both countries? No, for nothing would be said about laboratory research and mathematical investigations of H-weapons. Each side would continue that kind of work.

Could we trust the Russians to stop tests if we did? There would be no need for trust, because an H-bomb explosion is impossible to hide. Instruments that monitor the upper air over America reveal in a few days an explosion anywhere on the globe. If they indicated that Russia was again, or still, exploding H-bombs, we could start our tests again. The Russians know this, of course.

It would take courage for the President to stop the tests. For one thing, such a proposal was one of the chief points of the campaign of Adlai E. Stevenson, his recent opponent for the Presidency. The President would have to expect jeers from both his own party and the Democrats for adopting Mr. Stevenson's suggestion. We believe he is big enough to ignore them.

If tests stopped, the world could relax a little. It is impossible to forecast whether the door to disarmament might also open a little wider. That, if it happened, would be wonderfully welcome.

But the goal of greatest immediate importance, the result we must achieve, is a stop to the deposit of one tiny layer after another of deadly poison on the earth.

Action Now on Hungary

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune dated June 26, 1957:

ACTION NOW ON HUNGARY

Since last Thursday the world has had before it a document detailing one of the most shocking international crimes of this century. In 150,000 words, a United Nations investigatory commission has itemized the brutal suppression by Soviet Russia of the uprising by the Hungarian people against the Communist regime that had been foisted upon them from the outside. The report was compiled without any help from the Communist overlords of Hungary—indeed, over their determined opposition. But it was derived from the first-hand testimony of refugees, from a study of official documents, from a knowledge of recent Hungarian history. And it found that the uprisings in Budapest and elsewhere last October and November stemmed from the grievances of the people and their desire for liberty, rather than from the intervention of "Western imperialists," as the Communist charge.

It found, too, that if the Hungarians themselves had been permitted to determine their future, the pro-Communist government would have perished. The Hungarians never asked the Soviets to intervene; they came over the border uninvited and unwanted, with troops and tanks, and crushed the popular insurrection with force and with fire. Since the imposition of the Kadar regime in Hungary, the report asserts, liberties have been supressed and denied. But the investigators make clear their belief that basic yearning of the Hungarians for independence has only been strengthened by the Communist terror and that if the people had the means of freely expressing their will, Kadar and his Communist henchmen would be driven from power.

Few more devastating bills of particulars against armed intervention by a great power have ever been drawn up. But to indict the aggressor is not enough. A way must be found to redress the wrong and to restore the rights and the losses of the victim.

This is the problem that now confronts the United Nations. The report has been drawn up, but if the U. N. merely lets it rest in the archives it will have failed in its duty. Today can be a decisive day in the history of the U. N.'s handling of the Hungarian situation. For representatives of the 24 nations which sponsored the original General Assembly resolution calling for the investigation will meet to decide whether to press for action on the report now, or to postpone it until later.

A regular meeting of the General Assembly is scheduled for the autumn, and discussion could be deferred until then. But this is an extraordinary matter which demands extraordinary action. If a special midsummer meeting of the General Assembly were convoked, the importance of the Hungarian report, and the determination of the U. N. to do something about it, would be forcefully dramatized. Pressures would be concentrated on the Soviet Union and its satellite regime in Budapest. The people of Hungary and of other Iron Curtain lands would be heartened by the demonstration of the world's concern for them. They and their oppressors would be made aware that the overwhelming majority of the U. N. regards the suppression of Hungarian independence as a challenge to which a response must be found, rather than as a fait accompli to be accepted with a few pious protestations.

We urge the United States delegation and all others concerned with freedom to take the lead in calling for a special General Assembly meeting now. The report of the special investigation committee stands as a monument to the heroism of Hungary. It must not be turned into a monument to the futility of the United Nations.

Gov. Robert Gregg Cherry

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. WHITENER. Mr. Speaker, on yesterday I brought to the attention of the Members of the House the passing of a great North Carolinian, former Gov. Robert Gregg Cherry, of Gastonia, N. C.

I am inserting in the RECORD a copy of the story of his death carried by the

Gastonia, N. C., Gazette on Tuesday, June 25, 1957. I believe that this story will be of interest to our colleagues, since it so fully sets forth some of the highlights in the life of this great American.

The article follows:

Robert Gregg Cherry, 65—North Carolina's 89th governor and the only Gaston County man ever to serve in the governor's office—died at 7:40 o'clock this morning at Gaston Memorial Hospital.

He had entered the hospital here June 5.

Several weeks earlier he had been a patient at Duke Hospital in Durham.

Cause of his death was described by his principal physician, Dr. W. A. Anthony, of Gastonia, as a form of toxic poisoning. Dr. Anthony announced an autopsy will be conducted, but said this is of a routine nature.

Three nurses and a physician were with the former governor at the time of his death. Dr. Anthony had last visited Mr. Cherry's room in the hospital to check his condition at 11 o'clock last night. Dr. Anthony, who also was present at the hospital a few minutes after he died, said that Mr. Cherry's condition worsened suddenly just prior to his death.

While much of his life was devoted to public service, Cherry was also a highly successful attorney, known particularly for his skill at cross-examination and his mastery of rough-and-tumble courthouse tactics. Possessing a keen wit and never-failing sense of humor, he frequently was successful in trial of a lawsuit in throwing his opposition off balance. He served as Governor from 1944 through 1948.

Funeral for the former Governor will be held Thursday at 11 a. m. at First Methodist Church. Officiating will be Dr. Wilson O. Weldon and the Reverend C. E. Murray, pastor of the church. Entombment will be in the mausoleum in Gaston Memorial Park.

Honorary pallbearers will be members of the Gaston County Bar Association.

The only survivors of Mr. Cherry are his wife, Mrs. Mildred S. Cherry of the home, 212 West Ninth Avenue, and a half-brother, W. Brevard Cherry of Catawba, S. C.

The body will be at Carothers Funeral Home until 1 hour before the services when it will lie in state at the church.

The family asks that friends give memorial donations to the School for Handicapped Children instead of sending floral offerings.

Mr. Cherry was a member of First Methodist Church and served for a number of years as a member of its official board. In the civic sphere he was a member of the Gastonia Kiwanis Club.

Besides his service as such in public affairs, covering a long legislative career climaxed by service as Governor, he was also a powerful voice in the Democratic Party. He served as North Carolina's State Democratic chairman.

He was instrumental in writing the State Democratic platform in 1948, the last year of his governorship. As head of the North Carolina delegation during the 1948 National Democratic Convention he stood firm against all attempts to bolt North Carolina to the ranks of the Dixiecrats, led by J. Strom Thurmond, then Governor of South Carolina. His last active service in Democratic politics was as a delegate last August to the 1956 National Democratic Convention at Chicago.

IRON MAJOR

Gregg Cherry, the State's 89th Governor, was known as the Iron Major.

As a soldier, as a governor, as a man—in all his life and with all the things he accomplished—the Cherry leadership, magnificent wit, and warm human touch always appeared against a background that had a positive iron quality.

As speaker of the house of representatives in 1937, he ruled with an iron hand. He was hard and firm, like iron. His favorite color was gray. He wore gray suits and socks, and shirts in shades of matching gray. He often presented a picture in gray, without the grimness sometimes associated with that color. Topping off that picture was his head of glistening gray hair.

MADE HIS MARK

The State's newspapers popularized the "Iron Major" title when Cherry was speaker of the house in 1937. This was a hard-working session, often a rebellious one, and Speaker Cherry made his mark in State politics. He came out of the session an excellent bet for the governor's chair.

Robert Gregg Cherry was born October 17, 1891, at Catawba Junction in York County, S. C. His father, a Confederate veteran, was C. Lafayette Cherry. His mother was the former Harriet Davis.

The boy was named for his grandfather, Gregg Cherry. His mother died when he was an infant and he was brought to his grandparents' home in Gastonia.

Seven years later, when Gregg Cherry was still a child, his father died at the farm in South Carolina.

MOVED HERE

Cherry was taken into the home of his uncle, Henry M. Lineberger, who was appointed his legal guardian. The Lineberger family lived briefly at Catawba, S. C., but in December 1899, moved to Gastonia.

Here, in Gastonia, Cherry grew up, attended school, and made friends who later helped him win election to the State's highest office. The Linebergers treated him as one of their own children.

His maternal grandfather, Isaac Newton Davis, was a pioneer Gastonian.

Cherry attended the public schools of Gastonia and was known as a serious and purposeful student. But he had a good sense of humor and ample energy for mischief. His teachers noted, however, his burning desire and ambition to rise above the ordinary—he already had his eyes set on the governor's chair some day.

WORKED WAY THROUGH

Cherry graduated from Gastonia High High School in 1908. He entered Trinity College (Duke University) and worked his way through picking up and delivering dry cleaning, selling tailored suits, and typing for the dean of the law school.

He found time for basketball, too, and was good enough to be captain of the hardwood team his senior year.

He graduated in 1912. Then followed 2 years in law school. He received his bachelor of laws degree in 1914.

During the summers of 1912–14 Cherry worked in the tobacco fields near Durham, sold books door to door, and had a job in the mines of West Virginia.

TO CONVENTIONS

In 1912, when he graduated from Duke, Cherry took a trip to Chicago and Baltimore for the political conventions being held by Republicans and Democrats. He wanted to study politics at close range.

First, he joined the Republicans in Chicago where a split was developing between William Howard Taft and ex-President Teddy Roosevelt. Roosevelt and the Bull Moosers walked out, splitting the party, and leaving the way clear for the Democrats to nominate Woodrow Wilson and elect him to the White House.

Cherry, cheering, joyously, joined the revolters at Chicago and led them out of the convention hall. He secretly hoped for a deep enough split to elect a Democrat.

CHEERED AGAIN

On to Baltimore, and Cherry cheered again—sincerely this time—as the Democrats gave the nomination to Woodrow Wilson who later was elected.

It was at Baltimore that Cherry met Josephus Daniels, Raleigh newspaper publisher, who later was a strong influence in his life, especially in politics.

In 1914 Cherry opened his law office in Gastonia. In 1917, as war clouds gathered, he organized a company of Gaston men and trained them as Company A, 115th Machine Gun Battalion, 30th Division.

TRENCH FIGHTING

The company saw front-line service in France, survived the bitter trench fighting for 6 months, and came home with a loss of only 3 killed and 17 wounded. Cherry held the rank of captain.

Even before returning home, Cherry was projected into politics. Back in Gastonia his fellow townsmen put his name on the ticket as candidate for mayor, without his knowledge or consent.

He got off the ship in New York a few days before the election in April 1919. He got home the day before the election. He was putting away his uniforms—changing over to civilian clothes—the day of the election.

Cherry won. Being mayor of Gastonia was his first elective office.

REELECTED

He served until 1921. He ran again and was reelected.

Also in 1921 he married Miss Mildred Stafford, daughter of the mayor of Greensboro.

Cherry continued his interest in the North Carolina National Guard. He was promoted to major. He joined the American Legion and was elected first commander of Gaston Post No. 23 in Gastonia. In 1929 he was elected State commander.

He joined the Knights of Pythias, too, and was elected grand chancellor in 1924.

Politics took an ever-stronger hold on Cherry through the twenties. In 1929 his friend of Duke days, Willis Smith, of Raleigh, came to see him.

RUN FOR HOUSE

Smith wanted Cherry to run for the legislature. His reason: So Cherry would vote for him (Smith) for speaker of the house.

His arm twisted, Cherry consented. He did run and was elected to the State legislature from Gaston County.

He served in 1931, 1933, 1935, 1937, and 1939. He was speaker of the house in 1937.

In 1941 and 1943 he was elected to the State senate.

Cherry was gradually emerging as the strongest candidate for governor in 1944. He was the front-running candidate for the Democratic nomination.

CAMPAIGNING

In the primary of 1944, Cherry went up and down the State preaching health and hard work, better educational facilities and sound financing, improved opportunities for State employees, veterans, and teachers, better roads, rural telephone service and electricity, fair treatment of labor, improved agriculture, conservation and development of the State's resources, tax reduction where possible, and plans for a postwar construction program.

After a hard campaign, Cherry won. He was elected governor that fall, becoming the 89th man to hold the office and the first ever to serve from Gaston County. He was 53 years old.

SAVED MONEY

Cherry's administration, pinched by war shortages, was unable to start any large-scale construction programs immediately. By careful handling of money, his administration piled up surpluses of over $100 million that later went into permanent improvements of State institutions.

Cherry's administration left large sums for increases to schoolteachers' salaries, too.

Upon his retirement as governor in 1949, Cherry returned to Gastonia to live. He re-

sumed his law practice in the same office building.

Cherry's keen wit kept him in demand as a public speaker. He never lost his good humor, either, in the most trying situations as governor.

NOT IN MY PRECINCT

Once an angry schoolteacher wrote saying:

"I wouldn't vote for you again if you were the angel Gabriel."

Cherry fired back a reply:

"If I were the angel Gabriel you couldn't vote for me. You wouldn't be in my precinct."

Once a job seeker wrote, saying:

"Mr. Smith of the highway department has just died. Do you think I can take his place?"

Cherry sent him a telegram saying:

"It's all right with me if you can arrange it with the undertaker."

Statement of Congressman Torbert H. Macdonald, a Representative of the Eighth Congressional District of Massachusetts

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. DINGELL. Mr. Speaker, on Wednesday, June 19, the Honorable TORBERT H. MACDONALD, Representative from the Eighth Congressional District of Massachusetts, appeared and testified against the confirmation of Chairman Jerome K. Kuykendall, of the Federal Power Commission, to a new 5-year term.

Mr. MACDONALD has been one of the most vigorous and outstanding opponents of the natural-gas bill in the House Interstate and Foreign Commerce Committee of which we are both members. I believe that his remarks in connection with the confirmation of Chairman Kuykendall are of the utmost importance to the American people, and for that reason, I have asked permission to insert them in the CONGRESSIONAL RECORD at this time.

I hope all will read the remarks of Mr. MACDONALD and that others will come to realize as I have that the Honorable TORBERT H. MACDONALD has been serving well his constituents and the consuming public of his country by his vigorous and forceful opposition to a bill which would cost the consuming public of this country some $950 million a year:

STATEMENT OF CONGRESSMAN TORBERT H. MACDONALD, A REPRESENTATIVE OF THE EIGHTH CONGRESSIONAL DISTRICT OF MASSACHUSETTS

Mr. MACDONALD. Mr. Chairman, I am TORBERT H. MACDONALD, Representative from the Eighth Congressional District of Massachusetts. I am very grateful to you and the other members of this committee for the opportunity to appear and present my views on the important matter that is now pending before this honorable committee.

I am appearing here this morning on the matter of the reappointment of Chairman Jerome K. Kukkendall to a new 5-year term on the Federal Power Commission. I would like at this pont to preface my remarks by stating that as far as I know Chairman Kuykendall is a fine gentleman personally. I certainly have no personal objections to him. However, I feel strongly that Mr. Kuykendall has not always carried out the main duty of his high office, namely to protect the public interest. The basis for my opinion is predicated solely on testimony given before the House Interstate and Foreign Commerce Committee, of which I am a member, on the natural gas legislation now pending before that committee.

The members of this committee are well aware that the House Commerce Committee has recently concluded the public hearings on H. R. 6790, the natural gas bill, which seeks to free producers from effective Federal regulation. Yesterday, in fact, we began executive consideration of legislation and will be continuing same during this week, at least.

Mr. Chairman, I am not here to argue or expound on the merits or demerits of the gas legislation that is now pending before the House Commerce Committee. Rather I think that this committee should have brought before it the part Chairman Kuykendall played in formulating this gas legislation.

I am sure that every member of this committee will agree with me that when Chairman Kuykendall took office as a member of the Federal Power Commission he took oath to enforce and follow the laws of the United States, especially those governing his own agency which was set up to protect the American consumer from the unfair practices of large gas producers. As we all know, abuses by certain large companies led to the passage of the Natural Gas Act in 1938.

I soon discovered, after questioning Chairman Kuykendall during the gas hearings on May 9, 1957, that he had not carried out the principles of that oath, but that he had called secret meetings with the three segments of the natural-gas industry, namely, Randall LeBeouf, Jr., of LeBeouf, Lamb & Leiby of New York City, representing the gas distributing segment; William Tarver, of Southern Natural Gas, Birmingham, Ala., representing the transmission segment; and David Searls, counsel for Texas Natural Gas Producers, representing the gas producing segment of the industry. The admitted purpose of the secret meeting was to draft a bill acceptable to all segments of the Natural Gas Industry. This meeting, as you may know, was held on the instruction of the White House. There is no question that the vetoed corpse of the first Harris gas bill was still warm when Mr. Kuykendall instituted this gas legislation. That he did so at the request of the White House is not a mitigating circumstance in my opinion. He was appointed to serve the public, not the White House. I feel that the actual testimony taken before the House Interstate and Foreign Commerce Committee should be included in these hearings lest I be accused of prejudice. I now insert the actual questions and answers as appear in the reporters' transcript of the hearings.

The following is taken verbatim from the official record of our committee hearings:

"TESTIMONY OF JEROME K. KUYKENDALL, CHAIRMAN, FEDERAL POWER COMMISSION, BEFORE THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE ON MAY 9, 1957, TO AMEND THE NATURAL GAS ACT

"Page 184 and 185 of the transcript:

"Mr. MACDONALD. Would the gentleman yield for one clarifying short question?

"Mr. O'HARA. All right; I will yield.

"Mr. MACDONALD. Do I understand that you say you were not consulted at all about this bill, or merely about the drafting of the bill?

"Commissioner KUYKENDALL. I was not consulted at all about this by anyone that I can recall.

"Mr. MACDONALD. Thank you, Mr. O'HARA.

"Mr. O'HARA. Does that clarify it?

"Mr. MACDONALD. Yes, sir.

"Page 245 to 255 of the transcript:

"Mr. MACDONALD. Sir, this morning there was some conversation about what part you had played in the formulation of H. R. 6790, which was introduced by Mr. O'HARA and Mr. HARRIS. Would you care to comment on your part, your role, in the formulation of this bill?

"Commissioner KUYKENDALL. Well, I commented this morning, and I will repeat it: I had no part in the formulation of this bill or any other bill.

"Mr. MACDONALD. If I were to say to you, sir, that it is common knowledge—or strike 'knowledge'—it is commonly reported, shall we say, that prior to the election, prior to the past congressional and presidential elections, that you made it known to various segments of the industry that you wished they would get together to present to you a bill of this type so that you could make a report to the Director of the Bureau of the Budget, would I be saying something that was not correct?

"Commissioner KUYKENDALL. Yes; you would.

"Mr. MACDONALD. Then you categorically deny that you ever let any segment of the industry know that you were interested in their plans for the formulation of a new so-called gas bill?

"Commissioner KUYKENDALL. What happened was this, Mr. MACDONALD: That while Congress was still in session last year, and after the Harris-Fulbright bill had been vetoed, Jerry Morgan at the White House contacted me and asked me if I, without saying anything to anybody, could prepare a draft of a bill which I thought would fulfill the requirements that the President had stated in his veto message. So I told him I would try to do that. I went to work on it all by myself, and I soon ran into many problems. So I talked to Mr. Morgan, explaining that I could not do it myself, and the only way I could think to get it done quickly would be to confer with some of the people who had opposed the bill. I said I would like to talk with Mr. Randall LeBoeuf, who had been the spokesman of the distributing companies that opposed the bill.

"Mr. MACDONALD. What is his official title?

"Commissioner KUYKENDALL. He is a lawyer in New York City. I think he is in the room here right now.

"I talked with Mr. LeBoeuf, and he was willing to lend any assistance he could. He, however, agreed that we probably should get some representative of the producers and some representative of the pipelines.

"So I selected two other lawyers. I asked Mr. Searles, who has been a spokesman here for the producing industry on the previous bill, and I selected a Mr. Tarver, who used to be an attorney some years ago, long before I was with the Federal Power Commission, on the Federal Power Commission staff, but who is very knowledgeable about the Natural Gas Act and is now employed by one of the pipeline companies.

"Those gentlemen agreed that they would try to put together what they thought would be a good bill, and they did some work on it.

"In the meantime——

"Mr. MACDONALD. Did you see this bill while they were working on it?

Commissioner KUYKENDALL. I don't think this bill was in existence.

"Mr. MACDONALD. You said they were working on a bill, not H. R. 6790, but a bill, and I am asking you if you saw that bill?

"Commissioner KUYKENDALL. I saw several drafts of things they had drawn. None of them, so far as I know, ever saw the light of day.

"Then, as you will recall, last year, the President vetoed the farm bill, and other

things clogged up the congressional calendar, and it became quite clear to me that there would be no possibility of the administration sponsoring a gas bill, and I inquired of Mr. Morgan, and he later checked with me, and said that it was definitely out of the realm of possibility for this year.

"So I told these other three men I have mentioned that there was no chance of any bill coming up that year.

"In the meantime, I learned, and I have forgotten now from just whom, that Mr. Heyke——

"Mr. MACDONALD. Who is he?

"Commissioner KUYKENDALL. Mr. Heyke is president of the Brooklyn Union Gas Co., had instigated some conferences, not among lawyers, but among executives of the industry.

"Mr. MACDONALD. Each segment of the industry?

"Commissioner KUYKENDALL. Yes.

"And then later, Mr. Heyke came to me and said he had heard rumors about some lawyers drawing a gas bill, and he had started these conferences, he hoped they would be fruitful, and he requested that I defer to him and not have sort of a competing group going. And so I acquiesced to that.

"Mr. MACDONALD. What time of the year was this conversation had?

"Commissioner KUYKENDALL. Oh, I don't know, perhaps around the time Congress adjourned, I am not sure.

"Mr. MACDONALD. August?

"Commissioner KUYKENDALL. And so I stepped out of the picture at that time, never called these three lawyers together again that I had talked with; but was aware of the fact, and was advised from time to time by Mr. Heyke, or some of the other parties, that he had gotten together, and generally of what they were trying to do.

"And Mr. Harris mentioned that he had gotten ahold of a statement of principles. Well, I believe I received a copy of that.

"Mr. MACDONALD. A statement of principles from whom?

"Commissioner KUYKENDALL. I don't remember whether I got it from Mr. Heyke or one of the others, from other segments of the industry, with whom he was conferring. But I took no part in that at all, but let them go their way with it.

"Mr. MACDONALD. And you say that is the last you had to do with those segments of the industry concerning a gas bill?

"Commissioner KUYKENDALL. Yes, except, as I said before, they reported to me now and then as a matter of courtesy. I remember one time they reported that they were just about at the end of their rope. They didn't think they could ever agree on anything.

Mr. MACDONALD. What time of year was this?

"Commissioner KUYKENDALL. I don't recall. I didn't keep any record of it.

"Mr. MACDONALD. Was it during October and November preceding the election?

"Commissioner KUYKENDALL. I don't recall whether it was preceding or after that election.

"Mr. MACDONALD. And that is all the connection you have had with this bill?

"Commissioner KUYKENDALL. That is all; yes.

"Mr. MACDONALD. Well, sir, as I understand it, the bill under which you administer the act, the act which you administer, was put in for the protection of the consuming public of the United States, was it not?

"Commissioner KUYKENDALL. Yes.

"Mr. MACDONALD. And that, as such, your primary if not sole duty is to the consumers of the United States; is that not correct?

"Commisisoner KUYKENDALL. Well, to the public interest, which embraces all segments of the country.

"Mr. MACDONALD. Well, after elections are over, the public interest reverts to the people, the public interest is the consumers, because there are roughly 29 million consumers, and the number is going up all the time, as I understand it.

"Would you not say that your primary duty is to protect the people who use this gas, rather than those who produce it?

"Commissioner KUYKENDALL. Yes; and that is what I am endeavoring to do.

"Mr. MACDONALD. I would like to ask you this question: If, during the formulation of this bill which is now H. R. 6790, you did not call on any consumer group to find out how they felt about this matter, and relied solely on only the three segments of the industry that had to gain from any such bill?

"Commissioner KUYKENDALL. Well, that is a loaded question.

"Mr. MACDONALD. It is not a loaded question.

"Commissioner KUYKENDALL. I don't know what the distributors had to gain.

"Mr. O'HARA. Let him answer that.

"Mr. HESELTON. I think he has a right to ask it.

"The CHAIRMAN. The gentleman may proceed in order.

"Mr. MACDONALD. I would like to say this, sir: Any question that may seem adverse to you is not necessarily loaded, and I, as an impartial member of this commitee, somewhat resent being told I am asking loaded questions when actually I am merely asking you why you did not consult with the people from whom the job that you occupy was created to protect the very people that you did not—at least as you yet have said—ever consult. And I am just asking you why.

"Now, that is not a loaded question.

"Commissioner KUYKENDALL. In the first place, I know of no sufficient consumer groups to go to; and I wasn't going to groups. I went to three individuals, and I admonished those individuals that there should be no publicity about this, and there should be absolute secrecy, because I did not want any rumors started that there might be another gas bill during the last session of Congress.

"Furthermore, the pipeline group, and particularly the distributing group, were antagonistic to the producers, and were in, and had the same position on the matter as did the consumer, alleged consumer groups, that opposed the bill last time.

"That is why I went to Mr. LeBoeuf, who had been the spokesman, the chief spokesman, for the opposition to the previous bill.

"Mr. MACDONALD. I would just like to say that I think, under the circumstances, you acted wisely by acting in secret for the purposes you had in mind. But I repeat my question, for I have not had an answer to it yet. You have gone on about what you did, but you have said that you did not consult with any groups of consumers, and I know that you do know of groups of consumers, because they appeared here 2 years ago when you were in the room and you listened to their testimony in opposition to the House bill.

"Commissioner KUYKENDALL. No; I did not consult with any consumer groups. I was consulting with lawyers.

"Mr. MACDONALD. Did you consult with any lawyers from a consumer group, of the mayors' association, for one, the mayors of 200 cities of the United States?

"Commissioner KUYKENDALL. No; I did not. I only consulted with these people I have mentioned.

"Mr. MACDONALD. Since the mayors of 200 large cities of the United States comprise, at least in theory, representation for millions of people, and millions of people who would be affected by this bill, I cannot quite understand why you did not, and I am asking for an explanation why you did not.

"Commissioner KUYKENDALL. This bill poses a question where the producers are one interest, and not only the consumers but the distributing companies and the pipeline companies were another interest.

"Many pipeline companies were not friendly to the bill last time.

"I got 3 extremely able men from those 3 segments of the industry, and I believe that among those the consumer interests were adequately represented.

"Mr. MACDONALD. Now, sir, I want to yield to my colleague, but I want to ask because I think this comes to the nub of it: You consulted with those three groups because you wanted a gas bill, that is not correct?

"Commissioner KUYKENDALL. Not groups; three individuals.

"Mr. MACDONALD. With 3 representatives of 3 segments of this industry. You, by virtue of consulting with them, were consulting with the industry, is that not correct, for the viewpoint of the segments which they represented?

"Commissioner KUYKENDALL. Yes; I chose one from each segment.

"Page 269 and 270 of the transcript:

"Mr. MACDONALD. Sir, to go back to what we were originally talking about, your connection with the formulation of this bill, I do not know whether you are aware of this or not, but on April 15, 1957, there appeared in the Oil and Gas Journal an article which included the following paragraph, referring to the gas bill:

" 'Early hearing planned. The bill is based upon policies worked out by FPC Chairman Jerome K. Kuykendall in meetings with industry groups which he was asked to hold after the gas bill was vetoed by Eisenhower last year.'

"Do you say that that statement is not an accurate statement?

"Commissioner KUYKENDALL. Yes, I say it is not accurate. And I say that what I told you a little while ago is the truth.

"Mr. MACDONALD. All right, sir."

You will note that Mr. Kuykendall made several denials before he finally admitted that he had indeed originated a gas bill. The role, and sole role of the Federal Power Commission is to protect the public against the proven depredations of the gas industry.

The shocking thing in my mind is that Chairman Kuykendall never consulted a single consumer group the entire time this legislation was under consideration. If he was vitally interested in the consumers, he certainly was in a position to consult with any one of the 200 mayors of our large cities of the United States, who as you know, represent millions of people and whose association had so vigorously opposed the first Harris bill. I could never get a satisfactory explanation from him as to why the consumers were left out when his sworn job is to protect the public consumers against the manipulation of the natural gas industry. It is apparent to me, from the evidence, that Chairman Kuykendall has not been protecting the interest of the consumer. In fact, from his testimony, I am convinced that he collaborated with the natural gas interests, to the exclusion of consumers, in drafting a gas bill to ease Federal price controls on gas producers.

In order that the members of this committee may have a complete picture I would like to have made a part of the hearing record as well for the consideration of this committee, a number of questions I asked Mr. Randall J. LeBoeuf, Jr., who testified on behalf of Consolidated Edison Company of New York on May 20, 1957, and his answers to these questions. Likewise, I would like to have the questions I asked Mr. John E. Heyke, Jr., president, Brooklyn Union Gas Co. on June 4, 1957, and his answers, made a part of the hearing record. Their testimony reaffirms my position.

I am sure that if the members of this committee will study the questions I asked Chairman Kuykendall and the answers that he gave, together with the testimony of Mr. Heyke and Mr. LeBoeuf you will agree with me that Chairman Kuykendall failed in his primary duty to protect the people who use natural gas and favored those who produce it. The fact that distributors were involved is of very little consequence, for as we all know, the distributors merely pass along any increased cost to the consumer. Even more importantly the fact that all segments of this industry are closely intertwined is a fact beyond dispute. For example, Mr. Heyke, of Brooklyn Union Gas Co. and president of the Council of Local Gas Companies, in testimony before our committee stated: "Gas distributing companies are little more than sales agents for producers and pipelines."

Another illustration of the closeness of the three segments of the industry is shown by the fact that one of the principal witnesses for the pipelines in this natural gas bill hearing is leaving his position this month as head of a pipeline transmission company to become president of the large distributing company that services Chicago, Ill.

The record of the testimony before our committee is replete with testimony that Mr. Kuykendall consulted not only with his secret group representing the three segments of the industry, but also a second group in which everybody but the public was represented. Mr. Randall LeBoeuf, of LeBoeuf, Lamb, and Lieby of New York, who have clients in all phases of the gas and oil industry, worked hard and long as a member of both secret and nonsecret industry groups in drafting the bill now known as the Harris-O'Hara bill. The main point in both groups' bill and which is presently contained in the Harris-O'Hara bill, is the prohibition against the Federal Power Commission looking at the producers cost of production. This prohibition against looking at costs will cost the consumers of natural gas literally billions of dollars. It is the quid pro quo for which the producers are willing to file reports to the Federal Power Commission, whereas under the first Harris bill they would not even have to report. This prohibition is contained in the draft of legislation put forth by the secret group of industry representatives called together by Commissioner Kuykendall in principal No. 11, subparagraph (5). I am making this draft, which was furnished me by Mr. LeBoeuf at my request, a part of the record.

What this cost prohibition will mean to the consumer I think is clearly illustrated by a concrete example in the Denver, Colo., area. In this factual case if the Colorado Interstate Gas Co. was given a rate increase, based on the regular cost method now in effect, the increase would amount to $1,698,198, or a 26-percent increase, which of course is paid by the consumer. The same case based on a cost-prohibition basis which would be followed under the Harris-O'Hara bill would amount to $7,543,335, or an increase of 114 percent to the Public Service Co. of Denver, which in turn passes it on the consumer. This difference of 88 percent would be an annual increase of over $6 million.

With this illustration I think it unnecessary to go forward with other similarities in the two groups' bills which are to be found, but I have put them in the record for your perusal.

Both Mr. Heyke and Mr. LeBoeuf frankly admitted consulting with each other in April of 1956 about the drafting of a gas bill. (See p. 1614 of House hearings) while Mr. Heyke and Mr. Kuykendall consulted on the gas bill in May of 1956. The final draft of the bill was not finished until October of 1956. There is no dispute between anyone that this final draft is completely encompassed in the bill which is now H. R. 6790, and known as the Harris-O'Hara bill.

It is shocking to me, and I feel it will be to the committee to observe the role played in the originating of this gas bill by a chairman of a commission which has the duty to regulate the segments of the gas industry, to sit down in secret with the industry to draft a bill that would be satisfactory to that industry.

His duty is to protect the consuming public, not to draft legislation that will be satisfactory to the industry he is regulating. I think that the lack of judgment alone, shown by such an action would act as a disqualifying yardstick for reappointment to his high position. If, on the other hand, he was only being a messenger boy for an administration who was then engaged in a presidential and congressional election, I feel that this too is a disqualifying yardstick, for the public has a right to look to protection far beyond that afforded by a messenger boy.

If there are other and perhaps more complicated reasons to be deduced from the factual evidence submitted here today, I can only point out that in no place in the record can I find any evidence that the present Chairman has fought for the protection of the consuming public in this matter.

Can the Job Be Done?

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. PILLION. Mr. Speaker, this is the fourth of a number of articles dealing with the problems of cutting waste in our Government through recommendations of the bipartisan second Hoover Commission.

These articles were written by Mr. Clarence Francis, National Chairman, Citizens Committee for the Hoover Report, and were published in a pamphlet entitled "The Coupler," by the Symington-Gould Corp., of Buffalo, N. Y.:

CAN THE JOB BE DONE?

The preceding three articles have shown why we must cut Government waste, an intelligent method to undertake the job, and the size of the job. But our cause is lost if cannot apply the knowledge gained. Will we act in time to save the $5 billion a year which full adoption of the recommendations can mean? That's saving of $100 per average American family, by the way.

Unfortunately, nothing happens automatically in our democracy. To make changes, new laws must usually be passed. Before they can be passed they must be debated in Congress. And Congress must be advised by the American people.

In the past, attempts to reorganize the Federal Government have generally failed. The biggest roadblocks to reorganization have been "pressure groups," both within and without the Federal establishment. These groups represent a minority of Americans who are interested in maintaining certain advantages to themselves.

HOOVER COMMISSION SETS NEW PATTERN

As a safeguard against partisan pressures, all Members of Congress from "both sides of the aisle" voted for the law which created the second Hoover Commission. That is why the President appointed men from both political parties to serve on the Commission. Also included were members of both the Executive and Legislative Branches of the Federal Government and outstanding personalities outside the Government.

Never before in the history of our Nation has such a complete review of Government operations been made. The second Hoover Commission has given the Nation a blueprint for a streamlined, efficient governmental machine. It is now up to Americans everywhere to make sure that the blueprint is followed.

The odds were against the first Hoover Commission when it completed its report in 1949. Yet, by 1952, some 72 percent of the Commission's recommendations had been adopted. That experience proved that it can be done.

The second Commission has found the Federal Government doing things which should be done by private enterprise, in many cases more easily and cheaply.

For example, the Commission found that the Defense Department runs 2,500 individual commercial enterprises competing needlessly with taxpaying small businesses. To name a few, these governmental establishments include ice plants, sawmills, bakeries, motion-picture studios, dental manufacturing establishments, ice-cream plants, tree garden nurseries, sea transport lines and a railroad in Panama.

The Commission said that 1,000 of these enterprises could be eliminated without injury to our defense effort. It made little sense to the Commission for the Department of Defense to run laundries in regions where there are plenty of commercial laundries, bakeries where there are commercial bakeries, and paint factories where private firms made paint. The Defense Department, I am glad to say, has accepted the Commission's recommendation. So far some 179 business-type establishments have been closed.

In another instance, it was found that a $350,000 loss was registered over a 5-year period by 3 Government-owned ships of the Panama Steamship Line. These ships ply between New York and the Caribbean Sea. During this same period the passengers carried at Government rates dropped from 6,248 in 1950 to 4,746 in 1954. Freight dropped seriously at the same time. Yet in 1954 alone, the Military Sea Transport Service of the Department of Defense made 28 passenger ship voyages and 8 freighter voyages to the Canal Zone, carrying 6,781 passengers, 9,311 troops and 79,515 tons of cargo. Meanwhile, the Government's Panama Steamship Line sailed with partly empty staterooms and holds.

The second Hoover Commission made specific recommendations to cut this duplication and waste. To carry them out, every American must support them.

Importance of Girard Case

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I want to insert an editorial from the June 22, 1957, issue of the Daily Herald-Telephone, published in Bloomington, Ind. This editorial presents some interesting conclusions concerning the Girard case, which is of great interest in my district:

IMPORTANCE OF GIRARD CASE

The case of William Girard, whose shooting of a Japanese woman has become an important international matter could well be the occasion for this country—and particularly our State Department—to do some

serious thinking about all Americans living abroad.

Ever since the end of the war we have heard an incessant clamor against colonialism and imperialism. The prime targets were Britain and France, with the Dutch getting the rap in Indonesia. Now the tongues are being unleashed against the Americans.

Let's look at the record of Britain. It is far from being perfect, but the British did bring order, respect for law, and a good share of the free enterprise system, and a rather high degree of freedom. Being British they could do nothing else. Yet the British were probably the most disliked people on earth.

What were the British sins? The chief charge of the people in the former colonies was that the British were aloof and adopted a superior attitude.

Neither the British nor the Americans are especially adept at learning other languages. On our side we have so little chance to use them. The British just don't take the trouble. That fact alone creates aloofness. In every city in Europe, Asia, Africa, and South America there is a British-American colony. No matter how much we wrangle with the English at home, we do seem to get along very well with them once representatives of both nations find themselves on foreign soil. The big tie is language. It is all very well to be sociable with the Argentines, Indonesians, Japanese, etc., but it's a very difficult job when the knowledge of the language is confined to such simple sentences as "the girl has a doll," "today is Tuesday," and such other simple stuff as can be quickly snatched out of a simplified course in a foreign language.

Take a look at our own country. We see all sorts of Polish, Swedish, German, etc., settlements. Those people don't especially want to be clannish, but it is forced upon them. If you can't speak English, you can't even buy groceries, you can't telephone, you are isolated—and not by choice. Exactly the same situation confronts the American and Britisher in Japan. He is forced to depend on his servant to supply the daily food for the table. He is forced to trade in certain stores which provide interpreters. He simply has to be aloof.

The second charge is that the British, French, Dutch, or American act superior. They do, because they are superior. It isn't high hat to say the average American is superior to the average native of the Belgian Congo. He is. It isn't egotism to say the Britisher in India was the mental and physical superior of the average Indian. He is. If you have any doubts, look at the record of the two countries.

It isn't vanity to say the Dutch are superior to the Indonesians. Simply take a look at the country before and since the Dutch left. Before there was a stable government, respect for law, people worked, there was a high degree of prosperity and employment. Now the country is wracked by civil war, little gangs have taken over the actual government. Business is at a standstill. Despite the super abundance of raw materials and an oversupply of labor, Indonesia is, in fact, bankrupt. It has just announced it will not pay its foreign debt, most of which is owed to the Dutch. From our viewpoint, the Dutch are superior.

Is Egypt any better off since the British got out? The merchants, manufacturers, and people who labor don't think so. They get a constant diet of propaganda, but a pretty thin diet of food. Just ask yourself—who is superior, the average Briton or the average Egyptian.

Envy is the root of the whole evil. The native Egyptian, Indonesian sees his superiors live well, and live in cleanliness. He never considers why there is a diffeernce. He never stops to think of the years of schooling, of the system of sound government that develops resourceful minds. He figures that—if he is free from all colonial restraint—he too will live like his superiors. We have seen many examples of that folly in the past 10 years.

Many people have seriously questioned the wisdom of granting freedom before a nation is ready to receive it. The Philippines are the very best example. The United States prepared the Filipinos for freedom for nearly half a century, and much more important, we have subsidized the present government to keep it healthy. On top of that, the Philippines have been very fortunate in having a very capable and selfless group of native leaders. In that they have been almost alone.

Now it is Uncle Sam who has his troops stationed all over the world. They get paid better, they live better, and they are forced to keep to themselves. They are not popular, and their popularity is getting lower every day. This Girard-Japan situation is just an extreme manifestation. The Communists elected a mayor on Okinawa. Even the sensible Icelanders kicked us out, and then changed their minds after the Polish and Hungarian revolts. In other words, we aren't popular, but we are needed.

Every time Uncle Sam pulls home one of his soldiers or official foreign representatives we build better international relations. It's high time this simple truth soaked through State Department heads. Girard may turn out to be the builder of a new foreign policy—which we could sure use.

Horsesense on Hells Canyon

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. HOSMER. Mr. Speaker, the Christian Science Monitor has expressed some editorial thoughts on the Hells Canyon Dam issue that make sense. For the last 4 years, at least, those who want to scrap over public versus private power have pegged their arguments around this remote piece of geography in the wilds of Idaho. Some political strategists apparently think the issue had great political "sex appeal" in last year's elections in the Pacific Northwest and want to keep it alive for next year's campaigns. Personally, I think the elections concerned went off on other matters and most people were sick of hearing about it then, and are getting more so. I wish they would take the Monitor's advice and find another canyon to fight about.

The editorial follows:

LAST CHANCE FOR SECOND THOUGHTS

The Senate has reversed its action of a year ago and voted to build a Government-financed high dam in Hells Canyon.

Out of the 7-year controversy, which this latest action caps, a few points of general agreement stand out:

1. That the direct money cost of the high dam would be very much larger than that of the three lower dams which the Federal Power Commission has licensed the Idaho Power Co. to build. How much more is still a matter of debate.

2. That the single high dam would more completely develop the enormous power and water-storage potential of Hells Canyon than would the three smaller dams. How much more, likewise, is a matter of dispute among competent authorities.

3. Even had Idaho Power clung to its grant of a fast tax writeoff, the direct money cost to the taxpayer at the most generous computations of interest would still be lower than the outright cost of building the high dam.

This would seem to add up in fiscal logic to a simple conclusion: that the House (which has never voted on the project) should reverse the Senate out-of-hand, or the President should exercise his veto. Except for two considerations which, undeniably, color the picture.

The first of these is that the three low dams would rule out for unpredictable decades any opportunity to fully develop a great natural resource. The finality of this prospect puts even a hundred million dollars or so in different perspective.

The second is that the circumstances surrounding the fast tax writeoff certificate and the evident inside disclosure of its issuance had begun to make Hells Canyon smell a little like Dixon-Yates. On this count the Senate's action could be read as a protest vote.

Idaho Power's renunciation of its privilege has done much to dispel this aroma. But there remains the matter of choosing a whole or perhaps a three-quarters loaf with respect to the Hells Canyon potential. If the House and the administration now would like to take some second thoughts, the Senate has given them the opportunity.

What Is Behind the Galindez Case

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. REECE of Tennessee. Mr. Speaker, in view of the remarks just made by the gentleman from Oregon, I ask consent to extend my remarks and include a very able article by a very able American.

The article follows:

WHAT IS BEHIND THE GALINDEZ CASE

(By Harold Lord Varney)

The last few months have witnessed one of the most obscene performances ever staged by our "liberal" exhibitionists. Briefly stated, it has been the attempted journalistic lynching by a part of the American press of Gen. Rafael L. Trujillo, first citizen of the Dominican Republic. It has been the sorry attempt by a tight little handful of professional American "liberals" to destroy the man who is the pivot of American military security in the vital Caribbean area.

That the familiar crew of professional liberals should attach themselves to the anti-Trujillo cause is understandable. What is disquieting is that they have been joined in this lynching party by some of our most respectable national publications, whose editors should know better. Carrying the gonfalon in this incident has been the pontifical New York Times, idea fount of all the host of American eggheads. Scarcely a day passes that the Times does not confront its readers with a new anti-Trujillo editorial or news story. But the Times has lots of company. Such mass-circulation magazines as Life, Look, and, on a more starchy level, Harper's, have joined in the chorus. Wittingly or unwittingly, all these national media are helping to create a stereotype in

the American mind that Trujillo's Dominican Republic is somehow outside the pale of American approval. It is a typical liberal smear job.

This is not the first time that the liberal hue and cry has been unleashed against Trujillo. Actually, it is the third full-dress drive. The first was in 1937 at the time of the so-called Haitian border incident. The second was between 1947 and 1949 when the Communist-organized Caribbean Legion actually attempted an armed invasion of the Dominican Republic, to the applause of the leftist intelligentsia in the United States. Both of these attempts followed the pattern of a spotlighting of some alleged wrong in the Dominican Republic and then, by a trick of transference, indicting General Trujillo himself as an ally unacceptable to the American people. Both these attempts, which had wide press support at the time, failed dismally.

Now the smear drive is being ventured again. This time the enemies of Trujillo have a full-rigged mystery story to aid their approach to American editors. This is the so-called Galindez case.

The final chapter of the Galindez disappearance has not yet been written but enough is now known to indicate that in Jesus de Galindez we are not dealing with a martyr. The facts which have been brought to light suggest that we may be dealing with a simple case of voluntary personal disappearance.

Galindez, a lecturer at Columbia University and a writer of tracts against Trujillo, dropped out of sight in New York on March 12, 1956. No witness, who has appeared in the investigation, has seen him since that day.

Because Galindez was known to be writing a book against Trujillo, the Left-Wing elements which he had cultivated since coming to New York, set up an immediate cry of murder. The allegations took absurd forms. One accuser, Nicholas Silfa, who has since been arrested in New York for alleged illegal practice of dentistry, caused a 3-day sensation in the press by declaring that he had information that Galindez had been burnt alive in the furnace of the Dominican Line freighter, *Fundacion*, then in the New York port. When the New York Police Department investigated the charge, they discovered that the mouths of the three boilers on the *Fundacion* were so narrow that a man's body could not be pushed in. The story backfired.

Then it was alleged solemnly, by New York Trujillo-baiters, that Trujillo feared the 750 page book, "The Era of Trujillo" which Galindez was hawking around the New York publishing houses, and that he had been done away with by Dominican agents to stop the book. General Trujillo himself nailed this one when he revealed that he had already had an opportunity to stop the book and had rejected it. Before offering it for publication, it appears, a go-between for Galindez had approached representatives of the Dominican Government and offered to kill the book provided the Dominican Government paid consolation money in the amount of $25,000. The Dominicans had refused this, and Galindez then offered the book to New York publishers. The individual who acted as Galindez intermediary in this sordid transaction made a public statement divulging the episode to the New York World-Telegram.

And then a bombshell dropped on the case. The enterprising New York Herald Tribune discovered that Galindez had been living a double life. By day a $300-a-month lecturer at Columbia, away from his classes he had been conducting a lucrative money-raising drive for the so-called Basque government-in-exile, which is resisting Franco in Spain. He was a registered agent of that body. Since 1949, he had reported, he had raised the sum of $1,023,004 for this purpose—$32,103 of this money he reported as spent in the United States for personal expenses. His superior in the Basque government-in-exile, Jose Antonio Aguirre, in Paris, acknowledged that about $500,000 of this money had been sent to him. What happened to the other nearly $500,000 still remains a mystery.

In short, Dr. Galindez was not just a humble scholar: he was an international plotter with assets of half a million dollars in his possession. Here was certainly a much more obvious field for surmise, concerning his disappearance, than any possible Dominican lead. He could have been killed by criminal operators to get his money. He could have gone to Spain to conduct the underground against General Franco. Or he could himself have voluntarily disappeared, by slipping into another identity, with his half million. Senor Aguirre, from his Paris sanctuary, has given no help on any of these possible lines of inquiry.

An even more plausible explanation occurred. Galindez, who had Communist associations, could have been spirited to Russia. As is well known, Russia's MVD is highly trained to effect overnight political disappearances. The spiriting away of Burgess and MacLean in England, and the earlier disappearance of the scientist, Pontecorvo, were cases in point. The mysterious vanishment in the United States of Arthur Adams and of Juliet Stuart Poyntz were precedents. Certainly, it would have sharply aided Communist interests in the Caribbean to have staged the whole Galindez disappearance, and to have triggered the American liberals into launching the present anti-Trujillo publicity drive.

This surmise was strengthened when two refugee Hungarian professors arrived in Vienna after the Hungarian uprising. They declared that they had met Galindez at the Matyas room in Budapest in July (4 months after his alleged killing) and that he had given them the full Moscow indoctrination treatment. At that time, he apparently was a Soviet agent. The story of this meeting was published in the Vienna Montag.

The simple Trujillo-vengeance explanation of Galindez has thus flattened out during the year into several parallel lines of conjecture. Today, the assumption that Dominicans made away with Galindez has become the most implausible of the myths which have grown up around the case.

But "Liberals" are a stubborn and an intellectually dishonest breed. They have refused to give up the juicy propaganda property which Galindez has become. They are still belaboring Trujillo.

They found an opportunity to revive the agitation when Gerry Murphy, an American aviator soldier of fortune, disappeared in Trujillo City and when Octavio De La Maza, a Dominican pilot, committed suicide in a prison cell after confessing the murder of Murphy. De La Maza left a letter alleging homosexual encounters with Murphy. There was enough of an air of mystery about the incident to give an opportunity to link it with Galindez. Sally Caire, an alleged fiance of Murphy's entered the case, reporting several unsubstantiated conversations with Murphy in which he supposedly confessed flying Galindez' body out of New York on an unscheduled flight from a private airport in Amityville, Long Island. The only cited witness of this departure was an airfield attendant, who is now dead. The story collapsed when it was found that the books of the airport showed that the plane left Amityville for Miami 9 hours before the disappearance of Galindez. The young woman achieved a brief immortality by having her photo in Life, but since the whole fantastic story was built upon a chain of dead men's allegations, it was not very convincing. Further confusion was added to the De La Maza story when the State Department questioned its authenticity. It is obvious that Life jumped the gun on the story before the facts were all in.

But this patently contrived case has now been parlayed into a demand for a Congressional investigation. CHARLES O. PORTER, a first-term liberal Democratic Congressman from Oregon—avid, like all newcomers, for quick publicity—arose in the House on February 28 to repeat all the lurid gossip which has accumulated around the case and to include the startling demand that we apply sanctions against the Dominican Republic. Mr. PORTER would ban American travel, cut down or eliminate the Dominican sugar quota and bar the Republic from Export-Import Bank credits. To such absurdities has this case now descended.

Those who are wise to the ways of American publicity know that such clamor doesn't just happen in the United States. It is planted. The successive chapters in the Galindez agitation bear all the earmarks of an expert public relations operation. Magazines like Life and Look, and the national dailies, which have headlined the Galindez story, don't open their columns to amateurs like Nicholas Silfa. It is obvious that the pros have been at work.

When we look for the moving hands behind this 12-month sensation, we find that we haven't far to seek. All trails lead undeviatingly to an office at 67 West 44th Street described as the headquarters of the Inter-American Association for Democracy and Freedom. Here we find a determined lady named Frances R. Grant, whose face is familiar to all who have worked in the Latin-American field, as the front for numerous agitational activities which have long made trouble for the United States among our southern allies. Miss Grant is the self-appointed American conscience in the whole area of the Caribbean and South America. She has dedicated herself to fighting sin in Latin America. Sin, in her decalog, means deviations from civil liberties, as defined by the sinal of the American Civil Liberties Union.

Miss Grant has not always been a professional Trujillo-baiter. Before she involved herself in Latin-American politics, she burned with another ardent enthusiasm. This earlier Grant interest was the promotion of Nicholas Roerich.

Now largely forgotten, Roerich cut a wide swath in New York in the 1920's among the cultists and yearners. He was the "Dear Guru" of the notorious Henry A. Wallace letters. Wendell L. Willkie's failure to publicize these letters in 1940 probably cost him the Presidency.

Westbrook Pegler described Roerich as a "serio-comic Oriental religious fakir * * * who gave off intimations that he might be God Almighty."

Miss Grant, for 16 years, was a dedicated Roerich disciple, serving for 6 years as managing director of the Roerich Museum. She lectured widely as a propagandist for the museum. Actually, the Roerich movement was the springboard for her entrance into the Latin-American field.

When we glance at the cast which Miss Grant has assembled around her to fight for civil liberties in Pan America one curious thing strikes us. Like Galindez himself, they are nearly all avowed Socialists. While they are scrupulous to maintain that they are against communism, most of them have Socialist Party or Socialist-front records.

The star in her publicity constellation is none other than Norman Thomas, the perennial Socialist candidate for the Presidency. Mr. Thomas, in his old age, is now undertaking the rebuilding of a new American Socialist movement. No one has yelped more loudly or more frequently for Galindez during the past year than he.

Another is Clarence Senior, immigration coordinator under Puerto Rico's Governor Luis Muños-Marin. Mr. Senior is the former

national secretary of the Socialist Party of the United States.

Cooperating with her is Daniel James, former editor of the Socialist magazine, New Leader. Also Prof. Robert J. Alexander, a member of the staff of the New Leader.

From our scrutiny of Miss Grant's little junta emerges a startling fact. The people who are fighting Trujillo most energetically in the news columns of the American press are not just plain, liberal-model Americans who are outraged over Dominican abuses. They are people who have been outraged over many other things. Primarily, they are outraged over the capitalist system which is working so well in the Dominican Republic. They don't like the Dominican Republic under Trujillo, but they don't like the United States under Eisenhower either. What they really want, despite their present anti-Communist professions, is a Socialist revolution, preferably peaceful, in all the Americas. Trujillo has been an immovable obstacle to that objective.

Socialism and communism are two separate denominations in the church of Karl Marx, but before we begin to accept the advice of the Socialists in our American foreign policy it would be wise for us to heed the words of Mr. Harold Macmillan, Prime Minister of Great Britain. Mr. Macmillan, who has had a lot of experience with Socialists in England, told us on March 18:

"There is no difference between socialism and communism except this: Socialism is soft, communism is hard; socialism is pink, communism is red; socialism gets you down bit by bit by a kind of anesthetic process. It might be called mercy killing. Communism just knocks you on the head."

This is plainly evident when we turn to the individual who appears to be the planning head of the whole anti-Trujillo drive in the American press and in Washington. That individual is Roger N. Baldwin. Mr. Baldwin pulls many wires of influence. He is the chairman of the ultrarespectable International League for the Rights of Man. This league, a United Nations consultant, is a sort of holding company for a whole procession of civil liberties organizations, including Miss Grant's association. Miss Grant, incidentally, is the secretary of Baldwin's organization. The league, although it has a global program, particularizes in the Latin American field.

So important does Baldwin consider the league activities that he resigned the 30-year directorship of the American Civil Liberties Union in 1950 to assume its chairmanship.

This man, Baldwin, is quite an operator, Seventy, now, and weighed down with egghead honors, he has successfully lived down his murky pro-Communist past. Few remember that he went to prison in 1919 for refusal to register for military service in World War I. Few recall his labors for communism in the 1920's and 1930's which inspired the Committee for the Investigation of Communist Propaganda of the 71st Congress to declare that 90 percent of the American Civil Liberties cases, under Baldwin, revolved around Communist activities.

Not a Communist Party member himself, Baldwin, for almost 20 years, was a sort of one-man money-raiser and master mind of American Communist causes. He raised the endowment and directed the Garland Fund which, during its 6-year career, distributed $1,600,000 to direct Communist and Socialist movements, including a whole cluster of Communist newspapers, publishing houses, and schools. He was largely responsible for raising half a million dollars in 1922 to finance the Autonomous American Colony of the Kuzbas, which was set up in Siberia to help Soviet Russia. He was the prime mover in 1924 in the Russian Reconstruction Farms, set up to aid farm cooperatives in Russia. He was one of the founders and early leaders of the American League for War and Fascism, which has been cited by the Department of Justice as a Communist organization.

Nor is his interest in Latin America a new thing. Way back in the twenties he was a member of the National Committee of the All-American Anti-Imperialist League which was then the Communist Party front in the Latin American field. In 1941, Attorney General Francis Biddle classified this League as a "Communist front".

His enthusiasm for Russia prompted him to visit Sovietland in person and he returned to write Liberty Under the Soviets. In this curious book, he excused the tyrannies of the Soviet rulers because they were counterbalanced by the "abolition of privileged classes based on wealth." In September 1934, he wrote a signed article in Soviet Russia Today saying: "I, too, take a class position. It is anticapitalist and prorevolutionary." In 1935, he wrote in a Harvard class book, "Communism is the goal." Before a committee of the 71st Congress, he frankly declared in 1930 that he would defend a man who advocated political murder, or even assassination.

That such a man is now masterminding, from his International League for the Rights of Men aerie, the whole anti-Trujillo publicity drive has elements of the grotesque for all who can hold onto their sense of humor. The man, who for 20 years could see no wrong in Stalin, now boils with outraged wrath at the abridged civil liberties under Trujillo. That American magazines of top circulation are now throwing open their columns to the spy-fiction nonsense about the Galindez case at the urging of Mr. Baldwin and Miss Grant is a frightening commentary, upon the state of intellectual honesty which prevails today in the "liberal" American press.

The evil of the whole situation is that, to gratify their doctrinaire concepts of civil liberties, the Baldwins, the Grants, and the Thomases are perfectly willing to shatter the whole structure of alliances in the Caribbean by which this all-important American area is now insulated against communism. One need not give blanket endorsement to everything which Trujillo has done to recognize that, without him, or successors of equal firmness, the Dominican Republic could easily degenerate into a breeding ground of communism. It could become the fatal breach in the periphery of American Caribbean defense which would endanger our whole security in this hemisphere. Such considerations are of minor importance to the ideologues who now cry that one Galindez is worth more than 2,400,000 pro-American Dominicans. But to the responsible men in the Inter-American agencies of our Government in Washington, the distortion of this Galindez issue is recognized as a deadly weapon pointed against our whole Latin-American policy. It is the act of a political moron lighting matches among the fuses of a dynamite stockpile.

Since Habana in 1934, our nation has steadily progressed toward an enlightened and cooperative policy in its relations with the Latin American Republics. Not all of them share our political folkways. But under such leaders as Trujillo, Batista, Rojas, Perez-Jiménez and the late Anastasio Somoza, Latin America has been an almost unbroken bulwark of support of American policy in the United Nations, and in the world balance of power. With the United States they have risked their all to stop Communism in this hemisphere.

The peddlers of the Galindez fables would irresponsibly weaken this whole arch of patiently constructed American hemispheric policy. They would do it in the name of civil liberties. If they were successful in their aims in the Dominican Republic they might well earn the epitaph, "They brought civil liberties to the Dominican Republic, but they lost them irrecoverably for the United States."

The Unsteady Liberals of Morningside Heights

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared on June 26, 1957, in the Richmond Times-Dispatch, of Richmond, Va.

As the editorial points out, "liberalism", as applied to the proposition of racial integration, becomes an embarrassing cause when its practical applications approach too closely the ivory towers of the "liberals."

The editorial follows:

INTEGRATION FOR SOMEBODY ELSE

Some of our "liberal" friends in New York have been having a bit of a problem reconciling their own reluctance to accept enforced integration in the housing field with their interminable criticisms of the South for its similar unwillingness to accept enforced mixed public schools.

It would seem to be poetic justice that the New York Times—than which there are few more vigorous blasters of the segregationist South—is itself the recipient of dead cats from the militantly "liberal" New York Post.

The Times incurred the wrath of the Post when it successfully oposed a recent bill in New York City Council which would have made it unlawful for apartment owners to "discriminate" in selecting tenants for their own property. This amazing measure would have forced the owners of 1,700,000 apartments and flats in Gotham to rent them to any applicant, or face a $500 fine and a possible term in jail.

The Post correctly appraised the arguments of the Times against the bill as almost carbon copies of the South's arguments against compulsory integration in the schools. On this point the Post said:

"We anticipated the opposition of the realtor lobby and the know-nothing fringe to the proposed measure. But we were pained and saddened when the venerable New York Times added its voice to the opposition over the weekend.

"Almost every argument advanced by the Times in resisting the ban on segregated housing has been used by the South in challenging desegration of the schools.

" 'Progress must be a matter of education and a spiritual growth rather than a consequence of legislation,' intoned the Times. That is exactly what the diehard South says when called on to abandon white supremacy in its schools."

Another little sidelight on the attitude of New Yorkers, when the matter of integration is brought close to them, is seen in the unwillingness of Columbia University faculty members to send their children to Morningside Heights public school.

For many years they had been patronizing this school, but when it suddenly became more than half colored, under New York's aggressive integrationist policy and academic standards fell sharply, the Columbia professors took their children out and put them in private schools. So much for the "liberalism" of a faculty which has been as aggressive as any in the land in urging integration—for somebody else.

The Times, in opposing the bill intended to force 1,700,000 New York City property owners to rent to any applicant, said: "We do not think the people of New York have

been adequately prepared for the passage of this bill."

Precisely. And how much more unprepared was the South, with its infinitely more difficult problem, for the Supreme Court's mixed school order of 1954.

REA Loans

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mrs. GREEN of Oregon. Mr. Speaker, we have heard much about the effects of this administration's fiscal policies. As their ramifications strike home with each of us and affect us all in our daily living to a greater and greater extent, we shall unfortunately come to know, to appreciate and to rue the full effects of tight money, hard money, scarce money—call it what you will.

What it means in terms of rural electrification is clearly indicated in a recent letter to the editor of one of the papers in my district. So that the full import of these policies may be brought clearly before each Member of this body, I ask unanimous consent that the letter to the editor sent by Mr. Lee Wooden, president, Oregon Rural Electric Cooperative Association, be printed in the RECORD:

OPEN FORUM: ON INTEREST RATES

To the EDITOR:

Referring to the editorial appearing in your issue of May 20 entitled "Leakage of Public Funds."

This editorial specifically referred to rural electric and telephone cooperatives. It was perfectly timed to coincide with the following announcement from Washington, D. C., that "'it is indefensible for Government agencies to make 2 percent loans when the Government itself has to pay an average of 3½ percent to borrow money,' Senator STYLES BRIDGES, of New Hampshire, told reporters."

In the first place, the Government does not have to pay 3½ percent to borrow money. The average cost of money to the Government as of February 1957 was 2.719 percent, according to the last available figure.

In the second place the Government's tight money policy has artificially jacked up the interest rate and the way to remedy the situation is not to raise the farmers' electric and telephone costs, but to eliminate the high interest rate—tight money policy.

Throughout most of the 22-year history of REA loans, the farmers have paid the Government a much higher interest rate than the cost of money to the Government during those years. As a result the REA Administrator in his last report had netted $47.5 million to date on the REA electric loans. In other words it had collected that much more than the money cost the Government. If the cost of money is to be the criterion for fixing interest rates, it should work both ways. That $47.5 million should be refunded.

It seems to us this is a mighty poor time to be increasing farmers' operating and living costs. Farmers' net income for 1956 was down 27½ percent by comparison with 1951, whereas money lenders' interest income increased 46 percent in the same period.

Mr. Editor, how would you compare the recent negotiated loan to Great Britain, of $4.4 billion at the interest rate of 2 percent payable in the year 2000, to loans made to farm electric cooperatives at the same rate of interest? Is it wrong to lend money to farmers of America, and right to make loans in the billions at the same rate of interest to a foreign country?

The total amount loaned to electric and telephone cooperatives, which is being repaid with interest is far less than the outright gifts of the billions of dollars to the private power companies. The above mentioned gifts are in the form of fast amortization tax writeoffs.

The most recent is the millions of dollars given the Idaho Power Co. in the form of Government certificates, where actually there was no evidence of benefit to the defense effort.

The outright gift to Idaho Power was opposed by Secretary of Interior Fred A. Seaton.

The following is a quotation from the last paragraph of a telegram sent by President Eisenhower to Jack Smith, president of National Rural Electric Cooperative Association at the time of the 1957 annual meeting at Chicago, March 4–7:

"This administration gives wholehearted support to the rural electric and telephone programs. They are essential to the Nation's well-being and to our expanding economy.

"Best wishes to you all.

"DWIGHT D. EISENHOWER."

It would seem the President has completely changed his position in the last few months.

LEE WOODEN,
President, Oregon Rural Electric Cooperative Association.

The Girard Case

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. SMITH of Kansas. Mr. Speaker, the Girard case continues to receive a lot of attention from persons in all walks of life. I am in receipt of a copy of a letter written to President Eisenhower from a lady in Kansas, who clearly presents a viewpoint taken by many loyal Americans:

President DWIGHT D. EISENHOWER,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: Something is very terribly wrong in this situation, and I for one would like to know exactly what.

Either (1) the citizens of this country have not been told the whole story, in which case why? What is our Government trying to hide?

Or (2) a citizen of this country is being used as an "expendable" in a political trade that is, to my knowledge, without precedent in the history of man. In that case, what is our Government trying to accomplish?

When has strength ever before surrendered to weakness? And I am not thinking of armed strength, although we have that, too. When has surrender ever brought victory—for a country or for a cause? When has morale ever been built—either in an army or in a citizenry—with a nosediving confidence that accompanies flabby leadership?

I cannot convey to you my deep and seething resentment:

(a) At any military "leadership" which will betray its own charges.

(b) At the international "statesmen" who will sacrifice the very fundamentals they have sworn to uphold—and this in the name of "cooperation" and "compromise."

(c) At the "representatives" and "guardians" of the people who allow the continued abuse of their constituents when they have at their disposal the machinery for correction.

Our military and political chiefs would do well to consider thoughtfully where their policies are leading this Nation. And to ask themselves how much longer the citizens of this country will support their own downfall. It might be worthwhile, if they are in fact "protecting the national interest," to take into account such intangibles as morale, confidence, trust, emotions, heart—for where there is no heart, there is no life. And when the pressures and temptations toward capitulation to today's gods of expediency and appeasement become too great, it might even be useful to remember the peoples of ancient times: when they sacrificed their loveliest maidens to their gods, it was always "in the national interest" and "for the general welfare"—and by decree of the Most High.

With deep concern.

Justices Who Changed Their Minds

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. BYRNE of Illinois. Mr. Speaker, the Chicago Sunday Tribune editorial of June 23, 1957, is a thought-provoking and well-done piece of work on a most important subject. I would like permission to have the editorial inserted in the CONGRESSIONAL RECORD. I wish to commend the Chicago Tribune for bringing this to the attention of its readers:

JUSTICES WHO CHANGED THEIR MINDS—II

Associate Justice Hugo L. Black, former Senator from Alabama and erstwhile gold passport life member of Robert E. Lee Klan No. 1, was another member of the Supreme Court to concur in the majority decision written by Chief Justice Earl Warren in the Watkins case. In this opinion, the Court reversed the conviction of John T. Watkins, an Illinois CIO organizer, for contempt of Congress.

In his opinion, Chief Justice Warren contended that a congressional investigation must be directed toward a specific legislative purpose, and that any question addressed to a witness before a congressional committee must be justified as pertinent to contemplated legislation.

The committee chairman, at the Chicago hearing before which Watkins testified, offered an extended explanation to witnesses of the purpose of the inquiry, and coupled these purposes to specific pending legislation. Nevertheless, Warren and Black, with others of the Court majority, were not satisfied.

In 1936, Justice Black was still a Senator. He had made his reputation, such as it was, as the chairman of Senate investigating committees. In 1933 he had conducted an inquiry into merchant marine and airmail subsidies. In 1935, as chairman of the Senate lobby investigating committee, he had rifled the files of telegraph agencies and private corporations to assemble more than 5 million wires and letters in search

of evidence tending to establish lobbying activities.

In the February 1936 issue of Harper's magazine, as Justice Clark has reminded us in his minority opinion, Senator Black vigorously defended the blanket powers he had exercised against attempts "to discredit [the investigation] by calling it a fishing expedition."

"It," he said of an investigation of this sort, "is not a trial based upon an indictment where the facts are already known and merely need presentation to a jury. It is a study by the Government of circumstances which seem to call for study in the public interest."

Senator Black explained the enormous pains that investigators must go to to get at the facts. "It would be quite simple," he said, "if the interests involved would come forward with a frank willingness to furnish the truth. But very often they dare not furnish the truth. It is too damning. Therefore every conceivable obstacle is put in the way of the investigators."

If Senator Black was aware of the possibility of such obstructionist tactics by private business interests and, therefore, was able to justify embarking on a fishing expedition, it is quite remarkable that he does not expect similar difficulties when Congress sets out to investigate the far more deceptive and obstructionist methods of the underground Communist conspiracy against American liberty.

In 1936 he said it was predictable that methods such as were employed by his investigating committee would provoke the cry that they were "an outrageous invasion of the rights of private citizens." But now, with Chief Justice Warren, he holds in a case concerning an admitted accomplice of Communists that the House Un-American Activities Committee represents "a new kind of congressional inquiry unknown in prior periods of American history." And, with Warren and others, he represents that "this new phase of legislative inquiry involved a broad-scale intrusion into the lives and affairs of private citizens" which are protected by the first and fifth amendments.

Thus, as a Justice, Black denies the very precepts which he espoused as a New Deal crusader.

It was all right with Black to hound a businessman or a private corporation, but now he finds it all wrong to cause a crease of worry on the forehead of an agent or accomplice of Moscow.

Hells Canyon

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. MINSHALL. Mr. Speaker, the following editorial from the Cleveland Plain Dealer, I thought, would be of interest to my colleagues:

HELLS CANYON

Senator CHARLES POTTER, Republican of Michigan, has used the ugly word "sellout" in connection with the bill authorizing the Federal Government to build a high dam at Hells Canyon on the Snake River as a replacement for three smaller dams which the Idaho Power Co. previously had been authorized to build.

The bill passed the Senate Friday by a vote of 45 to 38. The basis of POTTER's charge is that 4 Democratic advocates of the Federal dam voted with the southern Democrats the day before to send the civil-rights bill to the Judiciary Committee, where it undoubtedly would have been buried for the remainder of the session. Although this maneuver was unsuccessful, it developed that 5 southern Democratic Senators, along with 2 Republicans, who voted against the Hells Canyon bill last year, switched their positions Friday and supported it.

Well, we wouldn't know anything about a sellout, if there was one, and all the Senators involved hotly denied there had been any vote trading on the civil rights and Hells Canyon measures. All we know is that people generally have strong convictions on the subject of Federal dams financed by the taxpayers versus dams financed by private capital supplied by taxpaying corporations. They're for one and against the other, and they seldom change their minds.

We see no reason why anyone who opposed the Federal dam at Hells Canyon last year should favor it this year. There has been no change in the principle at stake, which is the propriety of all the taxpayers in the country being required to subsidize the northwest with cheap power. If there were no other way for the northwest to get the power it needs, a good argument might be made for the Federal dam. But since a private company, which will pay taxes, in contrast with the Federal development which would not, is able and willing to do the job, why should the Federal Government be saddled with the burden?

The answer, of course, is that the private company would have to charge more for the power, not only to meet its tax bills but to earn a reasonable return on its investment. That's how the free enterprise system works.

Opposition to Hells Canyon Dam Proposal

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter of the Pennsylvania State Chamber of Commerce, State Chamber Building, Harrisburg, Willard F. Rockwell, Jr., president; David H. Harshaw, vice president; H. B. Bartlett, vice president; G. Richard Fryling, vice president; Scott C. Rea, vice president; Ritchie Lawrie, Jr., treasurer; Arnold L. Edmonds, executive director:

JUNE 24, 1957.

Hon. JAMES G. FULTON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN FULTON: If S. 555, authorizing the construction of a Federal dam at Hells Canyon, becomes law, it will cost Pennsylvanians $35,577,060.

The Pennsylvania State Chamber of Commerce, on the basis of studies made over several years, can find no justification for the project. The Idaho Power Co. has been engaged, under authority of a license issued by the Federal Power Commission, in constructing facilities which will insure that the area is well-served in a manner which will lighten, rather than increase, the heavy burden on American taxpayers.

In a day when both major political parties are concerned with the high cost of government, and when every thinking American wants private industry restored to its proper role in our economy, we regard S. 555 as being not only unwise and unnecessary, but as a local vote-getting device for which Pennsylvanians should not be asked to pay.

We are confident that your own studies will lead to the same conclusion.

With every best wish, I am,
Yours very truly,
ARNOLD L. EDMONDS,
Executive Director.

Israel Close to Heart of Chicago

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. O'HARA of Illinois. Mr. Speaker, the young and brave State of Israel is very close to the heart of Chicago, as again was shown by large testimonial dinners given in honor of two distinguished Chicagoans, one who is leaving Chicago to make his home in Israel, the other, one of the outstanding medical scientists of the world, for whom a department in a hospital in Israel has been named.

I am extending my remarks to include the following editorial from the Chicago Sun-Times of June 25, 1957:

BROTHERHOOD IN ACTION

The testimonial dinner given last week for Dr. Theodore K. Lawless, the noted Chicago dermatologist, pointed up a humanitarian gesture that is praiseworthy not only in itself but in its far-reaching ramifications.

Dr. Lawless, internationally known in his field, is a Negro. He has contributed generously to the establishment of a dermatology department in Beilinson Hospital in Israel to bear his name. Eventually, the facilities of the department will be available to Middle Eastern peoples regardless of race or creed.

It would be hard to find a more striking example of brotherhood and international friendship. An act so typically American should make a deep impression in an area that would profit immensely by more understanding and humanitarianism.

I further am extending my remarks to include the following article headed "Council Resolves To Honor Rabbi Berman," from the Hyde Park Herald of June 17, 1957:

A resolution to honor Rabbi Morton M. Berman, spiritual leader of Temple Isaiah Israel, was passed recently by the city council. Introduced by Aldermen Claude W. B. Holman (fourth), Leon M. Depres (fifth), and Nick Bohling (seventh), the resolution reads as follows:

"Whereas Rabbi Morton M. Berman, of Temple Isaiah Israel, located in the great fourth ward of the city of Chicago, is about to leave Chicago permanently and to take up residence in the State of Israel; and

"Whereas this great man of God, this humanitarian, this champion whose whole life has been a veritable crusade to strengthen the dignity of man and to uphold the civil rights of people everywhere; and

"Whereas this humanitarian is being honored by a testimonial dinner on Monday evening, June 17, 1957, in the Terrace Casino of the Morrison Hotel; and

"Whereas it is altogether fitting and proper that the people of Chicago should honor Rabbi Berman; and

"Whereas proper cognizance of the event should be taken by the city of Chicago: Now, therefore, be it

"*Resolved*, That the members of the City Council of the City of Chicago join with the Honorable Richard J. Daley, the great mayor of the city of Chicago, in a salute to Rabbi Morton M. Berman on the occasion of the testimonial to him on the eve of his departure with his family to make his home in Israel; and that we hereby, by these presents, pay tribute to a great citizen for devoted service to the city, to the State, to the Nation, and to the world; and that with this resolution a wish will go from us for his continued health, happiness, and prosperity, and for a long life for further service to mankind; be it further

"*Resolved*, That a copy of this resolution be delivered to him at the testimonial dinner."

Disabled Benefits Deadline Nears

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Pittsburgh Sun Telegraph of June 25, 1957:

SOCIAL SECURITY FOR YOU—DISABLED BENEFITS DEADLINE NEARS

(By Ray Henry)

Thousands of badly disabled persons face a June 30 social security deadline.

They fall into two groups:

Disabled persons between 50 and 65 who are now eligible for social security disability payments but haven't applied for them.

Disabled persons under 50 who haven't applied to have their social security records frozen.

The deadline affects the two groups in a somewhat different way. But both groups stand to lose valuable social security rights if they don't apply before July 1.

Take the deadline's effect on disabled persons between 50 and 65 who are eligible for disability payments but haven't applied for, them.

To be eligible for disability payments you:

Must have a permanent disability which is so severe that you're unable to do any substantial work and which has lasted for at least 6 months.

Must have worked in jobs covered by social security for 5 of the 10 years before you were disabled, including at least half of the 3 years immediately before the date of your disability.

If you apply for payments before June 30 your disability can date back to October 1, 1941, the earliest possible date you could have worked the necessary time under social security, and you can still be eligible for payments.

For example: Suppose you were disabled January 1, 1947. To meet the work requirements to be eligible for payments, you must have been in jobs covered by social security for at least 5 of the 10 years between January 1, 1937, and January 1, 1947, and at least 1½ of the 3 years between January 1, 1944, and January 1, 1947.

But, if you apply after June 30 and your disability is more than a year old, the date of your disability is considered to be exactly 1 year before the date of your application.

For example: Suppose you were disabled March 1, 1954, and you don't apply for payments until July 21, 1957. The date of your disability is considered to be July 21, 1956, rather than March 1, 1954.

This means that if you've been disabled more than a year, your failure to apply before June 30 could rule out disability payments for you.

Here's how: As mentioned above, one of the requirements to be eligible for disability payments is that you must have worked under social security for at least 1½ of the 3 years just before the date of your disability.

Now, suppose you were disabled March 1, 1954 and you don't apply for payments until July 21, 1957. The date of your disability is officially considered July 21, 1956.

Three years back from July 21, 1956, is July 21, 1953. Since during this 3 years you only worked from July 21, 1953, to March 1, 1954—the actual date of your disability—your total period of work was slightly under 9 months.

Thus you haven't put in the required 1½ years of the last 3 before your official disability date. So you're not eligible for payments.

The affect of the June 30 deadline on disabled persons under 50 is essentially the same as on those between 50 and 65—but with a twist.

Since disabled persons under 50 can't draw disability payments until they reach 50, they may ask to have their records frozen as of the date they were disabled.

But if their disability is more than a year old the request must be made before June 30 to protect their social security rights.

If they wait until after June 30 to apply, their records can only be frozen back to a year before their application. This means that if their disability is more than a year old they won't satisfy the work requirements to be eligible for payments when they reach 50.

As with the people between 50 and 65, their records must show they worked under social security at least 1½ years of the 3 just before their official disability date.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Graduation Exercise Address at Catholic University by John L. Schroeder

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. CHAVEZ. Mr. President, on June 8, at the annual class day ceremonies in connection with graduation exercises at Catholic University, Mr. John L. Schroeder, a Washington attorney, delivered a very fine talk which will be of general interest. Mr. Schroeder is the president-elect of the Catholic University National Alumni Association, and I request the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Before I proceed with the assignment for today, I would like to thank the class day committee for considering me worthy to stand on this platform and participate in your program. Fifteen years ago, I was a member of the graduating class—and not a very distinguished one at that. My grades were average—I received no Phi Beta Kappa key—I was not graduated "magna cum laude" or even "cum laude." The only thing that was satisfactory about my graduation was that everyone in the class and all of the faculty knew me and I knew them. You see, I had participated in almost every form of sanctioned extracurricular activity and in a few activities not approved by the authorities of the day.

Football, basketball, the Harlequins, the Pipe and Pen Society, the Tower staff, the Utopian Club, the Spiritual Council, and the Blue Key Fraternity were activities approved by the rector, Bishop Corrigan.

I would not have to scandalize a freshmen class by mentioning unauthorized activities, but since you are just one day from graduation, the following will not inspire misconduct and perhaps some will ask, "So what?"

The dean of the men would have been puzzled by the empty bed in my room on early mornings—checking in at midnight and returning to the village until the 2 a. m. closing time, was frowned upon by Fathers Dillon and Lang.

Dr. Deferari might have withdrawn my athletic scholarship and Dr. Campbell never would have allowed me to carry an extra subject if they had known that I was managing the Merrick Boys Club after football was deemphasized during my junior year. This being a full-time job, would leave me little time to study, even though I was able to attend the scheduled classes.

Father Magner could have suspended me on general principles if he caught me and my associates delivering the midnight edition of those bootleg newspapers that complained about the deemphasis of athletics and the food in the dining hall.

Monsignor MacDonald could testify to my business acumen as a student. He often reminds me of my job as the New York Times paperboy. He knew that I solicited the subscriptions, collected the weekly or monthly charges, but hired my roommate to actually deliver those papers at 6:30 a. m.

To those who are graduating with honors, I offer my deepest respect but to those whose grades were like mine I say that if you had half as much fun as I did and if you enjoyed attending the Catholic University your reward is locked in your heart and may never be known to anyone but yourselves.

As you prepare to leave this campus, I would like to tell each of you, individually, what Father Ignatius Smith, the closest and dearest friend that I had, both as a student and later as alumni secretary, always urged as the four activities that should claim your interest.

First, your parish deserves your support and in turn this university deserves the support of your parish. Whether you return to your hometown or become located in in a new environment, join the parish in which you live.

When I say "join" I mean participate in the sodalities, the holy name societies, the first Friday clubs, the adoration groups, the special religious services and social activities.

You have been exposed to more Catholic education than most of your fellow parishioners and by reason of that you have acquired the additional obligation to live Catholic action.

Second, be interested in your community and its activities. Everyone is not destined to be a leader, but everyone should do what he or she can to advance the general welfare of his fellowman. There are enough service clubs, community chest activities, Red Cross programs, health association activities and charitable drives to drain every extra ounce of energy from the bodies of the willing.

Third, take a part in the Catholic Youth Organization. With its four phases—spiritual, social, athletic, and cultural—there is no more important task awaiting you. The guided development of our youth is one of the foundations of our free world and without it freedom may not endure.

The last, but the activity to be considered above all is that of taking an active part in Government and politics and promoting the idea of the dignity of man. Without the belief in the dignity of man our United States may change from a government of laws and become a government of men.

Lt. Gen. Matthew B. Ridgway, when commanding our Eighth Army during some of the bitterest fighting in Korea, said that the deadly contest there was part of the struggle to decide "whether the rule of men who shoot their prisoners, enslave their citizens, and deride the dignity of man shall displace the rule of those to whom the individual and his rights are sacred * * *."

You from Catholic University understand just what the dignity of man means and what those sacred rights are that were fought for so bitterly.

Father Russel, later Monsignor Russel, a champion of the dignity of man always taught that the basic principle of our democracy is the belief that all men have certain rights which they are born with and which no one can justly try to take away—that all men must be treated right.

Belief in the dignity and worth of the human person is a big belief. When the Founding Fathers of our Nation agreed that all men are endowed by their Creator with certain unalienable rights, they meant all men—men on every acre of the earth. But the most amazing thing about the Founding Fathers was that they succeeded in actually setting up a Government based upon that belief, under which people could live in freedom and dignity. The main support of this democracy is the Constitution, which defines the Government and both grants and limits the powers that the people want the Government to possess.

The Founding Fathers of this greatest experiment in democracy did not, of course, think that they had discovered by themselves that "man is by nature free." Some of them were scholars who had read a lot about the ideas of Greek and Roman philosophers and other great thinkers of Europe. All of them had been influenced by English thinking on human rights. Jefferson said that the purpose of the Declaration of Independence was "not to find out new principles * * * but to place before mankind the common sense of the subject."

American democracy, with its belief in human dignity, grew with the Nation. It was nourished by the ideas not only of George Washington, Benjamin Franklin, James Madison, James Wilson, Gouverneur Morris, John Adams, John Carroll of Carrollton, Commodore John Barry, and at least 100 more men of early America, but by the ideas of many others, including men like Andrew Jackson, Abraham Lincoln, and our own James Cardinal Gibbons. It has not stopped growing.

Abraham Lincoln has given us a definition that can guide us in judging whether a country is a democracy. To quote: "As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference, is no democracy."

Most of us have a special "feeling" for democracy—a feeling of sympathy and friendship for the "underdog." We root for the baseball team with a string of defeats. Just recently our Washington Senators provided that special feeling in many of us. We help the small freedom-loving nation overrun by a giant aggressor. Our Statue of Liberty bears the open-hearted invitation: "Give me your tired, your poor, your huddled masses yearning to breathe free * * *." For years we have been cheered at the sight of thousands in those huddled masses breaking from the herd to become self-respecting individuals, free and strong. In our own time we have seen them add their lifeblood to that of the Nation. They are the proud owners of these "foreign-sounding" names we hear every day or read on the sports pages, or in true rags-to-riches success stories. But, actually, no names are foreign in the United States. Immigrants from every land have become United States citizens. All of us, except the American Indian, have foreign ancestors who came to the New World in compartively recent times.

Perhaps we have a feeling of sympathy for the "underdog" because in our country there is freedom of opportunity, and we have seen so many people rise to realize their ambitions through hard work. It is just as likely,

however, that people with a real feeling for democracy see in the humblest person a human being with an inborn dignity as respectable as his unalienable rights.

It is easy to see that the idea of rights for human beings is more than a beautiful thought thrown into important speeches. Freedom and justice are things every one of us can do something about in our own lives. But what hope is there that the idea of the dignity of each individual can lead to the peace we all want.

What is demanded of us as citizens of the leading nation in the free world?

At least several things, probably. We must realize that real democracy, with its rights and responsibilities is more revolutionary, constructive, and appealing than communism or any other kind of tyranny. And the desire for it was never stronger nor more widespread than it is in the period of world history in which we are living today.

And further, we must realize that we are struggling in a contest for men's minds. So we must find a way to let the people of the world know the truth about democracy, our belief in the dignity of every human being, and our aims.

Then too, all of us must learn that our everyday treatment of others can show how much we really believe in human dignity. We must practice what we preach. It is up to us to set a good example for others and to stand up for the rights of the individual thereby guaranteeing "liberty and justice for all."

But most of all, as Catholics, we must realize that we have a ready-made vehicle—an example supplied by God Himself—in His Divine Son, who became man, and gave us a basic charter and a constitution of good citizenship and decent living. By following Him and using His life as our pattern, we shall be providing the necessary living example for men of a troubled world.

By following His plan, we can achieve both temporal and everlasting justice—with all that the word implies—such as "Tolerance, human happiness and peace among men."

Seventh Annual National Catholic Youth Week

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the observance of the seventh annual Youth Week sponsored by the National Council of Catholic Youth, which will be celebrated from October 27 through November 3.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SEVENTH ANNUAL NATIONAL CATHOLIC YOUTH WEEK

There is much of encouragement and promise in the theme of this year's National Catholic Youth Week—"Healthier, Holier, Happier." The week, whose seventh annual observance will be celebrated from October 27 through November 3, is dedicated to the 7 million young people who comprise the Catholic youth organizations of the country. Rt. Rev. Msgr. Joseph E. Schieder, director of the Catholic youth in the United States, has arranged the event sponsored by the National Council of Catholic Youth.

President Eisenhower and former Presidents Truman and Hoover, along with other State officials, and governors and mayors all over the country, have proclaimed the observance in special messages prepared for the week.

Youth week is the display window for the talents and achievements of the Catholic youth of America. It includes participation by hundreds of schools, colleges, and universities, and many local and national youth groups, in addition to millions of working youth. The week's calendar of activities is geared also to participation by youth in military installations overseas. Programed events include religious exercises, radio-TV shows, award dinners, athletic contests, parades, and social affairs.

The theme of the week embodies the elements essential to the formation of the complete human being—healthier in mind and body, holier in spirit, and happier as a natural consequence of these two conditions. The youth organizations who set this as their goal in working with young people today are to be commended for their splendid contribution to the welfare of our Nation. Youth week serves as a reminder of the zealous efforts on the part of youth leaders all over the country to provide better citizens for the future of America.

Economy in Defense

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the substance of the very excellent 63-page statement by Perry M. Shoemaker, who testified in behalf of the Chamber of Commerce of the United States before the Defense Subcommittee of the Senate Appropriations Committee in support of economy in defense appropriations. Mr. Shoemaker is president of the Delaware, Lackawanna, & Western Railroad and a member of the chamber's government operations committee. He is exceptionally qualified on Department of Defense operations having served with several Hoover Commission task forces that reviewed the operations of that Department. The full text of the statement is contained in the hearings of the Senate Appropriations Committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY PERRY M. SHOEMAKER

The Chamber of Commerce of the United States has continuously supported a well planned defense program. We recognize fully that during this period of international uncertainty, the United States cannot have a second best defense potential. We recognize also that our military machine has become more complex because of the impact of scientific developments in air power, guided missiles, electronic computers, and atomic weapons which have contributed greatly to the difficulty of managing the Department of Defense. It is a tremendous business enterprise—perhaps the largest of its kind in the world.

The first thing for all of us to recognize as citizens and as businessmen is that the Department of Defense budget is a reflection of business management, is subject to analysis and the checks and balances of reasonable judgment and, in most particulars, can reasonably be discussed in public without endangering our national security.

We wish to emphasize that we are not posing as military experts. Nor do we question the military competency of our country's professional personnel. However, we feel that we know something of the business organization and the business-like operations of the Department of Defense.

• • • • •

Our purpose here today is threefold:

1. We support in general the action of the House in reducing the fiscal 1958 budget by approximately $1.9 billion and effecting savings of an additional $590 million in stock and industrial funds;

2. We support the O'Mahoney Amendment to H. R. 7665;

3. We recommend selective additional reductions of $743,559,000 in the appropriations approved in H. R. 7665.

HOUSE RECOMMENDATIONS

The National Chamber was greatly impressed by the thorough and sound analysis given the defense budget by the House Defense Appropriations Subcommittee under the chairmanship of Congressman GEORGE MAHON. We think its approach was not only objective but penetrating.

In our later discussion of specific reductions in defense appropriations, it will be noted that we are in considerable agreement with the House cuts and recommend no restorations. However, there are certain programs which, in our judgment, can be further reduced.

THE O'MAHONEY AMENDMENT

We vigorously support the O'Mahoney Amendment to H. R. 7665 which (1) directs the President to recommend organizational changes to establish an integrated supply system for common supply items and (2) directs and empowers the Secretary of Defense to eliminate overlapping, duplication and waste among the military services. The approval of this amendment is imperative and vital to the future of a strong defense establishment. No one will be able to stop the clock during another major conflict and provide us with time to reorganize our logistic system, as was necessary on a crash basis in World Wars I and II.

• • • • •

BUDGET REDUCTIONS AND ISSUES

Any discussion of broad programs in the defense budget crosses the lines between the services and unavoidably gets into overlapping and duplication of effort—duplications involving facilities, equipment, organizations, and research and development—all relating to the noncombat activities of the Military Establishment. These involve organizational questionsof great magnitude and place before the Congress the broad question as to whether or not the National Security Act of 1947 adequately and effectively supplies proper organizational guidelines for the period immediately ahead of us.

Competition between the services has a long tradition but clearly does not parallel competitive private enterprise as pictured by some proponents of the present arrangement. It takes great courage within Congress, and outside, to question the basic tenets of our Military Establishment but we must recognize reality.

In 1952, Senator PAUL DOUGLAS introduced a bill providing for integration of supply and service activities within and among the mili-

tary departments under the direction of an Under Secretary of Defense for Supply Management. The debate on this proposal ended in a compromise known as the O'Mahoney amendment, which required the Secretary of Defense to issue regulations aimed at fostering an "integrated supply system designed to meet the needs of the military departments without duplicating or overlapping of either operations or functions." It failed to accomplish its purpose.

The failure of the Defense Department to comply with this congressional mandate raises an issue fundamental to constitutional government. It involves the question of congressional mandates being accepted and implemented by the executive department.

Congressional leaders and committees have deplored for many years the seemingly inexcusable examples of waste and inefficiency in the handling by the military services of various phases of supply. Last year, the Mahon subcommittee and the Senate Appropriations Committee uncovered great waste and inefficiency in military procurement. For instance, the report of the latter had this to say:

"During the course of the hearings the committee had forcibly brought to its attention frequent examples of duplication of facilities and functions throughout the Department of Defense. In some cases the committee believes that this duplication borders on unconscionable waste of the country's resources, not only in material but in land resources, manpower, and money."

The record shows convincingly that if the supply organization of the Defense Department is to be integrated, it will have to be done by Congress. The insistence of the military services on retaining their independence and holding to a "separatist" outlook toward unification and the integration of supply having been revealed time after time by congressional committees, it is obvious that positive mandate is indicated.

It is considerations as basic as these which are mandatory for solution if the budgets of 1959 and 1960 and later are not to show the continuing costly result of duplication which is inherent in the organization of the Department of Defense as it now exists. We do not share with Secretary Wilson the belief that the present organization is the best that can be attained. Nor do we concur with recent testimony of Assistant Secretary of Defense McNeil that 90 percent of the supply system has been integrated. Surface compromises have been used all too effectively as a screen to cover the real lack of integration, the real extent of duplication in this whole supply field.

OPERATIONS AND MAINTENANCE

For this program, the national chamber recommends total appropriations of $9,579,562,000 divided among the three military services as provided in the summary above. This is a reduction of $357,097,000 over the $480,750,000 cut recommended by the House in H. R. 7665.

The military section of the defense budget covers 102 pages. Operations and maintenance activities are scattered throughout these 102 pages. We commend the services for the improvement in management of many of these activities. However, efforts at improvement have been centered too much in the direction of "patching up" a fundamentally defective organizational system rather than in the direction of removing the causes for the great waste in resources and manpower that are triplicated among three military services and then multiplied again within each service. We do not have a unified defense organization but rather dozens of separate organizations operating at numerous levels and duplicating functions many times at the various levels.

It would be naive indeed for one to review all the programs and activities financed under operations and maintenance in the budget and not visualize the great waste in resources and manpower. And the budget does not describe the picture as it exists at all levels of operations within the services.

The Army, for instance, does not have one supply organization but actually its supply activities are carried on by seven technical services—each with separate administrative staffs, separate supply depots, field staffs occupying separate offices, some in the same city, with duplicate inspecting, legal, fiscal, and procurement personnel. We are not dealing with a defense organization that fosters only three supply systems and organizations which is wasteful enough, but with one that contains numerous subdivisions paralleling the efforts of each other. And the existence of this condition is not limited to the Army.

Facilities are duplicated in almost every activity of the military services. One need only visit the great ports of our country to see the duplication of marine terminals. Storage areas are duplicated in separate depots and storage facilities. Each of the services has separate facilities for basic training and this activity extends even to separate organizations within each service for recruiting. The height and impenatrability of the fences between the services dominate every phase of common functions.

In the area of supply unification, the second Hoover Commission recommended a program of improving supply management by integrating common supplies and services under a separately administered civilian agency. This plan was rejected by the Defense Department in favor of a single manager system which was considered and rejected by the Hoover Commission. However, this system keeps this area of supply within the operations of the military services thereby multiplying supply operations.

Another area of savings opportunity involves Government competition with private enterprise. There is evidence of but limited progress within the Department of Defense toward enforcing the announced policy of the administration in this respect and thus reducing its expenditures directly involved. Clearly, Congress should support the elimination of competitive activities which keep operational and support costs high. At the time of the Hoover Commission Report the Defense Department was operating some 2,500 business and commercial-type activities in competition with private enterprise and employing some 600,000 persons.

We do not question the desirable existence of a nucleus air transport service that can be expanded in cooperation with civil airlift for strategic purposes during an emergency, but we consider the present MATS operation as greatly exceeding any reasonable interpretation of a nucleus operation. The single manager system was designed to centralize this en masse. Competition between the services has not permitted this to be fully effective and on the present basis the operation, which already exceeds the combined airlift of all the international commercial lines of the country, will continue to grow and compete as long as Congress provides appropriations to finance them. Savings in this field would reduce investment in new transport aircraft and operating and maintenance costs in personnel. Related thereto, it would feasibly reduce subsidies now being paid to international air carriers and relafed training costs.

The Defense Department has established a single managership for traffic management. We will not have real traffic management and all of the broad economies which are possible from the exercise of this important function until the policy control is completely passed from the individual services and the organizational responsibility is placed upon a worldwide basis and not restricted to the continental United States as is presently true. Like many of the support functions, there is duplication and lack of economic control in the overseas theaters worldwide.

These are factors which strengthen our belief that the reductions we have recommended in the operations and maintenance field are realistic, that they can be accomplished without impairing our national security or defense capability one iota, that the one necessary ingredient is pressure from the Congress to cut across the rigid bureaucracy which is the Military Establishment as presently organized.

MILITARY PERSONNEL

For military personnel, the national chamber recommends reductions in H. R. 7665 for all 3 services of $318,387,000.

Our recommendations are entirely within support and related activities and relate to better utilization of military and civilian personnel, eliminating nonessential and duplicative jobs, curtailing excessive rotation and reducing travel and movement of personnel effects.

We have recommended a 12 percent reduction in military personnel engaged in support and related activities and a 10 percent cut in the budget estimate for travel in permanent change of station.

Defense Secretary Wilson has already ordered a 12 percent cut in all Washington area personnel which the House took into account in its recommendations for appropriations for this item. However, it does not seem that the House has taken into account current plans to reduce personnel in all major subordinate administrative, logistical, and operational commands of the services as well as joint and unified commands as was testified to by Defense Comptroller McNeil before the Mahon subcommittee and which would amount to a 12 percent reduction in personnel for those offices. While we were not aware of the action contemplated by the Defense Department when we recommended a 12 percent cut in military pay and allowances for all support and related activities, we commend Secretary Wilson for this bold step. However, we firmly believe that this cut can be made for fiscal 1958 without impairing operating efficiency in the least.

Last year and this year the Mahon subcommittee of the House investigating procurement practices and procedures found that the rotation of military personnel was seriously impairing efforts to control production because of lack of personnel continuity in these functions. Chairman MAHON pointed to officer rotation as one of the areas where millions of dollars could be saved annually, and further stated that time and money are being wasted training a continuing series of new officers.

Military personnel are trained for combat and related activities—not for such business-type functions as procurement, manufacturing, supply, contract administration, hospital administration, legal, accounting, and other business related functions. Their insistence on controlling and supervising such activities for which they are not trained produces a wasteful and inefficient personnel system. Assigning military personnel to manage business operations is no more logical than assigning civilians to manage military operations.

RESEARCH AND DEVELOPMENT

You will note in referring to appendix C (p. 24) that we have recommended a reduction of $68 million in excess of the $30 million cut recommended by the House.

There is no better investment in the defense of our country than dollars spent wisely and in adequate quantity for research and development. We are firm in this conviction. However, we also believe that quality or effectiveness of such efforts is not necessarily measured by the quantity of funds assigned these purposes in the Federal budget.

After reviewing the testimony of the military services and the generally unconvincing

rebuttal of the Defense Department on its management of research and development activities, we believe more firmly than ever there is need for action to integrate research and development programs. This is necessary not only for efficiency and economy in the use of manpower, materiel, and dollar resources, but is also essential to the maintenance of adequate security for the United States. The acute nature of the rivalry among the services, especially in the field of research and development and its danger to national security was noted by the House committee on page 20 of its report (No. 471).

It said:

"The increasing degree of rivalry among the services for roles and missions is becoming so serious as to jeopardize and delay the rate of buildup of our military power."

If there were a truly integrated research and development program underway in the Department of Defense, the requested appropriations would appear more defensible. However, there are in effect three competing programs based not so much upon research to improve the technology of weapons as upon the desire of each service to prove that it should assume the principal strategic and tactical role in the defense of the Nation. This faculty premise makes for greater cost, difficult administration, waste, dissipation of scarce scientific manpower, and tends to move us toward second place in the arms race at the true level of competition—the international level.

Certainly, there must be a concrete and realistic reevaluation of interservice competition in this field. Rolling back the frontiers of science is not something which lends itself to the compartmentalization of the three military services. Scientists in the Air Force, the Army and the Navy should not be trying to give one service dominance over the other. A scientist working on defense programs must meet as his first competitor a Mother Nature very reluctant to disclose her cherished secrets and, second, a Soviet counterpart with whom he is daily locked in scientific combat.

The degree of overlapping and duplication is quickly noted when one examines the statements of program and performance contained in the fiscal 1958 budget for research and development. It clearly shows how each of the services cuts into the business of the other two in this support-type program.

It must be noted that the funds devoted to research and development by the Federal Government for the defense of the Nation are not all properly labeled. The budget indicates that approximately $1.6 billion will be spent for this program by the armed services, plus an $85 million emergency fund assigned to the Secretary of Defense. However, in actuality there probably will be in excess of $6 billion spent. And even then, this estimate of $6 billion does not include such things as allocation of departmental costs, regular operating and maintenance costs of military ships, aircraft, and troop units used in conducting tests, and other types of costs which would be in some measure assigned to this particular function.

SUMMARY

In summary, the National Chamber endorses H. R. 7665 and recommends its approval. In addition, it is our belief that further reductions can be made as I have discussed and as detailed in the appendices, without in any way impairing national security or essential operations of the military services. These reductions are possible by: (1) Improving management and reducing duplication in the broad field of noncombat activities, particularly those which have broad similarity to business-type operations; (2) Implementing Hoover Commission recommendations for improving supply and personnel management; (3) Curtailing business and commercial-type activities which are unnecessarily in competition with private enterprise; and (4) Effectively integrating and centrally administering the research and development program in all of its major aspects. * * *

The first issue is fundamental to our concept of constitutional government and involves, as I have detailed in my discussion, the reality of congressional control in its field of responsibility. * * *

A second major issue is the degree of unification consistent with modern conditions and the outlook for the future. Clearly, the intended unification envisioned under the National Security Act and supported by military leaders as producing economy and better support management, does not exist. * * * This issue requires careful evaluation of the advantages and disadvantages of the costly competition between the services. * * *

A third important issue involves the development by Congress of personnel practices and policies for the Department of Defense which go to the heart of quality versus quantity, which meet the organizational problem of management continuity and which permits the many economies which competent studies have pointed to as being practicably and realistically available.

A fourth important issue involves the continued magnitude of Government competition with private industry and the limited progress within the Department of Defense toward enforcing the policy of the administration and thus reducing the expenditures directly involved.

A fifth issue involves the organizational disease that is responsible for the tremendous duplication of facilities and functions and multiplies the amount of waste many times. Examples include the duplication of such activities as depots, marine terminals, airfields, research centers, maintenance facilities, procurement operations, training programs, and even duplicate recruitment.

Congress Should Not Surrender Its Power

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present an editorial which appeared in the Shreveport Times, Shreveport, La., of Saturday, June 22, 1957, entitled "Congress Should Not Surrender Its Power." I feel this will be of interest to the Members of Congress:

CONGRESS SHOULD NOT SURRENDER ITS POWER

No one can blame Representative HOWARD W. SMITH, Democrat, of Virginia, for feeling bitterness over this week's 6–1 decision of the United States Supreme Court overturning the convictions of 14 California Communists under the Smith Anti-Subversive Act, which he authored.

"I do not recall any case decided by the present Court that the Communists have lost," said Representative SMITH.

The decisions of the Court have followed the pattern described by the Virginian. Each decision seems to say that Congress, or a State legislature, or a lower court, or a prosecutor, was guilty of misjudgment in methods or processes of curbing communism within the United States.

The net result of all the decisions is a basis for concluding that unless a Communist is found placing a bomb to destroy a United States defense plant, there's nothing that can be done about his activities.

Chief Justice Warren, in one of the recent opinions, declared that there is no congressional power to "expose for the sake of exposure."

This pins Congress down rather closely. If there is a real menace to the Nation Congress has no power to investigate for the sole purpose of exposing that menace.

Reports from Washington indicate that at least some Members of the House and Senate are beginning to wonder whether Congress has become a mere lackey subject to whims and sociological fancies set forth in Supreme Court rulings.

Perhaps these Members and others later, will realize that the American electorate looks to Congress to preserve its powers and to exercise its authority. It expects the legislative branch of the Government to be much more than a mere servile, submissive servant of either Supreme Court decisions or executive mandates.

In asserting its own powers, Congress need show no disrespect for the Supreme Court. What it can do is exercise congressional powers in opposition to judicial powers whenever a legitimate opportunity affords. Congress need not stand impotent. The Constitution has given Congress powers which can, and should, be used.

If this is not done, the judicial branch of the Government will overpower the legislative branch, in a manner divorcing Federal authority from the will of the people, as expressed in congressional elections.

Politics ought to be put aside for the moment in Congress, while the larger question of the rights of Congress receives serious consideration.

Letter From Wife of American Serviceman Serving in Japan

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, June 27, 1957

Mr. CHAVEZ. Mr. President, I received a letter of June 7, 1957, from an American woman in Japan, the wife of an officer, telling about the treatment which the average American wife, soldier, and children receive. I am deleting from the letter, which I shall ask to have printed in the RECORD, the name of the woman and the name of the soldier, for obvious reasons.

I ask unanimous consent that the letter, with the names deleted, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 7, 1957.

DEAR SENATOR CHAVEZ: Please accept my apologies for not addressing the envelope properly. Reason for discretion to assure letter from being withheld.

I write in order to request your support for protection of American families in foreign countries. My present experience being in Japan. Be advised of the conditions and treatment that the majority of Americans have to contend with. Conditions are as follows: We live in private rental. No drinking water. It must be boiled or handled from nearest base. Boiling the water runs the gas bill up to an exhorbitant price—one cannot afford to pay. Hauling water is a

problem when one does not have personal transportation. No baths. Washing being done on the scrub board. In short we are living in a primitive way. This most of us can take. It is the abuse we are getting along with our daily struggles.

American women who have to walk to the base to do shopping get stoned along the way and spit upon. Next—we're lucky to get back and not find our entire household goods hauled away. They steal us blind. The big hurt is when the Japs run into your house to beat your children up without warning of any kind. A person calls on the military police and all is handled very quietly and agreeably toward the Japs that they will not do such things again. They continue to repeat their same doings. You see, people who are sent out to foreign countries are taken to the elaborate hotels, treated with the highest of dignities and are shown the bright side of our relations with them. Also people who are given the opportunity to voice their likes of foreign living are people who are connected with diplomatic status or the families of GI's who never had to experience living in private rental. These people I agree are having and living an enjoyable time. However, that is only a small percentage of Americans who are fortunate enough to enjoy foreign assignments. The rest of us live in fear, abuse and even hunger.

Senator CHAVEZ, I am not bitter or envious; I only appeal for protection from these people who have a belligerent attitude. The next time I find or catch a Jap in my house beating one of my boys or trying to tamper with my 3-year-old daughter I am going to get a baseball bat and sling it at him and I don't want to be thrown at no Japs for trial.

Senator, if any of the authorities know of my writing a letter to my Senator, my husband would be busted or penalized in some manner. Families are briefed upon arrival what is expected of us. I feel it is time someone knew the real inside of these foreign duties and how much protection we have.

Respectfully yours.

Conservation Farming

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. McGOVERN. Mr. Speaker, one of the most important responsibilities of the American people is the conservation of our land. For this reason, I have been very much impressed with an article that appeared in the Sioux Falls, S. Dak., Argus-Leader of June 14, which details the splendid efforts of a South Dakota farmer in the field of conservation.

Mr. Herron Runestad, of Howard, S. Dak., has certainly set a fine example of progressive conservation farming. As an inspiration to others who are interested in conservation, I am including the Argus-Leader article, as follows:

CONSERVATION FARMING A MUST FOR FARMER IN MINER COUNTY

(By Robert E. Cone)

HOWARD, S. Dak.—South Dakota is being kept greener each year by the extensive program of the Soil Conservation Service. Keeping pace with every program the Service has to offer is Miner County Farmer Herron Runestad.

His half section located 16 miles northeast of Howard is literally a garden spot. He has used every possible means of soil conservation and his farm indicates his efforts have not been in vain.

Runestad's farm is located high in the Vermillion hills. He started his conservation work when he purchased the farm in 1947. He has 2 miles of terraces, 40 acres furrowed pasture, a dugout where there was formerly a slough, and acres of trees in the right places.

When Runestad moved on his farm in 1947, a slough occupied a good part of one large field. His terracing on the farmable part of this field dried up the slough. Then he began his dugout project. Now he is able to utilize every bit of the soil bordering the 50 by 35 foot dugout.

Runestad rented another quarter this year and as soon as he has reached an agreement with his landlord, soil conservation practices will be put into effect on this quarter. Runestad says "conservation farming is definitely a must * * * it's coming slowly, but each year it gets bigger." He claims that terracing and contouring have raised his yields as much as 33⅓ percent.

Contour planting of crops, trees and even fence lines are common on the Runestad farm. He has a 2-acre shelter belt just north of his farm buildings that is planted on the contour. The result is a nice dry feeding lot for winter use.

Runestad uses the alfalfa-brome rotation program. He plants an alfalfa-brome mixture, leaves it for 2 or 3 years and then crops the land again. He also uses a mixture of clover in with his grain.

Cattle, sheep and hogs play a part in his farming operation. He feeds everything he raises. He said "we added a quarter this year because of more stock. But if that quarter isn't terraced, a lot of good crop value will be wasted."

In addition to his farming operation, Runestad is the Belleview Township assessor, Belleview Township committeeman, on weed board for Miner County, and active in the promotion of soil conservation practices. He is married and has one daughter, Sharon, a graduate this year from Augustana Academy, Canton.

Need Shown for Further Fish Farming

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. MAGNUSON. Mr. President, several weeks ago my Committee on Interstate and Foreign Commerce published a special report on Farming for Fishes.

Since that time, I have heard from many sources the growth the commercial fish farming industry has enjoyed in this Nation during recent years. Many letters came from commercial hatcheries, telling of their first-hand experience in this field, and how many of them are now being called upon to provide a good proportion of the fish plant by governmental agencies charged with the responsibility of stocking lakes and streams.

In many instances, private operators have been able to supply stock at a lower price than governmental agencies have been able to do. It is my belief that such operations should be encouraged in the future so that the Nation's sportsmen may receive more fish for their dollar.

I ask unanimous consent that one letter I have received, from the Snake River Trout Co., at Buhl, Idaho, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SNAKE RIVER TROUT CO.,
Buhl, Idaho, June 10, 1957.

The Honorable WARREN G. MAGNUSON,
United States Senator, Senate Office Building, Washington, D. C.

DEAR SENATOR MAGNUSON: Have read with interest the report prepared for the use of the Committee on Interstate and Foreign Commerce by you in regard to farming for fishes. I was particularly interested in this report since we ourselves operate the largest trout ranch in the world. I am sending to you a recent writeup on our operation by the Cryovac Co. This story will explain better than I can in a letter our type of operation here.

The commercial trout growers of the United States have formed an association and within the last year have been printing our own publication. A copy of this is also being sent to you. We feel that there is a great future in fish farming in the United States not only for trout, but also for other species. In many areas of the country, the trout that are produced are used for stream stocking for sportsmen. We are interested in table trout for food use although we also do supply a small amount of trout to the State for stocking. In almost every instance the private hatchery can supply commercially produced trout at a very reasonable price, and often at a lower price than the Federal or State operation can produce the same fish. We are now supplying 60,000 trout averaging 8 inches each, which is 4 to the pound, to the State of Idaho at 69½ cents per pound, f. o. b. our plant. Bids for live trout for stream stocking in this area range from 60 to 70 cents a pound, with a low last year of 55 cents a pound for 3 to the pound size fish supplied to the fish and game department of Nevada. With proper management in the years to come, it will be possible to ship trout in transcontinental tankers to supply stream stocking in the Eastern States. At the present time Idaho Rainbow trout are being delivered as far east as Chicago. The price of this type of operation is usually 65 cents a pound for 3 to the pound size trout or larger, plus 40 cents a mile one-way transportation charges. Tankers now used hold approximately 1,500 to 2,000 pounds of live trout.

Some of the drawbacks of fish farming, as far as a commercial hatchery is concerned, are the lack of available capital for going into the business and the lack of interest and cooperation shown to the commercial hatcheries by many of the State and Federal fish and game personnel. In some areas, such as your own State of Washington, the cooperation between the fish and game department and the commercial hatcheries is excellent. In other areas there is not only a lack of cooperation, but in many cases a determined effort to hinder whenever possible the commercial hatchery operator. We hope through the efforts of our association, the national board of United States Trout Farm Association, to be able to correct these problems as well as numerous others.

If, in our own small way, we can at any time help you in developing a better policy in the United States for such farming, we will be most happy to do so.

Sincerely,

SNAKE RIVER TROUT CO.,
ROBERT A. ERKINS,
President.

Foster Parents Week in Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. WILEY. Mr. President, I was interested to read in the newspapers of my State that our Governor, Vernon W. Thomson, has proclaimed the present week of June 23 through June 29 Foster Parents Week. In this way, tribute is being paid to more than 5,000 foster families in Wisconsin—worthy mothers and fathers who provide at least a temporary home to children.

We continue to read a great deal in the newspapesr about the problem of juvenile delinquency. We note how a great many youth crimes are attributed to the fact that the youngsters came from broken homes.

It is well, therefore, to note the constructive activity of foster parents in providing homes for youngsters who might otherwise have to grow up in institutions or in homes totally unsatisfactory as regards parent-child relationships.

I, too, therefore, wish to commend both foster parents and adopted parents throughout the land.

Wisconsin, of course, has been particularly careful in making sure that both foster parents and adopted parents are of the highest types. Other States have been less careful, unfortunately; and there have been abuses in the foster-parent system.

An article in last Sunday's issue of the Wisconsin State Journal tells the heartwarming story of What Makes Johnny Belong. I particularly want to salute the foster parents—indeed, the adopted parents—who take into their homes handicapped children, children suffering from some physical or mental disability.

Words can hardly express the genuine debt which society owes to those wonderful mothers and fathers who willingly, eagerly, take unto themselves children who otherwise might be rejected because of handicaps which are no fault of their own.

The solution to the juvenile-delinquency problem, like the solution of other social problems, lies in the home of America and in the church and in the school. Basically, it lies in the heart of America.

This article tells a heartwarming story. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OFTEN IT'S A FOSTER FAMILY HOME—WHAT MAKES JOHNNY BELONG?—WEEK TO HONOR 5,000 FAMILIES IN WISCONSIN

(By Helen Klieforth)

Drama in a young child's life.

Johnny, aged 4, was unwanted. Shunted about by relatives, he has never lived in one home for very long. He felt alone and rejected. When his case was turned over to a welfare agency, and a social worker came to get him, Johnny told her, "I'm nobody's nothing."

Today, Johnny belongs. He has been given a home by generous foster parents who share with him their home and love.

FOSTER PARENTS HONORED

This week, foster parents throughout the State are being honored. Gov. Vernon W. Thomson has declared June 23 to June 29 as Foster Parents' Week. At this time, tribute is being given to more than 5,000 foster families in Wisconsin.

In Dane County alone, more than 300 foster children are given homes by foster parents, who care for them from periods of a few days to several years. One woman, Mrs. W. E. Krause, 3902 Margaret Street, has had more than 260 foster children during the past 20 years. She has cared for infants, physically and emotionally handicapped children, and teen-agers.

Another family, the August Heeds, 1036 Spaight Street, have specialized in caring for handicapped children. During the past school year they had a 7-year-old girl who has a hearing loss, and an 8-year-old visually handicapped child.

Foster parents differ from adoptive parents in that they give only temporary care to the children, and do not adopt them. These children may have living parents who do not wish to give up their children permanently. Or the children may be infants who need temporary homes until they are placed for adoption.

The use of foster homes has been growing rapidly, especially since the first White House conference on children and youth in 1908.

At that time, President Theodore Roosevelt said, "Home life is the highest and finest product of civilization. Children should not be deprived of it except for urgent and compelling reasons."

Foster parents, therefore, not only provide family living for these children, but save the taxpayers thousands of dollars by providing this service in place of institutional care.

Sometimes, of course, children without families must be cared for in special institutions, but for the most part children are happier in family settings. In a foster family, they often give and receive the love they need so badly.

AN EXAMPLE

In one foster home, a teen-aged girl who had felt rejected and unloved, displayed rather perplexing behavior. She was testing her foster parents as if to prove to herself that they, too, did not want her. When at last she was satisfied that they did love her, she accepted them.

Today, she is married and a mother herself. When she writes to her foster parents, she addresses them as "Dear Mother and Daddy."

Social workers in Dane County report several instances in which foster children, now grown and established, have become foster parents themselves.

MORE NEEDED

There is a growing need for more foster parents. There are at this time, many children in State institutions who should be in foster homes.

For many prospective foster parents however, there is less appeal in taking older children than infants. Yet, the children have desperate need of loving home care.

Especially hard to place are some physically or emotionally handicapped children. They provide a challenge to those who open their hearts to them, often requiring patience and understanding. Mrs. August Heed, who cared for eight handicapped children says, however, "The effort required brings extra satisfactions."

Children are placed in homes which can best meet their needs. Sometimes a child who has been rejected might need a home where he would be the only child. Other children who had been neglected in their own homes, find security in a foster family with other children.

HOW THEY'RE JUDGED

Good foster parents are judged by their ability to give of themselves, not by their financial situations, nor by the way they do their housekeeping.

Foster family living is a family affair, involving fathers, mothers, and the family's own children. These children must share their own parents with children who had been strangers.

"Love" is the key word in foster home placement.

Dane County foster parents will be honored at a get-together Tuesday evening at the women's club. Judge Richard Bardwell will speak to the group, and several foster children will put on a short musical program.

The Apathy of Man—Essay by Joann Votava

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. JACKSON. Mr. President, I ask unanimous consent that an essay by Miss Joann Votava, of Pasco, Wash., be printed in the Appendix of the RECORD. It is a good essay, which has won wide recognition in Washington State, and I believe it demonstrates an excellent grasp of the significance of history on the part of so young a girl.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE APATHY OF MAN—THE DOWNFALL OF CIVILIZATION

(By Joann Votava, Pasco Senior High School annual speech contest, May 24, 1957)

Many hundreds of years ago a great and proud nation fell, and lay at the feet of the barbaric hordes. And for years, historians puzzled over the question of what single force could have caused this downfall. Mighty Rome, who had attained a level of cultural and political advances never before realized in this world, had fallen. As they studied this problem, historians came to the conclusion that not the only force but the main reason for the downfall of the Roman republic was the apathy of its own people.

In their forward progress, the Romans were able to attain their material and spiritual abundances largely through the preservation of individual initiative and responsibility. And so long as the Roman people took upon themselves their responsibility to themselves and to the state, Rome prospered and was strong.

And then history records a gradual shifting of responsibility from the people to the state. Under the welfare state of that day, they came to expect that the government would feed them, educate them, entertain them, and, indeed, sustain them in their livelihood. Gradually, not suddenly, but gradually the Roman republic shifted into statism and finally totalitarianism. And Rome fell.

This political chain of events has been repeated down through countless decades. From the earliest Sumerian civilization down through the Egyptian, Babylonian, Grecian, Roman, and even to this very day—not the only reason but the basic reason for the

downfall of a country was the apathy of its own people.

Since the early 1700's when the word American was first coined, we have always been noted for our strong national patriotism. We stand up in the eyes of the world and say: This is mine—my America—and I am proud of my country. But the attitude of the early 1700 day settlers was far different from the attitude of our citizens today.

For example, when voting was first inaugurated, these ancestors felt that it was not only a duty but a rare and precious privilege to vote for the person of our choice. These elections commanded a large participation. But today, how many of those actually eligible to vote take the time to register, and of those who register, how many get to the polls on election day, and of those who vote, how many take the time to vote wisely. Yes, the attitude of our American citizens has changed from earlier days.

We in America are indeed lucky and fortunate. We live in a democracy. We have managed to preserve from the 1700's the rights to vote for whom we wish, speak what we feel, worship in the church of our choice, and live as freemen and women. We can easily see this democracy we live every time we walk downtown. Democracy is seen in bright neon signs, merchandise-filled windows, and that basic element of all good business, free enterprise.

The Communist form of government which exists in the world today has one primary aim—to gain control of the whole world. This they will do either by peaceful methods or by war, whichever is most convenient. A Communist Party exists in the United States today. They have seized upon this apathy as displayed by our citizenry and using it as a wedge, they seek to divide and destroy.

If I had a voice that millions might hear, I would cry out and say, "wake up Americans, get down on your knees, and pray to Almighty God, that each and every American will realize that in his or her hands lies the fate of all future Americans." If we do this there will be no danger that someday a man will stand on the eastern shore of our continent and say, "This was the site of the capital of a civilization called America, and this pile of stones over here once belonged to the Washington Monument. Now isn't that quaint."

No Americans. That will never happen if we awaken ourselves from this apathy, appreciate this democracy we live in and live in the words of the motto of our country—In God We Trust.

Beyond the Bamboo

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very enlightening and provocative editorial published in the Washington Post for Thursday, June 27, this morning. The editorial is entitled "Beyond the Bamboo," and it relates to some of the developments that are presently underway in Red China, particularly the statements of the head of the Communist Party in Red China, Mao Tse-tung, and also one of the generals of the Red Chinese armies. I, therefore, ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEYOND THE BAMBOO

Something important has been happening within Red China, concerning which we have thus far only the dimmest intimations; yet the signs are slowly increasing that the cross-pollination from Mao Tse-tung's "hundred flowers" is already producing some strange growths.

Spokesmen for the half dozen or more fellow-traveling parties, tolerated by the Reds for purposes of propaganda, are now attacking the Peiping regime and demanding the formation of a genuine coalition and a greater share of public offices for themselves. Yesterday, at the opening session of the National People's Council, Premier Chou En-lai saw fit to warn these malcontents that if they persist in such demands they may soon find themselves classified as enemies of the people; and all who heard him knew what that meant.

Before Chou spoke, the ranking officer of the Red military command, Gen. Lung Yun, had denounced Soviet Russia for obliging China to bear the whole cost of the Korean war and for insisting on the repayment of its war loans. More astonishing still was the contrast drawn by General Lung between this avaricious attitude of the Russian comrades and that of the American bourgeois-imperialists, who canceled or wrote off under lend-lease agreemnts their far larger payments to allies in the First and Second World Wars. And besides all that, General Lung wanted to know when the Russians are going to recompense China for all the heavy industrial equipment seized by them in Manchuria after the Japanese surrender there and shipped away to Siberia.

Now this General Lung, though he has picked up a good bit of the party jargon, has been described as a sort of rice Communist. Actually, it is said, he remains what he has always been: an old-fashioned warlord on the pattern of Chang Tso-lin or Feng Huhsiang. As the master of Yunnan, his native province, he was once a foe and then an ally of Chiang Kai-shek. After the war he was placed under surveillance by Chiang, escaped and delivered Yunnan to the Communist cause.

Another curious circumstance about General Lung's latest oscillation of loyalty is that his attack on the Soviet was cited by the official Communist news agency as a deplorable example of a current tendency toward right deviationism. Not very long ago, the Peiping regime had other ways of dealing with deviationists than by giving wide publicity to their views. Two possible explanations, therefore, suggest themselves: (a) that General Lung was speaking with the tacit support of some powerful faction within the party; and (b) that his power is again too well consolidated for his statements to be ignored.

And so what we are left with for the present is a choice among various hypotheses. Is all this new and sweetly conciliatory talk from Mao a desperate appeasement of some strong and serious opposition that has risen against him and his regime? Is it an effort to beguile the West, and especially the United States, into recognition of Red China and into increasing trade with her? Is it an effort to profit by the severe loss of face suffered by the Kremlin in the Hungarian revolution and a challenge to Moscow for the ideological leadership of the Communist world? Or has it only the less ambitious purpose of squeezing a few concessions from the jittery Russian overlords?

No matter how these questions may be answered, there is plenty of reason to hope that Mao may have opened the gates of history to an even more momentous flood of events than those set loose by Nikita Khrushchev in his speech about the manias and crimes of the late Comrade Stalin.

Water Resources and the Tidelands Area

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I wish to present a most interesting speech delivered by the Honorable Calvin T. Watts, assistant director, Department of Public Works of the State of Louisiana, to the 44th national convention of the National Rivers and Harbors Congress in Washington, D. C. While this deals principally with the State of Louisiana, I feel it will be of nationwide interest.

The speech is as follows:

WATER RESOURCES AND THE TIDELANDS AREA
(Remarks by Calvin T. Watts)

If Louisiana were the only State in the Union, I believe that it could supply enough water resource problems to keep the National Rivers and Harbors Congress busy forever. Louisiana, I am certain, stands alone among all the 48 States in the magnitude and variety of its water problems. As I develop my subject, you will understand why we are such stanch supporters of this great organization—the National Rivers and Harbors Congress—and why we continually support an adequate national program for improvement and maintenance of our water resources.

First of all, we have the major problem of flood control. Nearly half of the United States drains on and through Louisiana—41 percent of the country, to be exact. We get the drainage from 31 States and 2 Canadian provinces—an area extending from Montana to New York, and from up in Canada to the Gulf of Mexico.

One-third of the State, about 16,000 square miles, is protected against flooding by 2,033 miles of levees—some of them over 30 feet high. Most of our industry, one-half of the population, one-third of the farms, including our most productive lands, and many important cities and towns, including the port city of New Orleans, lie in the area requiring flood protection. Heavy rains on the extensive low, flat lands of the coastal section creates many local drainage problems. Periodic droughts bring severe water deficiencies, particularly in the area dependent upon irrigation. We have over 690,000 acres of land under irrigation each year—more than any other State outside the arid West. Added to these are the problems of beach erosion—some of our coastal islands have vanished, and we are hard pressed to preserve others; salt water intrusion into our streams along a 400-mile coastline; lack of fresh water in brackish bays where oysters are cultivated; stream pollution; and the development and maintenance of navigable waterways in recent alluvial deposits.

Other States may have some of these problems to a greater or lesser degree, but few if any have all of them except Louisiana and the so-called tidelands area.

The people of Louisiana are slowly realizing that water—not oil or gas or minerals—is the State's most valuable resource, because without water we could not develop these resources. In earlier days water supplies seemed unlimited and we were concerned more with the disposal of storm and flood waters than with the availability of water for beneficial use. And we never thought that there would be a shortage of water in our State.

But times have changed with the influx of industries to develop our vast mineral resources, with the growth of agriculture, and with the great increase in our population, so that today water has become the most important element in our modern, highly complex economy. As a result of these developments, Louisiana has become one of the major water-using States in the Nation, and we are now concerned with water shortages in addition to the periodic excesses which must be faced each year.

Most of our water comes from our neighbors above us in the Missouri, the Ohio, the upper Mississippi, the Arkansas, and the Red River basins. The only trouble with this source is that most of the supply is delivered at once and is not evenly distributed over the year. Now that we have learned how to handle such huge volumes of water through flood control measures on the Mississippi River and its tributaries, we are very grateful for all our rivers and streams, and for all the water which you send us. Water is no longer the cruel master of Louisiana, but our very good servant.

Flood control has enabled us to take advantage or our natural resources, both mineral and physical. The fresh water flow of this Mississippi River and deepwater navigation for 233 miles below Baton Rouge are very attractive to industry, particularly when combined with the oil and gas resources of the State. The Mississippi River has never flowed through Louisiana at a rate less than 48 billion gallons per day. Its average flow is 312 billion gallons per day, and the maximum of record 922 billion, as compared to the 262 billion gallons which the entire Nation uses each day.

We have other interstate streams which add to our surface water resources—the Sabine, the Red, the Ouachita, and Pearl Rivers. We have recently entered into the Sabine River compact with the State of Texas on the division of Sabine River water, and development of the water resources of this basin. The two States are now jointly planning construction of the Toledo Bend Reservoir on this river to impound approximately 5 million acre-feet of water. It is to be a multi-purpose reservoir to be used for power, irrigation, flood control, water conservation, and recreation. Estimated cost of the project is over $30 million and it is to be financed from revenue bonds by the Sabine River Authority of Texas and the Sabine River Authority of Louisiana. I am sure that Members of Congress present here today are pleased to hear of a project such as this where two States are trying to build it themselves without coming to Washington for help.

Congress has authorized a compact on the Red River, and the States of Louisiana, Texas, Arkansas, and Oklahoma are now negotiating for an equitable apportionment among the States and development of the waters of that river basin.

Great as they are, our surface water supplies are not evenly distributed with respect to time or geography. We have periods of heavy rainfall followed by periods of drought. Our 60 inches of annual rainfall are not well distributed throughout the year. And we have not solved the problem of distributing the waters of the Atchafalaya and Mississippi Rivers to deficient areas although there are virtually unlimited possibilities for diverting flow from these rivers for beneficial use throughout the northeastern, central, and southern regions of the State. Surface water is available to meet all foreseeable needs—the problem is one of transportation and distribution to points where it is needed. We have made a notable start at Donaldsonville, where we have constructed a 400 cubic feet per second pumping plant diverting Mississippi River water to communities along Bayou Lafourche for a distance of 100 miles. And below New Orleans we have recently completed the Bayou Lamoque structure for diverting fresh water from the Mississippi River to the oyster beds of California Bay. Because of the low flat lands in the lower or coastal portion of the State, there are no opportunities for construction of storage reservoirs. This is the area where most of the water is used—600,000 acres of rice are irrigated, requiring 1,500,000 acre-feet of water in 150 days—and most of the State's industry is located here. To further decrease our water supplies, salt water intrudes all of the coastal streams in this area. Tremendous volumes of fresh water are required to reduce salt water intrusion. In the case of the Mississippi, it takes a flow of about 150,000 cubic feet per second to maintain low salinities at New Orleans, 100 miles up the river from the Gulf.

The Louisiana Department of Public Works has given this problem much study, for at least half of our irrigated lands are directly affected by salt water intrusion. The Waterways Experiment Station at Vicksburg has just completed for us a model study of the effects of closing Southwest Pass upon salinities in Vermilion Bay, a large bay connected to our irrigation streams. The results of this study should be helpful to other coastal areas experiencing similar problems.

Our groundwater supplies are nearly as great as our surface water supplies. It has been estimated that if all the water in the ground beneath Louisiana were brought to the surface, it would cover the State to a depth of 70 feet. But even here we have problems. In many locations our underground supplies have been overdeveloped and water levels have dropped rapidly. In 1 or 2 places where withdrawals have been heavy, salt water from the gulf has entered the aquifer. And in many areas where large volumes of groundwater are available for industry, the limiting factor is disposal of industrial waste without contaminating the surface watercourses.

One of our great problems in flood control is that of sedimentation. Along with the floodwaters which come our way are tremendous quantities of silt which are filling the great Atchafalaya Floodway through which must flow in times of flood one-half the water from 41 percent of the Nation, the other half flowing down the Mississippi. In a few years sedimentation of the floodway at moderate stages will be complete, and the delta-building process of the Atchafalaya River will continue in Atchafalaya Bay. At the same time, the river increases its length and flood stages rise.

Among our greatest resources are our navigable waterways. We have 7,500 miles of navigable streams in Louisiana, of which 2,200 miles are maintained as regular arteries of commerce. All of these streams are of great value to the economy of the State. Many of them traverse the coastal marshes of south Louisiana and provide the only means of transportation for developing the vast oil, gas, and sulfur deposits of an otherwise inaccessible area.

The Mississippi River extends for 233 miles below Baton Rouge as a continuous deepwater harbor for seagoing ships. Very little maintenance is required in this reach as compared to the upper reaches where the river flows through more unstable materials. Over $2½ billion have been invested in new industrial plants on this section of the river since 1946. Industry located here because it needed the river for navigation and the disposal of industrial waste and the fresh water for its manufacturing processes. The Mississippi is the key element in the most extensive inland waterway system in the world, connecting our inland waterways of Louisiana and the 1,200 miles of the Gulf-Intracoastal Waterway along the southern coast of our Nation with the Great Lakes, the Missouri, and the Ohio River systems in the North.

We are continually striving to expand and extend our waterway facilities. Among projects underway or planned are the Mississippi River-Gulf outlet, a tidewater channel from New Orleans to the gulf; the Atchafalaya Bay ship channel from Morgan City to the gulf; 40-foot navigation in the Calcasieu ship channel; the Calcasieu-Atchafalaya water supply and deepwater industrial channel from Lake Charles to Morgan City and projects on the Red, Ouachita, Mermentau, Sabine, and Pearl Rivers.

All of these projects and problems that have been mentioned are located in Louisiana—in the tidelands area—either in whole or in part. But in solving these problems, we find that we are not involved in local projects, but in ones of national significance.

The inland waterways of Louisiana, our ports and harbors, are of no value to us or to the nation unless they are connected to other areas which have similar navigation facilities. For this reason we in Louisiana support Federal navigation projects throughout the Nation—in the Missouri, Ohio, upper and lower Mississippi Valleys, and in the Great Lakes Basin.

We are well aware of and appreciate the increase in low water flow of the Mississippi River provided by the development of tributary basins, particularly the Missouri Basin. For this reason we watch such developments with great interest, and join our neighboring States to the north in support of these programs. It is most important to Louisiana that the low water flow of the Mississippi River be increased to provide deeper navigation in the upper reaches and prevent salt water intrusion in the lower reaches. The flood control program on the Mississippi River and tributaries is also of first importance to the Nation, and not just to the States in the alluvial valley. This program prevents flooding of millions of acres of fertile lands, and maintains the most important and extensive inland navigation system in the world. At the same time it secures the east-west lines of communication across our country—the transcontinental oil and gas pipelines, highways, railroads, power, and telegraph lines.

The water resources of Louisiana in the tidelands area are great, but the problems associated with them are also very great. Flood control and drainage has cost the State of Louisiana and its agencies over $300 million in addition to the $400 million spent by the Federal Government. At the present time the State and its agencies are spending about $12 million annually for these purposes in addition to that being spent by the Federal Government. Although water has been Louisiana's No. 1 liability in the past, during recent years it is fast becoming Louisiana's No. 1 asset. In the solution of these problems and in the development of our water resources, Louisiana has had a most pleasant association with the National Rivers and Harbors Congress. I am looking forward to a continuance of this productive relationship in the years ahead.

We Can't Buy All the Plans To Save the World

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. SCHOEPPEL. Mr. President, under date of January 21 of this year, there appeared in the Kansas City Star an editorial entitled "We Can't Buy All the Plans To Save the World," which I think is apropos at this time, because the Senate is soon to consider the appropriations for the Military Establishment and the national defense. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE CAN'T BUY ALL THE PLANS TO SAVE THE WORLD

When the Nation is in a constant state of alarm it takes a bold man to criticize any spending in the name of national security. Obviously there has to be a limit to spending somewhere. But where?

The mantle of wisdom on foreign aid is in the State Department and the military budget is engraved on a golden tablet by the Defense Department. We refer to these requests as they are revealed to mortal men with the ultimate endorsement of the Budget Bureau.

Any question is denounced as proof that you are more concerned with your taxes than the national security. This would be equally true if the high priests of our security chose to recommend a few billions more or a few billions less.

Now this poses a problem with no ready solution. We agree that the best judgment on what we should spend in Laos, Jordan, or the Nile is in the State Department. The men best equipped to discuss our military needs are the top leaders of the military services. It is hard for anyone on the outside to pick holes in their arguments and their budgets deserve careful consideration. But even these omnipotent men have been known to change their minds with such suddenness that we sometimes suspect that they, too, are poor mortals. Certainly they should not be above much stronger public questioning than we have heard in recent years.

Anyone who is interested in human nature knows that indefinite expansion is built into all governmental budgets. We aren't questioning the conscious intentions of men who plan the programs for the military or foreign operations.

But they do have a vested interest in the constant state of world alarm. We doubt that it is an accident that the greatest epidemic of war scares is in the United States. And the causes for fright seem to become particularly ominous at budgetmaking time. The Russians aren't the only masters of propaganda. It is a sad fact that on the most important problems of our times, it is sometimes virtually impossible to get unbiased answers.

It is in the nature of capable men to think their own jobs are so vital that they must be expanded. When you get into such far-ranging fields as foreign relations and defense, the multiplication of vital jobs is terrific. One man is prepared to save the world by pumping money into Cambodia and another has the answer with supercarriers. The top-level heads of the various departments pare down their requests, of course, but the pressure is terrific. And when war tensions are up, the arguments are hard to resist.

Most of us have known nervous people who bought insurance against so many calamities that they didn't have enough left to live on. Danger lurks in all human experience and no man has found the feasible means of protecting himself against every possibility.

Ordinary citizens also know that the rich man who accepts responsibility for all the troubles of his relatives sets off an endless chain of demands. And most of them sound perfectly logical. We have discovered that the same is true of the rich Uncle Sam.

And now, with the best of arguments, this country is on a course of setting up a unilateral policy of guaranteeing the military security of all the free nations in the world.

The increase in the foreign-aid request of the present budget comes only from the very reasonable new request for money to bolster the nations in the Near East. An emergency proposition. Yet, if we are to be at all realistic, we know that as long as world tensions persist there will be new emergencies every year. Let's assume the request for money to use on the latest emergency will always be valid. Then the only way to hold down foreign-aid spending is to wind up some of the old emergencies.

It would be suicidal for the most tax-conscious person to want to cut military defense to a dangerous level. And it's impossible for an outsider to know exactly how much should be spent. Yet we are entitled to doubt that the pet weapon of each branch of the service is the one that is going to save us. And it is no secret that the Navy political bloc is so powerful in Congress that we can't hope for an absolutely objective appraisal of the Navy needs. And we can't believe that the admirals are alone with a vested interest in war crisis.

We agree that any cutbacks that mean a return to isolationism would be highly dangerous. And that is not in prospect. Today the danger is from excesses in the opposite direction. The danger grows with the fatalistic public resignation that has caused it to accept without scrutiny anything proposed in the name of national security. A healthy infusion of public skepticism should force a more realistic approach.

It is only good sense to take out all reasonable insurance against the catastrophe of world war. The problem is to find an equally sane place to draw the line.

Punishment for Publishing "Secret" Information

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Dallas, Tex., Morning News of June 24, 1957.

The editorial is self-explanatory. It condemns the proposal of the President's Commission on Government Security that the Congress make it possible to put newspapermen in jail for publishing information the Government arbitrarily labels as "secret."

I consider this proposal as dangerous as the Sedition Acts of 1798.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WRIGHT OFFERS CURE WORSE THAN DISEASE

A long, cold look at one of the main recommendations of the Commission on Government Security is called for, at least.

This is the proposal to imprison and fine newspapermen who publish information which the Government labels as secret.

The propensity of Government officials to throw a cloak of secrecy around many of their moves is notorious. More crimes of news suppression are attempted in the name of security than is good for the country.

Outside the Defense Department, there are few, if any, facts or decisions of public servants that merit such a blackout. And in the case of genuine defense secrets we already have laws stout enough, with stiff enough penalties, to cover anyone who tries to pass vital information to either friend or enemy.

The temper of this one recommendation in the 800-page report of the Commission should alert us. At least equal scrutiny would seem to be in order for all others offered by Chairman Loyd Wright and his group.

It may be that we need a Central Security Office,, an independent agency answerable only to the White House. It may be that we need to revise appeal procedures for those tried by loyalty-security boards, although the courts appear to be on the job in this particular. There may be other proposals in the report that deserve consideration.

But the fact remains that Congress should go slow in adopting any more regimentation of the individual, either in or out of government employ. Just because a tactic works well in a Communist or Fascist state is no reason to insist that it should be adopted in a free country.

The Dreams of Our Rivermen

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. NEUBERGER. Mr. President, the Oregon Journal of June 14, 1957, features an editorial under the heading "The Dreams of Our Rivermen." This editorial recognizes the prophetic qualities of two Northwesterners who are widely identified with navigation development on the Columbia-Snake River system. The editorial pays to Mr. Herbert G. West and Captain A. Leppaluoto a deserved tribute for their faith, vision, and determined efforts to realize the full navigation potential of one of America's great river systems. Like all true prophets, they have their eyes set on the future. Today's achievement is to them but the realization of yesterday's dream.

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DREAMS OF OUR RIVERMEN

It is good for the soul of a landsman to spend a day with river people. He cannot

avoid becoming infected with some of the fervor which marks their dreams for the future of water transportation on the Columbia River system.

It startles one to hear Herbert G. West, executive vice president of the Inland Empire Waterways Association, predict that eventually navigation benefits on the Columbia will outweigh those of power, or to hear Capt. A. Leppaluoto, president of the Inland Navigation Co., say that barge tows, as the result of navigation improvements, will grow in size from 1,000 tons of the past to 10,000- and 20,000-ton cargoes.

West's predictions are based on a scope of operation not comprehended by the average Northwest resident. He sees the barge lines tapping the great Snake River Basin and pushing above Pasco on the main stem of the Columbia. Then he sees the products of this hinterland, greatest on the Pacific coast, being transported, not just downriver, but all the way to markets in California, Hawaii, the Philippines, and Alaska.

One cannot explain these men's dreams on the basis of expected selfish advantages. What they think and feel about the river is like a religion. That is what has kept them going in the face of the adversities of the last two decades. That is why they work for things they may not see in their lifetime.

Even now, however, the ordinary observer can see their dreams taking on substance. Barge transportation has won its spurs. Its lean years are about over. Drowning out of the Celilo Canal bottleneck is, as Captain Leppaluoto says, about to usher in a great new era, with larger, more efficient equipment. Much has yet to be done before river transportation reaches its ultimate stage. There are the four lower Snake River dams to be built. There is John Day on the main stem of the Columbia. Eventually there must be access to the territory above Pasco.

To complement these developments there must be dredging of a 27-foot channel to The Dalles, to permit the passage of smaller oceangoing vessels, and an eventual 40-foot channel from the sea to Portland-Vancouver, to accommodate the larger ships.

Water transportation is not a thing to be considered apart from the region's overall economic progress. Riverman West sees it helping, not hurting, other forms of transportation. It will help also the farmer, the industrialist, the banker, the laborer, the clerk, the salesman.

The river is one of our greatest resources. What we do with it, from the standpoint of navigation, will be a determining factor in the welfare of the whole region.

Columbia's Emblem—Poem by Edna Dean Proctor

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, June 27, 1957

Mr. DOUGLAS. Mr. President, at this time I wish to make a statement.

On last Wednesday, June 17, when I introduced Senate Joint Resolution 105, designating the golden corn tassel as the national floral emblem, I ended my remarks with the last verse of a poem written in 1892 by a native Illinoisan, Edna Dean Proctor. My attention was called to this poem by Mrs. Julia Proctor White, the niece of Miss Proctor, who lives in Peoria, Ill. Miss Proctor's poem first appeared in the September 1892 issue of the Century magazine, and was widely copied and recited. It also received several choral settings. As I feel that the poem gives eloquent support to my resolution, Senate Joint Resolution 105, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

COLUMBIA'S EMBLEM

Blazon Columbia's emblem,
The bounteous, golden corn!
Eons ago, of the great sun's glow
And the joy of the earth 'twas born.
From Superior's shore to Chilli,
From the ocean of dawn to the west,
With its banners of green and silken
It sprang at the sun's behest;

And by the dew and shower, from its natal hour,
With honey and wine 'twas fed,
Till on slope and plain the gods were fain
To share the feast outspread:
For the rarest boon to the land they loved
Was the corn so rich and fair,
Nor star nor breeze o'er the farthest seas
Could find its like elsewhere.

In their holiest temples the Incas
Offered the heaven-sent maize—
Grains wrought of gold, in a silver fold,
For the sun's enraptured gaze;
And its harvest came to the wandering tribes
As the gods' own gift and seal,
And Montezuma's festal bread
Was made of its sacred meal.
Narrow their cherished fields; but ours
Are broad as the continent's breast,
And, lavish as leaves, the rusting sheaves
Bring plenty and joy and rest;
For they strew the plains and crowd the wains
When the reapers meet at morn,
Till blithe cheers ring and west winds sing
A song for the garnered corn.

The rose may bloom for England,
The lily for France unfold;
Ireland may honor the shamrock,
Scotland her thistle bold;
But the shield of the great Republic,
The glory of the West,
Shall bear a stalk of the tasselled corn—
The sun's supreme bequest!
The arbutus and the goldenrod
The heart of the North may cheer,
And sunflower, cactus, and poppy
To sierra and plain be dear.
And jasmine and magnolia
The crest of the South adorn;
But the wide Republic's emblem
Is the bounteous, golden corn!

"Social" Medicine for the South

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. FORRESTER. Mr. Speaker, the Albany Herald, one of our leading daily newspapers, in the June 22, 1957, edition carried an editorial entitled: "'Social' Medicine for the South."

The distinguished editor, Hon. James H. Gray, was born, reared and educated in the State of Massachusetts and is a southerner by adoption. Mr. Gray performed outstanding service in World War II, and has traveled extensively throughout the world and, fortunately, is exceedingly familiar with the peculiar problems of the various sections of our country, and to his readers his opinions are rightfully held in great respect.

The above referred to editorial is so completely sound that I feel everyone should read it. The editorial is as follows:

"SOCIAL" MEDICINE FOR THE SOUTH

We share the chagrin and consternation of our two Georgia Senators over the action of the majority of the Senate in agreeing to bypass its Judiciary Committee with respect to the administration's so-called civil rights bill. If this action were not so damaging in portent, it might be viewed as an exercise in low comedy.

Here is a legislative proposal which is supposed to usher in a new "era of good feeling" among the races, to the distinct advantage of the national interest. Here is a legislative proposal whose intent is so high-minded that no men of good will should oppose its passage. And yet, what a difficult time administration supporters in Congress are having in selling this brand of social happy water. Such legislative medicine is a cureall, says the administration, and now we must put our foot on the sick child, prop open his jaws and pour it down his throat.

How have the administration's doctors conducted themselves? In the House, they decided that civil rights were so important to the public interest that right of jury trials should be suspended in violation cases, because presumably the people in those areas where such infractions might arise are not to be trusted to act fairly. In other words, these people on the local level do not possess the judgment to act responsibly in affairs that affect themselves and their immediate society most intimately. The Federal Government must do it for them.

Goshamighty, the curative powers of this social medicine must be so subtle that no patient can really be certain that he is a well person until the doctor slaps him on the back and pronounces him fit as a fiddle. The fact that the patient has lost the right to speak for himself? Why, that's as old fashioned as the Constitution.

In the Senate, the civil rights doctors continued their brave fight for enlightenment. The procedure of the established committee system? What nonsense in the atomic age. Throw that out the window! What in the name of confusion should the Judiciary Committee have to do with a civil-rights measure, which concerns intimately the power of our courts, the power of the Attorney General's office, the rights of States and the liberties of individual citizens? Why nothing, says Vice President NIXON as round eyed and innocent as the village maiden, and his artless sentiment is echoed by liberal Senators, many of whom, like Senator KNOWLAND, are not always so liberal except when they reckon the force of bloc voting in their home districts.

Yes, sir, this social medicine must really be the juice; one dose of it and the guaranty is that you can't tell black from white.

Perhaps in the foregoing we are being too caustic, too satirical, but the situation involving civil rights in Congress, in our opinion, has reached an emotional point which baffles commonsense and does serious injury to legislative practices and conduct which every thinking American honors. We respect Senator JOHN KENNEDY, from Massachusetts, for standing against this cheap fol-de-rol; in his view, the matter has gone beyond any question of civil rights. He sides with Senators RUSSELL and TALMADGE in believing that a basic principle is concerned that cannot be dismissed as merely sectional

prejudice. It is primarily an opposition to the so-called liberalism of today whereby the power of the Federal Government has been enlarged on the theory that anything that supposedly benefits the general welfare is constitutional, irrespective of what was decided before as to the rights of individuals and the rights of States. All this is not a system of law according to a written Constitution but law according to public sentiment as the judges choose to interpret it.

What is going on in this Alice-in-Wonderland partisan playlet in Congress cannot be taken lightly by any section of this country. When precedents and long-cherished principles of jurisprudence and legislative procedure are thus ignored, then captious politics will rule the day. And what of minority rights, which the administration's so-called civil rights bill purports to uphold so zealously? Why, these rights will go into limbo and the Nation will be at the mercy of intolerant majorities, which can be swayed for the moment by smoldering prejudice, political calculation, and pious declarations.

JAMES H. GRAY, *Editor.*

Right is right, and right is on the side of Mr. Gray, and our philosophies of government. Mr. Gray has lived in the South long enough to be familiar with the plans of the Communists to destroy the South and its people. Mr. Gray is thoroughly acquainted with the tactics and aspirations of the left-wing minority groups to beat down the South, and Mr. Gray opposes those purposes vigorously.

Mr. Gray does not share the opinion of some who express themselves in debate to the effect that southern Congressmen represent only the white South, for Mr. Gray feels that our southern Representatives represent the South and this Nation as it was intended to be and must continue to be if we are to survive.

Mr. Gray knows that the medicine cooked up for the South is intended to destroy the patient, not to cure. Mr. Gray knows that the same medicine will destroy the soul of this Nation.

Position of Pope Pius XII on Arms Race Is Consistent and Knowledgeable

---

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by Rev. Edward A. Conway, S. J., entitled "Refutes Cherwell Charge Pope Taken in by Communists."

Father Conway is a professor of political science at Creighton University and has been a student of Papal disarmament teachings. The article follows:

REFUTES CHERWELL CHARGE POPE TAKEN IN BY COMMUNISTS

(By Edward A. Conway, S. J.)

Let me say at the outset that I entirely agree with the thesis of the article in U. S. News & World Report that much of the current clamor about the danger of fallout from H-bomb testing is inspired by Communists. What I object to is the article's implication, based on Lord Cherwell's charges, that one of those who are Communist-inspired is the longtime opponent of communism, Pope Pius XII.

The U. S. News & World Report article used Lord Cherwell's insinuations to support its argument that the Communists have cooked up most of the opposition to the H-bomb tests. One passage, in particular, will illustrate what I mean.

It is captioned: Respected Figures Taken In? and reads in part:

"Another thing that puzzles British and American officials was mentioned by Lord Cherwell in his House of Lords discussion of the agitation against nuclear tests. He said:

" 'This sort of thing becomes particularly obnoxious since various universally respected figures like Pope Pius XII and Dr. Albert Schweitzer have been persuaded to intervene.

" 'How could they allow themselves to be taken in by the inaccurate propaganda of the friends of Russia is hard to understand. * * * Frankly, I am surprised that men in high positions without scientific knowledge or exact information could brush all this aside and issue appeals on quantitative scientific questions which they are really not competent to judge.'

"In his reference to the Pope, Lord Cherwell is believed to have had in mind the papal Christmas message of 1955, in which the Pope appealed for an end to testing of nuclear weapons."

POPE'S RECENT AUDIENCE

Let us start with the last paragraph above, the paragraph written by the U. S. News & World Report writer. First, I ask who could possibly believe that Lord Cherwell was harking back to a papal statement of 1955? I am sure no United States officials thought he was, and I doubt if anyone in Britain thought so. Obviously, Lord Cherwell was referring to an incident that occurred a few weeks before his House of Lords speech, when the Pope gave an audience to Prof. Masatoshi Matsushita, special envoy of Japanese Premier Nobusuke Kishi, who had just appealed in vain to the British Government to cancel the projected test of its first H-bomb off Christmas Island in the Pacific. Domestic opponents of the British H-bomb tests seized on this papal audience as proof that the Pope was on their side. So, of course, did the Communists. And this is what triggered Lord Cherwell's ill-mannered and ill-founded attack on the Pope.

The impression did get abroad that Pius XII had backed the Japanese protests against the British tests. The impression is based on a profound misunderstanding of the Pope's position. Before we can clear up the Pope's action in his recent audience with Professor Matsushita, we must clear up a misleading statement quoted above from the U. S. News & World Report article. U. S. News & World Report says that in his 1955 Christmas message, the Pope "appealed for an end to testing of nuclear weapons."

In that Christmas message, the Pope did call for an end to H-bomb testing, but not as a separate measure, independent of any overall arms-control agreement, as is implied in the USNWR article. He tied the ban on testing to 2 other measures and insisted that all 3 must be agreed on as a unity. This far different from what the British Labour Party recently advocated (simply an end to bomb testing) and, of course, even further removed from the position of the Japanese who wanted the British to cancel their tests unilaterally.

THREE-PART PACKAGE

What the Pope called for in his 1955 Christmas message was a three-part package including: (1) Renunciation of the testing of nuclear weapons; (2) renunciation of the use of nuclear weapons; and (3) effective air and ground observation to insure compliance with the first 2 agreements.

It is important for several reasons to quote the Pope "the sum total of those three measures as an object of international agreement is an obligation in conscience of nations and of their leaders."

This shows: (1) the Pope well understood the need for a package deal; (2) he wanted, not unilateral disarmament by any nation, but an international agreement; and (3) his conviction that a halt to the nuclear arms race is a moral imperative, not something dictated merely by economic considerations, as some people contend.

As if to make doubly certain that he would not be misunderstood, the Pope returned, in his 1955 Chistmas message, to an emphasis on overall arms control agreement.

"We said sum total of those measures," said the Pope, "because the reason they are morally binding is that equal security must be established for all." Then he added—and this can be applied to the recent British question—"If, however, only the first point, concerning experimentation, were put into effect, the result would be that the agreement would not be verified, the more so because there would be given sufficient reason to doubt the sincere desire to put into effect the other two agreements."

It is important to note, too, the pope's endorsement of a worldwide network of observation posts, each staffed by experts of different countries for the purpose of preventing any surprise attacks by either side. This is significantly different from the perennial Russian appeals for uninspected bans on experimentation and use of nuclear weapons. It is also significantly different from the unilateral and unrequited action which the Japanese and their partisans have been pressing on the British.

MISREPRESENTING THE POPE

The USNWR misstatement of what the Pope said in his 1955 Christmas message has two seriously bad effects. First, it makes his position sound similar to the Russians' (i. e., simply stop the H-bomb tests), encourages the suspicions of persons like Lord Cherwell and compromises the Pope's influence for peace. Second, and even worse, anyone who truncates the Pope's program for peace (as it was truncated in the USNWR) plays into the hands of the Communists who already claim that the Pope agrees with them.

A similar misrepresentation of the Pope's position occurred in another publication, the New York Times, and could have had serious consequences had not the Times hastened to repair the damage.

On the day after the Pope's 1955 Christmas message appeared in the American press, the New York Times correspondent at the United Nations wrote these lines:

"The Pope's message, it was felt here, was unclear as to whether a ban on nuclear weapons experimentation was being proposed as an independent first step, as India and others have asked, or linked with the broad question of controlling disarmament, as the West insists."

This was such an egregious misconstruction of the Christmas message that it created a commotion in Washington. Two days later, on December 29, the New York Times' Washington bureau filed a long dispatch reporting that the United States Government welcomed today Pope Pius XII's appeal for a worldwide system of controlled nuclear disarmament.

The dispatch further quoted a Voice of America broadcast which approved the Pope's goals of renunciation of experimentation with atomic weapons, the renunciation of the use of such weapons, and the general control of all armaments.

And here is a fascinating point. The Washington dispatch paraphrased the report

of its U. N. correspondent and attributed the same apprehension to persons in Washington. But then it added: "A close study of Pope Pius' message, however, has led officials here to the conclusion that he was not proposing that experiments with, and use of, the atomic weapons be banned before there was an effective control system.

The December 29, 1955, Times dispatch went on at length to make the amende honorable for the gargantuan gaff of its U. N. correspondent. If it had not, someone might have alleged, back in 1955, that the Pope had been, to use Lord Cherwell's words of 1957, persuaded to intervene in behalf of Russia.

POPE'S INTERVENTION

We are now ready to look at the question of whether Pope Pius XII intervened in the British controversy over H-bomb tests.

If we engage that word "intervene" at little more closely we shall arrive at an answer to the question of whether the Japanese secured the Popes' support for merely a one-sided halting to H-bomb tests.

The fact is that the Pope began to intervene in the whole question of how to use nuclear energy as early as February 21, 1943, 2 years and 4 months before the United States detonated the first A-bomb at Alamagordo, N. Mex. In an address on that day to the Pontifical Academy of Science, comprising 70 of the world's leading physical scientists, Catholic and non-Catholic, the Pope gave a detailed and accurate account of a nuclear chain reaction in uranium based on a report by famed physicist Max Planck, then a member of the academy.

The Pope noted that Planck had said that no one could yet think of a way of "gaining any technical profit from such a tempestuous process." But the Pope, who, according to Lord Cherwell, is "without scientific knowledge," warned that the process should not be used to produce an explosion, but that it should be curbed by "suitable and vigilant chemical means." Otherwise, he declared, "there might follow, not only in the installation itself, but throughout our entire planet, a dangerous catastrophe."

The Pope's knowledgeable position on nuclear action is even more remarkable when we remember that at that time, 1943, there was a blackout of information on nuclear experimentation in this country. The world-renowned scientists of the Pontifical Academy, who assembly annually under the patronage of the Pope—the last meeting was May 20, when the Pope addressed them on astronomy—must have been shocked by Lord Cherwell's recent caricature of the Pope as a "man in high position without scientific knowledge or exact information." The Pope's easy familiarity with the most recondite problems of modern science is, I understand, the marvel of the academicians.

The Pope's first intervention of 1943 was followed by many others as the arms race accelerated and the dangers from new weapons increased. Pieced together, the Pope's statements from then until now comprise a complete pattern for peace that is distinctively his own. I think the dual proposition can be sustained that the Pope's position on arms control, as elaborated over those years, is not only independent of the position of both East and West, but exhibits features neither possesses.

HARSCH SAW DIFFERENCES

It is true that the Voice of America broadcast, following the Pope's 1955 Christmas message, made the claim that the Pope's three-point arms-control package was identical with the West's. But Joseph C. Harsch, the Christian Science Monitor's astute Washington correspondent, pointed out in a dispatch dated December 30, 1955, three differences.

The Vatican, Harsch noted, thought that the danger from test explosions was greater than did the United States. A second implied, and "much more subtle," difference concerned the use of nuclear weapons in warfare. The third difference lay in the Vatican's concern for all peoples, while the United States was primarily concerned with the security of the West.

Mr. Harsch's significant conclusion was that, "The Vatican now has a position which, although closer to that of Washington, nevertheless lies between Washington and Moscow."

Mr. Harsch had no difficulty with the 1955 Christmas message. "Against these points of difference," he wrote, "should be set the fact that the Vatican position does not expect the West to agree to a ban on use of atomic weapons or to an end to experiments unless these two steps are taken simultaneously with the establishment of a system of inspection. Moscow has proposed starting with the ban. The Vatican agrees with the West that an end to experiments and the ban on use must be part of a whole process."

As further proof of the independent character of the Papal position, I quote Mr. Harsch's assertion that "the implications of the Papal message were discussed at State Department conferences and at the White House in two meetings on successive days between the President and Mr. Dulles. That is, the Vatican had made a move in the affairs of nations sufficiently important to constitute a state matter for discussion at the highest levels in Washington. It was what the diplomats call a demarche, a move which injects a new element into existing situations and calls for reconsideration of old policies."

JAPAN PEACE ENVOY

Keeping in mind the Pope's independent and universal approach to this problem, let us now examine what happened when he granted an audience to Japan's special envoy, Professor Masatoshi Matsushita.

The Pope received Professor Matsushita on April 14. As far as I know, no record of the interview was published. But the very fact that the audience was granted gave some grounds for the assertion that the Pope supported the Japanese demand that the British cancel the Christmas Island H-bomb tests. Even the usually accurate New York Times Rome correspondent, Paul Hoffmann, stated a month later that Professor Matsushita "sought and obtained Pius XII's encouragement for his Government's protest against the proposed British H-bomb tests." The Times' News of the Week Review had already said flatly that the Pope supported the Japanese.

Now, in a matter of such delicacy and importance, it is imperative that we do not go beyond the facts. What are they? Some time after the audience, from which no communique issued, the Pope delivered to the professor a short note, to which was appended an exhibit containing very brief summaries of nine Papal statements on nuclear energy made between 1941 and 1956. The precise diplomatic meaning of both note and exhibit can only be determined by the most careful study.

First, the note does not mention the British H-bomb tests, nor any request for support from the Japanese envoy. It begins by observing that the destructive power of nuclear weapons has now become potentially unlimited. It deplores the fact that "both sides" are increasing the terror in the world by exchanging nuclear threats. It urges that "scientists of all nations and all beliefs" try to master nuclear energies for "the service of man" instead of wasting scientific "activity, labor and materials" in preparation for a world catastrophe. The note ends with this sentence: "Scientific, economic, industrial and even political organizations should support with all their power efforts aiming toward the use of these energies on a scale adaptable to human needs."

Although the translation of this note could, I suspect, be improved, the statement as a whole could hardly be more generalized.

THE ATTACHED EXHIBIT

The curious device of attaching to the Papal note an exhibit of nine earlier Papal statements on nuclear activity is less curious when we look at some of the statements themselves.

Under the year 1955, we read in the exhibit: "In an address given on Easter Sunday, April 10, 1955, to the crowd gathered in St. Peter's Square, the Holy Father warned the world of the tragic consequences which could derive from progress achieved in the nuclear field, denouncing not only their fatal applications toward purposes of war, but also the no less damaging effects which could result from them in the field of genetics."

Again, under 1955: "In his Christmas message the same year, his holiness, speaking on peace, set forth the progress achieved in nuclear weapons and underlined the necessity for an international agreement to simultaneously put an end to atomic experiments, to renounce atomic weapons, and to institute effective control of nuclear arms. In this message, full of far-reaching exhortations and warnings, the holy father openly declared that he is in favor of a cessation of nuclear experiments."

Note that last sentence above. It is the closest reference made to the subject of the Japanese envoy's recent visit to the Vatican. But it does not support the Japanese demand for unilateral (i. e., British) testing of H-bombs. If he had wanted to do that, he could have used the sentence above separately, then added: "But this (the Christmas Island tests by the British) is a nuclear experiment. Therefore, I am in favor of its cessation."

INTENT OF THE POPE

I know it is risky business to try to interpret the intent of another, especially when that other is the Pope. But this is my personal explanation of why he used the novel device of the exhibit attached to his note to Professor Matsushita. The Pope wanted to show that he understood and sympathized with the Japanese fears over the effects of radioactive fallout from H-bomb tests. Also, he wanted to remind them, delicately, that he had warned against it and had urged measures against it 2 years previously. At the same time, he wanted to make it clear that he could not join in a demand that the British, in effect, disarm unilaterally, and still remain consistent with his 1955 proposal of an international package deal.

By means of the exhibit the Pope showed that he intended to maintain his independent position which he still hoped both East and West would finally agree to. I think he did maintain that position intact and that the Japanese, who are far from obtuse, understood from his necessarily roundabout response why he could not officially go any further with them.

I mentioned earlier that there are significant features in the Pope's position on nuclear arms which are possessed by neither the East nor the West. I want to discuss three of those features here, not only to indicate his universal, independent approach to the problem of peace, but also to indicate the realism of his position based on astonishingly exact and accurate knowledge of nuclear facts.

EXACT KNOWLEDGE

First, on the matter of radioactive fallout hazard from H-bomb tests, it is notorious that our Government suppressed the facts concerning the extent of the fallout from the March 1, 1954 H-bomb test until February 15, 1955. Yet, the Pope accurately described what had happened in his Easter message of April 18, 1954.

American newspapers, commenting on the Pope's Easter, 1954, message, thought he had been referring to the old fission-fusion, 2-stage H-bomb. Now, more than 3 years later, after we have learned of the existence of a 3-stage, fission-fusion-fission, or "dirty" bomb which scatters the radioactive particles into the air, we recognize that this is the bomb the Pope was talking about at Easter, 1954, when he said:

"The new destructive arms of unprecedented violence are now capable, with artifically radioactive isotopes of extended average life, of polluting in a lasting manner the atmosphere, the land, and also the oceans, even where those arms are very distant from the ones directly stricken and contaminated by the nuclear explosions. * * * Before the eyes of a terrified world, there is presented a preview of gigantic destruction, of extensive territories rendered uninhabitable and unfit for human use—over and above the biological consequences that can result either by the changes brought about by germs and microorganisms, or through the uncertain effect which a prolonged radioactive stimulus can have upon greater organisms, including man, and upon their future offspring."

We might ask how much further advanced might be both scientific research and public knowledge about the hazards of fallout if we had begun the current great debate back when the Pope first raised the question. We would probably have had the hearings of the Holifield subcommittee on fallout hazards at least a year earlier.

NO BALANCE OF TERROR

Another distinctive feature of the Pope's position was his early opposition to the formula for peace popularized by Sir Winston Churchill—the so-called peace of mutual terror. This balance of terror theory is closely allied to the belief in this country that the deterrent of massive retaliatory nuclear power is our best guarantor of peace.

The Pope rejected this thinking in his 1954 Easter message when he asked: "When will the rulers of nations realize that peace cannot consist in an exasperating and costly relationship of reciprocal terror?"

In this connection, we might be encouraged by Russell Baker's remark in a Washington dispatch to the New York Times of June 2 that "implicit in President Eisenhower's impassioned warnings that the thermonuclear arms race is impossible is the suggestion that he has little faith in the lasting efficiency of the vaunted deterrence policy. He seems to be arguing that the deterrent cannot work permanently, that the constant race to keep up must lead to ultimate war."

UNPRECEDENTED VIOLENCE

The third distinctive feature of the Pope's position is his emphasis that it is the arms race that must be stopped. During the first 10 years of his pontificate, he called for mutual progressive disarmament as a prime prerequisite of peace. But he changed his appeal when the competition for what he calls the ABC weapons (atomic, bacteriological, and chemical) became intensified. Disarmament in the traditional sense of a balanced cutback in arms and force levels is, of course, still desirable, but for the Pope the great threat to civilization lies in the race for new destructive weapons of unprecedented violence.

This new arms race does not consist, essentially, in the continuing production of conventional or even of already developed unconventional weapons, but in the continuing competition for even more destructive unconventional weapons and their delivery systems.

The Pope warned about this race in portentous terms in his Easter message of April 1, 1956:

"Every day marks a melancholy step forward on this tragic road, a haste to arrive first, alone, with greater advantage. The human race almost loses hope of being able to stop this homicidal, this suicidal madness. To increase the alarm and terror, there have been developed modern radio-guided missiles, capable of traversing enormous distances, to carry total destruction to men and things by means of atomic weapons. In order, then, that nations may be checked in this race toward the abyss, we once again raise our voice, asking for light and strength from the risen Christ for those who control the destinies of nations."

THE MISSILE RACE

This race toward the abyss, then, is the race today for missiles and for hydrogen-bomb warheads that will fit into these missiles. Unfortunately, those who control the destinies of nations are doing very little to stop this missile race. You mustn't mention missiles when you talk about disarmament. The Pope mentioned missiles 3½ months before the United States first referred to them officially in the United Nations.

On this occasion, at the closing session of the United Nations Assembly in July 1956, United States Ambassador Henry Cabot Lodge voiced a warning remarkable both for its candor and its urgency.

"We cannot afford to let much more time go by," said Ambassador Lodge. "The long-range guided missile is already looming on the scene. When it becomes a standard weapon, no nation would have more than 15 minutes to get ready to defend itself and to hit back * * *. We must act before these deadly missiles are poised in hidden nests ready to strike—and before the problem of nuclear control becomes too diffuse and too unstable to handle."

After Mr. Lodge's burst of candor, the United States planners retreated to the safety of euphemisms. The nuclear arms race once more became the nuclear threat and in our January 14, 1957, disarmament proposals, missiles became space objects and vague remarks were made about their international control. And now, in London, apparently missiles do not figure at all in the partial, first steps we are offering to take.

DEPLOYING THE MISSILES

This last is most disturbing. For, while the London negotiators haggle over their partial first steps, the missile makers of Russia, Great Britain, and the United States work steadily at their crash programs, achieving one breakthrough after another. When one, or all, successfully test and mass-produce intercontinental ballistic missiles with H-bomb warheads, and when they have operationally deployed them—"poise them in hidden nests" in Mr. Lodge's words—we will have reached the point where we now are with regard to H-bombs.

That is, we have given up hope of an agreement to dismantle existing stockpiles of H-bombs, because it is now officially acknowledged that no inspection system could detect bombs hidden in defiance of the agreement. So far as operationally deployed missiles are concerned, authorities now claim it would be extremely difficult, if not impossible, to find all of them.

Theoretically there is still time to stop the missile race. The testing period is just beginning and hundreds of tests will have to be made before a trustworthy missile is ready for mass production.

Practically, I am afraid that the missile-making countries have made such heavy commitments, both strategic and financial, that it would require a miracle of political courage to enable the rulers of nations to stop the homicidal suicidal madness, the race toward the abyss.

Just a few days ago, Secretary of Defense Charles Wilson was reported in a news conference as stating that the London negotiations would not affect our guided missile program.

I should like, as a final point, to re-emphasize something I have only briefly referred to in this article—that is, the Pope's approach to the problem of world peace.

SECURITY FOR ALL

If there is anyone in the world who speaks for man in what Atomic Energy Commissioner Thomas E. Murray calls "the predicament of our age" it is Pope Pius XII. He is forever appealing to the rulers of the nations in behalf of all the peoples, the peoples of the world, humanity, and the human race.

Lest this claim be considered parti pris, let me quote Mr. Harsch again in his commentary in the Christian Science Monitor on the 1955 Christmas message of the Pope:

"A third difference, although again a very subtle one—between the papal and United States positions—is conveyed by the papal statement that the objective of a search for an atomic weapons ban is that equal security be established for all. The objective of United States policy on atomic weapons is, of course, security for the United States and for its allies. When the Vatican speaks of equal security and for all it is eliminating a moral line between westerners and easterners. It is, in fact, embracing people behind the Iron Curtain, even when they are Communists, within the human family."

Contrary, then, to the views of Lord Cherwell and of others who would adopt his views, the Pope is hardly the ignorant, Communist-beguiled or Communist-inspired Johnny-come-lately to the problem of the nuclear arms race. His words and his actions through the years have been distinguished for their knowledgeability and universality. He has proved to be a sagacious, experienced, foresighted, and courageous counselor whose advice we should neither disdain nor distort.

Withholding by Government of Information From the Public

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 27, 1957

Mr. YARBOROUGH. Mr. President, the Beaumont (Tex.) Enterprise for June 25, 1957, carries on its editorial page a penetrating analysis of recent moves on the State level to buttress one of the keystones of American liberty—freedom of the press.

This editorial is all the more interesting in view of the June 21, 1957, report of the President's Commission on Government Security which recommends that Congress make it possible to put a newsman in jail for publishing information which a bureaucrat may arbitrarily classify, regardless of the newsman's intentions in publishing such information.

I ask unanimous consent that this editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RIGHT TO KNOW

There is a growing—and dangerous—tendency at all levels of government in this country to withhold information from the public.

But, fortunately, some Americans are beginning to realize that the trend must be reversed if our cherished way of life is to be preserved. In fact, there are some signs that the general public may at last be catching on, although polls show that a large number of people still believe that officials in high places, the President for instance, should never be criticized for their actions.

The press, of course, has been a leader in resistance to this idea that the people should get their news in filtered or diluted form. And it is meeting with some success.

For instance, under sponsorship of the newspapers of Texas, a bill was passed in the 55th legislature which opens all political meetings—from the precinct level up—to press coverage.

Now unusually good news comes from the State of Pennsylvania, where Gov. George M. Leader has signed open records and open meetings measures known generally as the "right-to-know" bills.

One bill forbids secret, or star chamber, operations at every level of State government, requiring that official actions be taken in open meetings. The other opens to the public or its representatives the records of public agencies.

The open meetings measure applies to city, borough, and township governments, school boards, State and local authorities, the State turnpike commission and all other agencies not specifically restricted by law in this respect. The last group takes in grand juries, police and tax agencies, and some special investigative commissions. Closed executive meetings still will be permitted, but no official action such as the passage of an ordinance, the awarding of a contract or hiring and firing personnel will be allowed in them. The records bill opens to public inspection or copying all official documents, including contracts and payroll records. This would not apply, however, to subsidiary records such as correspondence or matters having to do with investigations or personal reputations.

Significant is the fact that under the new laws due notice must be made to the public concerning the time and place of governmental meetings.

Yes; these Pennsylvania laws are important moves in the direction of giving the public news that rightfully belongs to it—without filtering and dilution. It is no wonder that Governor Leader said in a statement following their signing that he considered them "among the most important pieces of legislation produced during my administration."

And we are pleased with the fact that the bills were sponsored by the Pennsylvania Newspaper Publishers Association.

Congressional groups are also digging into this business of withholding of information by agencies of the Federal Government—or handing it out in such a form that it makes black look like white.

An Honest and Honorable Currency

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. McVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include a communication from Mr. Walter E. Spahr relative to the dangers of an irredeemable currency. Mr. Spahr, who is the executive vice president and treasurer of the Economists' National Committee on Monetary Policy, is a most able authority on monetary subjects. The President has asked the Congress to appoint a Monetary Commission to study our financial problems and report on its findings. To date the House of Representatives has done nothing toward implementing this recommendation. The importance of such action and the dangers inherent in a do-nothing policy are clearly indicated in the letter of Mr. Spahr. The letter of Mr. Spahr which follows resulted from an editorial in the La Grange Citizen which was published in my extension of remarks under date of May 27, 1957.

The reactions of Mr. Spahr to that editorial on Scars of Democracy appear in the following:

Your editorial on Scars of Democracy opens with the following sentence: "The privilege of free elections, free choice expressed in the secret ballot, is cited repeatedly as the keystone of democracy."

In addition to the points you outlined, I should like to add some other important considerations to your well-grounded statement that "* * * the ballot is also democracy's most deceptive trap, and a source of disrupting forces * * *."

If, as was the case in this country in 1956, both major political parties embrace irredeemable currency, the privilege of free elections and of the secret ballot becomes meaningless for those who wish to vote for men who would endeavor to give our people a redeemable currency, the only honest and honorable currency known to man.

When a government thrusts an irredeemable currency on a people it takes unrestrainable control of their public purse. Both of our major political parties want that power. It opened the gate to the Government's spending orgy, rising prices, great expansion of debt, our march into socialism. Every Socialist, Communist, and dictatorial government (regardless of form) uses the power of irredeemable currency over the people involved.

Free elections and secret ballots are not enough to insure a people that they will have a controllable and responsible government. They need, in addition, the power to protect their savings and wealth from a predatory government. With a redeemable currency they have that power. With an irredeemable currency they lack it.

Popular control of government developed along with the use of redeemable currencies. Human freedom, free competition, private enterprise, and the protection of private property all reached their greatest levels in human history under honest, redeemable currencies. Apparently no nation ever has been, or could be, socialized when the people have a redeemable currency at their disposal. An oppressed or frightened person, operating with a redeemable currency, can convert his wealth into gold and export it if conditions in his country become dangerouse or unbearable. It is the danger of such reactions by people that forces central governments and central banking systems to behave themselves and to act as responsible and responsive government and bank officials are supposed to act.

Protection of private property and human freedom are inseparable from a redeemable currency. When a people are subjected to the drug of irredeemable currency—which they will embrace as a drug addict embraces his drug—they lose control of the public purse and of their government.

Such is the state of affairs in this Nation today; and there is no valid basis for expecting that it will be corrected until statesmen appear who will provide our people with an honest and honorable currency.

Cabbie Says Teamsters Are Starving Him

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD a news story appearing in the St. Louis Globe-Democrat on June 16, 1957. I am sending a copy of this news item to the Senate Subcommittee on Constitutional Rights asking that committee whether matters of this nature are considered to be within the purview of its study.

I am also sending a copy of this article to the House Judiciary Committee asking what that committee is doing in this field of human liberties.

American labor unions have now become sufficiently strong so that they can be called upon to exercise some proper responsibilities. No longer can the plea be used that calling upon the unions to be responsible is an underhanded way in which to destroy unionism. Indeed, unionism will destroy itself unless it does start to assume greater responsibility to its members, to the American workingman, and to the general public.

I am also concerned with the reaction those who have professed to be great advocates of civil liberties have to stories of this nature. These are not stories out of fiction. These stories are so prevalent in America today that almost every American citizen has run into one personally. Now, how about it, are we for civil liberties across the board or are we just for selected civil liberties that do not affect our political friends?

[From the St. Louis, Mo., Globe Democrat of June 19, 1957]

CABBIE SAYS TEAMSTERS ARE STARVING HIM

(By William Beecher)

Fisher Harris, 38-year-old taxicab driver and father of 5, charged yesterday that the Teamsters Taxicab Union Local 405, "is starving me to death."

Harris became a probationary driver for the Yellow Cab Co. last month but was let go after 6 days because the union refused to accept his membership.

"I've been out of work for 4 weeks," Harris said. "The bills are piling up. I'm destitute. And the union tells me I can never get a job driving for a cab company in St. Louis because I worked for Allen Cab Co."

IN OTHER UNION

Joseph F. Bommarito, business agent for local 405, said yesterday in discussing Harris' complaint:

"We don't want anyone in our union who has driven for a faction or independent union."

Drivers for Allen Cab belong to the independent United Chauffeurs Association, which was formed in the fall of 1954 by persons who had formerly belonged to the AFL Teamsters Local 688.

Bommarito said, "We've had trouble with those people before. We don't want them coming in here and starting more trouble."

That goes for members of the Independent Taxicab Drivers Union, too, he added.

NOT ACCEPTABLE

Mike J. Concannon, vice president of Yellow Cab, said a short time after Harris started driving for the company, "We were

notified by the union that he was not acceptable for membership."

The union alleged that Harris had falsified his application, Concannon said, but they did not spell out the charge.

Yellow Cab is a union shop, Concannon said, "We can hire people outside the union, but within 30 days each must qualify for union membership. The union has the right to determfne eligibility," he said.

Said Eugene Sonnenshine, superintendent of drivers at Yellow Cab, "Harris is a good cab driver. If he could get straightened out with the union, I'd put him right back to work."

Harris lives at 5904 Lotus Ave. He had driven for Allen Cab for about a year and a half before quitting to go to Yellow Cab. "I wasn't making enough money to support my family," he said. "I wanted to better myself."

MUST BE SCREENED

Bommarito told the Globe-Democrat that all prospective members of his union, which has been under trusteeship for 4 of 5 years, have to be screened by members of the board before they can join.

The board, he said, consists of the union's membership from the particular cab company that a man wants to join.

Harris falsified his application, Bommarito said. "He said he'd never driven for a cab company, but later admitted that he'd driven for Allen and Harris Cab Companies," he asserted.

Would the fact that a driver had belonged to an independent union automatically disqualify him for membership in Local 405?

"Yes and no," Bommarito answered. "We are an organized union. We don't tolerate anyone who has driven for an independent."

Harris denied that he had lied to Bommarito. When he was asked, he said, he admitted that he had worked for Allen. "And I never worked for Harris," he added.

Had he been active in the union at Allen?

"I just paid my dues so I could work there," he said. "I paid $3 a month like everyone else."

Pvt. Alfred C. Petty

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. TRIMBLE. Mr. Speaker, a former resident of the district which I am honored to represent is in town, Pvt. Alfred C. Petty, who is now 80 years old. He formerly lived at Jenny Lind in Sebastian County, where he worked as a telegrapher for the railroad company.

Like a lot of other young fellows, he enlisted in the Army and went to war with Teddy Roosevelt and was with him at San Juan Hill. He is now a resident of California in the district of our colleague, Representative JOHN J. MCFALL, who has introduced a bill in the House to award the Congressional Medal of Honor to Mr. Petty for his exploits in the charge up San Juan Hill.

The following is an article from the Washington Daily News of June 17, 1957, by Mr. Joseph Cloud. I have talked to Mr. Petty, and I have read the article. He has an affidavit from the only other living survivor of that particular exploit. Coupled with the citations which the Army has already given him, I concur in what the gentleman from California [Mr. MCFALL] is trying to do. I hope the Congress will grant this young fellow a Medal of Honor. It seems to me that the Army people should either do that or court martial the young rascal for disobedience of orders.

The article follows:

MR. PETTY LEADS A NEW CHARGE

(By Joseph Cloud)

Private Alfred C. Petty, then a raw recruit, says he led the famous charge up San Juan Hill in Cuba on July 1, 1898, turning the tide of battle for the American forces in the Spanish-American War.

Ex-private Petty is now 80. He received a Certificate of Merit from President William McKinley in 1899 and the Distinguished Service Cross for conspicuous gallantry from the Army in 1954.

MEDAL OF HONOR

Representative JOHN J. MCFALL, Democrat, California, has introduced a private bill in the House to have him awarded the Medal of Honor for his exploit. Mr. Petty is in Washington from his home in Stockton, Calif., leading a brandnew charge to get the medal.

For years, Mr. Petty said, he "just put the whole incident out of my mind." At 72 he retired, and only then did he begin to wonder just what the citation that was supposed to go with my Certificate of Merit had said.

That is how he made a strange discovery. He had the Certificate of Merit, signed by the President and the then Secretary of War, R. L. Alger, but that wasn't any citation.

It hadn't been given to him and the Department of the Army couldn't find it.

PRETTY MAD

"Well, sir, that made me pretty mad," he said. "I wrote some letter to Washington."

It was because of Mr. Petty's anger—and the verification of all the facts occasioning it—that he finally was awarded the Distinguished Service Cross.

"What I did at San Juan Hill," he said, "I had to do. What I'm doing now I have to do, too. I've got eight great grandchildren. They've got to be able to know just what their great grandfather did."

Victory hung in the balance that day in July 1898. The American forces were fighting betwen the fortified hill and the jungle. They were weak from dysentery and other diseases; their food was bad; and—worst of all—they were running out of ammunition.

There were some 7,000 United States troops in the battle. The Rough Riders, Teddy Roosevelt's troops, who sometimes have been credited with the victory at San Juan Hill, were more than a mile away, Mr. Petty said.

Private Petty was in a shallow little trench at the foot of the hill.

At the top of the hill were Spaniards, raking the plain with gunfire.

DANGER

"If the Spaniards came down the hill we could have been forced to retreat," Mr. Petty said.

"Suddenly I was hit by a sort of shock—a kind of electric tremor like I'd never felt before or ever felt since. It was a sort of ecstasy. It went from my head to my feet—just took hold of me.

"I told myself, 'Petty, you're going up that hill.' I don't know why I said it. I wasn't thinking like I was me, because I knew I was raw and afraid."

And in that swelling moment, Private Petty threw his hat in the air, gave a yell, and started to run, straight toward the steep slope of San Juan Hill.

PURSUIT

Behind him, he said, ran 2d Lt. Thomas M. Anderson, Jr., and four soldiers, intent on bringing him back so he wouldn't be killed by the Spaniards.

Mr. Petty said he got past three barbed wire barricades, disobeying Lieutenant Anderson's order to come back down here, and when he reached the top, began firing at the nearest Spaniards, who fled into some bushes.

Private Petty captured two of the enemy, who ran from a blockhouse. He was holding them captive when Lieutenant Anderson and his men came over the top of the hill. The Spaniards in the blockhouse evidently had fired their last ammunition.

Behind Private Petty and the five who followed him came the charging army, advancing all along the line.

Maj. William Auman, commanding the 13th Regiment, seeing first 1 and then 5 more men hurling themselves up the hill, had mistaken it all for an abortive charge, and had immediately ordered his troops to get going.

The citation proposed for former Private Petty—if and when the Medal of Honor is awarded—will say:

"The inspiring act and fearless leadership of this soldier * * * not only exemplified the highest and best traditions of the military forces of the United States, but also gave inspiring courage to our forces which resulted in a quick and decisive victory in the battle."

Grow Corn for Plastics

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. COAD. Mr. Speaker, in the July 1957 issue of the Farm Journal apepars an article entitled "Grow Corn for Plastics." This article points to another specific use of agricultural products for industrial purposes. I believe that this article is of such importance as to merit the concern of every Member of the Congress. The item is as follows:

GROW CORN FOR PLASTICS

You may someday be growing corn for the plastics and fiber industry. Scientists at the University of Missouri have come up with corn that is 82 percent amylose starch, well within the 80- to 90-percent range that chemists say could put 40 to 100 million bushels into plastics and fiber-making.

"This is the first big break we've had in a long time," says Missouri scientist M. S. Zuber. "We've been stymied in the 70-percent range."

Here's how the scientists went about breaking the 80 percent barrier:

Most present-day hybrids are 25 to 27 percent amylose, with a strong genetic link between high amylose and low starch. But Purdue University scientists H. H. Kramer and R. L. Whistler have recently been able to break that link, and last year, they grew corn that was 77 percent amylose.

Zuber and C. O. Grogan crossed the Purdue corn with the Missouri-Kansas corn they've been working with since 1950 and grew the cross in Florida last winter. This spring they harvested the 82 percent amylose corn.

"Biggest possibilities for high amylose starch probably are in film and fiber," says scientist, P. R. Senti, at the United States Department of Agriculture's Peoria, Ill., laboratory. "We haven't had enough of the

starch yet to run a lot of tests, but amylose makes a dandy packaging film, for example.

"The film is like cellophane, and there may be special films for such uses as sausage coatings that you could eat when the sausage is cooked.

"As a fiber, high amylose starch could be used as part of the pulp in papermaking, and would have a huge market potential," says Senti. "About 800 million pounds of starch are now used each year just as coatings, adhesives, and sizing in paper products."

High amylose corn and its markets aren't ready to go yet. The scientists still have a lot of work to do, both in corn breeding and in research with high amylose starch.

For example, the scientists have been shooting at such a distant target in 80 percent amylose that they've had to disregard almost everything else, including yield. Now they'll have to work on yields and other factors.

One thing is almost certain; you'll be hearing a lot more about high amylose starch corn, now that we're over the 80-percent hump.

"This could be the first recommendation from the President's Commission on Increased Use of Agricultural Products (Farm Journal, May 1957) to get into gear," says corn breeder, Robert P. Bear, Decatur, Ill., who has been working with high amylose corn since 1948.

Private Power in New England

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. CURTIS of Massachusetts. Mr. Speaker, a large new hydroelectric plant on the Connecticut River at Littleton, N. H., was dedicated last week. The taxpayers in other sections of the country were not asked or compelled to pay any of the costs. There was no rapid tax amortization. This was a private venture all the way.

New England people thus demonstrate their belief in local responsibility and individual initiative. They applaud President Eisenhower's endorsement of these principles in his address at Williamsburg, Va., on June 24, in which he also said:

Every State failure to meet a pressing public need has created the opportunity, developed the excuse, and fed the temptation for the National Government to poach on the States' preserves. * * * The elimination of * * * the freight charges on money being hauled from the States to Washington and back * * * would save the American taxpayer a tidy sum.

I include as part of my remarks an article from the Boston Herald of Friday, June 21, 1957, written by the Herald's well-known political writer, Mr. William E. Mullins.

PRIVATE POWER IN NEW ENGLAND

The dedication yesterday of the gigantic hydroelectric power plant on the Connecticut River at Littleton, N. H., had all the appearance of a routine chamber of commerce-community tub thumbing affair. It was something much more important.

What it actually represented was an investment of more than $40 million, by the New England Electric System in a venture of private enterprise at a period in the development of America when the advocates of public power have been seeking to improve Government subsidy on the extension of this necessity of life.

VITAL TO OUR LIFE

No longer is there any denial of the importance of electric power in our way of life. Over the past 20 years the Federal Government has expended untold millions of dollars of public funds in what has been appraised as backward areas of the Nation to bring the benefits of electricity to these handicapped communities.

The most conspicuous demonstration of this subsidy has been the Tennessee Valley Authority which has succeeded in pouring electricity on an enormous scale into one of these backward areas at the expense of the taxpayers in all sections of the Nation.

This experiment certainly has succeeded in benefiting that section of the country at the cost of all the taxpayers.

The New England Electric System constructed the great dam across the Connecticut River between Vermont and New Hampshire without Federal funds and even without the advantage of the fast tax write-off provision in the Federal statutes currently under criticism because of its use in an Idaho power development.

This has been exclusively an exploit of private enterprise, the kind that has made America great because of its independence of public subsidy. Its construction was financed by investors who for the most part are residents of the six New England States.

It has gone far beyond the experimental stage. It represented the final development along the Connecticut River which was described by both Irwin L. Moore, president of the NEES, and Lt. Gov. Robert F. Murphy as the hardest working river in America. It functions today as the largest hydroelectric station in all New England.

INVESTOR MONEY

It was built exclusively with investor money. Moreover, it now represents a source of revenue to local communities. The outstanding example of this is the town of Littleton, one of the few communities in these days of inflation which has succeeded in reducing its local real estate tax. This has been accomplished by the tax revenue from the new dam.

FRANK EXPERIMENT

Is this type of electric power on the verge of extinction? Will the search into the possibilities of atomic energy make these vast engines of power production so old fashioned as to become in the remote future objects of antiquity? Probably not in the lifetime of this generation, but no reliance is being placed on the assurance of current security in the production of electric power.

In the remote town of Rowe in the western section of Massachusetts along the Vermont State line, private enterprise currently is engaged in a new venture in generating electric power. Again private enterprise is pioneering in the construction of the first atomic electric plant in New England. No one currently can accurately appraise the impact on the economy of this section of the country that might flow from the construction of this plant.

This is frankly experimental. No one can foretell its result with any degree of accuracy. It is probable that electricity might not be generated at costs lower than those currently imposed on conventional plants. Nevertheless there is the prospect that it will result in the reduction of the costs of transportation of electricity, a problem that has plagued all utilities in New England.

The important factor in yesterday's dedication is that it pointed up a lesson to the agents of liberalism who have been making the issued of public power a political consideration for more than 30 years. We saw private enterprise without Government subsidy of any description plunge into an enormous advancement into the business of giving electric power to the people at rates dictated by the agencies established by the several States to regulate rates.

All power to the New England Electric System and other such agencies of private enterprise which scorn Federal assistance in their development.

Recent Decisions of the Supreme Court on Laws Against Communism

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, June 27, 1957

Mr. SCHOEPPEL. Mr. President, in the July 1 issue of this year, there appeared in Newsweek magazine an article entitled "Under God and Law," written by the distinguished American economist, Raymond Moley. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNDER GOD AND LAW

(By Raymond Moley)

The successive blows which the Supreme Court of the United States has leveled at the laws of Congress and the States designed to protect the Nation against communism have created a constitutional crisis which gives added pertinence to a subject I had intended to consider this week. The American Bar Association is to hold 6 days of its annual meeting in London in July. There in England, on the hallowed ground which saw the birth of our own liberty under law, our lawyers and judges will pay tribute to the great patriots who fought long ago for freemen. We fought our revolution to vindicate our rights not as colonists but as Englishmen. Burke reminded a stupid king and his government that an Englishman was the last person in the world to deny rights to another Englishman.

The members of the American bar will pay tribute to Sir Edward Coke at his tomb in Tittingham in Norfolk.

No lawyer who plans to make this pilgrimage to London should miss reading Catherine Drinker Bowen's recent book, The Lion and the Throne, the Life and Times of Sir Edward Coke (1552–1634).[1] It is the sort of book that makes a wonderful traveling companion—massive, informtive, but immensely moving and stimulating. Here are portrayed the places and events of the period during which the people of England, through their Parliament, substantially brought autocracy to a final end.

FRUSTRATED JUDGE

Coke is best known as a judge and commentator on the laws of England. Endowed with a brilliant mind, a singular capacity for clear, colorful expression, and vast energy, he labored for years in the inner temple before Elizabeth made him attorney general. Of his service in this office the least said the better. His conviction of Sir Walter Raleigh was a deed of hideous injustice.

Later, as chief justice of common pleas, chief justice of King's Bench, and Lord

[1] 652 pages. Little, Brown, $6.

Chief Justice of England, he upheld every right and principle which he had violated as attorney general. His struggle against the absolutist pretensions of James I, a man who compounded stupidity with pedantry, lives in the traditions of every lawyer. He fought for the supremacy of the common law against the church, the admiralty, the star chamber, and the King. Best known is his encounter with James, when the King shaking his fist at Coke, said that "law was founded upon reason and that he and others had reason as well as the judges." Coke answered "Bracton saith, that the King should not be under man, but under God and the laws."

VICTORIOUS STATESMAN

Ultimately James, nudged on by the unscrupulous, mean-spirited Francis Bacon, removed Coke from his judgeship, and thereafter during the reign of James the judiciary was not only subservient but unbelievably corrupt. Bacon rose to the top and as Macaulay put it, was in his judicial conduct "not even the last lingering adherent of an old abuse, but was guilty of attempting to introduce into the courts of law an odious abuse for which no precedent could be found."

Coke is remembered best as a judge and commentator. But his greater role was as a member and leader of the House of Commons. Under Elizabeth he had been speaker and spokesman of a house that vexed the Queen by making her conform to the budgets which it deemed prudent.

After his removal from the courts, Coke in his old age enjoyed the crowning glory of leading the successful fight to make King Charles agree to the great petition of right. It is worthy of note that Coke always regarded the legislative department of government as the high court of Parliament, supreme over the courts and, in its appointed sphere, over the royal prerogative. Coke failed as a judge but triumphed as a statesman.

Parliament, not the courts, has over the centuries subdued absolutism and established the liberties of the people. No court of England might frustrate Parliament as the current Supreme Court has impaired the efforts of the Congress and the Executive to protect the Nation. This is a point that Americans might well ponder.

Come Up and See Us

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. BARTLETT. Mr. Speaker, Alaska welcomes visiting Members of Congress. We want congressional committees to come to the Territory to learn more about our problems, to enjoy our scenery, to understand even better that Alaska is a truly American land. The Alaska attitude toward visiting Congressmen was very well expressed in an editorial, We Like Junkets which appeared in the Anchorage, Alaska, Daily Times, Monday, June 24. I take pleasure in including it now with my remarks:

Open season for junkets will start as soon as Congress adjourns for the rest of the year.

Prospects are good that Alaska will get more than a fair share of the traveling groups. Summer in Alaska is an air-conditioned paradise for those who live in outside areas noted for sweltering temperatures. Fishing is fabulous here and hunting is equally fabulous come fall.

There are so many Federal activities and responsibilities in the Territory that almost any committee can find what is called a reasonable justification for a visit.

How could a committee pick a more desirable spot for official inspection and study?

Besides the attractions, Alaska is of interest to Congressmen because they are welcome.

There is a minimum of sentiment among Alaskans that inspection trips are costly extravagances made at the expense of the taxpayers without good purpose.

This attitude prevails as a result of problems. Under the Territorial system of government Congress is the ultimate authority on matters pertaining to Alaska. Many committees have more power in Alaska affairs than do the elected Territorial legislatures, elected officials, and even city councils.

Experience has shown that Congress often does not understand Alaska problems and cannot handle them intelligently in Washington. Usually, when the right answer to a problem is not known, nothing is done. This has led to the long record of neglect which dominates the history of Alaska as a part of the United States.

Alaskans long ago discovered that when a committee visits the Territory it is enlightened. No Congressman has ever been known to leave Alaska without having discovered that some of his impressions and conceptions were wrong. No matter how superficial his effort or intent while here, he has been a more effective legislator on Alaska affairs by virtue of his having been here.

Long lists could be compiled of good legislation that has resulted from committees after visiting Alaska.

The lists would include many amendments to existing laws pertaining to natural resources, powers of local government and extension of Federal aid programs for education, roads, wildlife studies.

It would also include such projects as the Eklutna hydroelectric plant, highways to Seward and Homer, International Airport, and numerous improvements to other facilities.

Statehood legislation has gained supporters through the years as more and more Congressmen gained first-hand information on the Territory.

It is no wonder that Alaskans welcome the so-called junketeers. The word junket lacks the ugly connotation that goes with it elsewhere.

It is to be hoped that many committees will come here this summer so that the expansion of national intelligence on Alaska will be continued.

United States Operates Luxury Air Fleet—MATS

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD an article in the New York State Taxpayer for June 1957, published by the Citizens Public Expenditure Survey for the State of New York, entitled "United States Operates Luxury Air Fleet," referring to the Military Air Transport Service—MATS—and other Government-owned and Government-operated air transport activities.

In addition, I would like to insert in the RECORD certain extracts from the excellent statement of Perry M. Shoemaker, Chairman of the former Hoover Commission Subcommittee on Transportation of the Department of Defense, which he gave at the Senate Defense Appropriations Subcommittee on behalf of the Chamber of Commerce of the United States on June 19, 1957. The parts of Mr. Shoemaker's excellent statement which I am inserting deal with MATS and other Government-owned air transport activities and praise the clear and wise policy laid down last year by both the House and Senate which reads:

The Government should, to the greatest extent practicable, adjust its use of air transportation so as to use existing unutilized capacity of United States air carriers.

Speaking in behalf of the Chamber of Commerce of the United States, Mr. Shoemaker makes the excellent suggestion that the Congress reaffirm the same policy, as was done in the exchange between the distinguished chairman of the House committee, Congressman MAHON and myself in the CONGRESSIONAL RECORD of May 27, 1957, at page 6909, and carry it a step further to direct that within the appropriations for operation and maintenance and the military personnel, the Defense Department reduce its expenditures on MATS and other Government-owned air transport activities below what is being expended in fiscal year 1957, and devote these funds toward making far greater use than is being done in this present fiscal year of United States commercial airlines.

It is my distinct feeling, Mr. Speaker, that the program advocated by the Chamber and myself will result in, first, considerable net savings to the American taxpayers and, second, reduction of Government competition with private taxpaying businesses.

I make note for the benefit of my Republican friends that regarding Mr. Shoemaker's general statement about the defense budget, Senator SALTONSTALL commented:

I appreciate the spirit in which the Chamber of Commerce has gone at this. It is the most thorough job that I have ever seen done.

The distinguished Democratic chairman of the Senate Defense Subcommittee, Senator CHAVEZ, stated also to Mr. Shoemaker:

I think you have devoted a lot of time and research in preparing this statement.

So, I think it is plain that Mr. Shoemaker's presentation has attracted strong bipartisan support.

The article and extracts from the statement follow:

[From the New York State Taxpayer for June 1957]

UNITED STATES OPERATES LUXURY AIR FLEET

If you were a farmer and gave your daughter $5,000 to go out and buy the best kind of truck to haul farm machinery about in, you would probably rest assured that she would bring home the proper truck and not a plush Jaguar convertible. But, Congressman DANIEL J. FLOOD, of Pennsylvania, pointed

out recently that some of the boys in the Pentagon would probably not be equal to such a task.

It seems that the Air Force was given $110 million during the first year of the Eisenhower administration to buy a fleet of planes capable of carrying Army tanks. Well, they didn't buy Jaguars, but in a sense purchased their air equivalent, six dozen plushed-up DC–6 passenger planes instead of the tank-carrying cargo planes. They called it reprograming. Congressman FLOOD labeled the act "misappropriation."

Congressman FLOOD in noting this, added that if our hypothetical farmer's daughter made the mistake of blowing the $5,000 with which she was supposed to buy a farm truck she probably would have a feeling of guilt about it to make amends.

"Not so with the Air Force," the Pennsylvania lawmaker notes.

"They display no sense of shame whatsoever about this boondoggle," he lamented. "When confronted with the recommendations of the Hoover Commission, the directives of our congressional committee * * * inveighing against competition with the private enterprise and general wastefulness of the taxpayers' funds, these gentlemen in the Air Force say, 'Well, we have got them now, and we are stuck with them so we had best fill them up a little bit by taking business away from commercial airlines.' "

This is only one example of how the Military Air Transport Service, known affectionately as MATS, has mushroomed in size so that it now operates approximately 1,500 airplanes. This outstrips all of the United States domestic commercial airlines with their combined total of 1,212 planes in operation.

The really sad feature of this extravagance is that it costs the taxpayers an estimated $1 billion a year to operate the Government-owned airlines while defense hearings for fiscal 1958 indicated that commercial airlines would have more than $900 million in unused space available for military use for this same period of time.

It has been pointed out that while it cost the Government $795 per hour to operate the military equivalent of the DC–6 the taxpaying civilian airline cost for operating the same plane is $650 per hour. Use of commercial lines, where possible, would not only reduce the size and cost of this mammoth air fleet but also reduce the amount of subsidies required to maintain the private airlines.

The Government-operated airline, with total assets over $1.4 billion, provides service to practically every corner of the world regardless of the existing parallel routes of commercial airlines.

The Hoover Commission disclosed that an Air Force Band was flown once a month from Westover, Mass., to Bermuda. The Air Force justified the flights for morale purposes, noting that there was no band in Bermuda.

Placing the morale issue aside, the Commission noted that two commercial airlines operated flights that could have carried the same band over the same route at less cost to the taxpayers.

The Hoover Commission has further noted that the $42.9 million airline subsidy for fiscal 1954 could have been reduced by 88 percent if the airlines had flown only 25 percent of the passengers and 50 percent of the mail moved by MATS over this same period.

The intent of Congress for fiscal 1958 that "the Government should to the greatest extent practicable adjust its use of air transportation so as to use the existing, unutilized capacity of United States air carriers" has been established. It remains now to be seen how the operators of military transportation will try to adhere to this established intent and refrain from trying to build up the plush operations of the military air fleet.

EXTRACTS FROM STATEMENT OF PERRY M. SHOEMAKER, REPRESENTING THE CHAMBER OF COMMERCE OF THE UNITED STATES BEFORE THE DEFENSE SUBCOMMITTEE OF THE SENATE APPROPRIATIONS COMMITTEE ON H. R. 7665, JUNE 19, 1957

(Page references are to the mimeographed prepared statement)

(Pp. 11 to 13)

Another area of savings opportunity involves Government competition with private enterprise. There is evidence of but limited progress within the Department of Defense toward enforcing the announced policy of the administration in this respect and thus reducing its expenditures directly involved. Clearly, Congress should support the elimination of competitive activities which keep operation and support costs high. At the time of the Hoover Commission report the Defense Department was operating some 2,500 business and commercial-type activities in competition with private enterprise and employing some 600,000 persons.

Extensive testimony on the MATS operation was taken by the House Appropriations Committee. We do not question the desirable existence of a nucleus air-transport service that can be expanded to cooperation with civil airlift for strategic purposes during an emergency, but we consider the present MATS operation as greatly exceeding any reasonable interpretation of a nucleus operation. The single-manager system was designed to centralize this en masse. Competition between the services has not permitted this to be fully effective and on the present basis the operation, which already exceeds the combined airlift of all the commercial lines of the country, will continue to grow and compete as long as Congress provides appropriations to finance them. Savings in this field would reduce investment in new transport aircraft and operating and maintenance costs in personnel. Related thereto, it would feasibly reduce subsidies now being paid to international air carriers and related training costs.

I can talk with some assurance with respect to the Military Air Transport Service as a result of the first public study of its operation which was carried out under my direction as Chairman of the Hoover Commission Transportation Committee. Our recommendations for the elimination of duplicating air-transport services in the Defense Department and preferential usage of available commercial transportation have not been implemented by the Department of Defense.

Transportation costs are an important factor in the general category of operations and maintenance. The Defense Department has established a single managership for traffic management. We will not have real traffic management and all of the broad economies which are possible from the exercise of this important function until the policy control is completely passed from the individual services and the organizational responsibility is placed upon a worldwide basis and not restricted to the continental United States as is presently true. Like many of the support functions, there is duplication and lack of economic control in the overseas theaters worldwide.

These are factors which strengthen our belief that the reductions we have recommended in the oprations and maintenance field are realistic, that they can be accomplished without impairing our national security or defense capability one iota, that the one necessary ingredient is pressure from the Congress to cut across the rigid bureaucracy which is the Military Establishment as presently organized.

We have read carefully the statements by the Department of Defense in reply to our MATS testimony before the House Appropriations Committee. They are the usual arguments motivated by an extreme desire to maintain active control over this vast enterprise. And if this type of competition continues, it is bound to cause severe damage to our free economy.

Gentlemen, may I propose a suggestion that in my opinion would serve to accomplish the objectives of this committee, as set forth by you in a letter to Secretary of Defense Charles E. Wilson, August 3 last year, and at the same time provide valuable guidance to the Department of Defense in its efforts to comply with your wishes relative to the operation of MATS.

It is my suggestion that a directive be sent to Mr. Wilson by this committee which would reemphasize the position taken last year in your letter of August 3, and also declare that maximum utilization of the United States Government of privately owned and operated air and sea transport is essential to both the promotion of our free enterprise economy and the provision of a necessary reserve of facilities in training personnel, essential to national defense and that Government operation of its own transport facilities should be limited to that essential to military security.

I might say that of all the Government activities competing with private business that we have looked into, that MATS is by far the largest. It dwarfs all the others.

That, in line with this position, it is the wish of the committee that within the 1958 appropriations for operation and maintenance and military personnel, the Defense Department show a reduction in its expenditures on MATS and other Government-owned air transport activities to a point below that expended for the 1957 fiscal year. And that these funds then be applied toward making greater use, than is being done in this fiscal year, of the United States commercial air lines in meeting their airlift requirements. It is also the wish of this committee that a progress report be made by the 1st of January 1958 which would indicate the progress made by DOD in implementing this directive.

Such a directive would implement the clear and wise policy laid down last year by both the House and Senate in the conference committee letter to Secreary Wilson, for which both congressional committees are to be heartily commended, which reads:

"The Government should, to the greatest extent practicable, adjust its use of air transportation so as to use existing unutilized capacity of United States air carriers."

It is our firm belief, therefore, that appropriations for "Operation and maintenance" as set forth in H. R. 7665 can be reduced $357,097,000 in the areas suggested in appendix A.

(Pp. 14 and 15 of appendix A)

OPERATION OF AIRCRAFT (FUEL AND OIL)

The House reduction for this activity is $32 million, or about 5 percent of the budget estimate. The national chamber recommends that appropriations for this activity be reduced to the fiscal 1957 level of $585 million—a cut of $55 million. We realize that fuel and oil costs have increased, but we also know that there has been an increase in the MATS operation to a point where it has expanded from a $480 million operation in 1954 to about a $800 million operation at the present time. This operation will continue to grow and compete with commercial carriers until Congress cuts appropriations to finance it. The national chamber would object strenuously to any effort to reduce fuel consumption for essential aviation activities. However, there is every indication that the Air Force is expanding their nonessential flight activities each year to a point where it is becoming a terrific burden on the defense budget. We think, therefore, that Congress has a great responsibility in this area to make sure that these costs do not get out of control and should take action at

this session of Congress to maintain the level of expenditures for this activity at the 1957 level and make certain that the MATS operation is curtailed for the future.

The Job Ahead

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. PILLION. Mr. Speaker, this the fifth and final article in a series of articles dealing with the problems of streamlining the Government and cutting its costs through recommendations of the bipartisan second Hoover Commission.

These articles were written by Mr. Clarence Francis, national chairman, Citizens Committee for the Hoover Report and were published in a pamphlet entitled the Coupler, by the Symington-Gould Corp., of Buffalo, N. Y.:

In the preceding articles we examined the urgent problem of the reform of the Federal Government. We noted that blueprints for streamlining the Government and cutting its costs were given to the Nation by the bipartisan second Hoover Commission. As a result, some progress has already been made in reducing Uncle Sam's wasteline and substantial savings have been effected.

But the work is still underway. More action must be taken within the Federal Government. New laws must be passed by Congress. Only then will the remaining tax-saving Hoover recommendations of the Hoover Commission be put into practice.

SECOND HOOVER COMMISSION

About 72 percent of the first Hoover Commission's recommendations were adopted between 1949 and 1953. Total savings estimated at $7 billion have followed with increased Government efficiency and other impressive benefits.

The second Hoover Commission carried on in 1953 where the first left off. It turned in the last of its recommendations in June 1955. It is estimated that the adoption of the 314 recommendations which it has made would, if adopted, eventually result in savings of more than $5 billion a year.

In 1956 Congress and the President acted to put into effect some 39 percent of the second Hoover Commission's recommendations. As a result savings to the taxpayers will total $532,600,000 yearly. That's $10 per year per taxpayer, a good beginning.

Congress worked hard in the final weeks before the end of 1956 session and approved 31 pieces of Hoover report legislation. Other recommendations which did not require new laws were carried out by the executive branch. Thus the Commission, which did its job with a congressional appropriation of less than $2.8 million, has already more than paid for itself by $200 for $1.

One big saving was realized by a very simple process. The Commission found that, for many years, the Defense Department has been serving just exactly as many meals as there were men in every military camp, base, or other installation. Offhand this might seem to make sense. But the Commission also found that 20 percent of the personnel at these establishments were absent at meal-time, on leave, or on business, or for some other reason. Thus the armed services were cooking millions of meals for "the little man who wasn't there"—and throwing them away.

That practice has now been corrected with estimated annual savings of $200 million a year.

Here is another example: You have seen the concrete post which the Post Office uses for mailboxes in such great quantity. At one time these were all made in one place, Baltimore, and shipped all over the country. By the time they got to the west coast these posts cost the taxpayer, you and me, over $15 apiece.

That, too, has been corrected. Now the posts are being made on the west coast at a cost of $2.70 apiece.

In big ways and small, great savings can be made. As another example, the Interior Department saved $1.2 million just by adopting more efficient methods of using its motor vehicles. The Commerce Department saved $150,000 by deciding not to publish a certain map when it found that the same map was already being issued by numerous States and cities.

It all adds up. But the big job, that remaining 61 percent of the Commission's proposal, still lies ahead of us.

Whoever Regulates Education Regulates Life

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend by remarks, I would like to quote from a letter I have received from one of my constituents, Mr. C. W. Chorpening, attorney at law, Ashland, Ohio. Mr. Chorpening has expressed his views in a very persuading manner and he has stated some quotes I have never before heard, and, under unanimous-consent request, I am submitting his entire letter. Especially do I call the attention of the House to one quote:

It has been well said that whoever regulates education regulates all life.

May I also call to your attention the article by Russell J. Clinchy entitled "The Day of Decision." You will find the reading worth while.

CHORPENING & CHORPENING,
Ashland, Ohio, June 18, 1957.

Hon. J. HARRY MCGREGOR,
House of Representatives,
Washington, D. C.

DEAR MR. MCGREGOR: I wish to let you know that I am one of the many thousands who feel that you are doing a good job.

In my opinion, the Republican Party will have rendered an invaluable service to our country if we succeed in curbing this move toward socialism by taking the Government out of the field of competition with private business and the curbing of the encroachment of bureaucracies. May I point out that I regard the effort of the Division of Education of the Department of Health, Education, and Welfare to enter the field of education as the most dangerous invasion of the rights and liberties of a free people. All our experience confirms that the guise of rendering so-called Federal aid to schools is neither for emergency ends nor is its author's intention to long refrain from regulation and control. (It has been well said that whoever regulates education regulates all life.) I believe you will do what you can to see that any proposed bill for Federal aid will be defeated, and that through your efforts, working with others, the defeat will be so overwhelming that never again will you as a Congressman be confronted with any similar or like proposal.

Recently I read a short article by Russell J. Clinchy. You may have read it, but, lest you have not, and since it is relatively short, I quote to you:

"THE DAY OF DECISION

"The day of decision is upon us. We must now begin to retrace our way to that place where we missed the road to our destiny. We do not belong on this road to serfdom that leads to a land wherein men sell their souls for what they call security, but which turns out to be a nightmare in which man is a lost soul without a home. Instead, we belong to a land of those who have learned that where the spirit of the Lord is there also is liberty.

"Let us determine that we shall not allow the state to be our master, but that we shall be the masters of the state. The long road of history is lined with the ruins of those states which bought the souls and wills of their peoples by the lure of a granted security and then led them to ruin by that same mirage. The world does not need one more such ruin. It needs, for the first time in all the 24 civilizations, a people who will be really secure and enduring, as far as mortal life is possible—secure and enduring because each member of the society is a person who accepts his and her responsibilities as duties and asks only that the state act to keep the avenues of freedom open. That will come, not by copying the ruins of the past, but by a free people rising to meet the challenge of a free society, putting their trust in freedom because their faith is in God."

Very truly yours,

C. W. CHORPENING,
Attorney at Law.

Punishment and the Crime

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. WHARTON. Mr. Speaker, a famous criminal authority recently called attention to the fact that in every case, barring insanity, the defendant is firmly convinced at the time of the crime that he will not be apprehended. Constituted authority on the other hand is dedicated to the apprehension of criminals and the protection of society. The police are our first line of defense and are now charged under recent court decisions with instantaneous investigation of the crime, apprehension of the criminal and his arraignment before a committing magistrate who aside from regular business hours frequently cannot be located. The criminal, if left at large, can escape from the jurisdiction in a matter of minutes these days.

Justices of the high courts often have no practical experience in police work and their decisions collectively impose impractical and unworkable regulations

on police authorities and definitely hamper them in their work. Unfortunately, in the detection and punishment of serious crime, someone along the line is likely to be inconvenienced. Should it be the authorities, society, which is the subject of protection, or a likely suspect?

The courts have held that an erring police official faced with all of the foregoing difficulties may well render the most heinous criminal impervious to prosecution for his crime, and this without even the proverbial admonition to sin no more.

I include an editorial from last night's Evening Star bearing on the much-criticized decision in the Mallory case:

CRIMINAL FREED

In setting aside the rape conviction of Andrew R. Mallory, the Supreme Court, for practical purposes, has outlawed arrests based on suspicion as distinguished from probable cause. The immediate effect, insofar as the case is concerned, is that the prosecutor, representing the people, admits he is licked and the prisoner goes free.

Mallory was arrested in connection with an assault on a woman in an apartment house here in 1954. He was picked up by police at 2:30 the following afternoon and, with two nephews, was taken to police headquarters for questioning. The interrogation lasted from 30 to 45 minutes. At 4 p. m. the three were asked, and they agreed, to submit to lie detector tests. There was a delay of about 2 hours in arranging the tests, during which period the suspects were fed. The nephews took the test first, and it was about 8 p. m. before the testing of Mallory began. It lasted an hour and a half, and ended in an oral confession.

At 10 o'clock the police tried to arraign him (the law requires an arraignment without unnecessary delay) but no arraigning officer could be located. With Mallory's consent, a deputy coroner was called in. He examined the suspect and found no indicia of physical or psychological coercion. In other words, no third-degree tactics were involved, and there was no claim that such methods were used. The sole question was whether the delay in arraigning Mallory (he was not arraigned until the following morning) invalidated his oral and his subsequent written confessions.

The court held that they were invalid on the ground that there had been unnecessary delay in the arraignment. The opinion went on to say that the police may not arrest upon mere suspicion but only on probable cause, and that while an arrested person may be booked by the police, he is not to be taken to police headquarters in order to carry out a process of inquiry that lends itself, even if not so designed, to eliciting damaging statements to support the arrest and ultimately his guilt.

In short, this is not a case in which a confession has been invalidated because it was obtained by third-degree methods. The entirely proper ban on the third degree is extended to ban arrests on suspicion alone, to forbid questioning of a suspect prior to arraignment and to require prompt arraignment. The arraigning officer cannot hold a suspect, however, unless there is probable cause to believe he committed the offense. So the police, evidently, must make out a case of probable cause without questioning a suspect—which will be very difficult in many cases. The court holds that this was the intent of Congress in requiring arraignment without unnecessary delay. If this ruling misconstrues the congressional intent, Congress can make the necessary correction.

At least two corrections suggest themselves. One is for Congress to specify by law the length of time a suspect can be held before arraignment. This is done in some of the States. Another might be to provide for taking a suspect before a magistrate, who would advise him as to his legal rights, after which the suspect could be held for a reasonable time for investigation before being charged or released. Unless something of this sort is done, the public is going to suffer from the inability of the police to make valid arrests under the restrictions imposed by the court.

Hawaii Girl Wins National Scholarship

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. BURNS of Hawaii. Mr. Speaker, acting chairman and executive officer of the county of Maui, T. H., United States of America, has sent me a copy of a resolution heartily congratulating Miss Joyce M. Ichiyasu, of Lahaina, Maui, County of Maui, for her achievement in winning a national merit scholarship.

As pointed out in the resolution, 830 high-school seniors as of May 1957, were awarded 4-year national merit scholarships. One hundred and sixty-two thousand high-school seniors in 12,500 high schools throughout the United States participated in this examination.

It is a real pleasure for me to join the board of supervisors of the county of Maui in congratulating Miss Ichiyasu and to wish her every possible success throughout her collegiate career and in her future life. Miss Ichiyasu has brought great credit and honor to herself, her family, her school, and the county of Maui, as well as Hawaii.

The national merit scholarships are of great benefit to the United States. The encouragement of an interest in higher education and the development of our able and talented, as well as highly qualified young people afforded by the 4-year scholarships awarded contributes materially to the security as well as the progress of our Nation in the future.

We of Hawaii are proud of Miss Ichiyasu. I include a copy of the resolution for the information of the Members of the Congress since Miss Ichiyasu deserves every possible credit that can be given to her:

Whereas during the current school year, out of the 162,000 high-school seniors in 12,500 high schools throughout the United States who were given college aptitude examinations, 830 were selected and awarded the National Merit Corp. coveted 4-year scholarship; and

Whereas among the 830 seniors, the only recipient of such award from the Territory of Hawaii was Joyce M. Ichiyasu, daughter of Mr. and Mrs. Tsuyoshi Ichiyasu of Lahaina, Maui, and a student at Lahainaluna Technical High School; and

Whereas Joyce M. Ichiyasu, who is the student body president of her school, has brought honors and recognition not only to herself, her parents, and her school, but also to the county of Maui by her attainment of the high scholastic achievement: Now, therefore, be it

Resolved by the Board of Supervisors of the County of Maui, That it does hereby convey its hearty congratulations to Joyce M. Ichiyasu, daughter of Mr. and Mrs. Tsuyoshi Ichiyasu of Lahaina, for having won one of the 830 coveted 4-year scholarships, and does hereby wish her greater success throughout her collegiate career and thereby bringing further recognition to herself, her family, her school, and the county of Maui; and be it further

Resolved, That a copy hereof may be transmitted to Joyce M. Ichiyasu, to Mr. and Mrs. Tsuyoshi Ichiyasu, and to Mr. Frank Kinnison, principal of Lahainaluna Technical High School.

Why Not the Corn Tassel for Our National Emblem

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday May 14, 1957

Mrs. KNUTSON. Mr. Speaker, the corn tassel, perhaps better than any other symbol, best represents America as it was founded by our forefathers, and no doubt represents the largest single contribution of America to the rest of the world. This would be a fitting emblem for our country.

Miss Margo Cairns, of Minneapolis, Minn., has dedicated herself to getting the corn tassel designated our national emblem. Under leave to extend my remarks, I should like to insert her letter regarding our heritage, a news release by Ralph W. Keller, manager of the Minnesota Editorial Association, and an article from the Minneapolis Star of June 17 about the work she is doing:

GUARDING OUR HERITAGE

"I cannot think of any particular flower or plant that is symbolic of the United States," so wrote a rose lover of Syracuse, N. Y.

Was this man thinking only of garden flowers and hothouse favorites? Was he not overlooking our ageless native American maize—fruit and plant—which so exuberantly and faithfully blooms, fruits, and serves in continuing cycles? Yet in New York State alone there grew over 700,000 acres of it in the summer of 1956.

Maize that saved the starving Pilgrims. Maize that succored the Jamestown settlers. Maize that fed the original North Americans. Maize of the Aztecs, Mayans, Toltecs, Incans and pre-Incans. Maize, upon which civilization after civilization built through several milleniums, all in the Western Hemisphere. What an incomparable record of service.

We today are heirs of all that countless generations of known and unknown races have labored to develop. Maize was the foundation of ancient economies; maize or corn is the foundation of our economy. Today, through the consecrated efforts of skilled scientists, corn has been made to serve us in industry as well as in food.

It has been suggested that the rose be designated as our national floral emblem. What is an emblem? It has been defined as that which is intimately associated with what it represents. Is anything that springs from the earth as intimately associated with this land and its people as corn?

For many weeks of every year the golden, pollen-ladened flower fulfills its delicate

mission, insuring perpetuity, then unveils a glowing prophecy of the wealth to follow. And every autumn its prolific fruit overflows the Nation's granaries, and streams into countless industries to reappear as necessities of our high standard of living.

This then is the faithful flower of the United States. It is the true symbol of this vast, bountiful land. It is this symbol of agriculture's wealth that we should honor, for we are practically the only people in the world's history that has never known hunger.

The rose grows in every land, hence it is an international flower, a happy choice as the floral emblem of the United Nations. But for our own United States let us honor the corn tassel, flower of the native plant bequeathed to us as a priceless legacy. Let us guard our heritage well that it may supply our Nation in all ways—always.

MARGO CAIRNS.

CORN TASSEL MAY BE NATIONAL EMBLEM

By the time this gets into print the United States may have a new emblem. The vision and patient persuasion of a native Minnesotan have gained for the graceful corn tassel not only national acclaim but the almost certain approval of Congress as the official United States flower. In bringing about this recognition of American maize Miss Margo Cairns, of Minneapolis, has won the proud sobriquet Miss Corn Tassel. It sustained our country's natives, our first settlers, and all who have come after, it is raised and used throughout our land, it's beautiful, it's useful—it's a perfectly natural choice, is the logic behind Miss Cairns' imminent success.

RALPH W. KELLER,
Manager, Minnesota Editorial Association.

[From the Minneapolis Star of June 17, 1957]

CITY WOMAN HEADS CAMPAIGN—ARRIVAL OF "MAYFLOWER II" BOOSTS CORN TASSEL DRIVE

(By Hal Seymour)

Arrival of the *Mayflower*, replica of the pilgrim's ship, from England last week signalled the latest surge in a drive to get Congress to name the corn tassel as our national emblem.

If Congress complies, it will be a tribute to the driving energy of a bright-eyed Minneapolis woman, Margo Cairns, known from Washington to Portland, Oreg., as the corn tassel lady.

The campaign has not been a long one, as such campaigns go. It started in January 1955.

But it has been a project of one woman, her friends and those who have been won over by her pushing the corn tassel as a true symbol of American history.

She points out that corn helped the pilgrims through their first winter in America.

Margo Cairns is a native of Minneapolis. Her early interest in corn she credits to her maternal grandfather, George Hield.

Hield's parents brought him as a child to the United States, crossing the ocean on a sailing ship prior to the Civil War. He then crossed the country with them by stagecoach.

When Miss Cairns was 5 years old, her grandfather told her of his surprise at being shown the stately rows of American corn, which in Europe had meant wheat or oats.

"He never raised corn, but he was always telling me of its majesty," she said.

Miss Cairns heard Congress was being asked to name the rose as the national flower. She sought out Representative WALTER JUDD.

"I told him the rose is already the national flower in seven countries and that the rose is an imported luxury." The plant named the national floral emblem must be "intimately associated with what it represents," she said.

Is anything that springs from the earth as intimately associated with this land and its people as corn?

It was with JUDD's encouragement, 2½ years ago, that she started writing letters—all in longhand, since she can't type. Thousands of letters have been written since then, friends have made contributions and introduced her to others who have spread the word. Newspapers across the country commented on her campaign.

Finally, in the 1957 session of the Minnesota Legislature a resolution to Congress was passed, asking that the Nation honor the corn plant by adopting its flower, the tassel of the corn, as our national floral emblem.

This week, JUDD wired he had introduced a motion to have Congress name the corn tassel the national floral emblem.

Miss Cairns is tolerant of those who scoff, remains quietly persuasive as she convinces one listener after another that the corn tassel should be the symbol characteristic of our land, as significant and distinctive as our remarkable flag.

Joe McCarthy, American

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Bedford Standard-Times:

JOE MCCARTHY, AMERICAN

The United States Senate and the American people suffered a grievous loss in the death of Senator Joseph R. McCarthy—a loss that is doubly tragic because his firm voice against the Communist conspiracy will be sorely needed in the critical months and years that lie ahead.

The distinguished Wisconsin Republican did more than any other American in this decade to alert the United States citizenry to the Red peril.

Senator McCarthy was a vigorous, uncompromising foe of communism at home and abroad. He exposed to a shocked nation widespread Red infiltration in American government, educational institutions, and private enterprise.

As chairman of the Senate Investigations Subcommittee, McCarthy had to fight not only the Communist conspiracy but public apathy. In the years immediately after the end of World War II, complacent America was only vaguely aware of Soviet aims for world conquest, and the subversive tactics employed in this country by agents of Moscow.

Senator McCarthy shattered this complacency—virtually single-handed in many instances—with dramatic disclosures of Communist intrigue in the State Department, at Fort Monmouth, in universities and defense industries.

It was inevitable that McCarthy's penetration to the heart of the Communist conspiracy would bring reprisal by Reds and Red sympathizers. He became the target of the most extensive and merciless campaign of character assassination ever launched against an American citizen.

By slanderous innuendo, McCarthy's character and integrity were attacked. McCarthyism, a vague and meaningless term, was coined by the Senator's enemies and used in a derogatory sense to imply falsely a departure by McCarthy from principles of Americanism.

It is to the everlasting credit of Senator McCarthy that he never retreated under fire, never let up in his crusade against the enemies of America although knowing full well he would be unjustly persecuted as a result.

Senator McCarthy is best known for his incessant battle against communism, but this was by no means his only significant achievement.

He was at the forefront of the fight to strengthen United States defenses through more rapid development and wider use of guided missiles—a fight that has borne positive results in recent months.

He was an implacable opponent of secrecy in Government except when required in the interests of national security. He was a zealous defender of the people's right to be informed on governmental affairs.

He was an outspoken adherent to the constitutional principle of separation of powers among the executive, legislative, and judicial branches of Government. He never failed to speak out against attempts by executive departments to encroach upon the constitutional rights of Congress.

Senator McCarthy was a man without fear, a man of supreme courage, a man willing and determined to serve his country to the best of his ability whatever the personal sacrifice.

He entered the Senate at a time when his fortitude and leadership were urgently needed. Had there been no Senator McCarthy to arouse apathetic Americans against enemies of their country and their Constitution, freedom as we know it might have long since vanished from these shores.

The Nation mourns the passing of this true patriot. His epitaph well might read: Joseph R. McCarthy—American.

Vice President Richard M. Nixon's Speech Before 42d Annual Kiwanis International Convention

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. HOSMER. Mr. Speaker, it is my pleasure to present the text of Vice President NIXON's speech today before the 42d annual Kiwanis International Convention in Atlantic City:

I know that there is no subject of greater interest to Kiwanians than that of international relations and the policies which are designed to bring lasting peace to the world. I would like to discuss that subject on the basis of my personal observations of our policies in action over the past 4½ years.

I believe there has been too much pessimistic, defeatist talk about America's policies in the past few months.

It is time for us to discuss our responsibilities in the world, not in terms of what we cannot do, but in terms of what America should do as a great nation welcoming the opportunity which is presented to us to make a mighty contribution to the cause of peace and freedom in the world. I suggest that we examine American policies in that spirit today.

DEFENSE BUDGET

We begin with a policy on which there is probably very little disagreement—the ne-

cessity for the United States and the Free World to maintain military strength sufficient to meet and defeat any aggressor. We do this not because we want war but because we want peace and because history tells us that where a potential aggressor is on the loose weakness invites attack and strength discourages it.

We can disagree as to what the level of that strength should be. But where the decisions as to the character and quantity of our defense were made after months of study of facts available from all over the world by a man with the experience and background of the President of the United States, I say that anyone who would make substantial cuts in that budget below the amounts recommended is taking a risk with America's security which the American people will not and should not support.

DISARMAMENT

There may be those who believe that we can make reductions in our Defense Establishment because of the prospects for disarmament. But while negotiations for disarmament are taking place is the very time we should not reduce our defenses.

Our primary objective and motivation in such negotiations must not be to reduce our burden of armaments but to reduce the danger of war.

The free world's military strength is the major deterrent to war today. If we reduce our strength and the Communists do not make a corresponding reduction in theirs, the risk of war will be correspondingly increased. A bad disarmament agreement, therefore, would be worse than none at all.

The road to war is paved with agreements based solely on mutual trust. That is why we serve the cause of peace when we insist that we will not make an agreement to reduce our own armed strength unless an inspection system is put into effect which will make certain that all the parties to the agreement are carrying out their commitments under it in good faith.

Let me turn now to some of the more controversial aspects of our foreign and defense policies. We have heard a great deal of criticism in recent weeks of our foreign-aid programs.

I suggest we examine those programs solely in terms of one question: Are the interests of the United States being served by them?

MILITARY-AID PROGRAM

Approximately three-fourths of the foreign-aid appropriation is for military assistance. Among the countries which are receiving military assistance are Korea, Formosa, South Vietnam, Pakistan, and Turkey.

All of these countries have common borders with Communist countries. The question is not whether they should have adequate defense forces, but how it should be done. On the average it costs 5 times as much to maintain an American abroad as it does for the fighting men of the allies we are aiding. By conservative estimates, our expenditure of $2.8 billion in foreign military aid results directly in at least $15 billion worth of defense for ourselves and the free world. Spending less for military aid abroad would simply mean spending more for defense at home and more American boys in uniform. I submit that on the basis of these facts those who would cut our military foreign aid programs are in fact the spendthrifts and not the economizers.

WINNING THE COLD WAR

Let us turn now to another phase of our program for peace. We can readily see how maintaining the military strength of the free world at adequate levels reduces the danger of war. But if we rely on nothing more than military strength we can only hope to have an uneasy truce with the whole world armed to the teeth for years to come.

What can we do not just to prevent a hot war but to win the cold war and thereby help to create the conditions on which a lasting peace can be built?

In finding the answer to this question let us begin by examining the breakdown of people in the world. The world's population today is roughly divided into thirds: one-third free world, one-third Communist, and one-third uncommitted or neutral. If the Communists can win a substantial part of the uncommitted areas of Africa and Asia to their side, the balance of power in the world which deters war today would shift inevitably in favor of the Communists and the risk of war would consequently increase.

But an even greater danger would be that by controlling the resources of Asia and Africa they would be able to force the free world to surrender without waging war.

The other side of the picture is that if the uncommitted world rejects communism and turns toward the free world, the danger of both war and surrender will be substantially reduced.

What policies can we adopt which will help to accomplish this objective? This brings us to the basic question—what do the people of the uncommitted nations want?

ECONOMIC AID PROGRAM

They want economic progress so that they can raise their deplorably low living standards. They would prefer to gain that progress and keep their freedom and independence at the same time. But if there is no other answer they will turn to the Communist world for help. And those who accept economic help from the Communists run the risk of eventual Communist domination.

That is why we are appropriating $1 billion a year to help nations in this category. Our purpose is not to buy friends but to help them develop the economic and political strength and independence which is the antithesis of Communist domination.

In the final analysis of our own independence and peace are involved just as much as that of the nations we are aiding.

As important as economic progress is, we would make a fatal error if we assumed that this was the complete answer to the problem of the uncommitted nations.

The people of these countries above all else want and deserve recognition of their dignity as individuals and as nations. We must never forget that they are as sovereign as we are. They are as jealous of their rights and their independence as we are.

And we want it that way. We do not want satellites browbeaten by American armed might or by our economic strength. We want allies, friends, and partners. Let us talk less about our world leadership and more about our partnership with other free nations. And may we always treat the people of other lands with the dignity and respect they deserve.

We have discussed our military program to deter a hot war and our economic aid program to win the cold war. What can we do in addition which will help create the understanding and good will which is essential if we are to have real peace?

A BREAKTHROUGH FOR PEACE

What we need is a breakthrough for peace. We must contain communism without war. But we must go further and try to set in motion changes in the Communist empire which will enable us to have real peace, not just an armed truce.

This will not be easy. There are no trick gimmicks that will change men's hearts. There are no miracle drugs which will impede the drive for power or restrain the cruelty and insolence of those who live by naked force.

If the Soviet Union would agree to a regular exchange of radio and television broadcasts, as proposed by Secretary Dulles and Senator JOHNSON, real progress could be made in reducing misunderstanding and prejudice.

But exchange of broadcasts may not be the most effective answer to the basic problem. People everywhere have been bombarded with so much propaganda that they are skeptical of it. There is a tendency to be suspicious of any information which emanates from government sources.

EXCHANGE PROGRAM

We should put at least equal emphasis on another program which too often is treated as a stepchild by both the executive department and the Congress in allocating funds in the information field. I refer to our cultural and persons exchange program. A recent example of the effectiveness of the cultural exchange phase of this program is the sensation created by our exhibit at the Poznan Trade Fair in Poland. This exhibit has probably created more interest in and understanding of the American economic system than 10 years of radio broadcasts.

Under the exchange of persons phase of this program editors, professors, labor leaders, clergymen, public officials, and various technical experts come here for periods of up to a year. They spend most of their time visiting Americans who share their profession or occupation. They are helped in planning their program, but they are not given propaganda tours or indoctrination. They see our country as it is—its good points and its weaknesses. When they return home they have had a firsthand experience of what democracy and freedom of opportunity mean in practice.

Radio and TV broadcasts are more spectacular but the exchange program in the long run is more lasting in its effect. What an American says to a citizen of another country about America is not as effective as when a citizen of that country who has visited America says the same thing.

These programs are so effective and so essential in creating better understanding that we should sharply increase our emphasis on them. At the present time only 12,000 leaders a year from all parts of the world are able to visit the United States under the Government exchange program. I believe we should set as our goal bringing at least 25,000 leaders a year from foreign countries to the United States.

EAST-WEST EXCHANGE

It is particularly important that we show greater initiative in attempting to increase on a large scale the exchange of persons program with the Soviet Union and its European satellites. We should accept the risks in such a program in the hope that we will be striking directly at the roadblock of hatred and prejudice which bars the road to peace. It is true that the Kremlin's leaders can be expected to do their best to send only case-hardened, tested Communist Party members to the United States under these programs. But the larger the number who come, the less effective the Communist screening process can be.

In undertaking such an expanded program we should not expect a miracle overnight. Attitudes which have been drilled into people for years do not change in a day. But only in this way can the seeds of understanding be planted which may eventually blossom into the good will the world so desperately needs.

SOVIETS BLOCK EXCHANGE

The major question, of course, is will the Soviet leaders meet us halfway in expanding the exchange of persons program? Mr. Khrushchev in recent days has tried to create the impression that it is the United States which is blocking a broader exchange of information and persons.

Never in history has a national leader indulged in more hypocritical double-talk. He is using the old Communist tactic of accusing us of the very practices of which his government is guilty.

We made it clear at the Geneva Conference and on a number of occasions since then that we want to increase the exchange of information and persons between the Soviet Union and the United States. Mr. Khrushchev now says that they want to do the same thing. It is time for him to back up his words with deeds.

Here are six areas in which by changing Soviet policy he can prove his good faith and contribute to the cause of understanding and peace:

He can stop jamming free world broadcasts to the Soviet Union. We do not interfere with Soviet broadcasts in any respect. Our broadcasts to the Soviet Union are jammed by the Communists night and day.

He can allow foreign periodicals to be freely sold and distributed in the Soviet Union. Communist periodicals are allowed to enter this country and can be purchased by anyone who wishes. On the other hand, the Russian people cannot purchase American newspapers or magazines except in those rare instances where their government permits it.

He can quit censoring news stories filed by foreign correspondents in the Soviet Union. Russian correspondents are invited to our press conferences and their copy is not censored in any way. The exact opposite is true in the USSR where every word a correspondent sends out to the Free World must be approved by a Soviet government official.

He can remove the restrictions which the Soviet government has placed upon travel within the Soviet Union. The United States has time after time requested just such a relaxation of restrictions. Mr. Khrushchev has said that he would be prepared to do away with these restrictions by mutual agreement. Up to this point, the Soviet action, in contrast to agreeable words over TV, has been negative.

He can allow not just a few Government officials whom the leaders feel can risk exposure to our freedoms but Soviet citizens of all ranks and walks of life to come to the United States under the exchange program.

He can accept the offer of the Secretary of State to exchange on a regular basis radio and television programs. The concepts of communism are read and understood by many in this country and have been rejected by our own free will. We challenge the Soviet Union to permit similar free and wide circulation within its borders of the concepts of freedom and democracy.

Acceptance by Mr. Khrushchev of any one of these proposals would be an evidence of Soviet good faith in their expressed desire to reduce tensions and to create better understanding between the Communist world and the free world. His continued refusal to take action will place the responsibility on the Soviet leaders and the Soviet leaders alone for blocking the road to peace.

May I conclude by expressing an optimistic conviction as to the future? You have all heard a great deal of talk with regard to the anti-American sentiment which exists in various parts of the world. The impression is sometimes created that our policies abroad have left a hot-bed of hate all over the world. There is no question but that tensions have been created which are inevitable when people of different backgrounds must live and work together. But anyone who concludes that because of a few incidents anti-Americanism is the rule rather than the exception in other countries is dead wrong.

I can testify from personal experience on this score on the basis of visits to 40 countries in the past 4 years. In my opinion, there is a great well of friendship for the people of the United States among the people of other lands. All we have to do is to go halfway in treating them as equals, in respecting their traditions, and in proceeding always on the basic assumption that there are no second-class people or second-class nations in the world today. Nothing can contribute more to the cause of peace than for us to act and think in those terms in our dealings with other peoples.

I believe that if we can show the same courage and devotion in fighting for peace that we have always shown in fighting to win wars, we have the best opportunity in history to realize in our time man's dream of peace and freedom for the people of the world.

Group Message on the Hoover Report

EXTENSION OF REMARKS
OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. CRETELLA. Mr. Speaker, we have heard and read many times of the desire to put the recommendations of the Hoover Commission into legislation so that they might be adopted toward the end that we can look forward to a more cohesive government as well as better organization.

I have had the privilege of receiving the following report by a committee which met in Washington and which advocated the adoption of the recommendations of the Hoover Commission. It is carefully prepared and I submit it to my colleagues.

GROUP MESSAGE ON THE HOOVER REPORT,
JUNE 19, 1957

We represent a group of private citizens who have assembled in Washington because we believe that certain of the bipartisan Hoover Commission's recommendations should be carried out without delay.

We have come to Washington for the specific purpose of reviewing and studying, with the expert assistance of specialists from both in and out of government, Federal activities in which substantial improvements can be made and economies effected.

We come from 26 States as follows: California, Colorado, Connecticut, District of Columbia, Florida, Georgia, Idaho, Illinois, Iowa, Kansas, Maryland, Massachusetts, New Jersey, New Mexico, New York, North Carolina, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas, Vermont, Virginia, West Virginia, Wisconsin, and Wyoming.

The people of the United States have expressed in recent months a strong desire for Federal economy and a reduction in taxes. We come from many parts of the country and represent many organizations. We seek the following objectives:

1. Budgeting and accounting: Prompt House passage of H. R. 8002, which would cause the budget to be submitted on an annual accrued expenditude basis. The Senate has already acted favorably and without dissent on a companion measure, S. 434.

2. Unifying common-use supply and service activities in the Department of Defense: Senate acceptance of the O'Mahoney-Chavez-Douglas amendment to H. R. 7665, the Department of Defense appropriation bill for 1958, which would establish a civilian-managed agency for this purpose; and House concurrence in such an amendment.

4. Unnecessary Government competition with private business: Prompt action on S. 1539 and H. R. 5826 which would affirm the policy of Congress to restrict and curtail unnecessary and competitive participation of the Federal Government in the field of private enterprise; and also S. 1394 and H. R. 5883 which would terminate gradually the Postal Saving System; and also on section 109 of S. 1534 and H. R. 5836 or alternatively H. R. 8108, which would render more realistic the charges of the parcel post as the Commission proposed.

4. Reorganization act extension: Favorable House action on extending this important law under which the President can realine agencies of the executive branch. The Senate has already passed S. 1791.

5. Surplus property. Prompt action on S. 1540 and H. R. 4119, which would place overall policy responsibility for surplus property management in the General Services Administration.

6. Real property transactions. Prompt action on proposals to relax congressional clearance procedures. The pertinent House measures are H. R. 29 and H. R. 4442. No similar measure is yet before the Senate; and action is needed to secure its introduction there and passage.

7. Hidden subsidies. Prompt and favorable introduction of, and action on, the proposal for curtailing interest subsidies in certain Federal lending programs as set forth in Budget Director Brundage's letter of June 3 to Vice President NIXON and Speaker RAYBURN.

8. Duplicate staffing. Prompt Senate action on S. 2294 and similar House action on H. R. 8091. The Hoover Commission called for "a clear delineation in the unjustifiable waste which results from duplicate military-civilian staffing." The Commission identified 16,000 such duplicate assignments, "representing an unnecessary payroll cost of more than $110 million per year."

9. Training. Favorable House action on proposals which would authorize Federal employees to be trained at public and private facilities. The Senate has already passed S. 385, which is under consideration in the House.

10. Administrative court. Prompt Senate action on S. 2292, which would establish an Administrative Court of the United States to assure protection of the rights of citizens as guaranteed by the constitutional doctrine of separation of powers; and prompt House introduction and action upon a similar measure.

11. Medical services. Favorable action on S. 2293 and H. R. 2435, which would establish a Federal Advisory Council of Health to coordinate and develop basic policies for the diverse medical programs of the Federal Government; and

12. Civil Service. Favorable action on S. 2290 and H. R. 8207, which would provide a system for establishing a flexible corps of highly competent, nonpolitical career administrators. Another Senate bill, S. 2291, would modernize civil-service methods and procedures to make careers in Government more attractive at all levels of Federal employment.

ATTENDEES, HOOVER REPORT BRIEFING SESSION, THE SHOREHAM, WASHINGTON, D. C., JUNE 18, 1957

It should be recognized that all resolutions were approved by majority vote and express the sense of the meeting, but may not necessarily entail endorsement of all proposals by each attendee.

Carter W. Atkins, executive director, Connecticut Public Expenditure Council, Inc., Hartford, Conn.

Everett P. Balch, chairman, legislation committee of Jockey Hollow chapter, New Jersey Society Sons of American Revolution, Mendham, N. J.

Harry S. Baxter, attorney, Atlanta, Ga.

Mr. and Mrs. Charles Dana Bennett, Vergennes, Vt.

Jess B. Bennett, assistant to the president, Braniff International Airways, Washington, D. C.

Joseph L. Borda, special executive assistant, National Association of Manufacturers, Washington, D. C.

Miss Sally Butler, legislative consultant, General Federation of Women's Clubs, Washington, D. C.

Keith A. Caldwell, Chicago South End Junior Chamber of Commerce, Chicago, Ill.

Raymond E. Coburn, director of research, Connecticut Chamber of Commerce, Hartford, Conn.

Dr. John H. Davis, Harvard School of Business, Cambridge, Mass.

Dr. James P. Dixon, Commissioner of Health, Philadelphia, Pa.

George C. Dworshak, executive secretary, Chamber of Commerce of the Attleboros, Attleboro, Mass.

Raymond E. Edwards, executive secretary, Iowa Taxpayers Association, Des Moines, Iowa.

J. Herbert Eichelberger, assistant to the president, Taxpayers' Federation of Illinois, Chicago, Ill.

Henry E. English, chairman of the board, Red Ball Motor Freight, Dallas, Tex.

Roy Erickson, Erickson Memorial Co., Denver, Colo.

Clarence Francis, chairman, Citizens Committee for the Hoover Report, Bronxville, N. Y.

Bayne Freeland, public relations director, the Quaker Oats Co., Chicago, Ill.

Lyle E. Graee, president, Champaign County Farm Bureau, Illinois Agricultural Association, Urbana, Ill.

William C. Hambleton, State president, Conference of International Association of Machinists, East Alton, Ill.

Alfred L. Hammell, president, Railway Express Agency, New York, N. Y.

Walter Harnischfeger, president, Harnischfeger Corp., Milwaukee, Wis.

Mrs. Mame M. Higgins, National Council of Negro Women, Chicago, Ill.

Arthur L. Holland, president, Sun Star Milling Co., Boise, Idaho.

Frederic W. Hume, vice chairman, Florida Citizens Committee, Miami, Fla.

Seward H. Jacobi, director of employers' advisory department, New Jersey State Chamber of Commerce, Newark, N. J.

Reed Larson, past national chairman, government affairs; United States Junior Chamber of Commerce, Wichita, Kans.

James T. Londrigan, State president, Illinois Young Democrats, Springfield, Ill.

Rodney W. Markley, manager, Washington office, Ford Motor Co., Washington, D. C.

Mrs. William T. Mason, president, the National Council of Negro Women, Washington, D. C.

William A. Mills, executive vice president, Empire State Chamber of Commerce, Albany, N. Y.

Blake T. Newton, Jr., president, Shenandoah Life Insurance Co., Roanoke, Va.

Mrs. Genevieve H. Oslund, legislation research director, General Federation of Women's Clubs, Washington, D. C.

James H. Parsons, special representative, Bloomington Kiwanis Club, Bloomington, Ill.

Harry P. Perkins, president, Perkins Brothers Co., Dallas, Tex.

Former Senator George L. Radcliffe, Fidelity & Deposit Co., Baltimore, Md.

Theron J. Rice, Chamber of Commerce of the United States, Washington, D. C.

Eugene F. Rinta, director of research, Council of State Chambers of Commerce, Washington, D. C.

Willis Sargent, attorney, Syracuse, N. Y.

Wallace H. Savage, attorney, Dallas, Tex.

F. E. Schuchman, president, Homestead Valve Manufacturing Co., Coraopolis, Pa.

Robert E. Simpson, secretary, Connecticut Chamber of Commerce, Hartford, Conn.

Mr. and Mrs. Joseph J. Spurr III, McLean, Va.

Dean Robert G. Storey, dean of Southern Methodist University Law School, Dallas, Tex.

Merle H. Tucker, president, radio station KGAK, Gallup, N. Mex.

Frank Upman, Jr., Washington, D. C.

Hamill Varner, the Quaker Oats Co., Winnetka, Ill.

Travis T. Wallace, president, Great American Reserve Insurance Co., Dallas, Tex.

Mrs. Donald L. Wetzell, State legislation chairman, Illinois Federation of Women's Clubs, Tampico, Ill.

NOTE.—The above list of attendees includes only those who attended the first day's activities in connection with the briefing session; others are registered for the second day's session.

Increases—for Whom?

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an exceptionally interesting article from the newspaper Labor, printed in the June 29, 1957, issue.

The article quite graphically, I think, provides a capsule summary of the monetary pattern devised and fostered by the Eisenhower administration, as it is represented by its chief fiscal officer, Secretary of the Treasury Humphrey.

The Secretary reportedly will be some $6 million richer when he leaves office soon; on the strength of which, he most probably is himself not much interested in a pay raise. But the postal workers of our country, whom I doubt have had the opportunity to engage in stock purchases and sales, are quite concerned with the possibility of a salary increase. Rampant are the stories of the economic plight; yet the administration has repeatedly voiced its collective opposition to any postal-worker pay increase this year. The administration's monetary pattern appears to be awkwardly top-heavy.

The article follows:

TREASURY CHIEF NOW $6 MILLION WEALTHIER

When Secretary of the Treasury George M. Humphrey leaves office soon, he will be approximately $6 million richer than when he entered 4 years ago. That was revealed after Humphrey submitted to the Senate Finance Committee a list of his holdings in private corporations.

The list disclosed that Humphrey's stockholdings are now worth a total of close to $14 million. Of this, comparisons were possible on only $12.6 million worth. These stocks were valued at $7 million in January 1953. Thus the gain in that portion alone has been $5.6 million, or 85 percent.

When Humphrey entered the Cabinet he was allowed to retain these big holdings in several companies, despite a law which forbids the Secretary of the Treasury to be interested in any private commercial business.

Humphrey also disclosed back in 1953 that members of his immediate family too have very large holdings in the same companies. But so far the Treasury chief hasn't itemized those family holdings, as distinct from his own personal fortune.

MOST IN M. A. HANNA CO.

Lion's share of Humphrey's holdings are in the M. A. Hanna Co. of Cleveland, which he formerly headed. The list shows he has 67,550 shares of Hanna stock, valued now at $9,165,000, gain of nearly $4 million over 1953.

Also, he has 20,000 shares of Pittsburgh Consolidated Coal, worth $2,445,000, a rise of $1,310,000; 13,200 shares in National Steel, worth $970,000, up by $310,000 and relatively small holdings in Republic Steel, Canada & Dominion Sugar Co. and National City Bank.

In addition, he has 12,471 shares in Hanna Coal & Ore Corp., valued at $2,120,000 now, but no information was available on the increase over 1953, though it's assumed to be at least several hundred thousand dollars, thus making his total gain in the neighborhood of $6 million. Hanna Coal is owned 50 percent by the M. A. Hanna Co.

Commenting on the disclosure, Senator ALBERT GORE (Democrat, Tennessee), who had spearheaded the move for information on Humphrey's finances, declared that "here in Secretary Humphrey we have a notable example of those who have benefited from the Eisenhower administration monetary policies."

"It is interesting to note," GORE added, "that had the Secretary liquidated his holdings and bought Government Victory Bonds, as he urges others to do, his losses now would be exceeding $1 million."

Incidentally, Humphrey had submitted a list of his holdings to the committee back in 1953, but GORE revealed it was missing from the committee's files. Then the Treasury chief provided another list.

Girard Case Comment by a Former American Soldier Who Served in the Far East

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the editor of the Elmira (N. Y.) Star Gazette printed in that newspaper on June 24, 1957. The writer is a young ex-serviceman who served in the Far East and had the opportunity to observe the workings of our Status of Forces Agreement with Japan at firsthand. I believe his comments on the general situation and the Girard case in particular bear reading by all of us in the Congress who are concerned with this problem.

The letter follows:

Having served in the Far East with American personnel who are familiar with the operations of the administrative agreement between the United States and Japan, I think that I can testify to the satisfactory results of that agreement whereby jurisdiction in criminal cases involving American military personnel has been delineated. I desire, therefore, to make a few observations on your recent editorial on the Girard case.

I disagree wholeheartedly with your contention that Girard's constitutional rights are the sole issue in this jurisdictional dispute because there is no indication whatsoever that Girard's basic rights as an individual would be jeopardized in a Japanese

court. Most Americans do not have the faintest idea of the procedures followed in the trial of American military personnel by Japanese courts.

The current uproar over the Girard case has largely obscured the true facts of the situation. It is alleged that if Girard is not tried by a United States court-martial, he will be turned over to the Japanese for trial and thus his constitutional rights will be impaired. This is incorrect. Throughout the entire trial, the accused remains in the custody of military command in which he serves; he lives on American military property and he appears in the Japanese court under American Military Police escort. During the trial the accused is accorded virtually all rights accorded to defendants tried under our judicial system. Only if the accused is sentenced to imprisonment by the court is he turned over to Japanese custody. The prisoner's living conditions in a Japanese prison compare favorably with those found in quarters for bachelor officers on American military installations. American liaison officers make frequent inspections of the prisoners' quarters to make certain that their conditions are satisfactory.

I am certain that if there were any indication that Girard's rights as an individual would be jeopardized by the Japanese court, President Eisenhower would not permit the trial to continue. It should be reiterated that Girard would remain in American custody until sentence (if he is guilty as charged) is pronounced, and then he would be released from American custody only if he were sentenced to a prison term. Most Americans opposing Japanese jurisdiction in the Girard case either ignore this fact or are unaware of it. Therefore, I cannot agree with your contention.

If it can be claimed that Girard's constitutional rights as an individual would not be jeopardized (as I firmly believe it can), what, then, is the real issue in this case? If I may take the risk of being vague, I feel the issue is our national interest. Our national interest is that American military personnel must be stationed in Japan under a mutual-defense system upon which we rely for our national security. This is our stake. Japan has a stake, also. Her stake is her sovereign rights as a nation which is an equal partner of the United States. One of her sovereign rights is that of trying United States military personnel under certain specified conditions. We cannot have our cake and eat it, too. We cannot expect the Japanese to permit us to station military forces on her soil for our defense in peacetime without our recognition of her rights as a sovereign nation. Somehow our military interest and Japanese sovereignty must be reconciled. They have been reconciled by the administration agreement.

The administration agreed to put the Girard case under Japanese jurisdiction because it could see no reason for making an international issue over the precise interpretation of the term "on duty" in this particular case. Both the United States and Japan can summon convincing evidence to justify their contentions that Girard was on or off duty. The United States Government feels, therefore, that our friendly and vital relationship with Japan should not be impaired by a dispute over terminology—especially since there is no indication that Girard's rights would suffer. I wholeheartedly agree with the administration's position and I heartily congratulate Congressman Cole for his recent defense of that position.

I have two questions which I respectfully request you to consider. First, what satisfactory alternative arrangement to the administrative agreement would you propose as a basis for reconciling our national interest and Japan's sovereignty? Second, in examining the facts of the incident involving Girard and Naka Sakai, the dead Japanese farmer, what do you think the reaction of the American people would be if the roles of the principals (both individuals and nations) were reversed? That is, if the dead woman were American and the accused were a Japanese soldier stationed, say, in Big Flats? Do you not feel that all things being equal, the American people might be justified in asking that the Japanese soldier be tried in an American court?

There are two basic issues here—Girard's rights and our national interest. I am convinced that Girard's rights would not be jeopardized. On the other hand, I strongly feel that our national interest would be adversely affected by the impairment in good American-Japanese relations which would surely result from the failure of the United States Government to abide by its administrative agreement with Japan.

RICHARD W. MURPHY

Double Standards and Double Talk

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, news from Texas tells us that District Judge Ben Moorehead has proclaimed that lawyers cannot practice law in Harris County unless they pay dues to the bar association.

Texas has a so-called right-to-work law which outlaws a union shop for working men and women. This law is designed, not to protect the rights of workers, but to give advantages to union-hating employers. The real objective is to prevent organization of workers, to hold down wage standards, and to impose unfair conditions which employees without organization are helpless to correct.

The proclamation by Judge Moorehead in supporting a closed-shop union for Texas lawyers gives added evidence that the right-to-work law is based on double standards and that the argument for right-to-work legislation is phony and a lot of doubletalk.

Mr. Speaker, under leave to extend my remarks, I include the following article on this subject from the current issue of Labor, official organ of the Railway Labor Unions:

ENFORCE "CLOSED SHOP" FOR LAWYERS, BAR UNION SHOP FOR WORKERS

AUSTIN, TEX., June 17.—Like many other States in the South, Texas has a "right to work" law which forbids labor-management agreements requiring membership in a union as a condition of employment. Yet, this same State has an ironclad "closed shop" setup for the lawyers, bearing the perfumed name of "integrated bar."

Under that closed shop, over 1,800 attorneys who have failed to join their "union," the Texas State Bar Association, have just received notices from the courts to pay up their back dues or be prohibited from practicing their profession.

In Houston alone, such notices went to 180 lawyers. They were warned they cannot practice law in Harris County unless they "pay up."

District Judge Ben Moorhead proclaimed that these delinquent attorneys must present proof their dues in the bar association are paid up to date. If they fail to do so, none of their pending cases will be acted on by the judges in the county.

Moreover, those on the delinquent list will be "dropped permanently" if their June 1 dues are not paid by August 31—in other words, on that date they will have to be paid up or get out of their profession.

This crackdown is the result of a mandate laid down by the Texas Supreme Court. It ordered each judge in the State to bar from practice in his court any attorney who was "not in good standing" in the association.

Similar "closed shop" setups for lawyers exist in many other States. In some, the courts have even assigned sheriff's deputies to call on the lawyers and demand they pay up dues to their "law union," or go out of business.

Imagine what a howl there would be if the power of the courts and the enforcement authorities were used to compel workers to keep in good standing in their unions, or be deprived from working their craft anywhere in the State!

A similar "closed shop" exists for doctors in most States—and yet lawyers and doctors are in the forefront of campaigns for more laws to prohibit the negotiation of even voluntary union shop agreements between unions and employers.

Whose Rights?

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News dated June 25, 1957:

WHOSE RIGHTS?

It is not the existing law of the land so much as the nature of communism which is brought into question by recent decisions of the Supreme Court.

Orderly society is impossible without some Government interference with the activities of citizens. These interferences should be kept at a minimum. But the right of the citizens as a whole to be protected in their enjoyment of life, liberty, and the pursuit of happiness is paramount.

Recent decisions have, in effect: Thrown open the confidential files of the FBI; held that the mere promotion of communism is not a crime unless there is overt incitation to force and violence; and restricted the right of Congress to ask about political beliefs and associations, even Communist beliefs and associations.

These decisions greatly encumber the intricate task of protecting our common rights by rooting out communist subversion. They open prison gates for a large number of communist leaders.

Interference with the liberties of individuals habitually has varied with the imminence and extent of danger. The draft—certainly near the ultimate in interference with individual freedom—is a good example.

Fundamental to the point of view which produced these Supreme Court decisions is the refusal—or legal inability—of the Court to consider communism a criminal conspiracy to advance the interests of an unfriendly foreign power—a clear and present

threat to national security. The decisions dramatize the need for law which plainly defines and outlaws this conspiracy.

It was communism which murdered more than 30,000 of our men in Korea and butchered the Hungarian freedom fighters. It is communism which imminently threatens world-destroying atomic war and requires our expediture of the vast sum of $40 billion a year to prevent it.

Anyone who participates in such a crime, if only in a small, stupid way, directly menaces the rights and lives of everyone. An individual has no more right to organize and serve this plot than he has to organize a cell of murder incorporated.

At the very least, anyone who cooperates in the Communist movement lends aid and comfort to our sworn enemy in this cold war. And that is what makes communism different in kind from other unpopular, minority causes which the Bill of Rights is designed to protect from majority or State interference.

It is vital that the policies enforced by these decisions be modified or reversed, either through rehearing before the court itself, by tightening of the laws by Congress, or by constitutional amendment—if that extreme measure is necessary.

First efforts are properly concerned with protection of the FBI files through legislation to be introduced this week. This legislation should get prompt attention.

It certainly is no defense of civil rights to permit the subversion of the Government which protects them.

There Was No Surrender of Jurisdiction Over American Troops Overseas in World War I

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. OSTERTAG. Mr. Speaker, at this time when there is so much dismay over the surrender of American servicemen to foreign courts for trial on criminal charges, it is instructive to recall how matters of this kind were handled in World War I. I asked the Library of Congress to look into this matter for me, to determine whether there was, as late as World War I, any precedent for the surrender of jurisdiction over our Armed Forces, as is now possible under the status-of-forces treaties and agreements. I find that no such arrangements were thought to be necessary, and none were made. The United States maintained jurisdiction over its troops stationed in England and France during the First World War, even though they could be arrested by civil or military police of the host country for criminal offenses committed while they were off duty. Formal arrangements provided that after arrest, they would be returned to American military jurisdiction for trial under the Constitution and laws of the United States.

This, in my judgment, was a sound arrangement, and the only arrangement which can insure that the United States Constitution and the Bill of Rights follow the men in our uniformed services wherever they may be assigned to duty.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD, the memorandum on this point prepared for me by Mr. Arthur H. Darken, of the Foreign Affairs Division, Legislative Reference Service of the Library of Congress.

THE LIBRARY OF CONGRESS,
Washington, D. C., June 14, 1957.

To: Hon. Harold C. Ostertag.
From: Foreign Affairs Division.
Subject: Criminal jurisdiction of United States Armed Forces in allied countries during World War I.
(Attention: Miss Savell.)

Upon arrival of the United States forces in France in World War I, both the American and French authorities took the view that under the general principles of international law members of the American Expeditionary Forces were answerable only to American tribunals for all offenses they might commit in France. It was later formally agreed between the two Governments that each should possess exclusive criminal jurisdiction over its land and sea forces whether in the territory of either nation or on the high seas.

A similar arrangement prevailed in the United Kingdom, which issued an order in council stating that: "The naval and military authorities and courts of an ally may exercise in relation to the members of any naval or military force of that ally who may, for the time, be in the United Kingdom, all such powers as are conferred on them by the law of that ally."

Arrangements were made in both France and the United Kingdom, however, for the local police or military authorities to arrest American soldiers absent from their commands or committing offenses against the civil population. In each instance the American soldiers so arrested were to be turned over to the United States military authorities for trial and punishment.

In June 1917 the commander in chief of the AEF recommended the passage of legislation that would enable him to organize a claims service in the force for the investigation and payment of such damages against the civil population as might be caused by United States soldiers in France. This law was enacted in April 1918 and put into effect. Some of the most frequent sources of claims for damages were automobile accidents, collisions between commercial vessels of France and England and those chartered by the United States, and incidents involved in billeting American troops in requisitioned French quarters.[1]

[1] The main source of information in the preparation of this memorandum was United States Army in the World War, 1917–19, prepared by the Historical Division of the Department of the Army, 1948, vol. 15, pp. 363ff.

ARTHUR H. DARKEN.

Economy Weapon—Facts

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. VANIK. Mr. Speaker, every Member of the House of Representatives, regardless of his position on the legislation, was profoundly impressed with the debate on the third supplemental appropriation bill, H. R. 7221, and the diligent effort made by my distinguished colleague, the gentleman from Ohio, the Honorable MICHAEL KIRWAN, to terminate the costly tungsten-purchase program. This $30-million economy was the proximate result of the strong and tenacious position taken on this issue by the gentleman from Ohio [Mr. KIRWAN].

Following is an editorial on the subject which appeared in the Cleveland Press on June 21, 1957, and which appeared in other Scripps-Howard newspapers on the same day:

ECONOMY WEAPON—FACTS

Compared to the total Federal budget, $30 million is peanuts.

But we're glad to record that Congress has just refused to spend this sum for continuing the Federal subsidy of domestic tungsten mines.

Congressman MICHAEL KIRWAN, Democrat, of Ohio, deserves the principal credit for this satisfactory bit of economizing.

His stubborn refusal to approve continuation of the subsidy was backed by facts. Such as: That it was adding to the wealth of large and rich corporations, had no connection with defense or our stockpile, whose tungsten requirements have long been met.

A Faith Kept

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. McGOVERN. Mr. Speaker, one of the great patriots of American history is General of the Army George C. Marshall. As chairman of the American Battle Monuments Commission, General Marshall has reported in a beautiful and sensitive article on the efforts of this Commission to honor America's fallen servicemen whose graves are in foreign lands. General Marshall's article, in the June 1957 National Geographic magazine, follows:

OUR WAR MEMORIALS ABROAD—A FAITH KEPT
(By General of the Army George C. Marshall)

Twice since World War II my heart has led me on long pilgrimages overseas. I went as an old soldier seeking fallen comrades.

The hours I walked among our lost legions were among the most poignant of my life. Each site evoked old memories of decisions made, of battles waged and won, and, above all, of the young Americans who paid the highest price that war can exact. Yet the tribute I gave these men in my thoughts must remain an unwritten one, for words cannot capture or convey gratitude held so deeply.

In the course of my pilgrimages there grew a very great, if melancholy, satisfaction in the work of the American Battle Monuments Commission, entrusted with the care of our war dead in foreign lands. We were keeping faith with the fallen. We were talking to them all that we could of home, of beauty, and of remembrance.

AN OBLIGATION TO THE LIVING

The Commission's high task involves also a most solemn obligation to the living. I have corresponded personally with many Gold Star families concerning our work, but to write words of comfort and assurance to all is beyond my powers. Therefore, I would like to share with the bereaved, and with all

other Americans, this brief account of a loving stewardship.

When World War II ended 15 million American men and women had answered the call to arms; of these, 360,810 died overseas. Most of them were buried near where they fell, in temporary graves on alien soil.

In the years that followed, more than half were brought back to their homeland at the request of relatives. The Commission has labored unceasingly through the past decade in behalf of those left in our care, and today they all lie in permanent memorial cemeteries.

We have established 14 of these World War II memorials abroad—at Manila, near Bataan, and Corregidor; in the green of the English countryside; on hills above the pastoral valleys of France and Belgium; in the field of Luxembourg, the Netherlands, Italy, and North Africa.

SIX SHRINES DEDICATED LAST SUMMER

Last July, six of these shrines—all in Europe—were dedicated. The remainder will be ready by the end of 1958.

But statistics, however meaningful, are poor fare for a troubled heart. It is only natural that some who left a loved one overseas should have moments of doubt concerning their decision. I know the assurance many families would have me give.

Yes, he rests now in a serene and beautiful place, well planned, well built, well kept by dedicated men.

From our task's inception the Commission has tried, as far as work and patience and skill can do, to make the memorials worthy of the men and women they honor. We began by asking 14 outstanding United States architects each to design a cemetery with its chapel. With every architect a landscape expert, a sculptor, and a painter—all Americans—generally collaborated.

Once our plans had been formed, the American Graves Registration Service moved the dead from nearly 250 temporary cemeteries, and reverent hands gave them final interment. Then, step by step, the Commission transformed each permanent site into a place of beauty and dignity.

The memorial chapels, for example, are of great artistic merit and truly representative of the American people. Each displays illustrated battle maps, usually large murals, amplified by text to explain the campaigns. In no two instances have artists used the same methods—rarely even the same materials. Some maps are made of layered marble; others are in bronz relief, still others in fresco or in ceramics.

REMEMBRANCE WALLS HONOR THE MISSING

Visitors also will see long lists of Americans missing in action. These regional honor rolls are inscribed within the chapels or upon exterior walls of remembrance.

Though the buildings give one a pervasive feeling of reverence, for me the deepest communion is found outside among the graves. It seems to be the same for many visitors. Some pause long minutes with heads bowed in prayer. Around them others, in quiet meditation, or with voices respectfully hushed, stroll down the ordered columns of marble headstones—a Star of David for those of the Jewish faith, a Latin Cross for all others.

When known, the name of the individual, with other information, is cut upon the headstone. If the man could not be identified, the inscription says, "Here Rests in Honored Glory a Comrade in Arms Known but to God."

With all my heart I believe that no one who left a son overseas should doubt the fittingness of his final resting place. That he should have, for time unending, a part of the ground he so dearly bought is supremely right and fitting.

MEMORIALS ARE NOT ENOUGH

Yet I feel, with equal conviction, that the excellent care given our cemeteries, and the distinguished memorials erected, are not enough. Something more is needed, and only the public can give it.

Let me introduce my explanation by telling you a true and very moving story.

One of the loviest of the new cemeteries lies at Épinal in northeastern France. There the American superintendent recently received a call from a townsman whose mission was mercy. The caller said an elderly American woman, sick, alone, and virtually penniless, was stranded at an inn in Épinal. She did not speak French, and for some time she had been existing only on apples and cookies. Would the superintendent help her?

He went immediately to the woman and recognized her as a Gold Star mother who had been to the cemetery several times. A proud and reticent person, she had given no indication of her plight.

The superintendent and his wife took this mother into their home and nursed her back to health. As they gained her confidence, they glimpsed the true measure of her loneliness and her purpose.

She was a widow with few friends and without close relatives. Her only son had been killed in the war. At his death the woman had vowed that someday she would visit his grave, and for years she had scrimped and saved to make the journey. Then at Épinal, the vow kept, her funds ran out.

Fortunately the mother held a return ticket for passage home, but from their own pockets the American couple gave her money for food and railroad fare to a French port.

What Gethsemane of spirit this lonely woman endured we can only imagine, but there is a clear lesson for everyone in her inflexible resolve to pay tribute to her son.

All of us are so greatly indebted to that boy and the thousands like him. In a higher sense, they are the sons of every freeman. Therefore I ask each reader who can, not just the war bereaved, to visit the cemeteries and pay similar tribute.

That is the something more needed.

If you believe in a life of the spirit, as most Americans devoutly do, then you must believe these men want visitation. Without it theirs would be a lonely vigil, one lacking the best evidence we could give of gratitude and steadfast memory.

CONGRESS STUDIES AID FOR VISITS

There is no need, of course, to urge such journeys upon next of kin. Many have already been to the cemeteries. But trips abroad are difficult, if not impossible, for those living on pensions, modest investments, and small salaries.

Unfortunately, the episode of the woman at Épinal, though not common, has been repeated at other memorials. The superintendents, all American war veterans, give what aid and comfort they can, but there are no funds to reimburse them.

After World War I, when General of the Armies John J. Pershing headed our Commission, Congress appropriated money for visits to overseas cemeteries by Gold Star mothers and wives. At this writing, two bills are pending in Congress that would authorize similar help for World War II next of kin.

Of necessity, consideration of Government-sponsored visits has had to await completion of the cemeteries, a long and difficult job. My regret is that Government help, as after World War I, would come too late for the many who have died or are ill.

For thousands of other Americans, a memorial pilgrimage requires little effort or sacrifice. These are the tourists who cross the seas in increasing numbers each year to travel through foreign lands.

But the right to tour, like other rights, is often denied a subject people. Americans traveling abroad might ponder this deeper significance behind their blithe holiday, remembering to whom they owe the good things of travel, the freedom of movement, the gaiety of a liberated Paris, the peacefulness of a quaint village.

Many would then, I am sure, take time to visit one or more cemeteries. The World War II memorials are all easily accessible by railroad or highway.

The six dedicated last summer serve not only to commemorate our Armed Forces but also to mark the general positions where Americans waged some of the war's most critical campaign (map, p. 738). Those near our landing places in Normandy and at Anzio are of particular historic interest.

PACIFIC MEMORIALS NOT YET DEDICATED

Though eight cemeteries remain to be dedicated, all are open to the public. Their locations: St. Avold, France; Henri Chapelle and Neuville, en Condroz, Belgium; Margraten, the Netherlands; Hamm, Luxembourg; Florence, Italy; Tunis, in North Africa, and Manila, in the Philippines.

The only sites in the Pacific islands or the Far East are the cemetery at Manila—largest of all—and National Memorial Cemetery of the Pacific, maintained by the Army, at Punchbowl Crater, Honolulu. At both sites the Commission is preparing appropriate memorials. In the Hawaii cemetery rest many who gave their lives in Korea as well as thousands of heroes of the fighting over the vast Pacific in World War II.

Some of our unknowns of the second World War were moved to the United States World War I memorial at Surenes, on the outskirts of Paris. Its chapel has been enlarged by adding two loggias, or wings, one for each great war. This site epitomizes all our military cemeteries and memorials. For 30 years representatives of the United States and French Governments have visited Suresnes on ceremonial occasions to honor the dead.

Many private citizens of France, as of other countries, also journey to our shrines. Often they bring fresh flowers for graves and make solemn family outings of their visits. At times superintendents overhear parents telling youngsters the story of the dead strangers, how they came from across the sea to fight freedom's battle.

Such incidents bring to mind a tribute Pericles paid the dead of ancient Athens, "* * * In foreign lands there dwells also an unwritten memorial of them, graven not on stone but in the hearts of men."

I have always felt that the establishment of American war cemeteries abroad was of great international importance. Each was built on ground donated by the host country, and each stands as a perpetual reminder of the sacrifices the United States made in the common cause.

Though many foreign friends have visited the sites, we hope many more of good heart and memory will be moved to do likewise.

PROMINENT CITIZENS FULFILL A TRUST

Assurance that the Commission's work lies in good hands is implicit in the names of the distinguished men and women who serve with me as members: Adm. Thomas C. Kinkaid, vice chairman; Mrs. Theodore Roosevelt, Jr., Mrs. Wendell L. Willkie, Leslie L. Biffle, Gen. Alexander A. Vandergrift, Senator Charles E. Potter, former Representative John Phillips, Gen. Carl Spaatz, Brig. Gen. Benjamin O. Davis, Forest A. Harness, and Brig. Gen. Thomas North, secretary.

On the following pages Howell Walker of the National Geographic Magazine staff tells

with feeling and perception the story of last summer's dedications. His illustrations speak eloquently of the planning and care given each site.

To my own personal message I would add but one more thought, and again I quote from Pericles. What he said in ancient times of the defenders of Greek freedom is a fit epitaph for our sons:

"When the moment came they were minded to resist and suffer, rather than to fly and save their lives; they ran away from the word of dishonor, but on the battlefield their feet stood fast, and in an instant, at the height of their fortune, they passed away from the scene, not of their fear, but of their glory."

The Effect of Chemical Sprays on Wildlife

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. REUSS. Mr. Speaker, lovers of wildlife the country over are deeply concerned over the effects of chemical sprays for trees and other vegetation on fish and wildlife. A recent letter by a prominent Milwaukee conservationist, Mrs. Max J. Schmitt, published in the Milwaukee Journal, vividly describes the effects of DDT and similar chemicals upon wildlife:

BIGGER AND BETTER MOSQUITO

To the Journal: Among all the insects, there are only a few that actually interfere with man's plans. And, ironic as it may seem these few seem best able to build up a resistance to insecticides.

The mosquito and the boring beetle larva are the real targets of fogging and spraying. But what actually happens?

The answer is becoming obvious. The bird migrations of the last 2 years show a vast decrease of song birds. Blasted up and down the continent with insecticides, they can find no safe place to live and raise their young.

Some of the cities in the south fog each week, in the same type of service as collecting garbage. The State of Wisconsin prevents a property owner from preventing a Government unit from spraying if that unit decides to spray. And further requires the owner to pay for labor and insecticide.

What are the ingredients used? DDT in forest areas, 12 percent or 12½ percent. One type used on certain farm crops is so deadly that farmers were warned over the university farm radio program not to attempt spraying. They were told to have the work done by plane.

The Fish and Wildlife Service found 6 percent DDT fatal to all fish life in a test area. The birds and animals left and did not return for over 2 weeks and then only in a limited number. The young, being abandoned, did not survive. Repeated time and again, as in most places where spraying is done, the mortality must run close to 100 percent. And over the whole country the picture is devastating.

That is only part of the picture. The poison can build up on foliage, water, and soil, 6 percent plus 6 percent plus 6 percent and so on. When it reaches a certain point it kills. Humans are no exceptions. Only insects have been able to build up a resistance. The mosquito is one. We are building bigger and better mosquitos. Fogging for these may lay down a lighter film of poison, but it is used oftener and is as deadly in its end result.

The city of Batavia, Ill., is an example. There are no birds there, according to some of the inhabitants. As a result of tests and reports, the State of Michigan has placed stringent restriction on use of DDT.

But what of Wisconsin? All this is known by our conservation department, yet they are going ahead with an enormous spraying program right now, with a 12½ percent solution. They have huge tank cars full of DDT on the side tracks in the northern part of the State.

How long are the citizens of this State going to allow this to go on? Where are the hunters? Where are the birds and animal lovers? Now is the time to act.

AROLINE H. SCHMITT.

Another outstanding Wisconsin conservationist, Mrs. F. L. Larkin, 5333 North Idlewild Avenue, Milwaukee, founder of Wisconsin's Audubon Camp, has recently issued a set of recommendations for DDT spraying and bird mortality. The recommendations follow:

1. Stop planting elm trees until Dutch elm disease is under control.
2. Provide a single annual spraying while trees are dormant, without foliage, and bark coverage can be most effective.
3. Confine DDT spraying to the period from November 15 through April 1 by using the new dormant spray method (thereby avoiding the periods of heavy spring and fall bird migration as well as of nesting).
4. Use only mist blower equipment and not hydraulic spray equipment, to minimize dripping that contaminates pools and puddles where birds drink and bathe.
5. Stress sanitation. Remove dying elms immediately. When weather is too cold for spraying, assign more men to remove dead and dying wood from elms.
6. Make sure that the State department of agriculture law is enforced which states that dead and dying elms must be removed within 10 days.
7. Enact a city ordinance prohibiting private operators from spraying trees with DDT or other sprays destructive to birdlife between April 1 and November 15.

The Congress fortunately has before it H. R. 783, introduced by the gentleman from Montana, Mr. Metcalf. This bill would direct the Secretary of the Interior to undertake "comprehensive continuing studies on the effects of insecticides, herbicides, and fungicides upon the fish and wildlife resources of the United States, for the purpose of determining the amounts and percentages of such chemicals that are lethal to or injurious to fish and wildlife and the amounts or percentages or mixtures which can be used safely, and thereby prevent losses of fish and wildlife from such spraying." The bill is now before the House Committee on Merchant Marine and Fisheries, and has received favorable reports from the Department of the Interior, the Department of Agriculture, and the Bureau of the Budget. The type of comprehensive research envisaged by Mr. Metcalf's bill seems to me clearly in the public interest.

New President of the Gannett Co. and the Gannett Foundation

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. OSTERTAG. Mr. Speaker, the Gannett newspaper organization, which has its headquarters in the city of Rochester, N. Y., acquired a new president this spring. Paul Miller, one of the country's outstanding newspapermen, was elected to succeed Frank Gannett, the founder of the Gannett enterprises.

The selection of Mr. Miller as successor to the founder insures that the high sense of community service and community responsibility will continue to pervade the Gannett organization, which now includes 23 newspapers and 5 radio stations.

Under leave to extend my remarks, Mr. Speaker, I wish to include in the RECORD an article about the new president of the Gannett organization, from the Gannetteer:

A VERSATILE NEWSMAN, EXECUTIVE, CIVIC LEADER, GLOBAL TRAVELER

In assuming the presidency of Gannett Co., Inc., Paul Miller pledged a continuation of the unique policy of local autonomy under which Frank Gannett always has delegated authority and responsibility to the management of each newspaper in the group.

Under this system, editorial policies are determined locally by the men who live in and know their communities. This is unlike a chain operation, in which methods and practices are dictated from a central office.

Miller joined the group as executive assistant to Gannett on August 1, 1947. He was elected a director and a vice president of the company in 1949. At the request of Gannett, he took over many of the duties which the founder had performed for many years.

In 1951 he was elected executive vice president. Since May 1955, he has been operating head of the company. He is also publisher and editor of the Rochester Times-Union and publisher of the Democrat and Chronicle.

His basic philosophy of newspapering was sketched in a bylined article on the Times-Union editorial page 2 days after his elevation to the presidency:

"A good newspaper is not built overnight. It develops over many years, just as a person's character develops. In time its readers come to know it for what it is. If it is truly successful, the newspaper is a good neighbor, a good citizen, a trusted confidant * * * like a good man or a good woman. It will be doomed to failure, ultimately, if it is not trustworthy, fair, and clean. This is especially true in cities of homes.

"That general thinking has been behind the growth and development of newspapers in the Gannett group, founded on a small beginning by Frank Gannett.

"It is assumed that Gannett newspapers will be clean and community-minded and patriotic and fair. From there on, the local management is on its own as to specific editorial problems and issues."

Regarding pricing of our products, Miller wrote:

"Briefly, and as a general policy, we believe in the lowest feasible advertising and circulation rates. We'd rather get more advertising at a low rate than carry less advertising at a high rate—even if net income were equal. Why? It's better business for us and for our communities. Low rates mean that more advertisers, including little fellows, can use the newspapers regularly, profitably, and with the adequate space. The overall picture, present and future, is better for newspapers which adhere to this principle, and for the communities they serve.

"The same for circulation. Gannett newspapers have ever been among the last in the Nation to up circulation rates.

"The Gannett management believes, in short, that the newspaper—to keep its place and to give maximum service with reasonable profit—must remain an effective mass medium.

"We are interested most of all in home delivered circulation within productive trading areas. Why? Because that's where it does the most good for us and for advertisers.

"Our newspapers are produced for family reading in the home by young and old. No advertising is accepted that it is believed might be harmful. Liquor advertising is excluded. A close editorial eye is kept trained on the comics. Standards of decency are insisted on in advertising and news copy."

Miller came to the Gannett Co. from the Associated Press, which he served for 15 years and of which he was an assistant general manager at the time of his resignation. He was then also chief of the AP Washington Bureau.

For 7 years, Miller has been a director of the Associated Press and was the first former AP employee to be named to its board.

He also is a member of the advisory board assisting the trustees of Columbia University in the award of the Pulitzer Prizes. He is a member of the advisory board of the American Press Institute, a past president of the New York State Publishers Association and a member of the American Society of Newspaper Editors.

At 50, Miller is a leader in civic affairs in Rochester. He has headed Rochester Red Cross campaigns. He was vice chairman of the 1956 Combined Community Chest and Red Cross drive. He was chairman of the Mayor's War Memorial Committee and of the Albert D. Kaiser Award Committee. He is a trustee of the Chamber of Commerce, of George Eastman House and of the Rochester Institute of Technology.

He has made many speeches, interpreting group policies to audiences within and outside the group. At a meeting of the North Carolina Press Asociation last January, he declared:

"We must never forget for a minute that with all our urgent need for better, more efficient, less costly machines and methods, people still come first.

"We need, and I believe we are getting increasingly, more care in hiring and developing, never forgetting that it is as important to weed out misfits promptly and considerately as to recognize and encourage the qualified. * * * You can't sum it up in any better line than one with which an associate of mine recently concluded a personnel policy statement for distribution among executives: 'Do the right thing'."

As for opportunities for advancement within the group, he told a gathering of Gannett circulation men: "There'll always be new opportunities. You should think whether you are doing the kind of job that will make someone think about you if there's another opportunity someplace—and whether you wish to leave where you are for an opportunity elsewhere in our organization. * * *

"As to where and when opportunities will come, time and events will tell. Things can happen fast, as you have seen. There are bound to be openings from time to time. Also, our company is not necessarily through expanding. We are not going to expand just for the sake of expanding. But we can be interested in good newspapers in good communities that fit our type of operation."

The new president, who already had visited each of the 23 Gannett newspapers, has stepped up his rate of travel since April 11. In one 10-day period he visited Plainfield, N. J., and conferred with executives of the Courier-News; addressed an annual dinner of the Niagara Falls Chamber of Commerce; spoke to teen-age correspondents of the Democrat and Chronicle in Rochester, and dined at Ithaca with department heads of the Ithaca Journal before touring the Gannett Medical Center on the Cornell campus.

Miller, son of a Southwestern minister and eldest in a family of 6, began his newspaper career in Oklahoma at 18 as reporter and editor.

After he joined the Associated Press in 1932, he rose swiftly in the worldwide news service. After service in Columbus, Ohio, he joined the AP New York headquarters' foreign desk, then did work on its general news desk.

Miller then successively was night news editor for AP in Kansas City, its key traffic point, and headed its bureaus in Salt Lake City, Harrisburg, and Philadelphia.

Reassigned to New York in 1941, he became executive assistant in charge of promotion and membership and in 1942 took over the AP's large Washington bureau. Shortly afterward, he was made one of the organization's assistant general managers.

In Washington for 5 years he directed national political coverage for Associated Press. This included national political conventions. He was also head of the AP staff covering the United Nations Organizations conference in San Francisco in 1945.

Miller in 1949 represented the American Society of Newspaper Editors at the International Congress of Publishers and Editors in Amsterdam, the Netherlands.

In 1950, he was one of a group of American newspapermen visiting Brazil, Uruguay, and Argentina.

In 1951, he and Mrs. Miller were representatives at the centenary celebration of Reuters, British news agency, in London.

At that time, Miller interviewed Dwight D. Eisenhower in Paris on reports that the general might be a candidate for the presidential nomination in 1952.

Miller visited Guatemala in 1954 after the anti-Communist revolution and wrote a series of first-hand reports on the situation. He attended both Democratic and Republican National Conventions in 1952 and 1956.

In September last year, Miller made a flying trip to London and Egypt to study the Suez crisis. He produced from this a series of articles for newspapers of the Gannett group and others.

Miller attended both Oklahoma University and Oklahoma Agricultural and Mechanical College. He holds a bachelor of science degree from the latter.

The Whip Versus the Individual

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. IKARD. Mr. Speaker, I have had called to my attention a very excellent speech by Alden J. Smith, of Burkburnett, Tex., who is a member of the 4-H Club in the Clara-Fairview community. The title of Alden's speech, which I wish to include in the RECORD, is "The Whip Versus the Individual" and was one of the State 4-H Club winners. This young man has won many honors in his 4-H Club work, in addition to this winning speech, and he deserves a lot of credit for the fine contribution he has made to the 4-H Clubs.

The speech follows:

THE WHIP VERSUS THE INDIVIDUAL

Four thousand years ago you lived and toiled Egyptian slave. Many times your back was bleeding from the whip when you began to falter from lack of nourishment and rest. But you were among the millions who built the mighty pyramids, which still stand today as a monument to your days of toil.

You studied the huge block of stone while hundreds threw their weight against the rope to hoist the great block into place. You knew the rope was weakened from overuse, and you had complained of it to your fellow slaves. But no one would dare stand before the master and ask for a new and safer rope. So you kept quiet and hoped that the rope would hold. But one day the inevitable happened and the rope gave away, and your legs were crushed beneath the huge slab of stone.

Your master was enraged because, in falling, the block had been chipped, and a fine stone was hard to get. He took no notice of your pain; you were one among thousands. So you lay in great agony, watched and pitied by your fellow slaves. You were left a cripple, with no legs, and later died of starvation.

But remember how your brain teemed the rest of your short lived life? There burned within you a desire to gather the people from everywhere and denounce your great injustice.

But even if you had whispered your feelings among your fellow slaves you might have been discovered by a spy and thrown into prison.

You might think it strange I choose you, an Egyptian slave, to be an unknown soldier in the long fight for freedom. But as your legs were being crushed under the massive stone your friends were thinking of your new freedom from the whip. No longer would you be forced to work on the pyramids. You thought that it would not be much longer before all the slaves of Egypt and yes, even the world would be free. However, you died, thinking it was impossible to break away from the whip.

But you were wrong. Down through the ages, man—the Roman slave, the serf of the Middle Ages, the peasants of imperialistic Russia—has revolted against hard masters and slowly man's desires have found ways to express themselves in speech, in written word, in the form of a doctrine. The doctrine that was created for my country is the foundation of my Nation.

That document was the Bill of Rights and under this great declaration the 4-H Club of America was founded.

In your day, slave of Egypt your menace to freedom was the cruel master; today another cruel master is trying in vain to rule our work and capture our minds. That leader with a whip in one hand and a bloody ax in the other is communism.

We should fear the evils of communism as we fear the pains of fire or the remorse of conscience.

While you spread your corruption, hate, and dissension throughout Europe and Asia, your work in our land, the United States of America, will be in vain.

The 4-H Clubs of our State and our Nation stand as a stumbling block on your road to success; 4-H Club members everywhere learn to do by doing, and to use their skill

and initiative is the desire of our leaders and parents. Never shall your tyranny stand in the way of democratic thought and deeds.

For every hog, steer, lamb owned by a 4-H member or for every demonstration given, crop sown, or program presented by the 2 million members means we are taking one step farther away from your worldly dreams and hopes and taking steps closer to the horizon where God, family, friends, and ourselves come before the desires of the State or the Government.

No matter what promises the Communists make to the youth of the world, they can never equal the satisfaction and joy of bringing back to your home and club a first place medal for some project in 4-H. No matter what the Communists utter from their lips, it can never equal the satisfaction we have in our hearts for having done good.

In what other nations could boys and girls have opportunities to exhibit, work, or join together in organization.

Today as our Nation is brought closer to the world by modern transportation, we, the 4-H members are becoming more interested in our friends and fellow members over the world.

Because of war and extreme poverty, many countries today are still suffering from starvation and overburdened land. Although the 4-H members of these countries are working for improvement, much still has to be done.

Last year the 4-H Clubs of Texas sent cattle and farm implements to the youth of Korea for replenishing their nation.

Since World War II, the American 4-H Clubs have cooperated with the Christian Rural Overseas Program in sending dairy and beef cattle to Germany, France, Italy, and Lebanon.

As long as we have organizations like 4-H Clubs spreading peace and good will throughout our land and the world, we shall never have to fear the clutches of communism taking over the minds and souls of our youth.

If you had been born when I was, your legs would not have been crushed under that slab of stone. Now Egyptian slave, you are wondering what is the name of this great country which has an organization that could have helped stop your legs from being crushed and kept you from dying of starvation.

What is the name of this organization and its country? They are, Egyptian slave, the United States of America and her greatest organization of youth, the 4-H Clubs of America.

Vacancies on International Fisheries Commission

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. PELLY. Mr. Speaker, I say "amen" to the suggestion contained in this editorial of the Fishermen's News regarding appointment of experienced commercial fishermen to positions on commissions having to do with the welfare of the industry. Perhaps, by including the article with these brief remarks, it will reach an eye, or ear, of some appropriate official. If so, and if the idea were followed, I would say merit and justice have their place—even in politics.

The editorial follows:

LET'S INCLUDE FISHERMEN

The two existing vacancies on the International Pacific Salmon Fisheries Commission leaves the Eisenhower administration once again in a position where they can follow the trend of appointing active commercial fishermen or their representatives to these vital bodies.

It was the Eisenhower administration which began this trend with the appointment of Capt. Matt Madsen of the fishing vessel *Eileen* to the International Pacific Fisheries Commission.

This publication has long felt and long advocated the desirability of including at least one member of the commercial fishing segment on the various regulatory commissions.

The Case of the Missing Millions

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. ULLMAN. Mr. Speaker, Edward P. Morgan, noted news commentator for the American Broadcasting Co., has long been known as a forthright commentator on important issues of the day. Characteristically, Mr. Morgan has not been hesitant to speak out on the Hells Canyon case.

During his radio broadcast of Tuesday, June 25, Mr. Morgan reflected at some length on the private power groups' propaganda activities. I believe these comments are timely and ask that they be included in the Appendix of the RECORD.

The text follows:

One of the handicaps which supporters of public power projects are working under is the fact that they don't seem to be able to generate what Broadway and Hollywood call good "box office" for their cause. They are forever careening off on technical tangents or slogging through swamps of figures leaving the public far behind. The nearest they've come to box office so far was in the maiden speech in the Senate last week of Idaho's freshman Senator, 32-year-old FRANK CHURCH. If he's not careful, the tall, boyishly handsome national oratorical champion from Boise may develop into something of a legislative matinee idol. He made an impressive speech on the Hells Canyon controversy which may or may not have had something to do with the fact that the Senate 2 days later surprisingly passed a bill to build a big Hells Canyon Dam on the Snake River in the Pacific Northwest. But young CHURCH'S fine forensics came late in a sultry afternoon, and made no headline splash outside of his home area. Besides a private utility, Idaho Power Co., has already been given a go-ahead by the Government and is now constructing two small Hells Canyon dams; prospects of getting this work supplanted by a Federal project are remote.

It is tempting to conclude that one of the reasons the Idaho Power Co. has made such progress so far is that the private utilities, with the help of some smart advertising consultants, do know how to create good box office. In a national magazine the other day I came upon a full-page ad showing a cat sitting in an open, empty safe. This layout was called, intriguingly, The Case of the Missing Millions. It contained only 127 words of copy, simply written, as follows:

"Millions of tax dollars are lost every year through a strange kind of tax favoritism," it ran, "and you are taxed extra to help balance the loss.

"As a customer of an independent electric light and power company, about 23 cents out of every dollar you pay for electricity goes for taxes. But because of present tax laws, people served by Federal Government power systems escape paying most of the taxes in their electric bills that you pay in yours. They pay taxes of only about 4 cents per dollar on power from the Government's TVA, for example. So to make up for the tax revenues which Federal power projects don't pay, you have to be taxed more.

"Don't you think that every American should carry his fair share of taxes?" The ad was signed "America's Independent Electric Light & Power Cos."

Well, fellows, I'm glad you asked that question. This implies, no doubt, that you are preparing to refund to the Government the billions you have been saved by special tax treatment which the rest of us didn't get. In this fast tax writeoffs, for example. One of the world's foremost electrical engineers, Dr. Comfort A. Adams, former dean of the Harvard School of Engineering, recently calculated in a letter to President Eisenhower that these fast writeoffs to utilities have by accumulation cost the Government some $150 million more than the entire 2½ billion that the Government has invested in all water power projects in the land.

Another interesting tidbit emerges from a report by G. O. Wessenauer, power manager for TVA, who says "looking only at TVA, the Federal Government has received more net financial gain from this public power system than it would have received in Federal income taxes from privately owned utilities with similar revenues," and he cites substantiating figures.

Then there is the report of the Bonneville Administration which states that as of June 30, 1956, just 18 years after Bonneville Dam on the Columbia started to produce electricity, 41½ percent of its capital investment for power production had been repaid to the United States Treasury; and the payments are some $77 million ahead of schedule.

I guess there wasn't room for all this stuff in the ad the private utility companies put in the magazines. It's too bad though because they could have used the same caption, "The Case of the Missing Millions."

No Man Is an Island

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following commencement address by Leon E. Hickman, vice president and general counsel of the Aluminum Company of America, whom I have known for a long time as a personal friend in whose judgment I have confidence and trust.

This commencement address was delivered at the 73d commencement of South Dakota School of Mines and Technology on June 7, 1957. Mr. Hickman is to be complimented on this real contribution to our United States economic and educational fields.

No Man Is an Island

(A commencement address)

I shall confine myself to a discussion of a few of the basic characteristics in business organizations of any size. It is my hope that what I shall say will help you to understand the origins of such organizations, their social and economic functions and something of the pressures under which they work. In the light of such data and your own experience, each of you young people can then determine for yourself the extent to which you are willing to build your life into one of these organizations.

The first characteristic common to all businesses, large and small, is that they grew to their present stature in the course of serving a public need. It is not the other way around, the advertising industry to the contrary, notwithstanding. There has to be a nationwide demand for a product before a company can grow to national size to serve that demand. When the demand shrinks or disappears, the companies serving it shrink or disappear with it. The carriagemaker, the blacksmith, the iceman, all illustrate the point. Of the 100 largest industrial corporations of 50 years ago, only 29 are still in that category; and today's list is studded with companies and industries that were small or nonexistent 50 years ago. No company has grown to regional or national stature except as it has served a market or met a need of comparable size.

It is also noteworthy that, as markets have grown, the share that any one company can serve has usually shrunk. Our markets are simply too big and complex for one company to excel all others.

By way of example, 50 years ago the United States Steel Corp. produced 67 percent of all the steel that was made in this country. Today its production is only 29 percent to 30 percent of the total, despite the fact that this great company has almost quadrupled its tonnage capacity over that period in its effort to serve its market. My own company, the Aluminum Company of America (Alcoa), served 90 percent of the aluminum market prior to World War II. Today that share is not over 40 percent although it has more than quadrupled its productive capacity within the last 20 years. Fifty years ago the assets of the United States Steel Corp. accounted for 22 percent of all the assets of the 100 largest industrial corporations. Today its assets are only 4 percent of that total. That story repeats itself throughout all large organizations. The markets and the needs of the American people are growing faster than any one company can possibly grow to meet them.

This is graphically shown in large foreign operations such as Middle-Eastern oil, Venezuelan or Canadian iron ore, where the sums involved are so great, and on occasion the risks so extraordinary, that the resources of a number of our great corporations are required to handle a single foreign venture.

Scientific and technical research is another field in which the demands upon capital, brains, and man hours are so great that only an organized pooling of resources can do the job. Atomic energy could have been developed in no other way, likewise our advance in electronics. As a consequence of the scope and complexity of such problems, 75 percent of the current research effort of the Nation is directed by business corporations.

The truth of the matter is that the size of a business corporation is determined more by the investment and technology needed to serve its market than by any other factor. The American Telephone and Telegraph Co., which maintains world-wide communications, has assets four times those of du Pont, our largest chemical firm, principally because the telephone company has four times as big a job to do. However, du Pont has more assets than the largest tire company, soap company, paper company, airline, meat packer, and many others, reflecting again the size of the market to be served.

We all yearn for yesterday's individualism that led our grandfathers to the small family farms, the corner grocery store and the small manufacturing enterprises where goods were produced item by item, without regard to hours of labor. The 5 day, 40 hour workweek was not even a conversation piece in those days. Yet that society, where each family sought and to some extent achieved a relative independence of everyone else, could not possibly produce or market the telephone, the automobile, the paved road, the power plant, the chemicals, the widely used metals, the refrigerator, radio, television or airplane. Each is necessarily the product of multiple brains and hands and of capital resources beyond the means of any one individual or group. Hence the inevitable development of the large corporations which are so characteristic of the economy in which you are soon to play a part.

A second characteristic of our large corporations is that they have become public institutions. They correctly so conduct themselves and are so regarded because, more than any other factor, they control the living standards of the Nation, the working conditions of its people, the security of its aged population.

Such corporations conduct their operations in a goldfish bowl and properly so. The wages these companies pay have a community impact, and consequently they are negotiated in public, the results a matter of general knowledge and comment. The prices at which they sell, their profits margins, are matters of general interest and information. Those companies which are large enough to be listed on a stock exchange or which solicit proxies through the mail, are required to make public detailed information concerning salaries, sales, earnings, and other significant developments. But most go far beyond the requirements of any law and issue annual reports, quarterly statements, and press releases which proceed on the premises that the public has a right to know the innermost workings of such companies and that the more that is known, the better.

The big company also assumes public responsibilities as a matter of course. Corporate contributions to our colleges and to able students have increased tremendously in the last 10 years. Every drive for funds for any public enterprise proceeds on the premise that the large corporations in the community will assume a generous role, both for contributions and personnel. Today's corporation which has achieved a regional or national stature accepts basic responsibilities with respect to housing, schooling, and municipal development. This is not because 1 or 2 men or a few companies have willed it so; rather, it stems from the fact that these companies that serve large markets so profoundly affect the well-being of so many people that they are recognized as public institutions and act the part.

The third characteristic of the large business enterprise of today is that it is essentially a partnership. I would have been cashiered out of my law school for describing a corporate organization as a partnership, for the legal consequences of the two are quite different. But socially and economically a corporation is a partnership of diverse talents, no more, no less. The engineer, the geologist, the metallurgist, the scientist, the banker, the accountant, the salesman, and sometimes the lawyer, all cooperate in producing and marketing a common product beyond the talents of any one of them.

The large corporation is also a partnership of capital, because no one family or individual can possibly supply its need for capital. The shareholders of General Motors Corp., for example, have made a net investment after depreciation of almost $4,600,000,000. This investment has been made by no less than 656,000 people, the shareholders of the company. The American Telephone & Telegraph Co. requires a net investment of over $16 billion, and this amount of money has been furnished by nearly 1,500,000 individuals and companies. General Electric Co. is owned by 362,000 shareholders, United States Steel by 308,000, Du Pont by 168,000, and my own company, Alcoa, much smaller, by 27,000 individuals. Were it not for such partnership in investment, each of these companies would fail for lack of capital. In very few of these large enterprises does any one individual own a significant portion of the company. These corporations have become public institutions.

Needing the capital of many people, these large corporations have done everything possible to make it easy to become a partner in the ownership of their business. Most of them list their securities on a stock exchange where the price can be ascertained and a purchase or sale made in a moment at a price which freely reflects the law of supply and demand. The stock of most of the others of regional or national stature is traded almost as easily in the over-the-counter market through recognized brokerage houses. Practically all large companies publish detailed statistical accounts of their sales, earnings, and business prospects. One of the deeply significant developments of our emerging capitalism is the growing public participation in the ownership of these great companies.

Our 20th-century corporations are even more obviously partnerships of people. It takes 787,000 to staff the American Telephone & Telegraph Co. General Motors requires 600,000 employees, General Electric 280,000, United States Steel 260,000, du Pont 100,000, and my own company 60,000. Within those numbers are skills of every sort, engineers, scientists, salesmen, accountants, indeed every variety of talent of which the human mind is capable. No one man nor group of men can fully comprehend the ramifications of any of these companies. By way of comparison, the population of the entire State of South Dakota over 21 years of age is 400,000, and this includes women as well as men.

You have a direct interest in this cooperative aspect of our business organizations because each of you are soon to join one of them. Our business community makes it easy for you to become a member, because these economic partnerships desperately need a constant flow of new talent. The graduating classes of schools such as this are sought with an eagerness that would do credit to a fraternity rush or a football talent scout. Once you enroll, you are customarily further trained on the job until each of you is in a position to make his maximum contribution.

It is at this point that the critic of the corporate organization takes hold. How can one individual possibly find independence and consequently satisfaction in working as a part of one of these vast teams? It is obvious that even though one rises high in the ranks of such an enterprise, the individual is not likely to be more than one of several who participate in any significant decision. What satisfaction is there in that?

I confess that I do not share the difficulty. I have felt no sense of frustration because my legal judgments are not ends in them-

selves but only guides to a salesman or a plant manager who charts his course in part on my advice and in part on the basis of other considerations. I must admit that I find some satisfaction in playing a significant part in a team effort that can and does produce results which neither I nor any other individual could ever achieve by himself.

Two world wars and some lesser military engagements of fairly serious proportion have taught us that no nation is strong enough or wise enough to build a fence around itself and live alone. That didn't work even in Tibet. Quite possibly it is only an act of supreme egotism to believe that one can or should find his way through life unaided and by his own efforts. None of us have lived on that basis to date; why believe that is so desirable? There may be no little truth in Harry Emerson Fosdick's observation that, "No man is the whole of himself; his friends are the rest of him." My personal philosophy is based upon the premise that the human race advances only through cooperative effort and that it is not man's role to stalk the stage alone. If that basic philosophy be true, a corporate system in which men band together in the organized pursuit of a common goal beyond the capacity of any one of them is a good one.

The partnership of people in our large organizations has two noteworthy characteristics, inequality of contribution but equality of opportunity. People who buy shares of ownership in a corporation buy different amounts and profit in proportion to their ownership. The individuals who become members of the organization and work on its projects, make differing contributions, depending upon circumstances and their varying abilities. Each is rewarded differently, presumably in a manner corresponding to his contribution.

And there is more equality of opportunity in today's corporate partnerships than ever before. As markets, industries, and companies have become larger, the bigger companies have grown beyond the control of any one individual, family, or group. As a result a managerial team has developed within the ranks. Most corporations promote from within and all prefer to do so when circumstances permit. It would be fatuous to say that every man has an opportunity to become the head of his company, and yet the fact cannot be gainsaid that the top management of nearly all of our big companies is composed of men who started at the bottom, without influence, and frequently without the education that is yours. In my judgment, American corporate life is more of a democracy and presents more unfettered opportunity for advancement than ever before in our history.

A fourth point to be borne in mind is the interdependence of businesses, large and small one upon the other. The company of which I am a part, Alcoa, is a fully integrated manufacturer of aluminum products. It is not only a partnership within itself—comprised of 60,000 workers and 27,000 owners—but it depends upon no less than 20,000 companies to supply it with raw materials. Eighty-three percent of these suppliers are business concerns with less than 500 employees. In turn, 12,500 other companies depend upon Alcoa in whole or in part for their aluminum. It is also fair to say that Alcoa is as dependent upon its sources of supply and its customers as they are upon it. These companies, both supplier and purchaser, are of all sizes.

The automobile industry illustrates this interdependence even more graphically. The cars that are parked around this building are made by five large domestic manufacturers. These automotive companies make more than 6 million cars a year. It takes over a million men and women to operate these companies. While each of the five auto companies manufactures many of its own automotive parts, it buys portions of its requirements from scores of thousands of parts suppliers. No small part of the production of the glass and rubber industries is devoted to the automobile industry. To sell the automobiles requires several dealers in practically every city and village in this Nation. More than that, every crossroads needs its garage and filling station. Consider also the interrelationship between the automobile companies and the oil industry and the roadbuilding business.

There is no escape from the fact that products that must be mass-produced for a national market have got to be made by large companies. A small company could do it only by becoming large. But the automobile manufacturers are no more vital to the success of the automotive industry than the thousands of concerns, large and small, which supply the parts or the scores of thousands of dealers, garages, and filling stations which sell and service the cars. To argue otherwise would be as though one were to distinguish between parts of the human body and say that the leg was important but the hand was not, that the heart mattered but the lungs did not. There can be no basic conflict between large and small business. Each is indispensable to the other and to the Nation.

A basic characteristic of our business community is that it is the servant but not the master of the people. A company lives and grows only as it serves its customers. More than that, it must satisfy the community of which it is a part that it is a constructive factor in community life, be it housing, personnel or civic projects. It must satisfy the people who work for it, not only in the matter of wages and salaries but in working conditions which make for a full life. It must treat equitably those who supply it with materials. And it must deliver to its customers good products at fair prices.

Let it fail in any of these areas and public retribution is swift and often vengeful. This is particularly true of big business, which is a fair target for every current complaint, real or imaginary. A corporation doesn't vote, does it? And usually it doesn't talk back, a mistaken attitude.

Corporations in the sense of legal entities separate from those who own them, have been known since the days of Babylon. Until modern times they were the grant of a sovereign or a legislature, commonly to a favorite and quite as often for a monopolistic as for a public purpose. The business corporation, as we know it today, available to anyone on terms spelled out in advance by our State legislatures, is only a little more than a hundred years old. Under the early statutes, corporations had all of the freedom of the individual. They have tended to lose that freedom as the public has moved in to curb abuses or grievances, and frequently to enact a dogma or a nostrum in current fashion. The railroads largely lost their right of self-management by the passage of the Interstate Commerce Commission Act in 1887, a legislative judgment of the American people that some of the railroads were not proceeding in the public interest. Public utility holding companies were destroyed by legislative action in 1935 as a direct response to the useless pyramiding of public utilities and the sale of their securities at inflated values in the late 1920's. The hindsight of the 1930's also led to the Securities Act of 1933 and the Securities Exchange Act of 1934 as a means of permanently controlling corporate financing in the public interest. The current pressure for an act forbidding corporate mergers without prior notification to the Government stems primarily from a feeling widely held that mergers are currently being pushed too fast and for too little reason. When the public became convinced that our automobile manufacturers were forcing dealers to take cars in numbers which were unreasonable, the result was legislation which, in effect, deprived the automobile companies of their right to terminate dealerships under the terms of a private contract. It is somewhat shocking to a lawyer trained 30 years ago to learn that Congress can now constitutionally pass a law forbidding one who employs an agent from terminating that agency in accordance with contract terms. The principle could be extended to the destruction of much of our system of distribution. It is a classic example of a hard case making bad law. But it is also a prime example of the fact that business organizations, of which you are soon to become a part, can function only to the extent and only so long as they enjoy the public favor.

Every man entering the employment of a business organization should assume his share of responsibility for seeing to it that his company operates in a manner that is equitable to suppliers, to distributors, to customers, to the people who work for it, to its owners and to the communities in which it functions. You will not serve your company well unless you are thoughtful and articulate to the management of your company on these matters. I predict that you will be amazed at how sensitive most corporate managements are in these areas.

The vulnerability of the business community to public judgments—as well as whims and prejudices—makes it equally subject to predatory raids upon its property and essential prerogatives. These you should be vigilant to sense and resist. The field of taxation is an important example. Every dollar that is taken away from business organizations in taxes is taken either from the owners of the business or from their customers, and distributed for the benefit of someone else. These projects may be in the public interest but they are all too frequently simply a device for taking property from one group for the benefit of another.

Those who do not understand the interrelationship of large and small business and who regard every small business as an unfairly stunted giant, frequently advocate a graduated corporate income tax as a means of leveling off the size of businesses. Such a proposal is now pending in the Congress. Were it to be adopted, large corporations would have no choice but to dismember themselves into smaller units so that they might preserve an equality of taxation. The result would inevitably be a curtailment of the ability to serve and, all too soon, a curtailment in the living standards of the nation.

Then there are those misguided people who believe that we should turn the clock back by abolishing large enterprise altogether. There is pending before the Congress at this moment a misnamed Free Economic Development Act of 1957. In effect it would adopt the prima facie premise that any corporation having over $10 million worth of assets was not in the public interest and should be broken up. It would create a board of five members empowered to do that very thing unless a corporation of greater size could affirmatively justify its existence to the satisfaction of these five political appointees. If I am right that corporations are big only when they have a big job to do, and that their size is a measure of that job and of their ability to do it, such measures as I have been describing are wholly destructive.

Our 20th century corporate organization is an effective blending of cooperation and competition. It is built on individual achievement and rewards within a framework that recognizes the need for organization teamwork to produce results otherwise impossible.

Cooperative effort has long been the dream of man. The first settlement at Jamestown experimented with a communal form of organization in which everything was shared equally. The same form of cooperative society was tried in many communities, particularly in New York and Pennsylvania, in the mid-19th century, although one of the most successful was at Amana, Iowa. But in the end they all failed, not because man was wrong in his dream that we must work together and share, but because the incentive to work and to contribute to the enterprise was destroyed by the fact that each shared equally although he may have contributed quite unequally.

European socialism is withering on the vine for the same reason. It is all well and good for the State to control production and distribution in the interests of society at large, but unless some way is found to reward individual effort and achievement a worker has no incentive to do his best, indeed every inducement to do his least, if not his worst. Communism is foundering on the same lack of incentive. The American cooperatives have achieved a limited success in the marketing of certain seasonal products but none at all in other fields, and for much the same reason.

But in our mid-20th century corporate society we have blended cooperation and competition with uniquely successful results. Perhaps in part we have stumbled upon the blend by accident but it is nonetheless valuable. Thousands of us buy a partial ownership in the same company, and thereby put it in funds to do its task, but we share the fruits of that investment in exact proportion to our unequal contributions. Likewise, those who contribute their time, effort and brains are paid individually according to a competitive estimate of their contribution to the corporation's success. This appraisal may be unjust, it may be inaccurate—it occasionally is—but it is made competitively and, broadly speaking, the rewards are in proportion to the contribution.

If it be true, as I verily believe, that we have in today's capitalism a melding of individual and group effort which gives us unprecedented wages, production, and consumer values, we ought to guard it carefully. It has been wisely said that economic stability is a better peacemaker and peacekeeper than all the diplomats and generals who ever wrote or broke a treaty. Our corporate society needs correction from time to time to keep it attuned to changing circumstances. But let it not be eroded or destroyed by uninformed or inflamed public judgments, by predatory attacks, by a mistaken nostalgia for a simple agrarian society that we would not want if it were available. Nor do I overlook the peril of abuses from within the business world itself. As counsellors and as watchmen within your respective companies young people can do much to keep your segment of the business community attuned to its responsibilities.

And what of a young person's personal philosophy as he embarks upon this great adventure into the business world? I think the answer was given by John Donne more than 300 years ago with a poignancy and a beauty never equalled. It was he who said:

"No man is an island, entire of itself; every man is a piece of the continent, a part of the main; if a clod be washed away by the sea, Europe is the less, as well as if a promontory were, as well as if a manor of thy friends or of thine own were; any man's death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls; it tolls for thee."

Great News for the Kremlin

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I want to insert into the CONGRESSIONAL RECORD the following editorial which appeared in the St. Louis Globe-Democrat on June 19, 1957, entitled "Great News for the Kremlin":

[From the St. Louis Globe Democrat of June 19, 1957]

GREAT NEWS FOR THE KREMLIN

The Supreme Court is making it virtually impossible to convict Communists.

In a second precedent-shattering decision, the Court ruled on Monday that mere preaching abstractly the forcible overthrow of the Government, under the 1940 anti-Communist act, is not a crime.

The distinction they made between advocacy of forcible overthrow as an abstract doctrine and advocacy of action to that end, is too subtle a distinction for all except the academician.

What in heaven's name does the Supreme Court thinks the Communists are doing when they advocate forcible overthrow of the Government? This is not a classroom exercise for them nor an abstract problem that will never be faced. They are training men and women as future revolutionists who, they hope, will someday put into practice the things they are being taught today.

The entire theory of the fight against anticommunism in the United States has been to catch the mastermind. Dozens, hundreds, or even thousands of small-fry Communists have been kept under surveillance by the FBI and allowed to go about their business in the hope of involving the higher-ups.

Now the Supreme Court says that only the triggermen are vulnerable; only, in effect, a sound motion picture of the act of revolution can convict, while the calculating genius goes scot free.

In the Nuremberg trials, we followed exactly the opposite theory. The United States and our allies sought to convict the Goebbels, the Goerings and the like and let off, virtually unharmed, the degenerate beasts of the prison camps who carried out the orders of the high command.

In warfare, it is the generals and admirals who are held accountable, not the private soldier. The Supreme Court would reverse all that.

This recent decision, coupled with the one several weeks ago directing law enforcement agencies to turn over their files for examination to the defendant, are all and more than the Kremlin could hope for.

In international law, since the beginning of time, nations have been given greater rights in defending their integrity and sovereignty than has been given individuals or corporations.

Treason is defined as a greater crime than murder because treason implies the murder of hundreds or thousands, not the murder of one or a few.

Congress is understandably shocked at what Senator EASTLAND said was the undermining of our existing barriers against Communist subversion. More than ever is there need for vigilance now that our highest court takes the direction of protecting conspirators against our national safety.

The leftists and the so-called liberals hail the Supreme Court decision as a great triumph for the individual. We see it as quite the reverse. Until the United States and other nations of the free world can effectively defend themselves from attack from traitors from within or without, the very liberties of all the people which the Supreme Court has gone to such excessive lengths to defend are more greatly menaced than at any time in our history.

Syracuse Amateur Radio Operators Boost Morale of Antarctica Troops

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. RIEHLMAN. Mr. Speaker, the requirements of maintaining the security of our Nation have necessarily resulted in the assignment of American service personnel in lands and bases far from the United States.

Some of these units are large, and others are small, such as the contingent of 315 men at bases in Antarctica. No doubt there are times when our service forces may feel that their fellow citizens have forgotten about them and the rigorous duties to which they have been assigned.

I merely want to call attention today to one group of citizens who live in my home county who are carrying on a service that has been a tremendous morale booster to our forces stationed in the remote regions of the South Pole.

The following news story details the activities of the Radio Amateurs of Greater Syracuse:

[From the Evening Star, Washington, D. C., June 7, 1957]

HAMS KEEP MEN AT POLE IN CONTACT WITH FAMILIES

To 315 men at the 7 United States bases in Antarctica, the name RAGS connotes a warm oasis in a frigid expanse of desolation.

The RAGS are a group of amateur radio operators in North Syracuse who tend the night watch at shortwave radio sets in the cellar of the home of their chairman, Paul Blum.

The cellar is the operational "shack" of the Radio Amateurs of Greater Syracuse. A little over a year ago Mr. Blum and his organization joined with the American Red Cross to form the Morale Message Service Center. The Red Cross teletype network brings messages from across the Nation to Syracuse for relay by RAGS to men in the Antarctic. Messages from the bottom of the world received by RAGS are put on the Red Cross network here for transmission to relatives.

Since their first transmission on May 1, 1956, informing a Deep Freeze sailor of the birth of a son, the RAGS have processed more than 7,000 messages to and from the men at the earth's southern extremity.

From the message service, the RAGS have expanded to break other communication barriers. In addition to the exchange of messages, they operate Operation Facsimile, Operation Baby, Operation Greeting, and the RAGS soon will embark on Operation Baby Face.

On May 5, Mr. Blum and his associates became the first amateurs to complete a transmission to the Antarctic of a page of pictures, comics, greeting cards, and news stories.

Now Little America and McMurdo Sound Base receive the Antarctic edition of the Syracuse Herald-Journal, put together twice a week by the Herald-Journal staff. The transmissions are made on equipment similar to that used by the Navy in the International Geophysical Year operation.

As an offshoot of the facsimile work, the RAGS soon will embark on Operation Baby Face.

Whereas messages were used to notify new fathers of additional dependents, now the RAGS will insert pictures of the infants in the Antarctic edition so that the papas can see their offspring.

Only once have the RAGS been rebuked by their friends 8,000 miles away. That came May 7 when an Associated Press wirephoto of a pretty young thing was marred by a necessitated code signal. The signal, in compliance with FCC regulations, resulted in a black line through the face and form of the charmer.

"We'll never forgive you, Paul," the receiving operator said. "You have blackened that doll's face."

Chances are, however, that Mr. Blum and his gang will be forgiven. Even straight lines on bathing beauties look good to men living in the world's biggest icebox.

That the People May Know About Our Nation's Missile Defense

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. ANDERSON of Montana. Mr. Speaker, my colleagues are already aware of my concern that Secretary of Defense Wilson's prohibition against continuance of the Army in the field of the intermediate-range ballistic missile may jeopardize our country's position in this critical area of national defense. This is a field where the Soviet is making a supreme effort. The Army, with its Redstone arsenal, its Aberdeen ordnance facilities and Werner von Braun's world-famed group of German rocket scientists has the most successful rocket-development team in the world.

Neither Air Force ambitions to drive the Army out of the IRBM field, nor General Motors ambition to monopolize missile production should be allowed to imperil our Nation's defense.

In this morning's Washington Post is a column by Drew Pearson which exposes some of the behind-the-scenes maneuvering and casts some light on the Nickerson case. I recommend it to your consideration.

The column follows:

PENTAGON PERIL FACES NEWSMEN

(By Drew Pearson)

Ike's Commission on Government Security has now recommended that a newsman who publishes secret data shall be jailed for 5 years and fined $5,000. Yet last winter when this writer voluntarily asked the Defense Department which portions of a guided missiles memo could or could not be published without risk to the Nation, the document was confiscated.

The incident helped to touch off the current court-martial of Col John Nickerson at Huntsville, Ala., a very fine officer whom I had never met and who was not the source of the secret memo. This is why my junior partner, Jack Anderson, was originally called to Huntsville to testify.

The incident also illustrates how a newsman is between the devil and the deep blue sea. If he doesn't consult the Pentagon, he may, under the new Ike-Commission rules, go to jail. If he does consult the Pentagon, his information is confiscated and a possible source of that information court-martialed.

A newspaperman has a moral obligation to keep the public informed. He especially has an obligation to inform the public regarding a weapon vital to the defense of the Nation which appears to be the object of a battle by big business.

The public has a right to know, for instance, when Secretary Wilson's former company, General Motors, together with Douglas Aircraft and Bell Telephone want to control guided missile production through the Air Force; while Chrysler, rival of GM, and Minneapolis Honeywell favor the Army's side.

MISSILE PRODUCTION

With the possibility that airplanes may fade out as weapons in favor of guided missiles, the combine that controls guided missiles will dominate defense production in the future. This is something that should not be a military secret.

According to Colonel Nickerson, in his secret memo:

"The aircraft industry, and particularly the Douglas Aircraft Co., openly oppose the development of any missile by a Government agency. High officials of the Douglas Company have stated that Douglas is paying particular attention to the possibility of killing off the operation at Huntsville, Ala."

It was last November 26 that Secretary of Defense Wilson sided with Douglas Aircraft, the Air Force, and his own former company, to rule that the Army at Huntsville must quit producing the medium-range ballistic missile. This put Chrysler and Minneapolis Honeywell, plus the Army out of virtually all missile work and concentrated it with the Air Force and friends: Douglas, A. C. Spark-plug Division of General Motors, and Bell Telephone. Deputy Secretary of Defense Donald Quarles is a former official of a Bell telephone subsidiary.

NICKERSON VIEWS

To illustrate some of the things the public has a right to know about, there follow some of Colonel Nickerson's conclusions:

"The Wilson memorandum (banning the Army from intermediate ballistic missile production) is a broad denial to the Army of essential tools for modern warfare * * *.

"The Wilson memorandum is solely an expression of Air Force views backed up by Admiral Radford, Chairman of the Joint Chief of Staff * * *.

"The Secretary of the United States Air Force has recently recommended in writing the discontinuance of the IRBM No. 2 (Jupiter) program at Huntsville, Ala. The present Secretary of the United States Air Force, Mr. Donald Quarles, is one of the leading contenders for Secretary of Defense.

"The Douglas Aircraft-Bell Telephone Laboratory is urgently needed to develop a defense against the Soviet ICBM's (Intercontinental ballistic missile traveling 5,000 miles). The Army IRBM (intermediate range traveling 1,500 miles) is not versed in antiaircraft missiles. Douglas is not experienced in ballistic missiles. It is poor management to discontinue development of IRBM by an experienced team and take the experienced antiaircraft team needed for the anti-ICBM development and put it on the development of an IRBM. This action is even worse because the antiaircraft team is not experienced in ballistic missiles."

American Committee on Africa

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. ANFUSO. Mr. Speaker, I am in receipt of a letter from the noted American writer John Gunther, author of Inside Africa and several other books, inviting me and other Members of Congress to join the American Committee on Africa. This is a nonpartisan group of Americans seeking to help the African peoples to achieve their national independence, as well as the fulfillment of their aspirations for justice and equality.

I am glad to associate myself with this worthy cause. I believe it is in the best interests of the United States, as the moral leader of the free nations, to espouse the cause of freedom for the people of Africa so that they may become linked with us in the struggle of the free world against Communist oppression.

Mr. Speaker, I wish to insert Mr. Gunther's letter into the RECORD and commend it to the attention of my colleagues.

The letter follows:

NEW YORK, N. Y., *June 24, 1957.*

The Honorable VICTOR L. ANFUSO,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ANFUSO: It has become increasingly clear in the past few years that events now occurring throughout the great continent of Africa will have a tremendous influence on the survival of freedom in the world. Now in political flux, several of Africa's emerging states have not yet made their decisions concerning their future role on the world scene. The direction in which Africa goes will be of tremendous importance to the world. Its strategic position, vast supplies of untapped raw materials, and population of 200 million make Africa perhaps the decisive continent. It is my conviction that our Nation and our people, if they are sufficiently aware and well informed, can do a great deal to influence the direction in which the nations of Africa will go.

In order to help convey the significance of this historic ferment throughout the African Continent, I have become associated with the American Committee on Africa. This organization in the past 2 years has been the

central agency for accurate and up-to-date information on African affairs. It is also the force seeking an American policy toward Africa designed to help the African peoples achieve national independence, justice, and equality.

Throughout Africa, the committee is regarded as the representative of those Americans who sympathize with these historic drives. Petitioners from African trust territories seek the aid of the committee in making their pleas before the United Nations. Religious, political, professional, and labor groups, representing legitimate and democratic African aspirations, constantly seek and receive various forms of assistance from the committee.

The committee has since its inception 2 years ago provided financial aid to Father Trevor Huddleston's churches in South Africa to enable them to defy the racist bans and has recently organized a defense fund for the victims of the infamous mass treason trials in South Africa. It called together the celebration for Ghana's independence, attended by several thousand people, at New York's Town Hall and contributed to a free-trade-union institute in Ghana. Space prevents a more lengthy exposition of the committee's activities.

I feel that, in the interests of American security and world peace and freedom, United States policy must be more enlightened in respect to Africa. We must stand unequivocally for African freedom, or we betray our own. The American Committee on Africa is an instrument of substantial potential in achieving such a policy. I am, therefore, asking you to join me as a member of the organization's national committee and thus to underscore our view that a broad and representative section of American leadership subscribes to the goals of national independence, justice, and freedom for the African people. We are a nonpartisan group of Americans drawing our leadership from all groups within the community but excluding antidemocratic elements of both the right and left.

I look forward eagerly to your affirmative reply. For your convenience, a reply card and envelope are enclosed.

Sincerely,

JOHN GUNTHER.

Senate Action on Hells Canyon

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. ULLMAN. Mr. Speaker, one of the most astute observers of the Hells Canyon fight has been Thomas L. Stokes, nationally syndicated columnist. His intelligent commentaries on this case have done much to inform the American people of some of the highly suspect actions perpetrated.

I am certain that Mr. Stokes' column of June 26 will be of interest to my colleagues in the House and I ask that it be printed in the Appendix of the RECORD:

The article follows:

SENATE ACTION ON HELLS CANYON—ACTION FOR SINGLE HIGH DAM VIEWED AS UPSETTING POWER MACHINATIONS

If you know what's been going on behind the sleek, shiny front of Eisenhower administration "peace, prosperity, and social welfare," there is ironic justice in the administration's defeat by the Senate and its Democrats on the Hells Canyon Dam issue.

For this exposes to public view the behind-the-scene machinations by the administration, and for the second time on a big scale, to hand over valuable natural resources to politically powerful utility interests. The attempt in this case is to turn over this last biggest undeveloped waterpower site on the continent—this one located in the Pacific Northwest—to a private corporation, the Idaho Power Co., of Augusta, Maine.

The other case was, of course, the notorious Dixon-Yates scheme designed to destroy the great TVA in the Southeast.

The pattern is similar in two ways. For one thing, the administration was severely rebuked in both attempted raids on the public domain that belongs to all of us. In Dixon-Yates, it confessed its own guilt by canceling the contract. Now, in Hells Canyon, the Senate, in a clear affirmation of majority public opinion in the Pacific Northwest, has voted to authorize the Federal Government to build one high dam at Hells Canyon in the Snake River along the Idaho-Oregon border. That is in keeping with the Army engineers' plan for integrated development of the great Columbia River system, in contrast with the three small dams proposed by the Idaho Power Co., which already has started work under license by the Federal Power Commission.

For another similarity in Dixon-Yates and Hells Canyon, there are the snide, sneaky, backstairs methods that have been revealed in congressional investigations.

Since Congress still have a way to correct the wrong done in the Hells Canyon case through House passage of the bill which was approved a few days ago by the Senate, it seems timely to take a look at the behind-the-scenes maneuvers, all of which are documented.

Dixon-Yates first. That starts with the Detroit banker, Joseph W. Dodge, Director of the Budget early in the first Eisenhower administration. He wanted a complete change of Government water resource policy so that TVA and eventually other huge public multipurpose projects would be turned over to private utility combines—though that was no more his business than it is the business of your Uncle Dudley.

One day he was talking to a friend, George D. Woods, chairman of the First Boston Corp., about his plan. Woods had just the man to draft his plan, one of First Boston's own men by the name of Adolphe Wenzell. So Wenzell came to Washington, drew up an overall plan and then another which would be the first step to take care of TVA. That was the scheme to contract with a couple of big utility magnates with southern holdings doing business at 2 Rector Street, New York, Edgar H. Dixon and Eugene A. Yates. They would build a plant of their own in West Memphis, Ark., and produce power that would be sold to TVA, an entering wedge, supposedly to compensate for power TVA would furnish to the Atomic Energy Commission at Paducah, Ky. When you devise such a devious scheme—you can be sure there is something fishy.

There was. But did the public know anything about it? No—not for several months. Then Senator LISTER HILL, Democrat, of Alabama, a sponsor of TVA, exposed in a Senate speech how Wenzell was involved. An investigation conducted by Senator ESTES KEFAUVER, Democrat, of Tennessee, showed that Wenzell was a consultant of the Budget Bureau and, at the same time, working for First Boston Corp., which was doing the financing for the Dixon-Yates scheme. That is known as conflict of interest. It is against the law. You never saw so much scurrying around in the administration, and wringing of hands in righteous indignation, which ended up by the Government canceling the contract it had originated.

Now for Hells Canyon. The opening scene is the Office of Secretary of the Interior Douglas McKay, himself from the Pacific Northwest, from Oregon. The time—early in the Eisenhower administration. On his desk before him is a paper he has prepared to back up a memorandum that his predecessor in the Truman administration, Secretary Oscar Chapman, had submitted to the Federal Power Commission. It recommended one high Federal dam at Hells Canyon as the way to develop the full potential there, as found by the Army Engineers. The telephone rings. The White House calling—Mr. Sherman Adams, the President's alter ego. He instructed Secretary McKay to withdraw the Chapman memorandum, which would be notice that the new administration supported the Idaho Power Co. proposal. Douglas McKay put down the phone, reached for his paper, tore it into little pieces and threw it away.

The Congressional Quarterly

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD a letter of June 20, 1957, from Thomas N. Schroth, executive editor of the Congressional Quarterly news features, which is in answer to the criticism I have directed against the impartiality and authoritativeness of this publication.

I was in error, as pointed out by Mr. Schroth, concerning rollcalls 22 and 23. The Congressional Quarterly did list both of these votes. The rest of the matter can be left to the judgment of the people who read my basic criticism and the reply Mr. Schroth has made:

CONGRESSIONAL QUARTERLY,
NEWS FEATURES,
Washington, D. C., June 20, 1957.

Hon. THOMAS B. CURTIS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN CURTIS: I appreciate your willingness to place a reply to your charges against Congressional Quarterly in the CONGRESSIONAL RECORD. I agree with you that my letter of May 20 was not in a form suitable for such inclusion.

However, because I believe it is important not to mislead your colleagues concerning the impartial nature of Congressional Quarterly studies, I would appreciate your placing this letter in the RECORD.

It is true that we did not list the rollcall votes on which we based our presidential support piece which appeared in the Congressional Quarterly weekly report of May 17. I believe we should have done this, as we have in the past; and that is why we subsequently listed them in the May 31 issue. It is also true that we did not list the eight votes which were not included in the study. We did not think this was necessary, and still do not. All the rollcall votes had appeared in earlier editions of the Congressional Quarterly weekly report and they are easily available to our many subscribers.

Congressional Quarterly confines its analysis to issues on which the President personally takes a stand. It is true this is an

arbitrary approach to this study, but after very careful consideration, we have concluded that our studies would be open to valid criticism of editorializing if we chose issues on the mere assumption that the President had taken a position on them, even though he did not express that position. You apparently would consider that on any partisan vote the President's position would be obvious, but there are issues on which the President prefers not to make his views public. The President also has made clear that on issues that are Congress' business alone, he keeps hands off, respecting the constitutional division of powers.

We recognize that certain issues are partisan issues, but partisan rollcall votes and Presidential rollcall votes are not synonymous. Congressional Quarterly's party-unity analysis covers all partisan votes.

Congressional Quarterly has considered carefully and rejected the idea of charting support for administration measures as opposed to those on which the President expressed himself. One reason for this is that on some issues different parts of the administration take opposing positions. A recent example was the conflict between the Department of Interior and the Office of Defense Mobilization on the Idaho Power tax writeoff. Another reason is that the President determines which of the thousands of administration legislative proposals to which he will lend the prestige of his support.

The vote on House Resolution 191, authorizing funds for an investigation of Federal regulatory agencies by the House Interstate and Foreign Commerce Committee, was unquestionably a partisan matter but Congressional Quarterly found that it did not directly involve the President. In fact, most of the agencies concerned are independent, not directly under the control of the President. Furthermore, the President did not state his position on this matter.

Your criticism of our exclusion of the three rollcall votes on House Resolution 190 is not valid. The resolution asked the President to indicate places in the budget where cuts might best be made. It was a request for advice and the President furnished that advice in his April 18 letter to Speaker RAYBURN. Had the resolution been mandatory, so that the President would have been required to reduce his budget, we naturally would have judged it a Presidential support vote. This is an excellent example of a partisan issue which could not be termed a Presidential issue for purposes of the Presidential support analysis.

Concerning the question of giving equal weight to all presidential support votes, Congressional Quarterly wishes to determine these votes on a nonpartisan, objective basis. The weighting of votes would present a series of editorial judgments, each one of which would be open to criticism. Congress takes rollcall votes only on issues which seem important enough to its Members to warrant rollcall votes. Congress determines which presidential issues it wants to have rollcall votes on. Congressional Quarterly does not make this decision.

This is demonstrated in the 14 rollcall votes on the Labor and Health, Education, and Welfare appropriation bill. We were of course reluctant to include all of these votes but since the required number of Representatives insisted on rollcalls, it was evident that going on record was important to many Members. Congressional Quarterly cannot weigh the degree of enthusiasm that the President has for each item he requested in his budget. He has said that they represent his judgment of what is necessary for the country and that of course Congress has the right to substitute its judgment for his.

On the question of grants to States for sewage plant construction, Congressional Quarterly knew that the President opposed this in 1956 but he was not required to budget money for it this year if he still was opposed to the program, and the fact that he did include the full authorized amount in his budget indicated some degree of approval of it.

You are in error concerning rollcalls Nos. 22 and 23 on recommittal and final passage of the corn and feed grain program. Congressional Quarterly listed both of these votes.

The question of whether or not to consider the House and Senate votes on a corn bill as Presidential support votes was considered very carefully by Congressional Quarterly at the time each Chamber voted. Both bills were borderline cases in which the President's views were hard to determine. Under the legislative program described in Mr. Eisenhower's budget message he said, "Changes are being recommended in the corn program." Subsequently, Secretary of Agriculture Benson recommended a corn program to the House committee. The bill actually voted on in the House was not precisely what Mr. Benson had recommended but Congressional Quarterly determined on balance that it conformed closely enough to Benson's proposals to be a bill that the President would support. Congressional Quarterly therefore marked the vote to recommit the bill, which failed, and the vote on passage, which also failed, as Presidential support votes.

Nearly a month after the corn bill was rejected in the House, and after farmers had made their plantings "on the assumption that there would be no new corn legislation," as Mr. Benson said March 29, a corn bill that differed from both the House and administration bills came to the Senate floor. After study of the Senate debate and the reported views of agriculture officials, plus the fact that the President had made no statement on corn legislation since defeat of the House bill, Congressional Quarterly concluded that the President's position on the legislation could not fairly be determined and hence the Senate votes on the bill should not be classed as Presidential support votes. The ranking Republican on the Senate Agriculture Committee, Senator AIKEN, underlined the importance of timing when he said the bill was "good" but that it came before the Senate "too late to be effective (or) fair" to many farmers.

We did not include the vote on the selection of the Speaker of the House because it was a procedural vote. This is the same position taken in the analysis of presidential support votes made last year by your Republican colleague from Pennsylvania, Mr. SIMPSON.

You chide us for bringing out a story on support of the President in midsession. As I mentioned in my letter to Senator SCHOEPPEL, a copy of which I sent to you, the May 12 story was timed to reach our newspaper clients when President Eisenhower made his first television address describing his program. We consider this good journalism. Our newspaper clients did, too.

In reference to your remark that we did not follow our own ground rules in the May 12 study of presidential support, I do not understand your point. We are not aware of not having followed our own ground rules.

May I repeat that we are always grateful for any suggestions for improvement in our methods. You and your colleagues are indeed welcome to visit us at any time to examine our methods and discuss them with our staff.

Sincerely yours,

THOMAS N. SCHROTH,
Executive Editor.

GROUND RULES FOR CONGRESSIONAL QUARTERLY PRESIDENTIAL SUPPORT-OPPOSITION

Presidential issues: Congressional Quarterly analyzes all messages, press conference statements and other public statements of the President in order to determine what he personally, as distinct from other administration spokesmen, does or does not want in the way of legislative action.

Borderline cases: By the time an issue reaches a vote, it may differ from the original form on which the President expressed himself. In such cases Congressional Quarterly analyzes the measure to determine whether, on balance, the features favored by the President outweigh those he opposes or vice versa. Only then is the vote classified. For example, Senate passage of the Area Redevelopment Act in 1956 (passed 60-30; Democrats 44-3, Republicans 16-27) was classed as an Eisenhower victory while the earlier rejection of an amendment placing the proposed Area Redevelopment Administration in the Department of Commerce (rejected 43-43; Democrats 0-42, Republicans 43-1) was considered a defeat. While the President was on record in favor of the rejected amendment he was not on record concerning the specific provisions of the Democratic-sponsored bill, S. 2663, as passed by the Senate, Congressional Quarterly decided, however, that S. 2663, on balance, contained the major features of the legislation requested by the President in his economic report, and classed passage of the bill as an Eisenhower victory, although a majority of Republicans voted against it.

Important votes excluded: Occasionally, votes involve issues that contain features favorable and unfavorable to the President's views in nearly equal measure. Since such votes cannot be classed as personal victories or defeats, they are excluded from the tabulation even though they may be important. For example Congressional Quarterly excluded the House vote, in 1956, on passage of the Democratic-sponsored school-construction bill (H. R. 7535) (defeated 194-224; Democrats 119-105, Republicans 75-119) but included rollcalls on two amendments and a motion. The President was clearly on record against the Gwinn and Powell amendments (Gwinn amendment rejected 168-250; Democrats 61-162, Republicans 107-88; Powell amendment adopted 225-192; Democrats 77-146, Republicans 148-46) and for the motion to substitute the McConnell bill (rejected 158-262; Democrats 9-215, Republicans 149-47). But it was not clear at the time whether he would have voted for or against passage of H. R. 7335, as amended, and when asked this question after the vote, White House Press Secretary James C. Haggerty said: "We're interested in schoolrooms."

The President's own position, as distinct from that of other administration officials, is often not a matter of public record. In 1956, his position was not known before the voting on the natural-gas bill, several electoral reform proposals, the Niagara power project (although later the President endorsed the project), a Democratic-sponsored bill for a $400 million atomic-power reactor program and several key amendments to a social security revision bill.

Motions: Rollcalls on motions to recommit, to reconsider, or to table often are key tests that govern the legislative outcome. Such votes are necessarily included in Eisenhower support tabulations. For example, in 1956, the Senate first rejected a farm bill amendment (42-43; Democrats 39-0, Republicans 3-43), opposed by the President, to drop the requirements that States contribute to the cost of commodities furnished for disaster relief. Later, however, the Senate adopted a motion to reconsider the amendment (47-45; Democrats 45-3, Republicans 2-42), then agreed to the amendment first rejected (47-45; Democrats 45-3, Republicans 2-42).

Rules: In the House, debate on most significant bills is governed by rules that restrict time and may bar floor amendments. These rules must be adopted by the House before the bills in question may be considered. Members may vote for the rule, in order to permit debate, although they intend to vote

against the bill. Generally, however, a vote against a rule is a vote against the bill, and vice versa, since rejection of the rule prevents consideration of the bill. Congressional Quarterly assumes that if the President favored a bill, he favored the rule, unless it was a closed rule that would prevent amendments he wanted. For example, in 1956 a rule for consideration of the Fryingpan-Arkansas reclamation project, favored by the President, was defeated the day before adjournment (179–194; Democrats 53–140, Republicans 126–54), effectively killing the bill. This vote was classed as a defeat for the President.

Appropriations: Generally, rollcalls on passage of appropriations bills are not included in this tabulation, since it is rarely possible to determine the President's position on the over-all revisions Congress almost invariably makes in the sums allowed. An exception to this rule is the foreign aid appropriation, since the program, although recurring, is not permanent. Votes to cut or increase specific funds requested in the President's budget also are included. For example, in 1956 the Senate's vote to increase Air Force funds by $800 million was a clear challenge to the President's views on national defense (amendment increasing appropriation adopted 48–40; Democrats 43–3; Republicans 5–37).

Failures to vote: In tabulating the support and opposition scores of Members on the selected Eisenhower-issue rollcalls, Congressional Quarterly counts only "yea" and "nay" votes on the ground that only an actual vote affects the outcome. Most failures to vote are based on valid reasons such as absence because of illness or official business.

Weighting: All Eisenhower-issue rollcalls have equal statistical weight in this analysis. For example, included among the 99 Eisenhower-issue votes of 1956 were 9 on which no opposition votes were recorded. A Member's votes for these measures, all favored by the President, count as heavily in his score as his votes on as many controversial issues decided by close margins. Any system of differential weighting, however, would make the analysis less objective and, by the same token, less useful.

CONGRESSIONAL QUARTERLY'S METHOD OF MEASURING A CONGRESSMAN'S PERFORMANCE BY ROLLCALL VOTES

The legislative record of the individual Senator or Representative is composed of actions—or inactions—many of which are not a matter of public record. As a member of one or more standing committees and their several subcommittees, where the shape of legislation generally is determined, the legislator participates in the making of important decisions, often behind closed doors. As bills move to the floor, he may be busy rounding up supporters—again out of public view—for an amendment that will be offered. On the floor he may or may not participate in the recorded debate. The only official record by which the actions of any legislator may be compared with those of his colleagues is the rollcall vote.

The great bulk of proposed legislation that reaches the floor is disposed of by voice vote, without a record of each legislator's position. For example, Congress in 1956 passed 2,791 bills, yet recorded only 203 rollcalls. Some of the legislation accepted or rejected by voice vote is important. Conversely, some of the matters disposed of by rollcall vote are relatively unimportant. Nevertheless, most rollcalls involve substantial issues, and they provide, in the final analysis, the only indisputable record of each legislator's actions.

For these reasons, Congressional Quarterly publishes the results of all rollcalls in specially designed voting charts. These show summaries of the proposals put to a vote and the positions recorded by the Members. Congressional Quarterly's rollcall charts present the individual Member's complete voting record, insofar as it is available.

This voting record, covering a wide span of legislative issues during any session, is inevitably open to partisan analysis and interpretation by the two major parties and other interested groups. In an attempt to provide students of Congress with a meaningful yet nonpartisan analysis of record voting, Congressional Quarterly conducts five separate and distinct studies, each under a specific system of ground rules, as follows:

Presidential support and opposition: This study is designed to show the extent to which each Member of Congress supports or opposes the specific legislative requests or stands of the President. Key step is the choice of rollcalls for inclusion in the tabulation. Only those votes are included on which it is possible to say that the President, were he a Member of Congress, would have voted "yea" or "nay" on the basis of his personal messages and statements issued before the vote was taken. This method results in the inclusion of some noncontroversial votes as well as the exclusion of certain important rollcalls on which the President's own position was not publicly clear at the time the vote was taken. Any departure from the method used, however, would lead to a subjective weighing of issues, the results of which would be open to serious challenge.

Party unity: This study is designed to show the extent to which each Member votes with the majority of his party when that majority is opposed by a majority of the other party. Thus, by definition, rollcalls included in the tabulation of party unity scores are selected automatically according to the numerical outcome of the vote. While this is an inherently arbitrary division, since the majority in question may range from unanimity to one more than the minority, it is the only method available that is free of bias. Any approach based on a yardstick determined by the votes of the respective party leaders runs into the fact that these leaders occasionally are to be found voting with a distinct party minority. In the absence of any more reliable method of determining party positions when they are in opposition, the system used by Congressional Quarterly provides the best index to a Member's support of his party relative to that of his party colleagues.

Bipartisan support: This study, in contrast to party unity, is designed to show the extent to which each Member votes with his party's majority when both party majorities are in agreement. All rollcalls thus are classified automatically either as party unity or bipartisan support votes, according to the mathematical outcome. As in the case of the former, the size of the majorities may vary widely on bipartisan support votes, although they tend to be large in the case of votes on relatively noncontroversial issues.

Voting participation: This study is designed to show the extent to which each Member actually casts "yea" or "nay" votes—the only kind that can determine the legislative outcome—on rollcalls for which he is eligible. Relatively few Members score 100 percent since absences due to illness, committee sessions and travel are common. Voting participation is not, however, a record of absenteeism as such. It is a measure of the relative extent to which Members make effective use of their voting privilege.

On the record: Members who, for one reason or another, do not cast "yea" or "nay" votes on rollcalls are generally recorded as being for or against the measure voted upon. These recorded positions are added to the "yea" and "nay" votes in tabulating on the record, which is a measure of the extent to which each Member makes his position on all rollcall votes a matter of public record.

Each of the foregoing studies is subject to the qualifications set forth in the ground rules for each study. Full understanding of these qualifications is essential to any interpretation placed upon the group and individual scores derived from the methods employed.

How's That Again

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. HÉBERT. Mr. Speaker, the Washington Star in an editorial the day following President Eisenhower's address at the governors' conference in Williamsburg, Va., published an editorial which bears reading and deserves much thought.

If only the American people would weigh well the words of public officeholders, from the President right on down, and examine those words very talk and semantic juggling.
closely, I feel there would be less double

The President's "ghost" in this instance really went to town. I wonder if the President himself had his tongue in cheek when he declared for States rights at the very time he and his administration were still hearing the echoes of the most destructive blow ever delivered against the rights of States—the passage by the House of the so-called civil-rights bill with the aid of the unholy alliance of New Republicans and New Deal Democrats.

Talking about States rights at a time when each day finds new administration bills encouraged which gnaw away at the rights of the individual States is nothing more or less than so much hogwash.

In the tidelands fight the President, during his first campaign, promised to sign a tidelands bill recognizing the rights of the States. He kept his promise but his Attorney General whom he appointed and who holds office at the pleasure of the President, is throwing every obstacle in the way of keeping in full the promise which the President made. Instead of allowing the States their full rights in the tidelands problem we now find the Attorney General and the United States trying to take away the loaf of bread which is rightfully the States and giving to them instead the few crumbs which have fallen from the table.

The President defends the ruling of the Supreme Court as the law of the land. Since when, until the present Supreme Cout took over, have the decisions of the court been handed down based on sociological studies and books of a questionable authorship, instead of the percent of previous decisions. What Supreme Court has reversed as many laws of Congress as has this Court?

But that's another subject.

Here is the editorial which appeared in the Washington Star and an editorial which says in plain language what the facts in the case really are.

This editor is to be congratulated.

The editorial follows:

HOW'S THAT AGAIN

President Eisenhower's address to the Governors assembled in Williamsburg is an intriguing exercise in semantics.

Mr. Eisenhower started off as a States rights man from way back—as far back, let's say, as Virginia's HARRY BYRD. He warned that a nation can be enslaved only by strong central government. What we need here in America is renewed determination to hew to the (Jeffersonian) principle of diffusion of power, knowing that only thus will we ourselves forever avoid drifting irretrievably into the grasp of some form of centralized government.

This must have come as sweet music to the ears of the States rights governors. But their rejoicing, if any, was premature. For in the next breath, the President declared: "Opposed though I am to needless Federal expansion, since 1953 I have found it neccessary to urge Federal action in some areas traditionally reserved to the States. This was a reference to his school-building program. The test, it seems, is not what the States, or the people of the States, may be willing to pay for in the way of schools. The test is what the President thinks they ought to have, and that, we gather from the speech, is what they are going to get—from their strong central government.

Much the same thing is true of the traffic situation. Noting that last year's toll of traffic dead soared beyond 40,000 people, Mr. Eisenhower said that this was a fearful price to pay for the failure of the States to agree on the essentials of traffic control. "As for traffic safety," he added, "this, happily (why happily?), is still a State and local responsibility." But he also warned that we simply cannot let this go on. If the States don't do something about it, the Federal Government will.

There was more, but it all adds up to the same result. A President who says that "I believe deeply in States rights" is quite prepared to take whatever Federal actions may be dictated by popular pressures and transient political expediencies arising out of the unwillingness of the States to do certain things for themselves. Why not come right out and say that Federal interference in local affairs is deplorable and dangerous—except when a sufficient number of people prefer it to no interference?

California Real Estate Magazine Features Information About State and National Legislators

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. DOYLE. Mr. Speaker, to my desk has come a very lovely and interesting magazine published by the California Real Estate Association for the month of February 1957, featuring the 1957 California State Legislature and the United States Congress.

In this magazine are nicely arranged and printed pictures of each of the members of the California State Senate and Assembly—and also each of the Members of the House and Senate of the United States from California. And opposite each of the photos is a designation of the district represented by the State legislator or the National Representative, together with a short but appropriate descriptive statement of some of the facts about the gentlemen.

Throughout the magazine are feature articles such as the opening message by Hon. Goodwin J. Knight, Governor of California, How Bills Become Laws, Crucial Issues Confronting 1957 Legislature, Streamlining the Legislative Process in California.

Mr. Speaker, I wish to observe that in arranging and publishing this issue of this monthly magazine by this group of California realtors they have rendered a really valuable service to the enlightenment of their members and other readers about the State Legislature in California and about the United States Congress.

I wish to further observe that if more regularly published magazines circulating to memberships of business and professional and other groups throughout our Nation would do some such act at appropriate times in connection with legislative activities in their respective States and in our Nation, it would certainly also be a definite contribution to the representative way of life under our State and United States Constitutions.

The "Last Word" Is Far From Having Been Spoken on Radiation Fallout

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, fortunately for all of us there is a growing awareness of the dangers from radiation resulting from nuclear weapon testing. There are increasing numbers of protests against continuation of nuclear weapon testing. As an example of these strong and cogent protests, I ask permission to insert in the RECORD the excellent article from the June 7 issue of Washington Window.

The article follows:

RADIATION FALLOUT

Adlai Stevenson's destiny apparently is not to become President of the United States. But there is some chance that he may prove to have been right after all.

His propsals for the elimination or at least control of new H-bomb explosions made during the election campaign last year undoubtedly cost him a lot of votes.

At the very least they cost him some caustic criticism by President Eisenhower running all the way from the observation that the proposals were "foolish" and that President had said his last word on the subject.

That last word is far from having been spoken.

Here it is a bare 6 months from the 1956 election campaign and the hazard of radiation fallout is a livelier topic to public discussion than ever.

Strontium 90 and its cancerous effect on human bones have become a topic for the popular magazines.

The genetic influence of other types of radiation is all but discussed at the family dinner table.

Headlines such as "Marshall Islands Children's Growth Stunted by Fallout" hit the newspaper readed in the eye.

One expert estimates that 80 million persons would be killed outright in a major H-bomb attack on the United States.

On the one hand is a powerful group of scientists, mostly in the Government service, who deny that the world is being poisoned by radiation fallout or that mankind is in danger of an insidious buildup of radiation exposure that goes beyond permissible limits.

The very definition of the word "permissible" as applied to radiation is the center of debate. There is no hard and fast answer. The world is still in the middle of scientific experimentation to determine how much radiation we really must suffer to kill us; or how long it will take to build up perilous amounts of radiation poison; or whether one type of radiation will injure us in our lifetime, or another will affect the genes of our children and our grandchildren so that future generations may be turned into generations of monsters.

The debate—for a long time carried on in undisciplined fashion in newspapers and magazines—is now coming under a new type of scrutiny that seeks to assemble enough sound information from all segments of the scientific world to give the American people a real basis from which to judge the problem.

Representative CARL T. DURHAM, North Carolina Democrat, who is now chairman of the Joint Committee on Atomic Energy, has appointed a special subcommittee under Representative CHET HOLIFIELD, of California, charged with the job of laying a scientific basis for information on radiation hazards. A wide range of scientists has been invited to testify during the 2-week hearings already underway.

As might be expected, the differences that existed before the hearings still persist. Scientists who work with or for the Atomic Energy Commission play down the dangers of radiation fallout. They see no reason for discontinuing experimental bomb explosions unless the tightest kind of inspection agreement is obtained with the Russians.

Other scientists take the poistion that there is some danger, but that the danger is less than a weak inspection agreement under which the Russians might destroy us.

A third position is that the dangers of radiation fallout are only dimly understood in the state of present scientific knowledge and that mankind should be given the benefit of the doubt and every effort made to stop further experimentation with huge bombs.

And, finally, there is the position of a large body of scientists who take the position that as scientists they "have knowledge of the dangers involved, and therefore a special responsibility to make those dangers known." Supported by such scientists as Dr. Linus Pauling, a Nobel prize winner for research in chemistry, they have called for an "international agreement to stop the testing of nuclear bombs."

"Each nuclear bomb test," they declared in an appeal which 2,000 of them signed, "spreads an added burden of radioactive elements over every part of the world. Each added amount of radiation causes damage to the health of human beings all over the world and causes damage to the pool of human germ plasm such as to lead to an increase in the number of seriously defective children that will be born in future generations."

After listening to all these viewpoints, the Holifield subcommittee one of these days will make its report on radiation hazards. It may well be one of the most important documents ever published in the history of the human race.

Appendix

Electric Power for an Expanding Economy

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. MILLER of Nebraska. Mr. Speaker, it is a pleasure to insert in the Appendix of the RECORD a speech made by the Secretary of Interior, the Honorable Fred A. Seaton. I have known Mr. Seaton, a fellow Nebraskan, for many years. He has established an enviable record for good, sound, honest thinking. His article entitled "Electric Power for an Expanding Economy" is thought provoking. It should make us all realize we are living in an explosive economy that is ever expanding and we should realize it is not possible for the Federal Government to supply all of the electric energy needed by this expanding economy. I think one of the greatest steps forward in our electric energy field is that taken by the REA's who are on a sound, businesslike management program. They borrow the money. They pay interest and return the borrowed money, with interest, to the Federal Treasury. When I first came to Congress, Nebraska farms were about 45 percent electrified. Today it is close to 98 percent. It is one thing that has brought the convenience and comfort to farm life that they hardly dared dream of a few years ago. I commend the reading of the Secretary's article to my colleagues:

ELECTRIC POWER FOR AN EXPANDING ECONOMY

(By Secretary of the Interior Fred A. Seaton)

Our population is growing at a rapid rate; there will be 221 million Americans or more by 1975. Our economy is expanding, having passed the $412 billion mark in 1956 and now moving toward $500 billion a year.

Our electric power needs are, therefore, also growing.

Under such circumstances there are two dangers. The first is that we shall not produce enough power to meet our country's needs in the next 10 or 20 years. The second is that the Federal Government will gain more control over our electric-power facilities than is necessary or desirable.

These facts and these dangers underlie the administration's power policy.

Consider the first danger first: The Federal Power Commission estimates that by 1965 we shall need 96 million more kilowatts of generating capacity than we have now. At present rates each kilowatt costs $464. Our economy will, therefore, have to spend—for generation, transmission, and distribution facilities—$44,544,000,000 in less than a decade. By 1975 the comparable amount will be $96,048,000,000.

Only about 8½ percent of the new capacity needed by 1965 can come from hydroelectric plants, the type which the Federal Government has traditionally built or helped to build. Fifteen percent, at the outside, may come from atomic-energy plants. The rest, 77 percent, will have to come from steam plants, burning fossil fuels—coal, oil, natural gas. Except in the TVA region, the Government traditionally has not built steam plants. And the Congress has never spent for power development at the rate which would be necessary to meet the power needs which I have just outlined.

Faced with these facts, you have two alternatives. You can urge that the Government reverse its policies, enter the steam-plant business on a large scale, and allot a bigger slice of the Federal tax dollar than ever before to power development. Or you can uphold the principle, the teamwork principle, that the Federal Government should build some power facilities, the State governments some, local governments some, and private utilities some.

If you take the first alternative, you will have to wait a long while (possibly even a dangerously long time) for the Congress to start spending for power as you want it to. In the meantime—and these are crucial years—our population will continue to grow. Our power needs will expand. The possibility of shortages of electricity will be a constant threat.

If you take the second alternative, you can have a reasonable expectation of new projects started today and new power put on the line at approximately the same rate as that of the growth in demand.

Actually, most Americans believe in the teamwork concept. Except for the zealots, most people neither want to abolish the private utilities and the State and municipal PUD's nor to remove the Federal Government from the power field. We believe that each of these organizations has its proper place and its share of work to do in producing and marketing power. Only through the teamwork of all can the country be assured of adequate power development. And we believe that through teamwork the country can simultaneously avoid the second danger I mentioned at the outset: an excess of Federal control. For teamwork assures us of many sources of capital and decision making—not just one—in the electric power field.

Teamwork has, in fact, been responsible for much of our progress so far.

This Nation's standard of living has never been equaled elsewhere in the world. But our accomplishment owes much to the reliability, economy, and adequacy of our country's electric service. Scientific and technological developments have led to the manufacture of reliable and efficient generation, transmission, distribution, and utilization equipment. Twenty-five years ago 1 pound of coal produced 0.67 kilowatt-hour. Today the same pound of coal produces 1.06 kilowatt-hours. Twenty-five years ago small local utilities served limited geographical areas. Today transmission interconnections and pooled operations have improved the reliability of service and contributed to the economic loading of systems. New designs and the use of improved protective equipment have made distribution systems more reliable. Twenty-five years ago the average retail monthly cost of electric energy for 100 kilowatt-hours was about $4.75. In 1956 the cost was $3.88.

The relatively stable cost of electric service during the past quarter century—during an economic depression, two wars, and a postwar period—could not have been maintained except for the initiative and resourcefulness of men in management, the ingenuity of scientists and engineers, and the competent decisions of State and Federal regulatory agencies. These people have all rendered outstanding public service. Their accomplishment is reflected in the Federal Power Commission statistics for the past quarter century, which show that installed generation capacity of the utility industry increased from 34,386,739 kilowatts in 1932 to 120,435,249 kilowatts in 1957. It is difficult to overestimate what this energy source has meant to the Nation's increasing prosperity.

But we don't have to look to the past for all our evidence. Today in the Pacific Northwest teamwork is again helping an entire region's economic development.

Before President Eisenhower took office, a former Secretary of the Interior said:

"The power supply outlook in the Pacific Northwest for the next several years will remain critical. Power requirements continue to exceed supply and the addition of defense industry loads with associated increases in civilian power requirements will further tax the existing generating and transmission facilities. Even with strict adherence to present recommended schedules for installation of new generating plants it is expected that the Pacific Northwest will be in a power shortage situation until 1957."

A power shortage was indeed imminent in this area during the latter part of 1952 and early 1953. Electric power use was curtailed. I am sure the people directly affected—especially in industries which were required to slow production and cut their payrolls—will remember the incident. This power shortage and other threatened brownouts occurred even though the contribution of the Federal Government was substantial.

Under the former administration's policy of preempting power sites for exclusive Federal development, State and municipal organizations and private companies could only plead each year for more and more Federal spending. Local initiative was stifled. Each year more serious power shortages were predicted. Business began to look elsewhere.

But today under the policy of planned teamwork much progress has been made to correct this state of affairs. Water resource development is proceeding at an ever-increasing rate. Local organizations are getting the opportunity to plan, finance, construct, and operate their projects.

The municipal plants of Tacoma, Seattle, and Eugene have facilities under construction to provide 604,000 kilowatts of energy. In Washington the Grant County, Chelan County, Douglas County, and Klickitat public utility districts have currently under construction and in planning 3,456,000 kilowatts—more than the total Federal kilowatt contribution in the past 10 years.

These organizations, it might be observed, are not private interests. They are public-power entities. Moreover, their projects are under strict regulation by the Federal Power Commission, which under the law is responsible for making certain that no hydroelectric project on a river subject to Federal jurisdiction will impair the fullest possible development of the resources of the entire basin.

But teamwork doesn't involve just local or regional or private groups. The Federal Government has much to do.

Federal action has, for example, brought immense industrial and agricultural and human benefits to the areas of the Central Valley of California, the Tennessee Valley, the Missouri Valley, and the Columbia River Basin. The administration is well aware of the importance and necessity of wise Federal programs in the water resources field. Last year, for example, the President supported and signed into law the great upper Colorado River storage project—the largest irrigation measure ever authorized by the Congress in a single piece of legislation. Under this project tremendous reservoirs will be built. The water supply of the upper Colorado Basin—a supply used in Wyoming, Utah, Colorado, Arizona, New Mexico, and other States—will be stabilized. Within 25 years irrigation water will be brought to more than 360,000 acres of land. A million kilowatts of hydroelectric power will be made available.

These changes will mean that a vast underdeveloped area, rich in natural resources, will be able to take care of the needs of an increased population for more homes, more schools, more businesses, and more productive farms.

The Fryingpan-Arkansas project is another means to the same end. Such administration measures help illustrate what the President meant when he said at McNary Dam in 1954: "The issue is not * * * public power versus unregulated private power. The issue posed to us is Federal monopoly of power as against public or regulated power, freely chosen in each instance by the citizens of each area, with the Federal Government coming in as a cooperating partner where this seems necessary or desirable."

Like the upper Colorado project and the TVA, McNary Dam itself is an example of the type of undertaking that, because of its sheer size, can be accomplished only by the Federal Government. The Hoover Dam is another. Grand Coulee is another. The administration looks with favor on such projects which, in Lincoln's words, need to be undertaken but which cannot be successfully undertaken by individuals or non-Federal organizations.

In accordance with this policy, in fiscal year 1956 the Bureau of Reclamation added $160 million to its $2.6 billion investment in western projects for power and other purposes. It added hydroelectric generating capacity in multipurpose dams in the amount of 120,000 kilowatts. With the Corps of Engineers, the Bureau now has underway 299 projects, for flood control, navigation, irrigation, water supply, and power. The Bureau, the corps, and other divisions of Government will continue to do their full and proper share as members of the team.

As the figure just mentioned indicates, of course, the development of hydroelectric power is only one of the results of the best kind of river basin project. The administration believes in multiple-purpose undertakings—projects which bring forth not just one benefit, but a variety, in irrigation development, power generation, fish and wildlife conservation, improvement of navigation. Theodore Roosevelt in 1908 forcefully set down this general principle:

"* * * every waterway should be made to serve the people as largely and in as many different ways as possible. It is poor business to develop a river for navigation in such a way as to prevent its use for power, when by a little foresight it could be made to serve both purposes. We cannot afford needlessly to sacrifice power to irrigation, or irrigation to domestic water supply, when by taking thought we may have all three. Every stream should be used to the utmost. No stream can be so used unless such use is planned for in advance. When such plans are made we shall find that, instead of interfering, one use can often be made to assist another. Each river system from its headwaters in the forest to its mouth on the coast, is a single unit and should be treated as such. Navigation of the lower reaches of a stream cannot be fully developed without the control of floods and low waters by storage and drainage. Navigable channels are directly concerned with the protection of source waters and with soil erosion, which takes the materials for bars and shoals from the richest portions of our farms. The uses of a stream for domestic and municipal water supply, for power, and in many cases for irrigation, must also be taken into full account."

The Eisenhower administration believes in basin development for multiple purposes through teamwork. As the President said only a few months ago, in his state-of-the-Union message:

"The whole matter of making the best use of each drop of water from the moment it reaches the soil until it reaches the ocean for such purposes as irrigation, flood control, power production, and domestic and industrial uses, clearly demands the closest kind of cooperation and partnership between municipalities, States, and the Federal Government."

Following such a principle we can make certain that the Federal Government will not take on functions which properly belong to States and localities. And we can make certain also that in the years immediately before us our country will have the electricity it needs for its people, every day becoming more numerous, and their economy, every year moving to higher and higher plateaus.

Teamwork is the keynote in the article prepared for Public Utilities Fortnightly—beginning on page 798—by the Honorable Fred A. Seaton, Secretary of the Interior. Secretary Seaton is a native of the District of Columbia, but he spent most of his life in Nebraska and Kansas. He attended Kansas State College, from which he received an honorary doctor of laws degree in 1955. His primary interest before becoming a member of the Eisenhower administration was in the publishing and radio business in Nebraska, Kansas, South Dakota, Wyoming, and Colorado. He calls Hastings, Nebr., his home, where he publishes the Hastings Daily Tribune. In 1951 he was appointed to the United States Senate to fill the vacancy left by the passing of Nebraska's Senator Kenneth S. Wherry. He also served as Assistant Secretary of Defense, 1953, and administrative assistant to the President, 1955. He was appointed the 36th Secretary of Interior on May 28, 1956.

Key Piece in the Mideast Puzzle

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. ROOSEVELT. Mr. Speaker, in the May 19 issue of the New York Times magazine appeared an article which, I am afraid, has been overlooked and deserves much more widespread consideration. Its author, the Very Reverend James Pike, is dean of the Cathedral of St. John the Divine, as well as professor of religion and law at Columbia University.

The most pressing problem in the Middle East is, of course, that of solving the Arab refugee puzzle. Until it is solved, no lasting peace will be achieved. Dean Pike's suggestions and analysis make not only absorbing reading, but offer a constructive program which constitutes a challenge to the leadership of this country.

The article follows:

KEY PIECE IN THE MIDEAST PUZZLE

(By James A. Pike)

The peace of the world may turn on a "vicious circle" in the Middle East. The vicious circle is this: there can be no lasting peace until the Arab refugee problem is solved; and the Arab refugee problem cannot be solved until there is a real peace. Is there any way out of this circle?

I pondered these things a little over a year ago as my wife and I visited a large refugee camp south of Bethlehem. The misery these establishments represent has been too frequently described to require exposition here. But the dreadfulness of the situation is more psychological and spiritual than physical. The United Nations Relief and Works Agency for Palestine Refugees in the Near East has seen to it that there are 1,600 calories per day per person—higher than some, at least, of the residents had before. The tin huts (ovens under blazing summer sun) and skimpy tents (chilly diggings in the winter) are no worse than many Arab accommodations elsewhere.

But even if the food and lodging were fit for kings, the situation would be tragic. I remember our passing, near the entrance to the camp, a tall lean Arab just sitting in front of his hut looking off into space—and an hour later, as we passed the same place, he had not moved or changed his expression. Nothing to do—except to dwell on his situation, to nourish his resentment over the past, to reflect on the apparent hopelessness of the future and, when he gathers with his fellows, nothing to talk about—except to go over the same ground, and fan the resentment. This is a living death.

It is an existence suffered by an unknown number of people who fled or were dislodged from their homes during the partition of Palestine and the subsequent fighting. Estimates of the refugee population run from 800,000 to 900,000, including the children born in the camps. These Arabs are now living in Jordan, Syria, Lebanon, and the Gaza strip, which is officially Egyptian.

Whose fault is it that the refugees got where they are in the first place? Whose fault is it that they are still there? And what can be done about it?

As to the first question, we received conflicting answers. From the Arabs: "We were driven out of our homes and lands by the Jews." From the Israelis: "We urged them to stay; the Arab nations urged them to leave and promised them their lands—and ours—when they returned." Who is right? Interestingly enough, both statements are true.

To grasp this apparent contradiction, you must put yourself in the position of the individual Palestinian Arab in 1948. He was confronted with a rapid—and confusing—series of events. (1) The U. N. had voted the partition of Palestine into a Jewish state and an Arab state, it being contemplated that there would be Arab and Jewish citizens in each. (2) The British abandoned their mandate before arrangements were worked out for the two new states to take over. (3) The state of Israel was forthwith declared; no Arab Palestinian state was organized. (4) Immediately the surrounding bloc of

Arab states attacked Israel. Out of the resulting insecurity of Jew and Arab alike came conflicting pressures on the Arab in Israeli territory:

Fear of his fate under the Jews: The Jewish terrorist groups were operating—albeit unofficially. The ruthless massacre in the Arab village of Deir Yassin was vivid in memory. Arabs in some localities were threatened. Why? Fanaticism, fear of an internal fifth column, desire to clear the property for Jews.

Fear of his fate under Arab rule: The invading Arabs put pressure on him to leave and threatened him if he would not. And most people thought then that the Arabs would win the war.

Hope of gain: If he left and then returned, which he was most sure to do once the Jews were overwhelmed, he would share in the booty—the Jewish properties.

Arab solidarity: After all, he was an Arab, and his brother Arabs were fighting Jews. And this cleavage had old roots.

The promises of the Jews: The official Israeli attitude was clear enough. The Government urged the Arabs to stay, spreading this word throughout the land by soundtrucks and handbills. They were promised an equal place in the new nation.

Under these pressures the individual Arab could hardly be blamed for making either decision—to go or to stay. As it turned out, those who stayed fared better than those who left. In terms of economic and educational opportunity, health and sanitation, the Israeli Arabs are, by and large, considerably better off than other Arabs in the Middle East. And because Israel is a democracy, they have more voice in the government of their nation than do the Arabs in Saudi Arabia, or, for that matter, than do the Palestinian Arabs in Jordan—now that the Trans-Jordanian (largely Bedouin) minority is in absolute power there.

However, there have been certain limitations on the Arabs in Israel, such as freedom of movement. This is justified by the government on the ground of security, but this factor may be exaggerated; indeed, the supreme court of Israel has on occasion sought to check the zeal of the military administration of Galilee; and during the Sinai operation there was no report of any rebellion of Israeli Arabs. But American critics are somewhat estopped from making too much of all this because the Arab in Israel is by and large in a better position than the American Negro in large parts of our country.

But the fact is that the majority of the Arabs left—and hardly for capricious reasons.

Why the present standstill in this situation? Many refugees in other areas have been settled with useful work and with a real future in their adopted homelands. Israel itself, less than one-hundredth the size of the Arab world, has settled some 900,000 refugees from many nations. There is a crucial difference. For example, in the case of the recent exodus of Hungarians to the United States, our Government and the refugees regard the situation in Hungary as a fait accompli and their future is planned accordingly. But neither the Arab nations nor the Palestinian refugees so regard the situation in the Middle East. They will not accept the fact of the existence of the State of Israel. Its extermination is the top priority in the foreign policy of the Arab nations and in the heart of the individual refugee.

So the failure to develop constructive plans for permanent resettlement is not attributable simply to the lack of the necessity wit or means. The Arab States don't want the refugees settled, for if they were they would lose their most potent propaganda piece against Israel. As Ralph Galloway, until recently head of United Nations relief in Jordan, has said, "The Arab States do not want to solve the refugee problem. They want to keep it an open sore, as an affront to the United Nations and as a weapon against Israel. Arab leaders don't give a damn whether the refugees live or die."

Recently, Henry Labouisse, director of UNRWA, declared that the Arab States have placed so many obstacles in the way of U. N. help for their own fellow-Arabs that it may be necessary soon to suspend such relief entirely. The Arab aim is to foster in the refugees the notion that return to their former homes is the only desideratum.

But is that a real possibility? Assume that there is a minimum of 800,000 refugees (it is hard to get a firm figure; there were probably 500,000 to 600,000 to start with). The population of Israel today is 1,900,000. No nation, regardless of past rights and wrongs, could contemplate taking in a fifth column of such size. And fifth column it would be, people nurtured for 10 years in hatred of Israel and totally dedicated to its destruction.

We can get a hint of what the presence of this large block of dissidents would mean to Israel's stability from what the acquisition of the Palestinian Arabs has done to Jordan's stability; the gulf between their orientation and objectives and those of the Bedouin population of the former Trans-Jordan has been the prime factor in the explosive situation in present-day Jordan. For an analogy, we must think of this: the scrupulosity with which the United States examines the views of each potential immigrant does not encourage us to imagine that we would be willing to take in nearly 71 million sworn enemies of the nation, which is what the proportionate figure would be.

But doesn't this argument prove too much? It would be said that the very magnitude of the refugee group as compared with the present population of Israel argues for their return, whatever the consequences to the State of Israel, since the figures prove that there should never have been a Jewish state in Palestine.

Actually, as a non-Zionist, I was and am less than convinced by the arguments for the establishment of Israel in the first place. But the fact is that it was established—and its right to exist is grounded on two bases of paramount validity: first, it was established by action of the only international authority, the U. N.; and second, it won a war brought against it by the Arab states.

We can't turn back the clock of history. Literally, the territory that is now Israel is not the same country that the refugees left. Nine years of intensive development, urban and rural; nine years of heavy immigration; nine years of the shaping of a way of life—all this rules out the possibility of an Arab's return, in any realistic sense, to what he left.

If return is ruled out, then what? Equally unthinkable is the continuation, year after year, of the demoralizing—and ever-explosive—status quo. The only live option then is permanent resettlement. And the barriers to that are not so formidable as has often been assumed. These are the barriers:

1. In Jordan and the Gaza Strip, where the bulk of the refugees reside, there is not enough arable land or enough available employment in commerce and industry to support anywhere near the total number of refugees.

2. Resettlement (in contrast to relief) would require a large capital outlay.

3. The Arab nations do not want resettlement.

Serious as these barriers are, they surely are not insuperable. Yet any solution must take them into account. Foolhardy as it may seem for me to say so, I believe there is a solution—if the United Nations and United States get behind it—and that it involves these elements:

The signing of a permanent peace treaty: There is only an armistice now, dating from the 1948 war, and Iraq has not even signed that (this is one reason Israel is nervous about the possibility of Iraq's absorbing Jordan and thus becoming her eastern neighbor). A peace treaty would acknowledge once and for all the existence of the state of Israel and make her less trigger happy, an attitude born of anxiety. And it would permit border readjustments which both economic and military realism require. The border now is so quixotic that it is difficult to defend and, since it is virtually unmarked (the Arab nations have so required, since they do not recognize that there is an Israel), many innocent trespasses—both ways—have occurred, with bloody results.

More than that, there would be eliminated one of the persistent sources of Arab hate—the plight of Arab farmers whose villages ended up on the Jordanian side and whose groves and fields ended up on the Israeli side. And there would be removed the resentment of the Israelis at being barred from Mount Scopus in Jerusalem, important because of the buildings and great library of the Hebrew University and the Hadassah Hospital.

Mutual development, with outside aid, of water projects: The arable land in both Israel and Jordan would be much increased by the diversion of the waters of the Jordan River. And this is only one of several practical possibilities.

Economic union and mutual planning: This was contemplated by, and included in, the terms of the U. N.'s 1948 partition plan. As things now stand, to take one example. Israel imports beef from Argentina, Jordan exports meat via a tortuous route through Syria and Lebanon. Thus Israel's cost is increased, Jordan's profit is cut, and both lose. And neither can afford it. Another example: the Gaza strip is economically viable only when linked to Israel. Economic planning—and outside assistance in development—would bring about fullest use of the resources of the whole area, with an increase in employment opportunities.

Resettlement of the refugees: Her borders secure, her existence recognized by her neighbors, the development of her economy linked with theirs. Israel could with less risk grant total equality, including complete freedom of movement, to her Arab citizens, and proceed to admit a proportion of the erstwhile Arab residents of her territory—perhaps the number 100,000, which back in 1949 Israel offered to take, though the offer was declined. If the offer is made, it will probably turn out that not so many will, in fact, want to go back. But, this quota filled, let the rest be settled in Arab nations on new arable lands made available by new water and in the new industry and service trade that will follow.

The pattern for this has already been set by Israel in its resettlement of some 400,000 Jews from Arab lands in western Asia and north Africa who abandoned their property and whatever wealth they had and arrived penniless in Israel. There have been refugee camps in Israel all along, but with this difference: They have been temporary reception centers, because Israel really wanted to settle the newcomers.

How to finance all this? Assuming that the preceding steps have been taken, this is the easiest part. In 1952 the U. N. allotted the sum of $200 million for this purpose and less than $7 million has been spent because the Arabs refused even to complete preliminary studies on how their own people could be helped. But more than this will be needed.

Let Israel add to the fund the value of the Arab property which it now utilizes for others, and which is not, under the plan pro-

posed, reoccupied by returning Arabs. Then let the Arab countries add to the account the value of the property of the 400,000 Jews who fled Arab lands into Israel. Then let our own Nation, which has such a stake in peace in the Middle East, contribute, at least, the cost of the technical assistance needed. And, once the job is underway, there will be saved the enormous cost of direct relief each year, since the resettled persons will have been enabled to support themselves.

But can Arab and Jew ever live peacefully together? Is the enmity undying? I don't thik so. Maybe it was just a straw in the wind, but when I visited with a class at the new University of Tel Aviv, I observed that an Arab student seemed to be well received and he was friendly enough to the others. And at the Mandelbaum Gate, at the Jordan-Israel border in Jerusalem, we observed something that is a foretaste of what could be.

On the Israeli side I saw a pile of new Arab picture magazines. "Where did you get them?" I asked the guard. "From the guards on the Jordan side," he answered. "We trade them." I pressed further. "When you do that, do you smile at each other?" "Of course," he retorted. "We're friends; we have coffee together." Individuals can always get along with each other—or at least can judge each other for what each one is—once the official tensions are relaxed.

But there is no hope that they will be unless the United Nations and the United States broaden their conception of the Middle East problem. We should expand the Eisenhower Doctrine to include the development and presentation to the Middle East countries of an overall plan which includes something like the elements outlined above. I am not suggesting that the hostilities can be "bought off"; but if we are firm and consistent in our influence and if the interest and energies of the whole region can be redirected toward the development of the entire area by the availability of a tangible, practical plan, the various groups of Arabs will find that they can like each other (something yet to be attained as recent events have shown) and that Arabs and Jews can like each other—and even have coffee together.

Among the narrow, winding streets of old Jerusalem (in Jordan), shared as they are by native Arabs, tourists, and donkeys, is a tiny side street surmounted by a large sign which reads, "For people only." This provides a good slogan for any plan for the resettlement of the Arab refugees and the consequent chance of peace for all in the Middle East—not pro-Israel, not pro-Arab, but for the sake of people.

Rosendahl Blasts Navy Cut of Blimp Sub Killers

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Carroll, from the New York Journal American of June 24, 1957:

ROSENDAHL BLASTS NAVY CUT OF BLIMP SUB KILLERS

(By George Carroll)

Vice Adm. Charles E. Rosendahl, retired, accused the Navy today of indefensible bungling when it chopped our antisubmarine blimp units 50 percent, effective June 30.

How can the Washington brass justify it, he demanded, if Russia's undersea threat is as serious as they say and reports of Red submarines off our coasts keep piling up?

In a stinging statement handed exclusively to the Journal-American Admiral Rosendahl called for a public investigation into the Navy's illogical, ill-considered decision.

TWO VITAL POINTS

This country's greatest authority on airships made these two points:

1. The blimp is the only submarine fighter we have, either in the air or on the surface, that can carry and use all our different detecting devices "and you can't kill a submarine until you locate it."

2. Airships escorted 89,000 allied vessels in World War II "and not one was sunk by enemy submarines while under such escort."

The blimp story leaked first in Washington. Next, it was confirmed at Norfolk headquarters of Adm. Jerauld Wright, Atlantic fleet commander.

His deputy chief of staff, Capt. Alfred G. Ward, said the reduction was based primarily on economy and was in the wind even before Congress started whittling President Eisenhower's military budget.

CAUGHT OFF GUARD

But if it was in the wind, it certainly hit the Navy's leading lighter-than-air men without notice.

"First I heard about it was when I read it in the papers," said Capt. Emmett Sullivan, the Navy's most experienced veteran in airships now on duty, who has been assistant chief of staff, plans, Eastern Sea Frontier.

Capt. Sullivan, a 1927 Annapolis graduate, is retiring this month to take a job in the aircraft industry.

TWELVE BLIMPS TO GO

The deactivation order affects Airship Squadrons ZP–1 and ZP–4, both assigned to the naval air station at Weeksville, S. C., where Capt. A. L. Cope commands Fleet Airship Wing 1.

The 2 squadrons operate 12 blimps and have a combined complement of 65 officers and 300 enlisted men.

Captain Cope, the Navy's senior airship man once Captain Sullivan departs, will be left with only two squadrons of antisubmarine blimps and two early warning radar blimp units.

These 4 units are scattered; 2 at Lakehurst, N. J., 1 at Key West, Fla., and 1 at Glynco, Ga.

There is also a helicopter antisubmarine squadron at Weeksville. Reports are circulating that these Sikorskys and Bells may be shifted to Norfolk, leaving nothing operational at all at the Carolina base.

Here is Admiral Rosendahl's full statement to the Journal-American:

"The unbelievably precipitous elimination of half the Navy's antisubmarine blimp units is, in my opinion, illogical, ill considered and indefensible from any standpoint.

"It is impossible to believe anyone really possessing airship knowledge was consulted or heeded.

"Any pretended economy through slashing the Navy's smallest specialty one-third (Editor's note: There are blimp units on early warning radar duty in addition to antisubmarine service) is transparent hocus-pocus.

DENIES OBSOLESCENCE

"Any pretense that the blimp is an obsolescent antisubmarine type is wholly oblivious of the facts.

"Blimps for both antisubmarine and early-warning purposes are on the threshold of achieving very important defense utility. But their potentialities apparently will never see daylight in an organization autocratically dominated solely by airplane thinking and by persistent refusal to recognize the basic differences between airships and airplanes.

"WHY KEEP ANY?

"Anyone who can distinguish between a submarine and an airplane should be able to understand the differences between airships and airplanes.

"In the antisubmarine field, the blimp is the only type, surface or air, which can carry and operate all the known detection devices as well as adequate offensive equipment.

"If blimps are ineffective, why do we retain two squadrons of the same ones as those eliminated?

"If the submarine threat is as great as advertised, how can we eliminate any useful antisubmarine type from an organization whose prime task is antisubmarine warfare?

"This action reflects the generally myopic attitude of the Navy toward airships. If airships are to succeed, they must be placed under men who understand them. They must not be made third-rate members and convenient whipping boys of the airplane organization.

"No question of national security can be raised as a convenient shield for warding off a public investigation of the Navy's bungling of airship matters.

"Let us hope such an airing comes before the remaining morale of the Navy's small, leaderless airship organization is completely shattered and before the Navy itself destroys all hope of fair determination of airship potentialities."

Admiral Rosendahl's unswerving faith in the military value of airships was vindicated once before, soon after Pearl Harbor. But the crash of the Shenandoah, split apart by a storm over Ohio, the susequent loss of the United States dirigibles *Macon* and *Akron*, and the spectacular explosion of the German Zeppelin *Hindenburg* at Lakehurst hung a bad name on lighter-than-air craft.

As navigator of the *Shenandoah* in 1925, Rosendahl saved himself and his immediate shipmates by free-ballooning the broken forward section to earth.

Thereafter he clung to airships, rigid and nonrigid, as he had clung to his navigator's duties in the face of death.

When German U-boats in 1942 started sinking our shipping at a shocking rate under our very noses along the east coast, the Navy Department hastily organized airship squadrons to spot them and rushed an order to Goodyear in Akron for a couple hundred of the helium-filled sky bags.

U-BOATS ROUTED

Rosendahl insists they pushed the U-boats back from American shores.

With planes, helicopters, and even other submarines, the blimps have remained a part of the hunter-killer team that the Navy has kept sharpened up to oppose a Soviet sub force estimated as high as 400 to 500.

Does this mean the blimps are going limp for good, 100 percent?

Mystery Shrouds Sub Killers' Fate

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. BONNER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article

from the New York Journal American of June 25, 1957:

MYSTERY SHROUDS SUB KILLERS' FATE—GAS-BAGS' FOES STRIKE SILENTLY

(By George Carroll)

Who put the slug on half the Navy's anti-submarine patrols by blimp?

Antisubmarine warfare (ASW) is a primary responsibility of the Navy and Soviet subs are prowling around our Florida guided missile range.

Yet a mysterious somebody or group of somebodys suddenly decided we could safely dispense with 50 percent of the airships used in this first priority role and mission of the Navy.

Our best brains in Navy lighter-than-air were not consulted. There is reason to believe that nobody consulted Vice Adm. Frederick W. McMahon, an old naval airman who fought in the Pacific and off Korea, and whose responsibilities today are wrapped up in the title: Commander, Eastern Sea Frontier.

BLIMP FEATS

The 2 squadrons of 12 blimps due to be deactivated June 30 are based on the frontier he has to defend.

And one of these ZPG–2's proved only this spring what kind of a nonstop patrol it can do on the hunt for submarines or any other kind of hunt:

Comdr. Jack Hunt won the Distinguished Flying Cross in March by skippering a blimp nonstop 11 days and 9,500 miles from Massachusetts to Portugal, down off Africa and back to the West Indies and Florida.

"I can't tell you what the thinking is on this in Washington," Admiral McMahon told me when I inquired if it wasn't a funny time to cut down on the tools for ASW when—if you can believe the reports—the Soviet undersea fleet is growing bolder in American waters.

How much substance is there to these reports?

"Let's put it this way," the admiral replied. "There has been evidence of Soviet submarines in the Atlantic."

STILL USEFUL

The 50 percent reduction in airship ASW squadrons on the East Coast (we abolished our World War II airship squadrons on the West Coast in 1947) doesn't mean the Navy is cutting blimps off the hunter-killer team, Admiral McMahon insisted.

"They have a place and function."

When I mentioned that lighter-than-air men seem to be riled plenty over the situation, Admiral McMahon rejoined with a smile:

"It's at least good to hear there's such spirit in any particular branch. Everybody tends to think his weapons are the best."

ALWAYS READY

The admiral's retiring deputy for plans, Capt. Emmett Sullivan, Annapolis, 1927, who took a squadron of blimps across the Atlantic in 1944 and used them to put a nighttime seal on the Straits of Gibraltar, says this:

"When the ceiling is zero-zero and nothing else is flying, you can always fire up an airship and go."

Airplanes were doing a good job of keeping German submarines out of the Mediterranean daytimes—but nights, no.

Three of them tried it after Sullivan put his blimps on darkness patrol at 100 feet, back and forth, back and forth across the 3¼-mile straits, but none of them ever made it.

What about this grounding business that's in the works today? Says Sullivan:

"In the light of the priority attached to antisubmarine warfare, I find it difficult to reconcile the decommissioning of two antisubmarine airship squadrons.

"The blimp is the only type of aircraft capable of carrying all established means of detecting submarines submerged, at snorkel depth or surfaced."

Other lighter-than-air people said blimps can operate with magnetic airborne detectors, known for short as MAD; sonar buoys, a delicate "ear" that listens for subs and radar detectors, plus infrared and other instruments that are still on the secret list.

SONAR EFFECTIVE

Sonar is said to be the most effective. Blimps can drag these "ears" through a suspected area constantly. Helicopters can winch them down periodically. Airplanes can't dunk them at all.

"You can't hunt subs with 700-mile-an-hour jets," one airship veteran told me. "Furthermore, airships can do the job at one-fifth the cost of any other aircraft."

After the last big war, the Navy developed a pair of twin Grumman airplanes, the Guardians, to track and destroy submarines. In 1954, both functions were built into a single plane, the Grumman Tracker, now on duty with the Atlantic Fleet.

Blimp men say the Tracker is fine, and helicopters are too, but there is definitely a need for the peculiar talents of their great Goodyear elephants plodding above the ocean waves.

The matter of the blimps may seem like a sort of intraservice decision well left to experts (except that in this case the experts weren't consulted).

CAN CHECK SIGNALS

It won't be so good, though, if the cutback encourages Soviet submarines to poke their snouts closer than ever to the Atlantic seaboard and hand around snooping.

They can check every signal that comes offshore in the entire radio and radar spectrum.

They can accumulate all sorts of data helpful in any future Soviet attack either from the air or from submarines launching missiles into New York, Washington, Boston, Miami, Baltimore—you name it.

Looking to see and hear what's cooking on our guided-missile range—where we've just had the first test firing (unsuccessful) of our "20-minutes-to-Moscow" missile, Atlas—is the most obvious task of Red submersibles.

SECRETS AVAILABLE

But by sneaking into the 3-mile limit they could learn plenty, too, about the Nike missile systems that guard New York and Washington and the new SAGE air defense system being pioneered in the Boston and Cape Cod region.

All these are mare's nests of electronics, giving off beams and pulses like a Christmas tree throws light, and the Communists want to know how best to jam them. Very useful in this business, submarines.

Such being the case, blimp men are not only mad like their magnetic airborne detectors (MAD); they're downright puzzled by what the high command has done.

Ike Turns Dixie Into Hostile Camp

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. ROBERTS. Mr. Speaker, the policies and practices of the Eisenhower administration have evoked great concern in the South. Even those who sided with the President as recently as the 1956 elections are finding too repulsive to swallow certain pills recently served up by the administration.

The Talladega Daily Home, a very fine afternoon newspaper in Talladega, Ala., located in the fourth district, has been an avid supporter of President Eisenhower. For this reason, it is of great significance that the president and associate editor of the Daily Home has publicly broken with certain administration practices. In his page 1 column, Passing Scene, J. L. Wallis, in the June 21 issue of the Daily Home, states that those who have looked to Mr. Eisenhower as a friend of the South when they voted for him now are disillusioned.

I recommend his column to the Members as a well-written, profound analysis of current southern temperament. Mr. Wallis' column, which follows is written in the form of an open letter to the President:

A BRILLIANT STAR FLICKERS OUT IN SOUTHERN SKIES

(By J. L. Wallis)

Mr. DWIGHT D. EISENHOWER,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: At your press conference this week, you defended your misnamed civil-rights bill, by calling it a "very moderate and decent thing." Mr. President, we of this column, and a lot of other deeply concerned southerners not only voted for you in both of your national political races, but we did so with enthusiasm. We were won to your side from the start when you promoted the idea that the sovereign States had rights with which the Federal powers could not interfere.

To the South, you were the way out of a terrible mess created by 25 years of new dealing and fair dealing. Millions of seriously minded southern people voted for you and supported your party. Many of their forebears fought and sacrificed during the terrible 1860's, even to the extent of giving their lives. Both of our grandfathers wore the Confederate gray. However, we deemed that we were honoring these gallant men, when we voted for you instead of the new dealers and fair dealers who had captured the grand old Democratic Party.

Mr. President, this week was the breaking point climax of your career in the South. We are deeply grieved that a national hero, like you are and have been, can become blinded with the greedy light of grasping politicians. You, and you alone, must in the final analysis take the blame of ambitious and greedy cronies like Dick Nixon, Herbert Brownell, Knowland, and all the rest who talk of modern Republicanism and stoop as low or even lower than any greedy Democrat ever did during the era of "tax, spend, and elect." Your great misnomer, which you have allowed to be called Eisenhower's civil-rights bill, is the final straw. And when, even a great man like you, has closed his eyes so tightly, as to proclaim moderation and decency for legislation which usurps the rights of States and individuals to the extent of crushing the right to trial by jury, you have alienated yourself and your party from millions of Southern votes, and the votes from other thinking people all across the Nation.

You have made jest of the accomplishment of noble English people who won the right to trial by jury, over 700 years ago, in the fields of Runnymede. The great charter, forced from King John, is the base for the most precious rights that Anglo-Saxon people have had for more than seven centuries. You promote the scrapping of this Magna Carta by calling your destructive wrongs bill a thing of decency and moder-

ation. While you are scrapping the rights of a free people, Mr. Eisenhower, you are also scrapping the power of your party, your own political career, and any ambitions that your political-minded greedy associates may have.

Any Democrat, worth his salt, will win the White House in 1960. In the South, in the yesteryears, the Democratic nomination has been tantamount to election. At one time your noble character was changing this, but your complete surrender to the sinister selfish goals of political friends, will turn the South away from everything you touch. In the summer of 1960, the next President of the United States will be elected and not in November. You, Mr. Eisenhower, must accept the responsibility for the irreparable harm you and your modern republicanism has brought to the respected Republican Party at this time when it writhes in death's throes.

Any Democrat by name who wins the nomination in the summer of 1960, will have a walkaway in November when pitted against any Republican, regardless of his record or ability. You, Mr. Eisenhower, have aided in causing a dangerous rift in national unity and national patriotism. In every crisis, the Nation has depended upon Southern leaders, and Southern heroism is known from pole to pole. We are at a crisis in world affairs today, and you and your greedy modern Republicans are turning a civilization and the empire of Dixie into a hostile camp. Our Nation needs unity as never before.

You were a national hero a few years ago and deserved to be. Some men retire in their glory and remain heroes forever. Some men live too long and what was a career of glory, turns into one of scoff, scorn, and bitterness filled with adverse criticism. Mr. President, we still believe in your personal integrity, but it has been undermined by greedy associates, and you must take the blame. We, along with thousands of southern people, are grieved because your brilliant star in the Dixie skies no longer is brilliant but has actually become repulsive with a passion which is turning to hate.

Legislation To Legalize Hiring Halls in the Maritime and Building Trades Industries

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. PELLY. Mr. Speaker, I should like to advise the membership of the House that I have introduced legislation which would legalize maritime and building trades hiring halls. The number of the bill is H. R. 8422.

This measure should have the support of employers as well as members of unions in the construction and marine industries. At least experience has clearly proved the best interests of all concerned, including the interest of the general public, will be served by the hiring hall system. Actually, I believe the practice of recruiting workers through a hiring hall is supported so widely, and has such an obvious advantage in its favor, that regardless of present law the hiring hall system prevails in many areas.

To illustrate very briefly the merit of what my bill seeks to provide, I include the following letter which speaks for itself:

DISTRICT COUNCIL OF CARPENTERS OF SEATTLE, KING COUNTY, AND VICINITY,
Seattle, Wash., June 19, 1957.

Mr. THOMAS M. PELLY,
House Office Building,
Washington, D. C.

DEAR TOM: Thank you for sending me a copy of the bill which you plan on introducing in Congress which would legalize maritime and building trades hiring halls. We in the building trades are particularly interested in this because of the casual nature of our work in which the average mechanic or laborer if he is fortunate enough may work half time and it would be to his advantage to have a hiring hall where he could seek employment.

If we can give you any assistance please feel free to call on us at any time. With best wishes, we remain.

Very truly yours,

HARRY L. CARR,
Business Representative.

Chairman McConnaughey Leaves Federal Government Service

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. HARRIS. Mr. Speaker, Mr. George C. McConnaughey, Chairman of the Federal Communications Commission, is leaving Federal Government service on June 30, 1957. As chairman of the Committee on Interstate and Foreign Commerce I have had many occasions to deal with the Federal Communications Commission and its Chairman. I have always found him courteous and cooperative and although in some instances we may have disagreed with regard to specific issues, there always has been an atmosphere of mutual respect. I have addressed the following letter to Chairman McConnaughey which I would like to insert in the Appendix of the RECORD:

JUNE 28, 1957.

Hon. GEORGE C. MCCONNAUGHEY,
Chairman, Federal Communications Commission, Washington, D. C.

DEAR CHAIRMAN MCCONNAUGHEY: I do not want to let the day of your retirement from Federal Government service pass without extending to you my best wishes for the future and expressing my appreciation for the courteous manner in which you have always dealt with the Committee on Interstate and Foreign Commerce whenever the Commission was called upon for information.

In public life, individuals who have dealings with each other must not necessarily agree with each other's point of view, and on occasions we have openly and frankly disagreed. However, at all times I have respected you for the sincerity with which you have presented your position, and I have always found you willing to listen to the arguments advanced by those who were inclined to disagree with your views.

There are few places in the Federal public service where the problems confronting an agency of Government are more urgent and more controversial than in the case of the Federal Communications Commission. Under your chairmanship, the Commission has striven to bring about solutions of several communications problems of great importance to the public, and you can leave the Commission feeling confident that you have given your best to bring about fair and equitable solutions of these problems.

Sincerely yours,

OREN HARRIS,
Member of Congress, Chairman.

Allocation of Nickel

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD a letter dated April 30, 1957, from Mr. C. T. Murphy, vice president, McLouth Steel Corp., Detroit, Mich., and an exchange of letters with Secretary Weeks.

Mr. Murphy's letter points out the hardship suffered by certain steelmakers who require nickel for their operations. It is their contention that nickel is allocated to them on the basis of an old formula which does not take into consideration current requirements.

As a result, some companies have been forced to pay high prices for contained nickel from scrap or to buy from the gray market which has thrived through the leakages in the allocation system. The allocation system is based upon an understanding or arrangement between the Department of Commerce, with ODM's blessing, and the International Nickel Co.—see CONGRESSIONAL RECORD of June 26, 1957, pages A5087–A5088.

While the responsible executive agencies do not wish to exercise controls for one reason or another, they approve allocation controls by the world's greatest producer of nickel, a Canadian concern. It is strange to me that the vice president of the McLouth Steel Corp., Detroit, Mich., should need to say:

International Nickel Co. did grant us a very small portion of our requirements and permitted us to start making nickel alloy steels.

I am pleased to relate, however, that the Secretary of Commerce is agreeable to the idea of arranging a meeting with a representative group of stainless steel manufacturers for the purpose of giving consideration to their problems and recommendations. The insertions follow:

MCLOUTH STEEL CORP.,
Detroit, Mich., April 30, 1957.

Mr. JOHN M. CURLEY,
President, Eastern Stainless Corp.,
Baltimore, Md.

DEAR MR. CURLEY: We have read with interest the remarks of the Honorable JOHN W. MCCORMACK, of Massachusetts, in the House of Representatives on Thursday, April 18, 1957, together with your letter to him dated March 20, 1957, with reference to the nickel situation.

We, too, have wondered at the wisdom of withholding the excess quantity of Nicaro sinter from the market because of the fact that steelmakers can use it and platers cannot, and as a consequence releasing it to the steelmakers would create an imbalance according to the formula now in effect. It has seemed completely unreasonable to us that this material, produced by the Nickel Processing Co. of National Lead Co., must be withheld from American steelmakers who so badly need it. The material in question should be put on the open market at the discretion of National Lead Co. and sold to the companies who need and can use the material, and who would agree to continue to use it after the balance of supply and demand has been attained.

We also agree with you that the formula now in use in allocating nickel is antiquated and should be revised. This formula has worked severe hardship on our company because during the years 1946 to 1954 we purchased rerolling slabs from a local concern who in turn built up a considerable record for purchases of prime nickel with International Nickel Co. over these years. It was our foresight, ingenuity, and salesmanship which built up the market, but unfortunately did not provide us with any history as users of prime nickel. Consequently, when our facilities for producing our own nickel alloy steels were put into operation in 1954, we had no record of purchases of nickel and, therefore, no allocation. International Nickel Co. did grant us a very small portion of our requirements and permitted us to start making nickel alloy steels, but we have had to buy large quantities of high-priced nickel alloys and scrap to keep going, and as a result have suffered considerable loss because of the out-of-date formula used for the distribution of nickel.

During the period when we were paying $1.75 to $2 per pound for contained nickel in scrap, Nicaro was accumulating large quantities of nickel sinter which they would have been happy to sell at the market price but which we could not buy because of the allocation formula in effect. We fail to see the wisdom or justice in this situation.

We agree with you wholeheartedly that a good way to effect economy in our Government would be to discontinue adding to our already heavy Government expenditures for stockpile purposes. The public would be terribly shocked to know that the amounts of money which we have tied up in stockpile items today just about equals the alarmingly high budget for the next fiscal year which was recently presented to Congress.

We will be pleased to lend our support to a movement to revise the outdated formula now in use for the allocation of nickel and to release for civilian use the large quantities of Nicaro sinter now being accumulated in stock.

Very truly yours,

C. T. MURPHY,
Vice President.

JUNE 26, 1957.

The Honorable SINCLAIR WEEKS,
Secretary of Commerce,
Washington, D. C.

DEAR MR. SECRETARY: It is my understanding that certain stainless-steel manufacturers contend that the base for the allocation of nickel has not been brought up to date since 1951 to provide for changed operation conditions within the industry. It is also contended that the industry task force on nickel has not convened since September 1953, despite the radically changed conditions which necessitate revision of the distribution formulas.

Would it be convenient for you or your staff to meet with this or a representative group and give consideration to their problems and recommendations?

Sincerely yours,

THE SECRETARY OF COMMERCE,
Washington, June 27, 1957.

The Honorable JOHN W. MCCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. MCCORMACK: This will acknowledge and thank you for your communication of June 26, 1957 concerning the contention of certain stainless-steel manufacturers that the nickel-distribution system is outmoded.

I have requested Mr. H. B. McCoy, Administrator of the Business and Defense Services Administration, to look into the matter and to arrange a meeting with a representative group of such stainless-steel manufacturers if this appears to be desirable. I shall be pleased to sit in on any such meeting as may be arranged.

As of possible assistance to Mr. McCoy in arranging for full and adequate representation it would be appreciated if you would suggest the names of companies whom you may wish to have represented.

I shall pass on to you any details concerning the time and place of the meeting.

Sincerely yours,

SINCLAIR WEEKS,
Secretary of Commerce.

Right To Work Laws

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Albert T. Lunceford, secretary-treasurer of the Greater Los Angeles CIO Council, before the religion and labor conference in Los Angeles on June 13, 1957. Mr. Lunceford's remarks on right-to-work laws are particularly valuable in view of the respected position he holds as a responsible labor leader:

Reverend Crane, and fellow members of the religion and labor council of Los Angeles, I am happy to be able to discuss with you tonight the so-called right-to-work laws. We meet at a time when the opponents of labor, taking off from the current exposures before a Senate committee of the defalcations and misuse of power of a handful of labor leaders, are doing their best to convince the entire country that all leaders of organized labor are crooks, that the unions do nothing for their members, and that our laws should be revised so as to make life a lot easier for the multi-million-dollar corporations, and a lot harder for the average man and woman to get or to keep the benefits which organized labor has obtained.

Much of this effort is still to come. Now the foundation is being laid, the climate of public opinion is being established. Later, and not too much later, we will see the effort to utilize this presumably antilabor climate of public opinion, in the passage of laws, State and Federal. Part of this will revolve around laws regarding the registration and disclosure of welfare funds, and part of it will be straight, out-and-out anti-organized labor laws in the form of the so-called right-to-work bills.

I want to talk about both of these developments, not only in my remarks but in the question-and-answer period afterward. It is out of such discussions that a fuller understanding of our mutual problems grows, and only on such an understanding can intelligent decision and action be based.

Actually, discussions of right-to-work laws are largely a matter of semantics. What is really meant when we use the terms "right-to-work" laws, "closed shop," "union shop," "maintenance of membership agreements," and so on? At the risk of covering ground with which you are already familiar, I should like to start by defining these terms, so that at least what I mean by them will be clear when they are referred to later.

Let's begin with the various forms of security for the union which are embodied in contracts between management and labor. There are three basic forms of this protection, each different from the other. The most important, because it is the most prevalent, is the union shop. Under a union shop contract, the employer is free to hire whomever he may choose, whether a union member or not. Within a specified time after beginning work, nonunion members join the union, at least to the extent of paying dues. The union shop is permitted under the Taft-Hartley act.

Under the closed shop, only union members may be hired by the employer. The closed shop is not permitted under Taft-Hartley, but it is worth noting that it exists in fact in a number of cases, even though there is no such clause in the contract, for the interesting reason that it is the most efficient way for some employers to operate. For example, take the case of a contractor or subcontractor, whose volume of work varies drastically from job to job. He wants, let us say, 100 skilled workers for a period, for example, of 3 months. The employer must complete his work within that period, and therefore he has no margin for either time or money to be wasted through hiring workers of unknown or dubious levels of skill at their jobs. He must have competent, skilled workers, or he goes broke. The only real guarantee he can find of this level of skill is through the union, which imposes high standards upon its members, and therefore that is where he goes for his men.

Another form of union security which is found in contracts—and is permitted by the Taft-Hartley law, is the maintenance-of-membership clause. Such a contractual provision means that workers who are union members when the union-management agreement is signed, and nonmembers who join the union later, must remain members of the union for the duration of that contract.

Trying to define right-to-work laws is something else again. The title itself—right to work—is a stroke of propagandistic genius. It sounds great, but like many a convincing slogan, it conceals rather than reveals the essential nature of the proposition it covers. "Right to work" sounds like the title of a full employment program—jobs for all. But the so-called right-to-work laws give no one a right to work. So-called right-to-work laws provide no work. So-called right-to-work laws provide no rights.

These so-called right-to-work laws were made possible by section 14b of the Federal Taft-Hartley law. This gives to the States power to legislate even more restrictions on union security provisions than the Federal Taft-Hartley law contains, and at the same time denies any State the power to lighten any of the Taft-Hartley restrictions.

Altogether, 18 States mostly in the South, have such laws on their books. Four other States, Louisiana, Maine, New Hampshire, and Delaware, passed such laws and then repealed them.

What these laws actually do is this: they prohibit any form of union security—whether permitted by the Taft-Hartley law or not—from being made a part of a contract between union and management. They prohibit the closed shop, the union shop, the maintenance-of-membership clause, or any variation of any of them.

So let us be clear about exactly what so-called right-to-work laws do—whether we favor them or oppose them. They do not

provide anybody with any rights; they do not provide anybody with any work; they simply outlaw any and all forms of union security. They are in fact an attack on unionism itself, and their purpose is to destroy or to weaken free American trade unions, to discourage responsible unionism, and thus to weaken America.

The question before us is: do we want this to happen? Do we want to destroy or weaken free American trade unionism, to discourage responsible trade unionism?

I think most of us here tonight remember that the working men and women of America didn't arrive where we are now either by accident, or through the development of corporate paternalism.

We remember, I think, even if many have forgotten, or would like to forget, that the rights and privileges enjoyed today by almost every American working man and woman won in a long hard fight—a fight on the picket lines, in the legislative halls, in the courts—a never-ending struggle—and one that isn't over yet, for there are hundreds of thousands of our people who still must work for less than a living wage, and endure conditions and restrictions that are affronts to the dignity of man.

We have run this country for a long time on the basis of protect the basic rights of the minorities, but the majority rules. The same thing applies here. It is a fact of American law that the union must represent all the workers in the plant whether they belong to the union or not. So if the union members, through the process of collective bargaining, achieve better wages and working conditions, all the workers in the plant benefit. Inevitably, there are a number who, while happy to get the benefits of the unions' achievements, would also be happy to avoid paying the dues that makes the union able to negotiate for all the workers. To avoid this situation, the various forms of union security clauses have come to be inserted in the contracts. Under the union shop, which as I have told you is the prevalent type here, first the union must win an election by getting a majority of the workers and even then management can hire whom they please, with the proviso that the workers ultimately become members of the union. So-called right-to-work laws eliminate this proviso; they weaken the union's position among the workers whom it represents and they weaken the unions.

Basically, the reason unions came into being in the first place, and the reason they have endured and grown stronger, is that individual workers, as individuals, have very little bargaining power—virtually none. It is simply in the nature of the employer-employee relationship that the individual worker cannot accomplish for himself what he and his fellow workers, bargaining as a unit, can accomplish for each member of the unit.

Those who would put back the clock—those who would destroy our free trade unions, or weaken their utility and influence—actually operate against their own enlightened self-interest. I grant the fact that must be apparent to all ministers, that the perception of one's own enlightened self-interest is a most difficult thing. Nevertheless it is so in this case, and not too hard to demonstrate.

The people who really want weaker unions have quite a specific reason in mind—they do not have to pay as much money to their workers. That this is true is easily demonstrated. Take the States which have these so-called right-to-work laws on the books. For example, in Mississippi, according to United States Government figures, the workers average only $55 to $60 a week. In South Carolina they average around $55, and this is likewise true for Georgia. In California, the average is around $85 to $95 a week. If the unions were completely destroyed in California, that average wage level would come down, and it would come down sharply. Just suppose, for example, that it dropped to the $55-a-week level of the right-to-work States. What would happen?

What would happen is that the entire economy would go into the tailspin of deflation, and this would affect every enterprise which makes up the economy, including all of those run by the people who come out for right-to-work laws.

The working people of California, and there are by the last count 4,403,100 of them working in nonagricultural jobs—supporting a total of more than 10 million people—spend virtually every cent they make to live, and that means they spend it on clothes, on food, on shoes, on cars, on toothpaste and television sets, in rent or house payments, and so on.

They're customers, as well as employees. And if you take away from customers the wherewithal to buy what you manufacture and wholesalers and retailers sell, they can't buy those products, and they won't until the price comes down to where they can afford it. The complete shakedown of the entire economy involved in a drop of this proportion would be enough to put most of the members of any local chamber of commerce out of business. Any drop in the purchasing power of the working people of this State—and I point out to you again that this is 90 percent and more of the total State's purchasing power in terms of retail sales—any drop in this purchasing power, I say, is immediately reflected in a drop in retail sales. But it takes a comparatively long time for a drop in wages to be reflected in a drop in the cost of the things you must pay for in order to do business. Meanwhile, the wholesalers and the retailers are stuck with the inventory, the real-estate brokers are stuck with merchandise to move at prohibitive prices, the banks, the finance companies, and the savings and loan outfits are stuck with time-payment plans the borrowers cannot meet, investors decide they are going to wait and see, and the dizzying and quite horrible spiral of deflation takes its extensive and intensive toll of all of us.

So I think it is plain that while industrialists, and retailers, may listen with wistful hopefulness to any siren song that promises to reduce their payrolls by 30 or 40 percent, the very last thing they want—or at least the very last thing their own economic self-interest should lead them to want—is any overall reduction in the purchasing power of their customers—which means the wage level of the working people of this State.

But there is more to this matter than economics, important as they are.

A large part of the agitation for right to work laws is carried on by professional right-wing agitators, sustained and financed by small groups of wealthy individuals who believe blindly and irrationally that any society which is not aristocratically structured, is dreadfully wrong. Those who, for example, are trying to put over this constitutional amendment to limit income taxes to 25 percent of income, those societies which see a Communist in every liberal, those who see a foreign plot in the honest efforts of citizens to improve their school board, those who see labor as a devil, all of them seem to satisfy some deep feeling of inner insecurity, by participating in what are essentially meaningless tribal ceremonials.

Only last week, the President of the National Association of Manufacturers made his contribution to the current ceremonial by voicing the tribal chant. What was wrong with this country, he said, was (1) the power of the President to spend money; (2) the threat of monopolistic unions; (3) high taxes. Now I ask you to reflect, is it not true that the same officer of this same association has been saying the same thing each year, every year, in peace and in war, under Democratic presidents and Republican presidents, for the last 20 years? It was of him, and his colleagues in the NAM and the United States Chamber of Commerce, that Defense Secretary Charles Wilson, formerly the biggest of big-business men, said with his notable frankness, "They give me a pain. They never had it so good."

I put it to you that much of this anti-labor talk is pure irrationality because it doesn't square with the facts. For example, one of the byproducts of the current exposures of the corruption of a handful of labor officials, is an attempt to imply that all union officials get outrageously high salaries. And yet the facts are, as revealed by Business Week, that the salary of just one American business executive in 1956 more than equaled the combined salaries of the top 23 salaried union presidents. It took only 4 top industrial leaders to earn more, almost half a million dollars a year more, than 146 top union presidents all together. The salaries of the 10 top business executives averaged more than 1,000 percent higher than the salaries of the 10 top union presidents. And yet you don't see any headlines about this.

Another concept that the I-hate-labor boys are doing their best to instill into the American mind is that the unions somehow resist the registration with the Government and the publication of information about employee welfare and pension plans.

The fact is that the AFL-CIO has long been supporting laws to compel such registration and publication about all welfare and pension plans, including their own, and the real opposition has come from management associations. The NAM is on record that the public welfare demands laws to compel registration and financial accountability for union-administered joint union-employer welfare and pension funds, but it violently objects to Federal reporting for plans administered solely by management. And plans administered solely by management cover about 90 percent of all protected workers.

Let me make it clear at this point that I do not for one moment condone the conduct of labor leaders who violate their trust to their members and to organized labor. I say that if there are crooks in the labor movement, let us expose them, and let us throw them out.

But let me make it clear also that there are more bankers—many more bankers—in jail than there are labor leaders. And let us also reflect upon the possibility that one of the reasons so much publicity is being given to the illegal manipulations of a few labor leaders is that this is an uncommon, a rare, thing. When another banker goes over the hill with a suitcase full of widows' and orphans' trust funds—or is exposed as having embezzled hundreds of thousands of dollars over a period of years to support his racehorses and his mistresses—it really isn't much of a news story because it happens all the time.

I remind you also that the AFL-CIO devotes a lot of energy and manpower to policing its unions—its ethical practices committee is one of the very top committees of the organization. And I ask you, did you ever hear of an ethical practices committee of the NAM or the United States Chamber of Commerce?

Again I say that I do not condone wrongdoing on the part of the officials of organized labor. But I do condemn the double standard of morality which holds a labor leader criminally wrong for conduct written off as "standard operating procedure" for a leader of industry, which distinguishes between accountability for welfare and pension plans on the basis of who manages them, and which argues that the power of big business is innately virtuous and the power of big labor innately sinful.

Furthermore, I deeply regret the disposition on the part of the hawkers of phoney rightwing political nostrums to try to take advantage of this period to wreck the union movement all over the country.

As a piece of sheer political and economic folly, it would be hard to find a worse one than a drive for so-called right-to-work laws.

We have now for several years enjoyed a period of real peace in the sphere of labor-management relations. The old theory that labor and management are natural and mortal enemies has fallen into the discard; I say well so; and I regret to see the lunatic fringe of the right trying to revive it. The principle of unionism has been accepted; the principle of collective bargaining, once the subject of hundreds of massive strikes, has been accepted by all but a few diehards; the principle of union security has been accepted, for it is a part of 8 out of every 10 contracts which are written.

A really serious effort to put over a right-to-work bill nationwide, or in this State, would end that period of peace. I assure you that organized labor in California and across the Nation will fight it, and fight it to the last ditch. What is more, we will beat it. But all of who have been through similar campaigns in the past know that the charges and counter charges, the stirring of the emotions which takes place whether we want it or not, the identification of individuals and associations as good and bad, friends and enemies, leave in their wake scars which take long to heal, if heal they ever do. Organized labor has fought hard for the rights of the working men and women and their families. We have earned, we think, a responsible place at the council tables of our communities, our State and our Nation.

A right-to-work bill in this State—a big campaign to convince the public that labor unions are all corrupt—would have the worst possible effect on our continuing to work together to achieve a higher standard of living for us all.

So I ask you not to be fooled by those insidious siren songs sung by the promoters of so-called right-to-work laws. And I have every confidence that your good sense, your concept of decency and fair play, your fundamental respect for the rights and the dignity of all Americans whatever the color of their collars, will keep you or bring you into the distinguished company which knows these so-called right-to-work laws for what they are, and therefore opposes them.

I think, also that we of organized labor must at this time do more than merely defend ourselves. No matter what the facts are now, some of the smear has rubbed off on us all. The net result of the current furor may be to convict a handful of people of wrong doing—although nobody has been convicted of anything yet—but regardless of how little the concrete results, rank-and-file confidence in our leadership—and public confidence in unions and their mission for the good of all has been diminished.

We must set to work to redress the balance. We must intensify our own efforts to root out the few crooks among the many honest in our ranks. We must continue to fight for decency and dignity for all Americans, regardless of their color, creed, or race. We must expand the many good works in which our unions now engage—welfare work, charity work, civic contributions, scholarships, actions and contributions for the good of our cities, our State and our Nation.

And we must labor tirelessly to make known to the public the truth about labor, and about unions. Those who oppose labor own and control most of the means of mass communication in this Nation, but we cannot be denied a hearing even by them if only we are worthy of being heard, and clever enough to ask for the hearing in the right ways.

This, perhaps more than anything else, is the great challenge of the day to union leadership. It may mean a change from our old, established and comfortable ways of doing things, but it must be done if we are not to slip back to the status of second-class citizens.

And I have every confidence that it will be done. We have not come the long hard road to the threshold of a decent livelihood and a modicum of personal dignity for all Americans only to have the door slammed in our face.

Time after time in its history, organized labor has found the means, and found the men, to meet seemingly impossible challenges. Time after time, we have suffered setbacks, and gone on to victory.

This battle is not different from the rest. We will win it, as we have won the others, because our goals are just, because we fight to clear the way for millions of men, women, and children to a better, a fuller, a more abundant life.

Thank you very much.

Justice Finally Done

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. ASHLEY. Mr. Speaker, in a recent decision, the Federal Communications Commission announced that the application for renewal of a television station permit in Erie, Pa., had been granted to Mr. Edward O. Lamb, of Toledo, Ohio. This decision, which climaxes a series of hearings, allegations, and counterallegations, extending over a period of 4 years, is a welcome one indeed.

At this point, Mr. Speaker, I would like to insert in the RECORD an excellent editorial from the Orlando (Fla.) Sentinel, an editorial which describes the long road Mr. Lamb and justice had to walk before the decision was announced:

THE LADY JUSTICE

Justice sometimes keeps a man waiting so long he suffers almost irreparable hurt before the tardy lady finally smiles.

That's what happened to Edward Lamb, owner of WHOO in Orlando and of newspapers, radio and TV stations elsewhere.

The lawyer and industrialist from Toledo, who has represented many corporations and trade unions in courtrooms all over the land, must have asked himself many a time during the 3½ years the Government was accusing him of associating with Communists, "where is this woman justice I have wooed so many times for my clients? I can't find her for myself."

The FCC in 1953 issued a statement that it had evidence in its files that Mr. Lamb was a member of the Communist Party from 1946 to 1948.

Mr. Lamb went to the Federal courts and the United States Senate for relief, charging a planned frameup inspired by business and political foes.

The FCC dropped these charges, changed them to association with Communists and denied action on Mr. Lamb's application for a TV station in Erie, Pa.

Lamb also was an applicant for the TV channel in Orlando, recently granted to the owners of radio station WLOF. Under fire Lamb withdrew this application and may have been beaten out of a profitable deal here because he was persona non grata with the powers that be of the FCC at the time.

After all the hullabaloo, it seems crystal clear that Mr. Lamb was being persecuted.

Where was the evidence the FCC claimed it had? It never appeared.

Worst thing the FCC produced was some "dream book" type evidence from a woman who appeared to be playing a cloak and dagger game. She charged Mr. Lamb with infamy, withdrew her charges and with a 180 degree turn said the FCC had bribed her to lie. She was convicted of perjury.

Now, Mr. Lamb has cleared his name. The courts have smiled upon him and rightly so.

The Government has treated Mr. Lamb cruelly and harshly.

It forced him to spend a fortune to clear his name of hideous charges. And while the Government was chasing will-o'-the-wisps, its officers spent $900,000 of taxpayers' funds on the hunt.

The Sentinel congratulates Mr. Lamb for his vindication, sympathizes with him for his long and arduous ordeal.

Address by Dr. Salvador Araneta Commemorating Adoption of the Philippine Constitution

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. UTT. Mr. Speaker, under leave to extend by remarks, I would like to insert the following which was inadvertently deleted from my previous insertion, on June 13, 1957, of the address by Dr. Salvador Araneta at the annual commemoration of the adoption of the Philippine Constitution:

It is fitting and patriotic of you, Dr. Alafriz and your colleagues in the Philippine Lawyers' Association, to have initiated, and, except for a period of the Japanese occupation when our constitution was suspended, and the 2 years immediately after the liberation, to have faithfully followed the tradition that you yourselves had established to pay a yearly homage to our constitution on this anniversary day of its approval. It is still vivid in our minds that historic and solemn occasion, which was crowned by the valedictory address of the president of the constitutional convention, Claro M. Recto, the Madison of the Philippines. From the brilliant mind and the Ciceronean prose of President Recto came forth a most penetrating analysis of the constitution that was born from that august assembly. In that speech he enumerated what he calls the dogmas of the constitution.

THE SPIRIT OF THE CONSTITUTION

Four years ago, on an occasion similar to this, Senator Recto referred to the spirit of the constitution in this vein:

"The war destroyed the original of the constitution, and we are free from any confusion between the historic document itself, as a treasured possession, and the infinitely more precious spirit which it once embodied. It is only the spirit of the great charter over which we must stand guard, to preserve its purity and integrity."

ISSUES IN THE CONSTITUTIONAL CONVENTION IN WHICH I WAS INTERESTED

In our deliberations during the constitutional convention, many of us, including myself, were very much concerned with the letter and particular provisions or omissions in the constitution. In my particular case, I wanted to insure the constitutionality of the movements initiated in that august body, which we then called the nationalization of the retail trade and the nationalization of labor. I wanted to rewrite the bill of rights and clarify the provisions guaranteeing the due process of laws and the equal protection of the laws, and to incorporate in the bill of rights two provisions, one against confiscatory taxes and another against retroactive tax laws. I fought for the creation of the Committee on Accounts in Congress, to be composed by a majority of members of the opposition party; for the appointment of the Auditor General by the National Assembly, and not by the President, to make the Auditor General the eyes of Congress, to see to it that the budget and appropriation laws would not be violated by the Executive; and for the principle that the habeas corpus cannot be suspended by the President without the concurrence of Congress. These were some of the issues that I fought for in the constitutional convention. The proposed provisions against retroactive tax laws was approved by the convention only to have it unceremoniously eliminated by the so-called committee on style. The proposal for the nationalization of the retail trade met with the concurrence of a great majority of the delegates but received the strong opposition of President Quezon, and we had to be satisfied with a resolution expressing the sentiment of the convention. I supported those who led the fight for a presidential term of 6 years without reelection, a provision which was incorporated in the original draft of the constitution but which was abrogated 5 years later under the spell of the leadership of President Quezon. Tonight I am referring, in a passing manner, to the principles I stood for in the constitutional convention which were lost or not completely won either in the first skirmishes or in later stages. I shall not tire you with an enumeration of the principles or the provisions I fought for or supported, which found their way into the constitution.

THE SPIRIT OF THE CONSTITUTION WAS NOT AN ISSUE IN THE CONSTITUTIONAL CONVENTION

But as I was preparing this speech and pondering on the work of the constitutional convention, I came to realize that most of the issues that were fought within the walls of that convention had reference to the letter of the constitution, and that there was less controversy on the main doctrines that form the spirit of the constitution. And now after the passing of 22 years, I feel more concerned over the spirit of the constitution, and the spirit of its implementation than many of its particular provisions. For, as a great English historian has pointed out, "it is the spirit in which a constitution is in practice administered, that is the great point of consequence, far more than the letter of the law."

THE THREAT OF A WORLD NUCLEAR WAR

Within the short compass of an after-dinner speech, the broad subject of the spirit of the constitution cannot be fully developed. I shall only attempt, therefore, to interpret that spirit against the background of some of the recent national events—the President's prayer in the National Eucharistic Congress, the various nationalistic movements, the unprecedented flood in Mindanao, the persistent unemployment problem, and the Philippines' demands for a revision of our bases agreement with America. And towering over all these problems and issues and intimately connected with them is the present threat of a world nuclear war. The atomic age has brought new unprecedented dangers to humanity. And a world crisis has developed bringing new fears and responsibilities to democratic world leaders. And we may ask ourselves: How can the spirit of our constitution place the Philippines in the active service of world peace?

THE CONSTITUTION AS AN ARMOR OF STRENGTH FOR THE NATION

We must first of all realize with President Recto, that our constitution, or any constitution for that matter, is not the open sesame to all the promised treasures of a republican regime, nor a magic formula which by mere fiat will restore youth and vigor to a decrepit polity, and that it can only attain validity and dynamism with popular consciousness, faith, and militancy. And I would like to add that this popular consciousness, faith, and militancy can best be propogated and strengthened through the spirit, rather than the letter of the constitution. Our Magna Carta can be made the armor of strength for the nation. It can be made the fountain of living waters for the Filipino soul of our people. And the spirit of our constitution, as the constitution itself, would be as enduring, as it can be made an effective instrument to imprint the Filipino soul with the two main characteristics:

1. The belief in God, and a fear of God as the only fear.

2. The belief in, and the practice of, the brotherhood of man.

These two main beliefs, first of all, are rooted and stem from the great commandments of the Lord and, fortunately, these two beliefs constitute the basic spirit of our constitution.

THE SUPREMACY OF GOD OVER THE STATE

The fathers of our nation, conscious that our people believe in God, ordained and promulgated the constitution by imploring the aid of divine providence, in the name of the Filipino people.

It is true that the constitution ordains that no law shall be made respecting an establishment of religion, or prohibiting the free exercise thereof; that no religious test shall be required for the exercise of civil or political rights; and that no public money or property shall be used to support any church or minister except when working in the Armed Forces, penal institutions, orphanages, or leprosalia. These are the three inhibitions in our constitution embodying the doctrine of the separation of church and state. But, as against these provisions in the negative, the constitution, on the other hand, ordains positively that the free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever be allowed, and that optional religious instruction shall be maintained in the public schools as now authorized by law.

Therefore, I am confident that I express the sentiments of my colleagues in the constitutional convention when I say that, although we meant to keep separate the church from the state and vice versa, it was our desire to acknowledge the supremacy of God over the state. The doctrine of the separation of church and state should not be interpreted as involving the separation of state from God. This interpretation has found expression in the preamble of our constitution and in many traditions and practices of our own Government as well as of the American Government, from which we have patterned our own. Thus, from time immemorial, Protestant ministers open the sessions of the American Congress with a prayer to the Almighty. And every year, the President of the United States and the President of the Philippines, by official proclamation, dedicate one day to thanksgiving to the Almighty.

Our own constitutional convention began with an invocation by a Catholic bishop, and many of our official acts usually start with similar invocations. We, therefore, expect our President and public officials to pray in private and in public and officially to God. In such actions, we find moral strength for our nation and people, for ultimately it is only God that can save our country from foreign invasion and the world from a third planetary atomic war.

A PRAYERFUL PRESIDENT AND THE DOCTRINE OF THE SEPARATION OF CHURCH AND STATE

I, therefore, venture to say that it is not only the right of the President, but also his duty to pray for his people and the nation, and he must pray in conformity with his conscience, belief, and religion, in private and public. Let us not confuse speaking for and praying for. The President cannot speak for all the Filipino people, but he can pray for all of them. An undue significance was given to the word "consecration" used in a prayer of the President as tantamount to committing the Filipino people and the nation to the Catholic faith. But consecration is the word for spiritual dedication, and it has no greater significance than a prayer of loyalty to God. In the immortal speech of President Lincoln at Gettysburg, he used the word "dedicate" five times, and the synonymous word "consecrate" twice and we all remember the ringing thought: "But in a larger sense we cannot dedicate, we cannot consecrate, we cannot hallow this ground."

In Gettysburg then, the President of the United States dedicated and consecrated a portion of a great battlefield "as a final resting place of those who gave their lives that the Nation might live."

In Manila, another President expressed a desire to consecrate "our beloved native land" not to the dead but to the Lord of Lords.

Similarly, in Gettysburg, the American President was certainly not speaking in a private capacity. He was speaking as the President of his country, at least in a semi-official capacity.

To deny the President that right would be in violation to the free exercise of religious profession and worship. His right to pray as a President is as sacred as his right to pray as a private citizen. A prayerful President does not violate the doctrine of separation of church and state. Our President as such, be he a Catholic, Protestant, Aglipayan, Iglesia ni Cristo, or Moslem, should pray in public in conformity with his belief and his conscience, and so long as there is in law and in practice religious freedom, the doctrine of separation of church and state is not violated.

The High Hells Canyon Dam Project

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. COLLIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to discuss briefly S. 555, the high Hells Canyon Dam project, which last week was passed by the other body and which the House Committee on Interior and Insular Affairs will be asked to vote on shortly.

The bald fact is that high Hells Canyon Dam will cost the American taxpayers $500 million. The dam has the

sole admitted purpose of supplying cheap Federal power to individuals and industries of the Pacific Northwest, which may be an admirable purpose if you live in that pleasant area.

I represent the people of the 10th District of Illinois and I have to ask myself: What benefit do we get from high Hells Canyon Dam? The only answer is: Absolutely none at all.

Then I must ask myself, What does high Hells Canyon cost the people of Illinois? We in Illinois paid last year 8.1 percent of all Federal income taxes. In other words, we would pay 8.1 percent of the cost of Hells Canyon, or, roughly, $39 million. That is $39 million going out for which we get nothing in return.

Mr. Speaker, when I return to my home in Illinois and face my constituents who have paid the electric light bills of the people of the Pacific Northwest, how am I to answer their questions?

I would like to suggest, too, to the Members from such States as New York, which would pay 17.1 percent of Hells Canyon's cost, and Pennsylvania which would pay 7.5 percent of the cost of this proposed project that they ask themselves the same questions before they vote in favor of this half-billion-dollar raid on the Federal Treasury.

Small Business Act

SPEECH
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7963) to amend the Small Business Act, as amended.

Mr. RHODES of Arizona. Mr. Chairman, if I may have the attention of the gentleman from New York [Mr. MULTER] I would like to ask him a question about a situation which has occurred in my State and in my area. I have had any number of businessmen who have applied for loans from the Small Business Administration complain that they could get a loan if they had security and they could get a loan if it was a loan which was certain to be repaid.

I note in this bill on page 13, subsection (1) says:

No financial assistance shall be extended pursuant to this subsection unless the financial assistance applied for is not otherwise available on reasonable terms.

I note also on page 16, subsection 7 states:

All loans made under this subsection shall be of such sound value or so secured as reasonably to assure repayment.

Now I ask the gentleman from New York if these two sections are not, for all practical purposes, contradictory in terms. In other words, if you have a loan which is of such a sound value as to be reasonably sure of repayment, or one which is secure, can you not in almost all cases get a loan from some other source and therefore be ineligible to receive a Small Business Administration loan?

Mr. MULTER. No, they are not inconsistent, for this reason. There are many instances where a bank, particularly in a small community, cannot loan as much as $50,000 to any one borrower. In those instances the borrower would be precluded from getting a loan in his own area. There are other instances in many other States where the banking authorities frown on long-term loans. They will not permit a loan to go beyond 2 or 3 years as a maximum on these business loans. You will find many small businesses that will need a loan and cannot possibly repay it in 1, 2, or 3 years. It is in the nature of a capital loan. It is for machinery that will never be able to be paid for within 1 or 2 or 3 years, but can be amortized only out of earnings in a period of 5, 6, or 10 years. They could not qualify as far as the local bank is concerned, to get the loan, but they can qualify under this program.

I will say to the gentleman that we, the committee, believe that the agency has been a little too stringent, too strict, in the way it has revised some of these loans. We tried not to put ourselves in the position of the lending officer. That is a judgment that will have to be exercised by the agency. But within the criteria that we have laid down, the standards set down in the statute, we think the agency has been a little too strict in making some of these loans. That was one of the points I was making as my time ran out. They are going way beyond what we intended. That language in the statute comes out of the old RFC Act.

Mr. RHODES of Arizona. I thank the gentleman from New York.

Mr. Chairman, I am in hopes that the Small Business Administration will be a little less stringent because of the remarks of the gentleman, and the other expressions of the intent of the House made on the floor today. There is a great need for risk capital and for money which can be borrowed for expansion of business.

I want to congratulate the committee on bringing this bill out. I certainly intend to vote for it.

Full Rights and Protection Urged for Members of United States Armed Forces Wherever Stationed

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram received from the Pennsylvania Department of Sons of Union Veterans of the Civil War:

WILKES-BARRE, PA., *June 26, 1957.*
Congressman DANIEL FLOOD,
House Office Building,
Washington, D. C.:

The 77th annual encampment of the Pennsylvania Department, Sons of Union Veterans of the Civil War, unanimously adopted a resolution urging that William S. Girard and all members of the United States Armed Forces, wherever they may be stationed through the world, be entitled to the full rights and protection afforded an American citizen by the Constitution, and we appeal to you to use your influence to this end.

CHESTER S. SHRIVER.

Farm Price Supports

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. BERRY. Mr. Speaker, throughout this session of Congress I have listened to the Democrats lay the lash to Mr. Benson for not establishing support levels on various crops at 90 percent of parity. They contend that since he has the authority to establish the support price at that level, that he is obligated to do so.

During the past week I have listened to a number from that side of the aisle demand Mr. Benson's resignation, stating that the wheat referendum demonstrated a complete denunciation by the wheat farmers of America of Mr. Benson and his policies.

It is interesting to note that even in South Dakota, which according to the unofficial returns of the wheat referendum, gave the second largest percentage endorsement in the Nation, less than 30 percent of the eligible wheat farmers participated in the referendum.

According to unofficial returns 13,589 votes were cast out of an estimated 44,500 eligible. In 1957, 19,084 voted out of the same estimated eligible. In 1956, 20,243 voted out of an eligible list of 44,000. In 1955, 14,486 voted out of 44,000, and in 1954, 23,486 voted out of 44,000 eligible.

Nationally, the unofficial returns show that only 172,166 persons voted in the 1957 referendum, as compared with 447,757 in 1954. One is prone to wonder why many eligible wheat farmers neglected to vote in the 1957 referendum. Possibly it is because a majority are not satisfied with any of these programs, and feel that the wheat-production industry would be much better off with a program geared to the betterment of the wheat industry, rather than an overall support program.

Personally, I believe that what wheat farmers want and what wheat farmers need is a program for milling wheat. Instead of the vote being a denunciation of Benson, it may have been a lack of interest in the choice the wheat farmer had to make, as demonstrated by the fact that only a little more than one-third of those voting in 1954 voted in 1957.

Let me point out, Mr. Speaker, that the Democrats are in complete control

of every committee in both the House and the Senate. Let me point out that the leadership is completely in the control of the Democratic Party, and they can pass any bill in this Congress they wish to pass. The Secretary of Agriculture is only an arm of the administrative branch of Government, and administers the laws passed by the Congress. If the Democratic Party really wants a program of farm supports at 90 percent of parity, they can pass a law providing supports at that level, and the Secretary of Agriculture has no alternative except to put that law into effect.

The Secretary of Agriculture is actually an agent of the Congress. Mr. Speaker, I demand that this Congress patch together its bankrupt farm leadership, assume the responsibility that is theirs, and pass legislation which does what they claim they want instead of rocking restfully in the shade of the Department of Agriculture, screaming "resignation" at the Secretary.

Unrealistic Taxes Stifle Small Business Research

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. BAUMHART. Mr. Speaker, the Congress has long recognized the importance of preserving small business in our economy by enacting antitrust laws, by earmarking certain Government contracts for small firms, and by providing financial assistance to firms unable to secure funds from conventional loan sources at reasonable interest rates.

In voting this week to extend the life of the Small Business Administration and its helpful programs (H. R. 7963), we again demonstrated our concern for the small-business man and our willingness to provide assistance to him.

This is all to our credit, but there is no mistaking the fact that the Congress has failed to come to grips with basic impediments and burdens which our tax laws have thrust upon defenseless small businesses. As now constituted, our corporate and personal income tax laws combine to strike the small-business man twice and prevent him from realizing the growth potential of his business.

All too often, therefore, our small businesses remain stunted and undernourished, eking out a marginal existence. They become easy prey for even the slightest drop in the level of business. Our national economy is surely the loser when ingenuity, skill, and ambition are thwarted by unrealistic tax policies.

Remedial action is urgently overdue. Such relief would be provided by my bill, H. R. 6184, and by other bills introduced by my distinguished Republican colleagues who serve on the House Select Committee To Conduct a Study and Investigation of the Problems of Small Business. These bills incorporate recommendations of the President's Cabinet Committee on Small Business, along with proposals made by leading tax experts.

Research—the constant striving for improved products and wider distribution—is the nourishing lifeblood of business, large or small. There is no status quo in business; one must grow or die. But our present tax laws conspire to keep the small-business man from pursuing vital research and thereby tend to make him increasingly reliant on artificial aids and stimuli from the Federal Government.

In this connection I would like to insert in the RECORD excerpts from a study entitled "Research for the Small Business" appearing in the Corporate Director, volume VI, No. 16, May 1957, published by the American Institute of Management. This material derives in large part from Research and Development in the Corporation, the fifth volume in a series analyzing the 10 functional categories of management appraisal developed by the institute.

"Small business," as used in the AIM material, refers in manufacturing to a company whose annual sales volume is under $5 million, whose net worth is under $1 million, and whose earnings are under $100,000. In retail and service trades, a business is considered small if its sales are under $1 million.

By "research" the study means management efforts to develop new products, processes, or equipment; to improve existing products, processes, or equipment, its own or those of competitors; to develop new uses or new markets for its products; to lower the costs of production and maintenance; to salvage materials.

The excerpts follow:

Despite all the evidence of its value, small business generally ignores research. Only about 10 percent of this country's small manufacturers have their own research facilities; only about 20 percent support real research in any way at all.

The chief executives of many small companies believe that research, because of its cost, is a function of big business. The widely publicized, elaborate research facilities of the large corporations confirm this impression for them. They see other deterrents too. Research returns are slow—it may be a decade before a research idea begins to pay for itself. The idea may never pay off. As one small business head puts it, "Big business can bury a mistake. In a small company, one mistake may bury the business."

But despite these arguments, it can be shown that research should be a continuing function of the very business process itself. Research is essential for growth in any competitive field. And the small competitor is in no way excluded from research; in fact, in several ways it has advantages over the large corporation. The small firm has a flexibility lost in bigness. It can capitalize quickly on a development for a limited market, while its large competitor must consider his national market and large scale production process. And, research can be less costly than many businessmen believe.

HOW MUCH WILL IT COST?

In concrete terms, how much must management spend to support a formal research department? Naturally, this figure cannot be fixed rigidly, but these points can serve as guides:

About 50 to 60 percent of an annual research allotment is spent for salaries.

The average salary of a research scientist today is between $8,000 and $9,000, and each scientist must be supported by one other employee (laboratory worker, technician, librarian, stenographer, etc.) whose salary is about half that of the researcher's.

It costs at least $10,000 to equip each scientist to carry out his work—although in specialized fields this figure can be much higher. Added to that figure would be the initial investment in a research building or facility.

A research team of, say, 5 scientists and other personnel would therefore need a budget of about $100,000 to $140,000 per year, plus the initial cost of building and a minimum of $50,000 for equipment. A company can spend less, of course—down to the cost of supporting a single researcher. But the practical minimum is not much below a budgeted $120,000 a year. One research consultant advises: "If a company can't spend at least $100,000 a year for 5 years, it can't afford its own research department."

* * * * *

WHY COMPANIES GO OUTSIDE

Many excellently managed companies use outside research organizations to obtain the services of specialized personnel and equipment not in the company's research department and not likely to be needed there regularly or permanently. Some companies use outside research to assure research objectivity and a fresh research attitude. Or they may want to avoid imbalance in their research department—too many projects in one field of science. In any event, these corporations have various valid reasons for using outside research facilities. Many of the best managed companies have used them regularly and profitably for decades.

Smaller companies can gain these and other advantages from outside research. They can avoid prohibitive investment in equipment, gain the services of personnel they could not attract on any permanent basis, and let their research expenditures expand or contract as profits permit.

* * * * *

The cost of outside research is, naturally, important to the small company considering it. Consistent with their nonprofit status, most of the research institutes try to conduct all programs at the lowest possible cost. Like company research, though, costs can vary greatly. They can mount quickly if expensive special equipment is needed or if extensive travel is required. However, the cost of an average project can be estimated roughly. A project that requires full-time work by two men—a professional scientist or engineer and a laboratory technician—will cost about $2,000 to $2,500 per month. At some foundations, projects can be set up on a fractional basis—employing the part-time services of one scientist, if the work can be effectively prosecuted in this way.

ANOTHER VIEW OF COSTS

The projects actually in progress at one of the large research institutes provide another view of research costs. Southwest Research Institute gives these figures on the costs of sponsored research there:

"About one-sixth of our projects amount to less than $1,000 in total cost. About one-third range from $1,000 to $5,000. Another one-third cost $5,000–$7,500, and the remaining sixth go all the way up to one project, for example, which amounts to over $500,000 per year."

Obviously not even the very small corporation is excluded from research if projects can be pursued for only a few thousand dollars. There is probably no excuse for any company, regardless of its ability to maintain its own research department, to fail to avail itself of some research effort through the superbly conducted independent research facilities which exist primarily to meet its needs.

Nontechnical research too can be pursued the same way. Several of the major research foundations—Stanford Research Institute is probably preeminent in this—do extensive economic research for business.

• • • • •

ELEVEN RESEARCH PROJECTS

A medium-sized firm in the chemical equipment business placed 11 projects with 1 research foundation during the past 5 years. Their cost, progress, and variety are related here by the research foundation:

Project 1: Investigate the possibility of developing a new chemical equipment device. Had it been done? Would it be possible? How could it best be developed? The answer: The possibilities looked good. The device was new; itt might be commercially practical. The foundation's report outlined an approach for developing the device.

Project 2: Review and analyze possible new products. This continuing project is still in existence; the foundation periodically reports its review.

Project 3: Develop a new method of solving the gum problem in gas absorpttion units. Result: A patentable invention which has already proved profitable.

These 3 projects each cost from $2,000 to $5,000.

Project 4: Make a pilot plant study of an absorption-type gas drier. Cost: $6,000. Result: An improved process netting the company a pretax profit of $150,000 per year.

Project 5: Investigate a possible new device. Result: Negative, project abandoned. Cost: $1,800 (of an allotted $5,000).

Project 6: Analyze the possibilities in a new device for the oil industry. Result: The device was possible, but uneconomical and certainly not feasible commercially. Cost: $2,500.

Project 7: Develop a new type of industrial gas refrigeration process. Results: A successful invention, carried through the pilot plant stage and proved to be commercially practical. Patent application made. Cost: $35,000. Since this product has not yet been marketed, the profit from this research cannot be determined.

Project 8: Analyze the low-temperature limits of a chemical process. Results: Successful. Cost: $1,500.

Project 9: Develop the chemical equipment device first investigated by the foundation (project 1). Results: Successful. Patent application has been made. Profit potential is estimated to be over $200,000 per year.

Project 10: Develop a gas-desulfurizer for use by a large customer of the sponsoring company. Results: Successful, but the development was designed specifically for the single customer. Cost: $5,000, underwritten by the sponsor.

Project 11: Evaluate an invention on which the company had obtained an option. Results: A report advising against buying the device. Cost: $3,200.

The AIM study should be required reading for every small businessman. It makes a strong case for research and points out many ways that the small business can embark on a research program within its own organization or through outside research facilities.

It has been my own experience, however, that many—if not most—small-business men fully recognize that research is indispensable and are earmarking every possible dollar for this vital business function. The rub lies in the fact that—after taxes—there just are not enough dollars available to small-business men, no matter how research-minded they may be.

As the AIM study points out, "research can be less costly than many businessmen believe." But when increased cost of labor and materials trims profits; when these profits are in turn trimmed to the bone by taxes, and when the small-business man himself is forced to pay taxes on his own paltry share of these profits—it is obvious that the best-laid plans for research must all too often be deferred, if not scrapped. Little wonder, then, that a small businessman finds himself on a treadmill—unable to plow back earnings, incapable of attracting fresh investment capital, thwarted in his efforts to achieve the full potential of his product or his market.

As I see it, a revamping of our tax laws as they affect the small-business man can do more than anything else at this time to emancipate him from his treadmill. Praiseworthy as our other efforts may be to help him, they are attacking his symptoms rather than the source of his malady.

H. R. 6184 has been devised to provide for growth, expansion, and modernization for small and independent business enterprises engaged in trade or commerce.

It would amend the Internal Revenue Code to provide an election for filing income tax returns for small and independent businesses engaged in trade or commerce whether or not such businesses operate as individuals, partnerships or corporations, and to provide a normal tax rate of 20 percent for taxable years after March 31, 1957, and to increase the surtax exemption.

In addition, the bill would allow credits for losses incurred through investment or loans, and authorize a growth, expansion and modernization exemption on net taxable earnings.

Rapid amortization of property utilized for the production of profit would be granted to small and independent businesses engaged in trade or commerce. Small business could also claim an exemption for good will in the determination of the value of an estate.

By enacting such a realistic, far-reaching tax program I am confident that we can launch a significant breakthrough in the small-business segment of our economy, without penalizing or discriminating against other groups. If we believe in the philosophy that it is better to help someone help himself than it is to put him on the dole, we should pay more than lipservice to it by giving the small-business man the tax incentive and break he both needs and deserves.

Retirement Annuity Increases

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. SHELLEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the statement which I presented to the Pfost subcommittee of the Committee on Post Office and Civil Service today. The subcommittee is considering legislation to provide a much needed increase in annuities for civil-service employees who retired before October 1, 1956. Among the bills which they are considering is my bill, H. R. 4701. I sincerely hope that the committee will act without delay to approve such a measure so that the many retired employees of the Government and their families who are now undergoing severe hardship will receive badly needed help.

The statement follows:

STATEMENT BY HON. JOHN F. SHELLEY SUPPORTING INCREASED ANNUITIES FOR CIVIL SERVICE EMPLOYEES RETIRED PRIOR TO OCTOBER 1, 1956

Madam Chairman and members of the subcommittee, although in the interest of saving time in consideration of this much needed legislation I have not asked to appear before your subcommittee personally, I do appreciate the opportunity of submitting this statement in support of my bill, H. R. 4701, and of other measures to provide an increase in the annuities of civil-service retirees and their survivors.

It is unfortunate that when Public Law 854 was enacted last year, including Civil Service Retirement Act amendments, the annuity increases were limited to those who retired after October 1, 1956. Because of that limitation a great many people living on fixed civil-service retirement incomes were forced to continue a hand-to-mouth existence, and their situation has gone from bad to worse as the cost of living has continued its steady rise month by month. The token increase granted to them in 1955 did not even begin to absorb the living cost rise prior to that time and, as we all know, there has been no downward turn in the Consumer Price Index since. On the contrary it continues to inch upward, in spite of the administration's rosy statements from time to time about a leveling off with predictions of a downward trend.

I call attention to the fact that Public Law 854 of the 84th Congress contained a provision in section 406 stating it to be the policy of Congress that whenever general adjustments were made in the salaries of Government employees corresponding adjustments should be made in the annuities of retired employees. I submit that this does not mean that we should wait a year or two thereafter but that the increases in civil-service annuities should be made concurrently. Your committee has now begun consideration of employee pay increase legislation and it is apparent that, despite the opposition of the Eisenhower administration, this session of Congress will pass pay raise bills, thus calling the President's hand. Certainly, in line with the policy voiced in the 84th Congress, we should present to him at the same time a measure calling for a generous increase in retirement annuities.

I have in my files a large sheaf of letters from retired Government employees in my district telling me of the hard time they are having in trying to get along on their small annuities. I know that these are not exaggerations as I have come face to face with many of my constituents who are in similar situations, and it is a matter of commonsense that even a man living alone cannot live on $100 or $150 or even $200 a month which is the case with many of them, whereas those with a wife and other dependents to support have no chance at all unless they can find some other source of income. A man who has passed retirement age has little opportunity to find any sort of a job to supplement his annuity in this day and age. Many of them are simply not capable because of age or physical infirmities of holding down a money-making job of any kind. Others, willing and able to work, just can't get a job because of the age taboo which has grown up around us.

Under these circumstances we have no choice but to act to bring the level of annuity incomes up to a point where outright suffering can be avoided. A schedule of increases such as provided in H. R. 4 and my bill, H. R. 4701, is a minimum approach to a just solution of the problem.

The fundamental purpose of the civil-service retirement system is to insure that people who have given a lifetime of work to the Government and to the people of the United States will not be thrown on the streets or to the mercy of public assistance agencies or charities when their productive years have ended. There was a time when the annuities provided by the system were sufficient to permit a retired employee with maximum service to live in relative comfort, assuming that he had been provident enough to purchase a home during his working years. That time is long since past. Very few retired employees who were in the lower pay grades during their Government careers have the means to subsist now, when subsistence on their debased annuity income alone is not possible. Only this relative few whose family responsibilities were lighter or who found other means of supplementing their capital while still in the prime of life are free from want of one kind or another now. For the great majority the decreasing value of their annuity as the cost of living has increased means that they are faced with privation or with dependence on their children. This situation is certainly contrary to the intent of the retirement program, and is a cruel contrast to the promise of a protected old age held out by Congress in inducing participation in the program. The only way in which we can return to the basic principle and promise held out in establishing the system is to pass timely legislation to maintain the real income provided by annuities at a level consistent with the cost of living. The time to do that is now. Every day in which we delay is an additional day of hardship for civil service annuitants and their dependents and causes them to fall deeper and deeper into the hole of debt. Even those who may have some independent means are faced with the necessity for drawing on their meager savings until they are wiped out. We cannot in good conscience leave these people faced with such harsh alternatives.

The Civil Service Commission informs me that as of June 30, 1956, the latest date for which they have compiled figures, the average monthly annuity paid to beneficiaries of the retirement system was $133 per month. That average has increased somewhat as a result of Public Law 854, but the increase did not apply to the beneficiaries of the legislation we are now considering and only serves to make the position of those who retired before October 1 of last year relatively less favorable. At the same time the monthly benefit for survivors of deceased employees averaged only $50. Remembering that these are only average figures and that countless thousands are receiving less than that amount, it is completely clear that a very substantial increase is necessary to afford the absolute minimum needed to eke out a living for those in the less than average class.

It is for this reason that my bill and other similar bills set up a schedule calling for greater percentage increases for those whose annuities are less than $1,500 per year. However, on mature consideration it occurs to me that the schedule of increases set up in the Morrison bill and my bill might work an injustice on the groups whose annuities are now just above $1,500, in that others in the same retirement date class with annuities of slightly less than $1,500 might be jumped above them in total annuity by virtue of the 25 percent to 30 percent increase provided for the lower-income groups. Therefore, I propose that if the schedule in the Morrison bill is used as a basis for any increase granted, the flat 10-percent increase for annuities above $1,500 in the several retirement-date groups be revised to grant either the maximum increase granted for those with less than $1,500 annuity or 10 percent, whichever is greater. Thus, those with annuities of over $1,500 who retired between October 1, 1955, and October 1, 1956, would receive either $375 (25 percent of $1,500) or 10 percent of their total annuity, whichever is greater. Similarly, those who retired between August 20, 1920, and October 1, 1951, would receive an increase of either $450 (30 percent of $1,500) or 10 percent, whichever is greater. There would be similar minimum increases of 26, 27, 28, and 29 percent of $1,500 for those in the intervening retirement-date groups whose present annuity is in excess of $1,500. This proposed revision would prevent an inequitable adjustment of annuities just above or below $1,500 through which annuitants receiving lesser benefits now might wind up with a greater annuity than others now receiving a slightly higher payment.

I am prepared to support on the floor of the House any bill which emerges from your committee which provides for an adequate schedule of increases for civil-service annuitants and their survivors, provided that it does full justice to the urgent need. I know, for example, that there is a great deal of support for the Davis bill which calls for a different schedule of increases and does not specify the source of funds to be used in paying such increases. To me the imperative thing is that action be taken quickly, that the committee satisfy itself that the increases provided are reasonable and just and that the fiscal obligations are such as to assure payment on a sound basis.

It's a Nice Gift to Sioux Falls, but Why?

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. BERRY. Mr. Speaker, during the WPA days the Federal Government entered into a program of privy building. Under the guise of providing employment, anyone who furnished the material could have a nice, modern, well-ventilated privy constructed on his property.

Many of us thought this was the funniest thing we had ever heard of. We poked fun at this program, editorially, and otherwise.

Mr. Speaker, we were pikers in the WPA days. Today we are building sewer systems for everyone for whom we built privies back in the old horse-and-buggy WPA days.

Authorization for this grandiose privy program was slipped through Congress last year as an amendment to a bill which merely extended stream-pollution legislation. A stiff fight was had on the floor this session to block this privy appropriation, but the spenders won, and today every town and hamlet in the United States is rushing to Washington to get privy money for a new or expanded sewage system.

In the June 21, 1957, issue of the Sioux Falls (S. Dak.) Argus-Leader, appeared an editorial in which that newspaper asked why the Federal Government should be coming around offering their city $250,000 to assist in the expansion of their sewage system. Many other Americans are asking why? They want to know why the Federal Government with the staggering debt burden of $274 billion should be sending agents around offering money to debt-free, or comparatively debt-free cities, for local improvements.

Mr. Speaker, this question can only be answered by the spenders in Congress who constituted a majority in both Houses when the glorified privy appropriation was passed.

The Sioux Falls Argus-Leader editorial is as follows:

IT'S A NICE GIFT TO SIOUX FALLS, BUT WHY?

It's nice to know that the Federal Government is willing to provide $250,000 for the expansion of the sewage system in Sioux Falls. But we are at a loss, nevertheless, to understand just why it should.

Mind you, we are not criticizing local officials for asking for the money and we aren't suggesting that we be so high-hatted as not to accept it.

But Sioux Falls is quite able, financially and otherwise, to provide whatever sewage system it needs and there's no particular necessity for Uncle Sam to step in and assist us.

Yet the money has been appropriated and, as we pay our share and more of the various and many benefactions of Washington, it is proper to collect this minor return on our contributions.

The tendency to disburse aid of this type, however, is one reason why our Federal Government is so expensive and why it must collect so much money from the people.

And don't assume for one moment that South Dakotans are overlooked when the Federal tax collector makes his rounds. Actually we pay at least $100 million annually in Federal taxes, directly and indirectly. The total might be much greater than that, in fact, if we could obtain figures on what we pay in hidden taxes.

There are some Federal activities that are in a nature interstate or where large areas are involved. Developments in these frequently present difficulties from the viewpoint of local financing and in some instances Federal assistance is warranted. But no such argument is applicable to a local sewage system.

George H. Bender

EXTENSION OF REMARKS

OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. BURNS of Hawaii. Mr. Speaker, on June 10, 1957, the Honorable George H. Bender was appointed a Special Assistant to the Secretary of the Interior. A former Member of this House and a Member of the Senate, Senator Bender has served the people of the United States with energy, courage, and distinction. The people of Hawaii welcome him to his new duties and pledge him every possible cooperation. I include in the RECORD a concurrent resolution adopted by the 29th legislature of the Territory of Hawaii expressing the sup-

port and good wishes of the two houses of our legislature:

Senate Concurrent Resolution 5

Whereas the Honorable George H. Bender has been appointed to the position of Special Assistant to the Secretary of the Interior to work in the field of the economic development of the Territories with special emphasis on the pending statehood bills for Hawaii and Alaska; and

Whereas Mr. Bender through a long and distinguished career as a Member of the House of Representatives and the Senate of the United States has taken an active interest in the political and economic affairs of Hawaii and has indicated his support of statehood by word and by action in voting for statehood bills: Now, therefore, be it

Resolved by the Senate of the 29th Legislature of the Territory of Hawaii, in special session assembled (the House of Representatives concurring), That Mr. Bender be congratulated on this assignment of importance to Hawaii and the Nation, and that the two houses pledge their complete support to him in carrying out this assignment; and be it further

Resolved, That Mr. Bender be and he hereby is cordially invited to visit Hawaii as soon as his duties and responsibilities permit; and be it further

Resolved, That a certified copy of this concurrent resolution be transmitted to the Honorable George H. Bender, to the Honorable Fred A. Seaton, Secretary of the Interior, to the chairman of the House Committee on Interior and Insular Affairs and the Senate Committee on Interior and Insular Affairs and to the Delegate to the Congress from Hawaii.

THE SENATE OF THE TERRITORY OF HAWAII,
Honolulu, T. H., June 7, 1957.

We hereby certify that the foregoing concurrent resolution was this day adopted by the Senate of the 29th Legislature of the Territory of Hawaii, special session of 1957.

WILLIAM H. HEEN,
President of the Senate.
WILLIAM S. RICHARDSON,
Clerk of the Senate.

THE HOUSE OF REPRESENTATIVES OF THE TERRITORY OF HAWAII,
Honolulu, T. H., June 8, 1957.

We hereby certify that the foregoing concurrent resolution was this day adopted by the House of Representatives of the 29th Legislature of the Territory of Hawaii, special session of 1957.

O. VINCENT ESPOSITO,
Speaker, House of Representatives.
HERMAN T. F. LUM,
Clerk, House of Representatives.

Resolutions Adopted by the 37th Annual Conference of the Western Association of State Game and Fish Commissioners Held at Glenwood Springs, Colo., June 19, 1957

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. DOYLE. Mr. Speaker, I am pleased to present the text of a letter received by me dated June 25, 1957, from Mr. Seth Gordon, director, department of fish and game, of my native State of California, together with the resolutions adopted by the Western Association of State Game and Fish Commissioners, to which he refers in said letter to me.

No doubt the text and import will be interesting and informative to all readers thereof who are interested in these problems:

STATE OF CALIFORNIA,
DEPARTMENT OF FISH AND GAME,
Sacramento, Calif., June 25, 1957.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN DOYLE: Enclosed for your information is a copy of the resolutions adopted by the Western Association of State Game and Fish Commissioners during its 37th annual conference held at Glenwood Springs, Colo., June 19, 1957.

We are in accord with these views and trust you will cooperate to the best of your ability in effectuating the several recommendations.

Sincerely yours,

SETH GORDON,
Director.

RESOLUTIONS ADOPTED BY THE WESTERN ASSOCIATION OF STATE GAME AND FISH COMMISSIONERS, 37TH ANNUAL CONFERENCE, GLENWOOD SPRINGS, COLO., JUNE 19, 1957

RESOLUTION 1

Amendments to Coordination Act

Whereas the conservation and perpetuation of fish and wildlife are becoming critical because of the increasing utilization of lands and waters to meet the needs of our expanding human population; and

Whereas large sums of public money are being spent by State, Federal, and private agencies for the development of water resources; and

Whereas construction agencies, both Government and private, have been reluctant to consider ways and means to maintain or mitigate losses to fish and wildlife resources; and

Whereas many water-development projects can be planned and coordinated to benefit all the users of the resources, and

Whereas the amendments to the Coordination Act of 1946 (commonly called Public Law 732) as proposed by the Department of the Interior and endorsed by the 48 States, will provide for mitigation and consideration of fish and wildlife values in all construction projects; and

Whereas it appears that there is an unnecessary delay in submitting these proposals to the Congress: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That the Bureau of the Budget be requested to expedite approval of this proposed legislation and submit it to the Congress with a recommendation for early action.

RESOLUTION 2

Maintenance of fish structures on Columbia River dams

Whereas the United States Government, through the Bureau of Reclamation and Corps of Engineers, has constructed more than 40 dams on the Columbia River watershed; and

Whereas an agreement has been entered into between the United States and the several States concerned in the Columbia Basin regarding the construction of fishways, salmon hatcheries, and other facilities to provide for the passage of fish, resulting in the completion of many of these projects and the planning of others; and

Whereas the maintenance of these structures will result in a continuing cost that has not been provided for in the original agreement; and

Whereas the several States concerned, through their legislatures, have petitioned the President and Congress of the United States to recognize the permanent maintenance of these structures as a Federal responsibility: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby urge the Congress of the United States to recognize the permanent maintenance and operation of these facilities as a Federal responsibility and to appropriate moneys for their continued operation and maintenance on a permanent basis.

RESOLUTION 3

Land withdrawals for Salmon River spawning areas

Whereas the perpetuation of the anadromous fish resources of the Snake River Basin generally and of the Salmon River particularly depend on the adequate passage of fish through the various dams constructed in this system, and vast sums of money have been expended to insure such fish passage; and

Whereas adequate provisions are needed not only for fish passage, but also for the protection of the natural spawining areas in the headwaters of the Salmon River: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners goes on record as continuing to endorse the request of the United States Fish and Wildlife Service for withdrawal of some 33,000 acres of public lands along the headwaters of the Salmon River from all forms of entry, including the mining laws, but not including the mineral leasing laws; and be it further

Resolved, That the association does hereby request the Secretary of the Interior to take prompt action to issue a public land order to set aside these lands for the preservation of these spawning grounds in their natural state.

RESOLUTION 4

Disposal of radioactive wastes

Whereas the increasing use of radioactive materials has created a disposal problem which may in the future affect all marine resources and seaside communities; and

Whereas radioactive materials once disposed of into marine waters cannot be retrieved; and

Whereas ocean disposal of these materials has resulted in concern on the part of public officials and consumers as to safeness of ocean products as human foods; and

Whereas this concern itself may result in irreparable damage to the fishing industry: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners recommends to all public agencies concerned that radioactive wastes be disposed of in appropriate underground depositories.

RESOLUTION 5

Recognition of water for wildlife and recreation as a beneficial use

Whereas wildlife and recreation are recognized as one of the most important of the economic resources in our Nation today; and

Whereas the recognition of water for these purposes as a beneficial use is essential in the maintenance and development of these resources; and

Whereas other economic developments are constantly encroaching on our natural stream flows and recreation opportunities; and

Whereas with an ever-increasing human population and demand for expanded recreational facilities: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commssioners, That each individual State legislature give serious consideration to the adoption of adequate State water laws to provide for the recognition of the beneficial use of water for wildlife and recreational purposes in order that all of our natural resources may be developed equally.

RESOLUTION 6

Topock Marsh rehabilitation

Whereas the 40 mile stretch of the Colorado River from north of Needles to south of Topock, which has been channelized by the Bureau of Reclamation, or is programed for channelization within the next year, historically included thousands of acres of ideal waterfowl habitat; and

Whereas commitments prior to 1946 provided for the retention of Topock Marsh to mitigate the loss of waterfowl habitat in the Needless-Topock area, and since then continued opposition by the Bureau of Reclamation to the maintenance of this area as a waterfowl wintering and resting ground has resulted in a continued reduction in Fish and Wildlife Service plans while channelization has continued to eliminate more and more historical waterfowl habitat; and

Whereas provisions under the Boulder Canyon Act permit the United States Government to take water from the Colorado River for its lands according to legal counsel, and such diversions shall not be chargeable either to Arizona or California as individual States; and

Whereas the future of the intermountain flight of the Canada goose is in jeopardy; and

Whereas the Department of Interior has not taken definite steps to correct this situation: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners urges the Secretary of the Interior to order the diversion of water to permit a flow of 20,000 acre-feet through the Topock area, not more than 4,500 acre-feet of which will be for consumptive use, and that a determination of the amount of water necessary for the future maintenance of Topock Marsh be made; and be it further

Resolved, That the Secretary should order a study made immediately of the minimum amount of water that must be permitted to flow through this area to maintain wildlife values.

RESOLUTION 7

Soil Bank Act

Whereas the Soil Bank Act of 1955, through its conservation reserve program, has a great potential in the field of preservation and restoration of sorely needed habitat for fish and wildlife; and

Whereas the early experience on the part of the several State game departments with this program has led to frustration and an apparent lack of fulfillment of the purposes of the program; and

Whereas the Federal regulations dealing with the conservation reserve program appear to be partially responsible for the program not living up to its expectations: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That the Secretary of Agriculture modify existing regulations governing the conservation reserve program of the Agricultural Act of 1956 as follows:

1. Provide that wet lands be made eligible for conservation reserve payments, irrespective of past crop history.

2. Provide that wildlife practices be entitled to 80 percent Federal cost-share based upon the average cost of establishing the practice as specified by the State administrative committee.

3. Provide that the contract period for establishing woody plantings under practice G–1 be from 5 to 15 years and that the contract period for G–1 herbaceous practices be for a period of from 5 to 10 years as it is in respect to A–2 practices at the election of the landowner.

4. Provide that the respective game and fish departments be offered contracts under which such departments would be reimbursed for establishing wildlife habitat as provided by G–1, G–2, and G–3 of the regulations, and that they be reimbursed for such services; and be it further

Resolved, That a committee be appointed by the president of the Western Association of State Game and Fish Commissioners to work with a like committee of the International Association of State Game, Fish, and Conservation Commissioners to procure the above-listed changes.

RESOLUTION 8

Public access for recreational use on and around reservoir impoundments

Whereas Federal laws now provide that under certain conditions Federal agencies mitted to issue special use permits to private individuals for the construction of dams for the purpose of impounding water; and

Whereas it is recognized that said special use permits allow development of our agricultural lands and provide for the highest use of said land; and

Whereas public access for recreational purposes does not interfere with the primary purpose for which the special use permit was granted; and

Whereas said lands belong to all the public rather than a few individuals: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That the Bureau of Land Management and other Federal agencies authorized to issue said permits be requested to include, at the time of granting, a provision stipulating the right of public access for wildlife and recreational purposes.

RESOLUTION 9

Hunting and fishing on military lands

Whereas there has been insufficient cooperation between the military authorities and State game and fish departments relative to the management and harvest of game and fish on military reservations and on other public lands proposed for military use; and

Whereas the Defense Department is continually requesting large withdrawals of public lands for the exclusive use of the Armed Forces; and

Whereas requests have been made to take over national wildlife refugees and other lands having public recreational values for exclusive military use: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That Congress speedily enact legislation as follows:

1. That State game and fish laws, rules and regulations on game and fish, including game and fish management responsibilities, apply to all federally owned or controlled lands except national parks and Indian treaty lands.

2. That all military personnel be required by law to observe State game and fish laws, and further, to allow State enforcement agents, after proper security clearance, to enter military reservations for the purpose of enforcing such laws and managing and harvesting the game thereon.

3. That congressional approval be required for all military withdrawals sought by the Defense Department which are over 5,000 acres in size.

4. That the United States Senate be urged to give immediate consideration to H. R. 5538 (Engle) which includes the above-mentioned objectives, and would preclude further unnecessary encroachment by the Armed Forces on the wildlife resources of the Nation.

RESOLUTION 10

Public ownership of reservoir sites and surrounding lands

Whereas the policy of taking flowage easements rather than outright title to reservoir sites and surrounding shorelands, adopted in August 1953 by the Corps of Engineers and the United States Bureau of Reclamation, has resulted in an almost complete loss to the general public of highly valuable and irreplaceable recreational areas; and

Whereas under the policy followed prior to August 1953 such shorelands and access areas to these lands were often licensed to the various State game departments, resulting in a high and permanent public use of these areas; and

Whereas the Chudoff committee in Congress and other groups are in the process of conducting hearings for the purpose of evaluating these policies: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does strongly urge that the present flowage easement policy be terminated in the general public interest, and that there be substituted for it the former policy of taking absolute legal title to reservoir sites and surrounding shorelands in order that their use may be permanently assured to the general public.

RESOLUTION 11

Increased funds for wet lands acquisition and management

Whereas there is urgent need for the preservation of the remaining wet lands of the United States in order to provide adequate breeding and wintering grounds for the continental population of waterfowl; and

Whereas there is urgent need for public funds for the acquisition and leasing by the United States Fish and Wildlife Service of the majority of the 8 million acres of wet lands that are vital to this conservation effort, and funds are also needed for the development and maintenance of such areas; and

Whereas the migratory waterfowl hunters of the United States have contributed more than $50 million through the purchase of duck stamps to perpetuate migratory waterfowl; and

Whereas the duck stamp as a means of raising funds for the above-mentioned purposes was accepted by the American public with the pledge that the funds would be used primarily for wet land acquisition; and

Whereas Congress has failed to meet its obligation to the millions of people interested in the preservation of waterfowl; and

Whereas the waterfowl resources of the North American Continent are a public responsibility recognized by international treaty; and

Whereas it is recognized that land costs are much higher than they were a few years ago, requiring the outlay of considerably more money to accomplish the same objectives, which, coupled with a corresponding increase in other governmental costs, has rendered the present $2 duck stamp inadequate: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners goes on record approving a $1 increase in the duck stamp to aid the above objectives, with the definite understanding that (1) the entire income from duck stamps will be matched by appropriations from general public funds, (2) that not less than 50 percent of such combined funds be allocated to the acquisition or leasing of wet-land areas for waterfowl management purposes, (3) that substantial areas in the so-called pothole country of the Prairie States be acquired or leased for nesting and feeding grounds, (4) that not more than 40 percent of said funds be available for administration, operation, management, and maintenance of said waterfowl management and wet-land areas, and (5) that the remainder be used for enforcement and distribution of stamps by the post office.

RESOLUTION 12

Reorganization of the United States Fish and Wildlife Service

Whereas in 1956 Public Law 1024 was enacted by the United States Congress reorganizing the United States Fish and Wildlife

Service of the Department of Interior and elevating the Service to sub-Cabinet level consistent with the importance of its resource responsibilities; and

Whereas Public Law 1024 continued the United States Fish and Wildlife Service as one coordinated entity and established a Bureau of Commercial Fisheries and a Bureau of Sports Fish and Wildlife within that Service; and

Whereas a complete separation of functions as now being established reflects a basic policy change in the fisheries management which is inconsistent with the long-established philosophy of coordinated effort, particularly at the field level, and previously insisted upon by the American people; and

Whereas it was not the intention of Congress to provide for a complete separation of activities between the Bureau of Commercial Fisheries and the Bureau of Sports Fish and Wildlife, such separation being only an administrative interpretation; and

Whereas this division of activities within the Service (1) will result in administrative confusion, internal conflict, and greater administrative costs, as is evidenced by the recent requests of the Service for substantial budget increases, and (2) will jeopardize the perpetuity and well-being of the Nation's fish and wildlife resources, both for commercial and for recreational uses: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners continues to oppose the establishment of two completely separate and autonomous bureaus dealing with the fisheries resource, and especially the separation of such activities at the field level; and be it further

Resolved, That the association urges Congress to deny funds for an administrative superstructure which is not only unworkable but needlessly costly, and to designate any increase of funds for a much broader and accelerated field program.

RESOLUTION 13

Recreational Resources Review

Whereas the Nation is faced with mushrooming populations, ever-expanding industry, more intensive utilization of all natural resources, each exacting an inexorable toll on the resources available for all types of public outdoor recreation; and

Whereas there is great need for making a comprehensive review of outdoor recreation resources and opportunities for the purpose of inventory and evaluation to determine the quantity and quality of these recreation resource opportunities which future generations will require and as a base for developing broad programs at all levels to meet these future needs; and

Whereas legislation embodying these objectives has been introduced in the Congress by a distinguished bipartisan group of Senators and Representatives: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners endorses the principles and objectives of the Outdoor Recreation Resources Review (the Anderson-Aspinall bills, S. 846, H. R. 3592, et al.) and urges enactment and implementation at an early date.

RESOLUTION 14

Operation outdoors

Whereas the United States Department of Agriculture, through the United States Forest Service, has developed a long-needed program identified as Operations Outdoors; and

Whereas part I of this program, concerning national-forests recreation aimed at solving the mounting problem of increased family outdoor activity, has been completed and is ready for implementation; and

Whereas part II will deal with improvement and management of wildlife habitat on the national forests in cooperation with the fish and game departments; and

Whereas both phases of these activities have long been needed and have been programed in a most thorough and systematic manner: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners commends most highly the United States Department of Agriculture for preparing the analyses and resulting plans dealing with the extremely important recreational and wildlife values of the national forests, and urges Congress to implement the program through appropriate financing.

RESOLUTION 15

Harvest of game on Federal refuges

Whereas the upland game birds and big game animals now located on Federal refuges belong to the States, and their proper management is the responsibility of the individual States; and

Whereas the establishment of refuges for the protection of one species prevents the harvest of other species for which such protection is not required; and

Whereas in most Federal refuges regulated harvests are needed in order to manage properly the game resources thereon; and

Whereas it is the opinion of the Western Association of State Game and Fish Commissioners that such game species, through lack of harvest, overutilize their range and are lost through malnutrition and old age; and

Whereas it now appears that the United States Fish and Wildlife Service has given serious consideration to proper management of Federal refuge areas, from the standpoint of an allowable harvest, in certain areas, but not in others: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby commend the United States Fish and Wildlife Service for its progressive attitude with reference to proper management of these refuges; and be it further

Resolved, That the Western Association of State Game and Fish Commissioners does hereby request the United States Fish and Wildlife Service to continue to give study, in cooperation with the States, looking toward the development of uniform cooperative harvest plans for their refuge system where such programs are not now in operation.

RESOLUTION 16

Commending Colorado hospitality

Whereas the 37th annual conference of the Western Association of State Game and Fish Commissioners, held at Glenwood Springs, Colo., has been an outstanding success in the furtherance of the conservation ideals of the Western United States and Canada; and

Whereas President Thomas Kimball, the Colorado Game and Fish Commission, and the Colorado Game and Fish Department have extended every effort to make this conference a success; and

Whereas the official hosts have been aided by the kind efforts of the Glenwood Springs Chamber of Commerce and the Glenwood Springs Sportsmen's Association: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby thank Thomas Kimball, the Colorado Game and Fish Commission, the Colorado Game and Fish Department, the Glenwood Springs Chamber of Commerce, and the Glenwood Springs Sportsmen's Association for a most enjoyable and profitable conference.

How Narrow the Line

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. JOHNSON. Mr. Speaker, dairymen are among the farmers in America who are doing their best to promote their own commodities through extensive promotional work in magazines, newspapers, radio, and television. Two editorials, among many published in the Ninth District of Wisconsin to celebrate June Dairy Month, help call attention to how narrow is the line between surplus and shortage when it comes to milk. On June 14 an editorial in the Cadott Sentinel said:

We are told that the future for dairying is bright. Our mushrooming population makes it inevitable. But right now, the existing market must be broadened if we are to keep the important dairy industry strong and healthy.

An extra sip of milk a day, experts say, by every man, woman, and child in the country, would tax our Nation's milk production capacity. If, instead of ranking 15th in per capita consumption of milk in the world, the United States was to rank 12th, we would have to import milk, temporarily at least.

So thin and yet so wide is the line dividing surplus from shortage in the dairy industry.

That editor publishes a special section filled with dairy recipes printed on butter yellow colored paper to encourage use of dairy products at home.

On June 12 the editor of the Rice Lake Chronotype admitted the multiplicity of special days, weeks, and months set aside for various purposes and proceeded to explain the importance of dairy month, with the following words:

JUNE IS DAIRY MONTH

What with all the days, weeks, and months set aside for various commercial, charitable, and other reasons, most people probably pay little attention to all the proclamations and other gimmicks used to draw attention to the special causes being pleaded at the moment.

During June, the Nation's dairy industry gets together to proclaim its virtues and to put on a special campaign to sell the products of the cow.

The cow is an animal that does deserve some special recognition from mankind, for no beast has given as much to man as the producer of our milk.

The cow is seldom pictured as a noble animal, an adjective we apply to the dog. She is more often described as a docile, contented animal who is responsible for little inspiration to poets, artists, and writers. She merely goes on eating grasses of the field, which we human beings cannot eat, and we pay little attention to her.

Since milk still holds the title of "nature's most nearly perfect food" and since most of us, especially adults, don't consume as much milk as we should, according to the nutritionists, there is probably good reason for us to cooperate with the cows and the dairy industry in celebrating June Dairy Month. Milk and its products have a great deal to offer in terms of pepping us all up after months of winter lethargy.

How some restaurants handle the question of serving milk with their meals is the subject of another editorial, the following in the June 27 issue of the Thorp Courier:

COOPERATING WITH DAIRY FARMER

The colorful poster on the restaurant wall proudly proclaimed: "June is dairy month—We are cooperating."

Fine.

On our return from Sparta this past weekend, we ordered our lunch from the menu—substituting milk for coffee.

Then came the bill. Sure enough. We were charged 5 cents extra for the milk.

Paying the bill, we glanced at the "We are cooperating" poster.

Who wouldn't want to cooperate with a program that would enable them to sell an 8-ounce glass of milk for 15 cents? That's $30 per hundred pounds.

Somebody was getting a lot bigger chunk out of the price of that glass of milk than was the farmer who produced it and paid for the June Dairy Month poster with his checkoff.

How did we get the 15-cent price? It's easy to figure. Coffee in most eating places now sells for 10 cents. Coffee comes with the meal.

Substitute milk, and you pay for the coffee and add 5 cents. Total, 15 cents.

To be fair, it must be noted that some restaurants do permit you to substitute milk for coffee without extra charge. But they're too few.

Fortunately, some folks like milk well enough to pay the price. But why put a price penalty on milk?

The Nation's dairy farmers are spending a lot of money—about $6 million—this year to push the sale of dairy products.

Dairy farmers provide free posters promoting the sale of milk and other dairy products served in restaurants. And dairy farmers are pushing the idea of "milk with your meal—coffee later," another help for restaurant operators.

Is it too much, then, to ask the restaurant operators near and in the big cities to sell milk for something less than 12 or 15 cents per glass, especially during June Dairy Month? Is it too much to ask that they put some meaning into the word "cooperate?"

Another pet peeve. We couldn't begin to count the number of times that we've had a waitress suggest coffee as a beverage. But, so help us, we can't recall a single waitress who suggested milk.

What do dairy farmers think of restaurant milk prices?

The fact is: Most of them haven't given the problem much attention. They're producers, not merchandisers.

Most dairy farmers feel that they're doing their part toward promoting sales of dairy products when they contribute through the year-round checkoff—1 cent per pound of butterfat during May and June, and one-half cent per pound of butterfat or 2 cents per 100 pounds of milk during the other 10 months.

Added to that, good dairy farmers eat most of their meals at home, close to the cows. Few of them have a chance to make their own surveys of restaurant milk prices.

And those who've spotted the problem find it rather baffling.

"I'll cuss all you want me to," says a Withee township farmer, "but I don't know what else to do about it."

Then he adds: "It's the same old story. They set the price on our products at both ends—to us and to the consumers."

Over in Reseburg township, a veteran dairyman feels about the same way.

"I've never been able to figure out why they charge more for milk when you substitute it, but most of them do," he said.

That's it. You can't tell a restaurant operator how to run his business—any more than you would let him tell you how to feed your cows.

"I don't know what we can do about it," a Thorp township farmer told us yesterday, "except to commend the ones that don't charge extra for milk."

Maybe that's the only answer. Maybe it's time for dairy farmers and June Dairy Month committees to do a little checking up in their own communities—find out how milk is being sold.

Then express appreciation to restaurant operators who really are cooperating in the dairy-promotion program.

Maybe the dairy farmer can do more than contribute to dairy product promotion through the checkoff.

What results might be expected if every dairy farmer were to go on a little crusade of his own during June—visit some restaurants, ask questions about milk prices, and make commendations where they are deserved?

Big Rain

EXPENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. H. CARL ANDERSEN. Mr. Speaker, in a story entitled "Big Rain," in the June 24 issue of the Midland Cooperator, published in Minneapolis, Gordon Mikkelson, one of its editors, has so graphically described the effects of the devastating flood in my district, that I want to commend it to the membership's serious consideration. Mr. Mikkelson's excellent job of reporting contains the following reference to the value of soil-conservation practices:

Midland Cooperator called on farmers and newspaper editors in the storm area for reports on what happened to terraces and diversion ditches and grass waterways. The answer—unanimous: Land that was under soil-conservation practices stood up. Crops are solid. Topsoil is still there. The contrast is very remarkable. Fields side by side show the difference.

Mr. Mikkelson's article follows:

BIG RAIN

(By Gordón Mikkelson)

Tiny rain drops, billions of them, flooded towns, killed crops, tore away millions of dollars of topsoil and brought death to six persons last week.

The drops plunged from low clouds in southwestern Minnesota onto nearly bare fields where small grains were just getting started.

They first spattered flecks of dirt away from tender roots. Then they bombed small craters under the plants.

On level ground the water gathered in big sheets because the earth could not soak it up as fast as it fell. On thousands upon thousands of acres of lower ground, the water drowned out crops.

It will be too late for most farmers to reseed, and short-maturing corn was hard to get. Soybeans and alfalfa are most likely as replacement crops.

On slopes of 2 to 3 percent, 2 or 3 feet of drop in each 100 feet of distance, the water dug small rills. It only trickled down them at first. After an hour it was gushing in tiny ribbons that carried away tons of fertile soil from each field.

When these rills joined, they formed small streams and ate new gullies. These drained the deluge into ditches along roadsides.

The road ditches filled quickly. Tons of water pressure built up in them against the road embankments.

As more rain continued Sunday evening, the ditches overflowed. Torrents of water under pressure poured across the roadways.

They tore out concrete and hardtop by undermining it.

Then the water was on its way to the main creeks and streams.

At culverts and bridges, the water choked the channels. It took out scores of small bridges and flowed over the flooring of some of the biggest ones.

By 9 p. m. most of the streams in the extreme southwestern Minnesota and adjoining South Dakota had topped their banks at spots. They ate away pastures and grainfields and poured trash and smothering silt over crops.

Marshall, Minn., became a national news center.

The Redwood River was pounding the town and within a day had flooded three-fourths of the city of 6,000. Rescue teams of civilian defense, National Guard, and Red Cross people came with boats, amphibious trucks and a helicopter.

By the weekend, official surveys placed the loss at $17 million in Minnesota. Officials said the final total would be greater when hidden effects came to light.

Governor Orville Freeman called an emergency meeting of the State executive council. It appropriated every penny in emergency funds to help townships, counties and cities restore bridges and other public works.

Senator EDWARD THYE, Republican, of Minnesota, introduced a bill in Congress for a $500,000 study of how to dig a ditch to send Redwood River around Marshall in future floods. The town is at the neck of a basin that is shaped like an hourglass. Drainage from the southwest passes through the narrow neck in the city.

The Minnesota and Mississippi Rivers will be rising all this week as the runoff heads for the Gulf of Mexico, still carrying silt and loam with it.

Weather Bureau forecasters barely had time to measure the downpour before they were tied up round the clock. A new rain came. Floods spread and warnings went out downstream.

The deluge was the greatest that white man has recorded in the area.

Joseph H. Strub, Jr., State climatologist at Minneapolis, said it ran 8 to 9 inches in the storm center. He received an unofficial report—meaning it was not made with a Government rain gage—of 15 inches of rain in less than 24 hours near Lake Benton, Minn.

"That report could be accurate, but it's unofficial," Strub told Midland Cooperator. "When you have a carefully measured 9 inches in a storm like that, there can be spots with 15 inches."

The big story was lost to most of the Nation.

Attention was focused on the raging water, flooded stores and homes, people marooned in houses and torn bridges, three cars that were swept away by swift water and their passengers drowned.

The big story was that this historic deluge hit the area that soil conservationists had developed for 1954 demonstrations. It was a test of whether modern land management could win against the very worst that could come.

The answer showed up at daylight Monday.

Land that was put under modern soil-conservation practices held up under the onslaught.

Even on steep hillsides, the water did not tear away soil. Even the small dam that was

built to make a stock pond handled the extreme storm.

And because dozens and scores of farmers have adopted the practices they saw at Plowville 1954, damage downstream was less than it would have been.

Midland Cooperator called on farmers and newspaper editors in the storm area for reports on what happened to terraces and diversion ditches and grass waterways.

The answer—unanimous: Land that was under soil conservation practices stood up. Crops are saved. Topsoil is still there.

The contrast is very remarkable.

Fields side by side show the difference.

On one next to a highway, you see wide fan-shaped layers of topsoil spread across corn and that is barely peeking above the deposit. Above it run fingers of light color—small grooves in the land down through the topsoil and into the clay sands and below.

And above those fingers are the knobs or rises in the cornfield—with more stones showing than when the crop went in.

These new stones measure the amount of fertile land that was washed away from around them—1 to 3 inches of it in some fields.

Next to the eroded and smothered corn is a field that was first terraced and then planted in strips. Even on the short slopes between the terraces, the grass has held—has stood the forces of 8 to 12 inches of driving rain.

And at the ends of the terraces where the water ran down diversion ditches, there is only a little erosion—about as much as a 1-inch cloudburst tears away from other land.

Wildlife loss was not measured in dollars.

Some game and fish study parties said that only adult pheasants came through the storm alive in South Dakota. Chicks by the thousands were drowned, and even the early first hatch birds did not make it through in parts of southeastern South Dakota.

Deer raced out of the stream bottoms to high ground. They were trotting around in bewildering new country all week. Their homes were gone for the summer. Some fawns probably were lost, wardens reported.

Young Republicans

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. DORN of South Carolina. Mr. Speaker, as far as news is concerned, we seem to be under a military censorship today. For a while, there was much hullabaloo and publicity about the Nation's Young Republicans holding a convention in Washington, D. C. The general theme song was that these Young Republicans would be 100 percent for modern republicanism. According to the "whoop-it-up" boys, we got the impression that these Young Republicans would be as far from the philosophy of the old guard Republicans as east is from west.

But lo and behold, these Young Republicans seem to have ideas of their own. Undoubtedly, they came into town from the grassroots where the people are not as yet completely brainwashed. I have been unable to learn from the press, which is apparently feeling the effects of this military censorship, what was actually adopted by the Young Republicans. However, a good Republican friend of mine, a patriotic American, furnished me with some of the resolutions adopted and which were not reported to the people of the country.

Following are some of the resolutions adopted by the Young Republicans last week at their convention here in Washington:

1. Pass a Federal right-to-work law.
2. Congress should not pass Federal aid to education.
3. That Sergeant Girard not be turned over to the Japanese courts.
4. No military aid to Tito in Yugoslavia.
5. A stronger Taft-Hartley law.
6. No aid of any sort to any Communist nation.

Usurping Power

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the St. Marys (Pa.) Daily Press:

USURPING POWER

It was not until 1803 the Supreme Court first attempted to invalidate a law passed by Congress, Chief Justice Marshall usurping that power then for the initial time.

It was not until 1865 the high tribunal again decided two laws passed by Congress were not constitutional. Because the laws affected at that time were not of any major importance Congress made no effort to overrule the Court or bypass its judicial processes.

It has only been within the last 30 years or so the Supreme Court has set itself up as the last judgment seat this side of kingdom come, although there is nothing specific spelled out in the Constitution that empowers the High Court to impose upon Congress and the Executive its personal interpretation of the National Constitution. It has merely usurped that power like the fabled camel that once it got its head under the tent kept moving in more and more until the owner was forced completely out of his sheltered home.

Inch by inch, year by year, the Supreme Court of the United States has abrogated unto itself the right to say what laws passed by Congress are in compliance with the Constitution, and often the interpretation one set of judges hands down will be completely reversed by a subsequent group of jurists on the same Court. The Supreme Court in 1954 on the school segregation issue completely reversed itself and said a decision made earlier by men presumably as well versed in law that held "equal and separate schools" satisfied the law's demand, was out of tune with the times.

Chief executives of several Southern States have indicated they will not comply with the Court order relative to segregation, and far as can be seen from surface indications there is no manner in which they can be punished for their outward refusal to carry out the Court's order.

Would Congress be any less punished should its Members refuse to carry out the latest order relative to congressional investigating un-American activities?

If sovereign States can thumb their nose at the Supreme Court it seems only fitting Congress can do the same thing.

If This Be Treason

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. DAVIS of Georgia. Mr. Speaker, in all sections of our country people who believe that public officials should perform their duties lawfully and constitutionally are outraged by the brazen and fraudulent usurpation of unauthorized powers by the Federal Supreme Court.

The deliberate pattern which the Supreme Court is following of usurping the lawmaking power and amending the Constitution to suit its own perverted ideas has roused a storm of protest from thoughtful people who realize that liberty and freedom cannot continue to exist here if the judicial department usurps the powers of the legislative or executive departments of the Government.

One such protest is an editorial If This Be Treason in the Savannah Morning News of June 19. Under unanimous consent previously granted, I insert this editorial herewith.

The editorial follows:

IF THIS BE TREASON

It has been often said by observers of the actions of the United States Supreme Court that the ultimate in absurdity had already been plumbed when the high body jettisoned the authority of all lesser courts by opening secret evidence to the defense. But such observers are shortsighted. They misjudge the immense capacity of the High Court to make a fool of itself and a mockery of the laws of the United States.

We refer, of course, to the latest ruling of the Court in which a nonexistent barrier is drawn between abstract and concrete preaching of the violent overthrow of the United States Government by force. Such a distinction does not exist under the wording of the Smith Act by which 14 California Communists had been convicted.

As if this absurd ruling were not sufficient evidence of the advanced state of socialistic senility on which the Court apparently bases most of its recent rulings, there is an added fillip to this latest comedy of errors. That is based on the technicality since the Communist Party changed its name since the act became valid, that the entire legislation covering control of Communist activities can be thrown out the window.

All of which leaves us inevitably to agree with Representative HOWARD W. SMITH, Democrat, of Virginia, author of the act, who commented on the decision:

"I am not surprised. I do not recall any case decided by the present Court that the Communists have lost."

We are indebted to a very close friend, retired attorney, L. M. Norwood, for perhaps the most acidulous comment on the whole sorry business. With preliminary apologies to the Mother Goose of fable, Mr. Norwood paraphrases a well-known rhyme. For those

who might have forgotten all of it, the original is as follows:

"There was a man in our town,
And he was wondrous wise,
He jumped into a bramble bush,
And scratched out both his eyes,
And when he saw his eyes were out,
With all his might and main,
He jumped into another bush,
And scratched them in again."

Mr. Norwood wonders, with obvious reason, if this bit of mild satire couldn't be aimed at a more definite target. To wit:

"There were nine old men in our land,
Who thought they were wondrous wise,
They jumped in an illegal thorny bush,
And scratched out all their eyes,
And now they see their eyes are out,
Will they their sanity regain,
And jump into a legal bush,
And scratch them in again?"

If anything, we think Mr. Norwood has been too mild on the allegedly highest court in the land.

Within a relatively short period the Supreme Court has arbitrarily abrogated all the principles, customs, and mores that governed southern administration of our various school systems; they have jerked the rug from under any powers of American bar associations to police their own houses; they have, in effect, emasculated the prosecution arm of our courts by arbitrarily ruling open to inspection secret files of investigative agencies; they have negated State sedition laws; and they have put every possible barrier in the path of those patriotic Americans who are interested in apprehending and convicting Communists and other subversives who advocate the violent overthrow of this Government. If this isn't a record of rampant hairsplitting, obfuscation, and other obstructions to the orderly proceedings of our courts and agencies of Government, we stand indicted.

But we feel constrained to speak our piece. We firmly believe the American public in general is outraged at the highhanded and irresponsible actions of the current Supreme Court of the United States.

So, in the words of Patrick Henry, a gentleman of Virginia, "If this be treason, make the most of it."

New Foreign Quarantine Service

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. ROONEY. Mr. Speaker, on June 18 the House adopted the conference report on the third supplemental appropriation bill, 1957, which contained language providing for the payment of overtime services of employees of the Foreign Quarantine Division of the United States Public Health Service without cost to the taxpayers, to permit the clearing of ships at our ports after 6 o'clock in the evening and on Sundays and holidays.

A week ago today the President signed this bill and thereby enacted this provision into permanent law. I am happy to say that I took part in drafting the language which was unanimously agreed upon by the conferees on this supplemental appropriation bill.

Under the permission heretofore granted me by unanimous consent of the House, I include the following article by Walter Hamshar, published in the New York Herald Tribune of Wednesday, June 26, 1957, just 5 days after the agreed upon language for this overtime service became permanent law:

NEW QUARANTINE SERVICE

Dr. Isidore Abrahamer, assistant medical officer at quarantine, reported last night that four requests for overtime quarantine service by cargo ships arriving after 6 o'clock last night were the first to be srviced under the bill signed Friday by President Eisenhower.

The four vessels were able to proceed to their piers after the overtime inspection well in advance of 8 a. m. this morning when longshoremen will report to handle their cargo. The elimination of delay in docking the vessels was estimated to have saved $1,000 in the operation of each ship.

Dr. Abrahamer said last night's service was a little limping but that service will be rendered if requested.

Procedures for administering the service in all ports were being worked out yesterday in a Public Health Service headquarters in Washington.

The bill signed by President Eisenhower amended the Public Health Service Act to permit employees of the service to work overtime at ship-quarantine stations when requested by steamship companies. The companies will pay for the service at overtime rates of time and a half for night and Sunday work. Before passage of the bill, quarantine stations were required by law to close for 12 hours a day and on Sundays. Delays to ships arriving after the stations closed were estimated to cost the shipping industry at least $10 million a year.

Mr. Alvin Silverman New Head of Washington Bureau of the Cleveland Plain Dealer

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. VANIK. Mr. Speaker, the Forest City Publishing Co., publisher of the Cleveland Plain Dealer and the Cleveland News, has recently announced the appointment of Mr. Alvin Silverman, formerly city editor of the Cleveland Plain Dealer, to the head of the Washington bureau of the Cleveland Plain Dealer and the Cleveland News, succeeding the late Walker Buel, who served this bureau with great distinction.

Mr. Alvin Silverman comes to the Washington bureau of the Cleveland Plain Dealer and the Cleveland News with a brilliant background as a sportswriter, statehouse correspondent, political editor, and city editor of the Cleveland Plain Dealer.

Following is a copy of Ohio Senate Resolution 62 relating to the promotion of Mr. Alvin Silverman as head of the Washington bureau:

Resolution on extending congratulations to Mr. Alvin Silverman, of the Cleveland Plain Dealer, on his appointment as head of the Washington bureau of the Cleveland Plain Dealer.

Whereas Alvin Silverman, an able member of the Ohio Legislative Correspondents Association, has demonstrated outstanding ability over the years as sports writer, Columbus correspondent, political editor, and city editor of the Cleveland Plain Dealer; and

Whereas the members of the Ohio Senate take note that Mr. Silverman has been promoted to the position of head of the Washington bureau of the Cleveland Plain Dealer, a promotion which will allow Mr. Silverman much opportunity to add to his reputation as an astute political analyst; and

Whereas the membership of the Ohio Senate is familiar with the forthright, accurate, and interesting reporting which has always characterized the work of Mr. Silverman, and feels that his promotion is richly deserved: Therefore be it

Resolved, That the members of the Ohio Senate of the 102d General Assembly adopt this resolution as an expression of congratulations to our friend, Mr. Alvin Silverman, on his promotion, and that we extend to him our best wishes in his new position as head of the Washington bureau of the Cleveland Plain Dealer; and be it further

Resolved, That the clerk of the Ohio Senate transmit an authenticated copy of this resolution to Mr. Alvin Silverman and to the Cleveland Plain Dealer.

The question being on the adoption of the resolution.

So the resolution was adopted.

The Federal Government Has a Responsibility to Urban Areas

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mayor Frank P. Zeidler, of Milwaukee, Wis., commenting on President Eisenhower's recent address to the governors' conference and emphasizing the responsibility of the Federal Government to urban areas:

STATEMENT ON PRESIDENT'S ADDRESS TO GOVERNORS

The President's address to the governors in Virginia is a cause for serious concern on the part of local municipal officials, particularly in the large cities of America. The President again strikes the note of States rights and indicates that he desires to reduce the expenditures in the Federal budget by cutting out assistance to local communities, asking the States to assume that responsibility. If this were to occur, it would be an unfortunate reversal in policy. It would reverse a fundamental concept of the Constitution; namely, that people have a joint responsibility to their governments, one to their State government and one to the Federal Government. In return these governments each have a responsibility to the citizens.

This joint responsibility of Federal Government and the State governments to the individual citizen is the basis of the Federal system of government.

Ours is not a unitary government in which the Federal Government is responsible only to the States and the States only to the people. The net effect of the States rights theory in the past has been to deny great classes of people equal rights and privileges under the law. The emphasis on State supremacy also has meant the denial of proportional representation in many State legislatures. By this device most large urban communities are cut off from effectively presenting their problems to the legislatures through lack of voice. The following of the theory of States rights has meant the establishment of a one-party system in many States of the Nation to the detriment of the flourishing of democracy.

States by themselves have failed to act with proper effectiveness on such problems as highway development, adequate housing, slum clearance, in many instances education, in the organization of metropolitan areas, and in the returning of adequate revenues to local governments so that they can carry out their needed functions. It was precisely because of the failure of the States' governments to deal with such problems as unemployment and relief in the period of the thirties' that city governments went to the Federal Government to seek assistance. The Federal Government's refusal to recognize its responsibilities to the urban areas can result only in the deterioration of those areas, because those areas have no effective way under the system of unequal representation in the legislature of making their voices effective. Even now, after 12 years of the atomic age the State governments have scarcely begun to meet the problem of civil defense, and have done nothing really effective to date to carry this burden which the Federal Government placed on them by law.

There is no great tendency on the part of the State governments now to carry on the programs of Federal aid to the cities that President Eisenhower wants to shed. It should be pointed out also that even if all Federal grants and aids for relief and welfare purposes and housing and education were removed from the Federal Government, there would occur only a small drop in the total Federal budget. Yet, the turmoil that such an action would cause in the cities would be so great as to create a considerable amount of disaffection for the administration. It is a sad commentary on the times that really the most constructive part of the Federal budget—the reconstruction of the great centers of urban culture in the United States—should be the program that the President finds the most easy to dismantle. The burden of spending for things to blow up, shoot off, and burn away for military purposes grows daily more heavy while that expenditure which would lead to the cultural and physical improvement of the country must be curtailed in the Federal budget.

The Suez Canal and the Western Coalition

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. VANIK. Mr. Speaker, under leave to extend my remarks, I include a speech by Prof. Alfred J. Hotz, of Western Reserve University, Cleveland, Ohio, before the Canton, Ohio, Rotary Club on the Near Eastern crisis. I voted for the so-called Eisenhower doctrine with some reluctance because I felt, as I still do, that it is no substitute for a firm and just United States foreign policy that grapples with the realities of the situation and that safeguards the interests of our allies in Europe. Professor Hotz' address underlines the crucial importance of free passage through the Suez Canal by all nations including Israel and the importance of a firm United States policy in the area. I commend it to my colleagues:

THE SUEZ CANAL AND THE WESTERN COALITION

(By Prof. Alfred J. Holtz, of Western Reserve University)

American so-called leadership in the Middle East will face a decisive test in its success or failure to reestablish some system of international control, or at least international supervision, over the Suez Canal operations. Thus far, the ambiguous position taken by the Eisenhower administration on this vital issue verges on appeasement of, if not abdication to, Dictator Nasser.

Western Europe, in particular, views with deep concern, if not suspicion, the present avowed neutralist posture assumed by the United States on a problem so fundamental to Western national interests. The economic viability of West Europe is sorely dependent upon "free passage" through the Suez, which translated means an international system, instead of exclusive Egyptian national operation.

Most Americans are unaware of the economic facts that prompt European concern over the issue of international control of the Suez Canal. Yet, a brief look at these basic facts should confirm the fears that arise in Europe over General Nasser's firm grip on the economic jugular vein of our closest allies.

In overall foreign trade, the United Kingdom depends upon the free transit of the Canal for 30 percent of its imports and an equal 30 percent of its exports. France employs the Suez for 20 percent of its imports and 20 percent of its exports. The rest of West Europe averages closer to the British requirements in usage of this vital international waterway.

In terms of shipping interests, West Europe flag ships add considerably to the economic health of our allies. In 1955, European merchant shipping comprised 73 percent of the total net tonnage using the Suez with British flag ships leading the way with 28.3 percent, followed closely by Norway and France with 13.5 percent and 9.4 percent respectively. By comparison American shipping carried only 2.7 percent of the net tonnage that passed through the Canal.

Yet, the primary national economic interests that directly involve West Europe in the future Suez Canal operation revolve about oil shipments. As Europe's coal seams declined in availability and productivity, our Western allies have of necessity had to transfer to oil products for fuel requirements in order to run their factories and transport systems. In terms of locale, the Middle East provides 94 percent of the petroleum requirements for France, Italy, and Belgium. Britain receives 84 percent of her oil imports from the Middle East, while West Germany 88 percent of its imports. Even the Netherlands, which has oil refineries in the West Indies, draws upon the Middle East for 61 percent of her national requirements.

Moreover, Europe's financial investments in Middle East oil production require continued political and military protection. Over one-half of the present total fixed capital investment is controlled by three major companies—British Petrol Company, the French Petroleum Company, and Royal Dutch Shell. Since World War II, five major American companies—Standard Oil of New Jersey, Standard Oil of California, Socony, Gulf, and Texas Oil—have rapidly increased their fixed investments, so that along with several smaller American concerns, they hold almost 47 percent of the overall foreign investment amounting to more than $6 billion.

It is quite obvious, therefore, why West Europe considers both the free transit through the Suez Canal and its capital investments in Middle East oil as a vital interest to be both protected and defended. It should be equally clear why, if West Europe is to be expected to build its economy and thereby adequately to support the NATO alliance, the Eisenhower-Dulles diplomacy must defend Europe's vital economic interests as if they were our own.

It must be recalled that the United States appealed to West Europe to defend American vital interests during the Korean war. Our allies responded with not merely political and economic support, but as well with fighting troops. Thus the western coalition held firm because of West Europe's defense of American national interests in the North Pacific.

It is noteworthy that Joseph Stalin in his last testament, rendered at the 19th Communist Party Congress—October 1952—predicted that the west European states and the United States would ruthlessly cut each other's throats through economic competition, thereby permitting the Soviet Union to make substantial political and economic gains without recourse to open war. It is significant that a more recent Soviet statement—April 29, 1957—tried to muddy the oily waters, in referring to recent American actions in the Middle East by declaring: "This is an example of how the imperialists of the United States are trying to establish themselves in the Near and Middle East and squeeze out Britain and France."

This is not to suggest that present American policy has as its major objective such a predatory design—to deliberately sell down the river—or the Suez—the vital economic interests of our best allies. Yet the Eisenhower-Dulles policies have seriously weakened the western coalition by acts of omission if not acts of commission.

Seizure of the Suez Canal by General Nasser last summer afforded the United States a real test case of its readiness to defend the national interests of our western allies. Unhappily, during this first phase of the Suez crisis, Secretary Dulles declared that the canal was not a vital interest to the United States. He added the ambiguous comment that the American objective would be the safeguarding of the interests of those dependent on the canal as well as recognizing the legitimate interests of Egypt.

While Dulles ostensibly appeared to be supporting the London User's Association established last fall, he deliberately undercut its bargaining strength by declaring that the use of armed force would not be countenanced by Washington. In October, our Secretary of State further weakened the users' association at the Security Council secret negotiations to the point where the so-called six principles—October 13, 1956—were the maximum guaranty we would support.

These six principles passed by the United Nations and tacitly accepted by Egypt were in reality a grave retreat from the international system of control of the Suez envisaged by the London User's Association. Britain and France quite properly considered the Dulles reversal in favor of General Nasser as a complete sellout of their vital interests. This tragic split in the western coalition was followed by the British-French military intervention in the Suez region. American failure to assert real leadership on behalf of the western interests and to exert adequate pressure on Nasser prior to the ill-fated Suez military venture was inexcusable.

Having decided to curry the favor of the Arab-Asian bloc, the Eisenhower administration then rode the great "white moral steed" of the United Nations. But once again the United States failed to support West Europe's and Israel's interests in the series of United Nations resolutions that followed. So intent was the Eisenhower administration to stop the armed conflict that it neglected to start the type of commensurate pressure on Nasser for adequate guaranties on the reopening of the canal.

In the series of U. N. resolutions that followed, the United States saw fit only to force British-French-Israel withdrawal without any attempt to extract from Nasser any international guaranty for implementation of even the ambiguous six principles recommended by the Security Council. A last-ditch attempt by West Europe to tie military withdrawal with political insertion of the United Nations Emergency Force as guardian of the Suez Canal was sabotaged when the United States failed to support the Belgian amendment on November 24, 1956.

From thenceforth, the United Nations became the instrument of Soviet-Egyptian policy with the western coalition paying the price of American stupidity or frailty. Thus, former Secretary of State, Dean Acheson, could quite properly declare: "If a great nation, like the United States, looks to the United Nations to form American policy, instead of fighting in the United Nations for what the American Government believes should be done, then we have committed an unprecedented abdication of responsibility and power. * * * Something surely seems askew in a course of conduct during which our Government opposes and humiliates our closest allies—Britain and France—by joining with the very power—Soviet Union"—whose wholesale penetration into the Middle East the Eisenhower doctrine was later designed to contain.

Winston Churchill, whose friendship for the United States is above reproach, severely criticized the American ineptitude during the Suez crisis when he recently said: "I do not think that the attitude then adopted by the United Nations—and the United States—has been helpful either to the free world or to the cause of peace and prosperity in the Middle East."

We are now witnessing the third phase of the Suez problem with General Nasser, supported by the Soviet Union, and by rampant Arab-Asian nationalists, in absolute control. Egypt's unilateral declaration with regard to operation of the Suez openly violates the so-called six principles, vague and inadequate as they were. Nasser's military defeat has been turned into a tremendous political victory due to the Eisenhower-Dulles appeasement policy.

Past appeasement of Nasser and present apathy toward western vital interests are clearly reflected in Ambassador Henry Cabot Lodge's declaration at the United Nations that the West must grant the new Suez regime a trial run. But it is American leadership of the western coalition that is on trial, not Nasser.

Substantial defense of our allies' interests should have resulted in a more forthright American declaration of the legal rights guaranteed by the Constantinople Convention of 1888. It should have resulted in irrevocable support of western political and economic rights previously enunciated by the Security Council. The Eisenhower administration that speaks so glibly of morality and justice could at least have set the record straight. But Secretary Dulles, the honest broker, apparently prefers to break the unity of the western coalition and pursue the will-o'-the-wisp favor of the Arab-Asian bloc.

How many more Munichs can the West stand before it falls?

Diminution of Air Defense Capability in 33d Air Division Area

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I insclude the following letter:

HEADQUARTERS,
33D AIR DIVISION (DEFENSE),
UNITED STATES AIR FORCE,
OKLAHOMA CITY AIR FORCE STATION,
Oklahoma City, Okla., June 19, 1957.

Hon. CHARLES S. GUBSER,
House of Representatives,
Washington, D. C.

DEAR MR. GUBSER: I am grievously concerned about the gradual diminution of the air defense capability in the 33d Air Division's area of responsibility which encompasses essentially the States of Oklahoma, Texas, Louisiana, and Arkansas, a total of 300,000 square miles, with a population of 11 million people. My concern for my particular area is shared, I am sure, by the air defense commander responsible for the defense of California.

Our ability to protect your area and your people has been falling off for 3 years now and today continues to fall off simply because the Air Force is not able to retain the highly trained officers and airmen technicians required to operate your air defense system at anything near peak efficiency.

We train young, intelligent, and highly motivated people to shoulder this essential responsibility, but are not permitted to offer them the reimbursement commensurate with their training. Civilian life, with its significantly higher salary rates inexorably beckons to them—and they answer in distressingly high numbers on completion of their first enlistment.

In today's modern, high-speed air defense system you need career minded, experienced officers and airmen to produce an acceptable level of air defense in your area against the multimegaton hydrogen bomb of 1957.

(Megatons have become standard in American conversation today, but few people realize the enormity of the word. Megaton means 1 million tons. Less than four megatons of bombs were dropped in all wars since the airplane was invented. Yet, today it is accepted that a 4-megaton bomb can be delivered on 1 American city by 1 airplane in 1 instant of time. There are many cities in California that must be considered as potential targets. I make this parenthetical observation to point up the importance of air defense in the 33d Air Division's area of responsibility.)

To highlight the expensive dollar cost of this constant turnover in people, in this division alone (1 of 16 in the Air Defense Command) we lost to civilian life 900 officers and airmen in the past 2 years. Each lost officer represents an average investment of $30,000. Each lost airman represents an investment of $15,000—total loss to the taxpayer of $14,625,000 in only 1 of 16 Air Divisions in Air Defense Command which in turn is only 1 of 7 major commands of the Air Force.

There is a solution to this problem, a problem which is of vital and personal interest to every citizen of California.

The solution is: (a) A significantly increased air defense capability at; (b) a significantly decreased cost to the voting taxpayer through; (c) the creation of a career-minded and career-motivated Air Force, the individuals of which are paid commensurate with their ability and experience.

In effect, I suggest to you that the air defense of the United States can be increased by some 15 to 20 percent at no increase in cost, or alternatively our present potential level could be an actuality at a very substantial savings of taxpayer dollars.

To put it another way, we can have more defense for the same money or the same defense for less money—if two identical bills currently before the Congress of the United States are enacted into law.

These bills are S. 2014 in the Senate of the United States and H. R. 7574 in the House of Representatives.

As you of course know, both bills provide in effect a modernized method of computing basic pay for the uniformed services, so as to enable the Air Force among others to retain their expensively and highly trained personnel far beyond the 2-, 3- or 4-year period of their initial term of service.

Frankly, I am asking for your active interest, influence, and support in bringing to reality during the current session of the Congress this proposed pay structure that will give me as an air defense commander the tools to perform my essential task more effectively and at a saving, estimated for the entire military establishment of $5 billion.

In utmost honesty and candor, I say to you that speed in the passage of these bills is essential to the effectiveness of air defense of the United States. Trained people are leaving the Air Force every day—people that we should be retaining to build up rather than reduce further your air defense. The loss of another full year's worth of already scarce officers and technicians (if the bills are not passed at this session) will degrade further the protection of our Nation and of California from a devastating air attack.

I am presenting these facts of air defense life to you as a member of the House Armed Services Committee and to enlist your aid. You certainly can feel free to make whatever use you care to of this letter if you think the position as stated is a valid and worthwhile one.

I am at your complete disposal to provide you with additional information on this essential matter of our national security and national survival.

Sincerely,

WM. P. NUCKOLS,
Brigadier General, USAF, Commander.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a copy of a resolution dated June 19, 1957, which was adopted by the board of trustees of the Unified School District of South Pasadena, a city in the 24th Congressional District, in opposition to Federal aid to education.

The action taken by the citizens of the South Pasadena Unified School District in solving their educational problems themselves at the local level, as described in the resolution, is to be commended. It is typically and traditionally the American approach. Communities na-

tionwide might well take a page out of their book.

I would, therefore, like to bring this resolution to the attention of the Members of Congress. The resolution follows:

RESOLUTION ADOPTED BY THE SOUTH PASADENA UNIFIED SCHOOL DISTRICT OPPOSING ANY AND ALL FURTHER FEDERAL AID TO EDUCATION

Whereas the funds of the Federal Government are derived primarily through taxation of the citizens of and within the 48 States; and

Whereas the State of California is 1 of the 48 on which the Federal tax burden is greatly disproportionate to the benefits received from the Federal Government's expenditures; and

Whereas the State of California is continuing to develop its own sources of revenue, to meet the growing educational and building needs of its public school systems; and

Whereas the citizens of the South Pasadena Unified School District have voted to tax themselves to provide adequate buildings and provide other physical facilities, and as recently as May 17 last, voted to tax themselves as much as $3.10 per $100 of assessed valuation, for general educational purposes (an increase of $1.45 over the State-prescribed maximum rate of $1.65) to meet the rising costs of education; and

Whereas the citizens of a community which takes such action to maintain a good educational program for its children should not be taxed again to support the schools of other States and other communities which are contributing less nationally and are doing much less locally than they can and should to support their own educational programs; and

Whereas local school boards, locally chosen to represent local viewpoints and aspirations, and to meet local needs, continue to be not merely the best, but assuredly the only guaranty of real educational freedom; and

Whereas Federal aid and Federal control are as inseparable as the two sides of the tax dollars involved; and

Whereas historically education has been a responsibility of the individual States rather than the Federal Government: Now, therefore, be it

Resolved, That the board of education of the South Pasadena Unified School District is firmly opposed to any and all projects and proposals for further Federal aid to education, with that proposed for school construction specifically included.

Dated June 19, 1957.

The Oder-Neisse Line

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. LESINSKI. Mr. Speaker, the following statement is the beginning of a series of articles by Joseph Sanocki, of the Polish American Congress of Hollywood, Calif., in response to some of the ambiguous arguments being used for extending the eastern boundary of Germany beyond the Oder-Neisse line:

THE ODER-NEISSE LINE

(Introduction)

German revisionism, which for the past several years, with the help of its propaganda apparatus, has been attempting to convince the world opinion of the necessity of returning to Germany the western Polish territories and eliminating the Oder-Neisse boundary, has also spread deep roots in the United States.

Using every means, German propaganda, which penetrates all strata of the American society and stresses theories which could convince that Poland has no right to these territories, that she is unable to settle and develop these territories, and that Germany without them could not exist.

The result is that the members of the American Government, statesmen, and other representatives of the American life, such as press, express opinions corresponding to German interests, overlooking the vital interests of Poland. Thus, a large section of the American public and its representative, base their opinion on the biased theses of the German revisionists.

Americans of Polish descent, who innumerably and without any hesitation risked for their American way of life both their lives and their properties, cannot accept the fact that German revisionsism attempts to partition once again the country of their forefathers.

The Polish American Congress, considering that the American people should form their opinions on undeniable facts which have been deliberately held back by German propaganda and wishing to acquaint the American people with the truth, has called to life the committee for the affairs of Polish western territories whose duty will be to present the issue of the Oder-Neisse boundary in true and uncolored light.

We hope that in presenting the first issue of the Polish Western Territories, the publication will enable the American public to orient itself in the important world problem of the Polish-German boundary on the Oder-Neisse.

GERMAN REVISIONISM—DANGER TO PEACE

At the Potsdam Conference (1945) the Allied Powers agreed that the territories east of the Oder-Neisse Line would be assigned to Polish administration with the specific stipulation that the final delimitation of the Oder-Neisse boundary would be established at a peace conference to be held at some future date.

Considering, however, that the Potsdam Conference agreed to transfer German population from these territories and it does not mention any possibility of a future revision of the Oder-Neisse boundary, it can be safely assumed that Poland is to remain the unquestioned owner of these territories and that the Oder-Neisse boundary is final.

Unable to resign themselves to this fact, German revisionists, composed mostly of the refugees from these territories in question, have been attempting for the past several years to convince the world opinion that assigning of these territories to Poland has done the German nation an irreparable harm and to maintain world peace they should be returned to Germany.

German propaganda activity for the return of these territories is organized on a very large scale. German revisionists created a huge propaganda apparatus with which they plan to flood the world, and particularly the United States with their arguments, which they hold are justifiable.

German propaganda theses

German propaganda apparatus, members of which include some of the foremost scholars, brought into its political battle innumerable arguments for the return of the Polish western territories and designed to undermine Poland's rights to these territories.

German revisionists, among some of their arguments, claim that—

1. During recorded history, and prior even to it, these territories were always unquestioned property of the various German tribes;

2. Drang nach Osten (drive to the East) was originated for the return to ancient fatherland;

3. German colonization of the Slavic-Polish lands and converting the inhabitants to Christianity was achieved by peaceful means;

4. Germans were exclusive spreaders of Christianity in Poland;

5. Territories in question were Germany's larder;

6. Poland initiated expropriation of the Germans;

7. Poland is unable to settle and manage these territories;

8. The plight of the German refugees threatens world peace.

These are only a small part of the German arguments.

Those familiar with the Polish-German problem in general and with western Poland in particular, and whose point of view is not shaded by prejudicial considerations must in all fairness admit that the above listed arguments have not the slightest base for argument and are originated with the single purpose of duping the world's opinion on the subject.

It is the purpose of this publication to acquaint those who are familiar with the problem strictly from German sources, with the existing truth, discuss all phases of the issue without any bias and present not only unprejudiced German sources but also statements and arguments of experts from other nationalities, in order to prove that the claims of the German revisionists are completely without foundation.

Germany seeks 1914 boundary

German revisionists are not satisfied with the demands for the return of territories lost after World War II. Their goal is to restore the boundaries which existed prior to August 1, 1914. An excellent proof of this is presented in a form of a map depicting the German Reich as it appeared in a refugee publication in Germany. It portrays Germany prior to World War I and is captioned: "Dieses Land Bleibt Immer Deutsch." (This land will always remain German.)[1]

Some of these German revisionists are of the opinion that one of the goals of the new German Army is to restore the very boundaries of 1914. One of the members of such group is Prince Hubert zu Loewenstein, member of the West German Parliament, who stated in an article titled "Future German armed forces" (die kommende deutsche Wehrmacht), and published in one of the German-language newspapers in the United States:[2]

"If it came to a necessity, German soldiers must be enveloped by a holy fire. Their view must not only be to repulse the Bolshevik adversary but also to liberate the enslaved parts of Germany, restore historical boundaries and destroy the humiliation of the Oder-Neisse line. The new German Army would only then be in striking condition when before her eyes stands as goal Germany in its entirety. Its (German Army) goal cannot exist exclusively for the defense of Western Germany. Diplomatic and political means of expulsing German enemies not yet exhausted. But should they be exhausted and should a shooting war arrive, then the issue of the German boundaries as of August 1, 1914, will come into existence."

Such Germany as quoted above is the German demand and such is Germany for which Prince zu Loewenstein, member of the West German Parliament, who visited the United States in January of 1955 as an "ambassador of good will," will fight.

Footnotes at end of speech.

Opinions of German notables

German propaganda maintains that the entire German Nation demands the return of Polish western territories. This does not correspond to facts and German revisionists cannot produce any proof that it is so.

It is true, however, that the demands for the return of the Polish territories behind the Oder-Neisse line came exclusively the German refugee organizations, which does not mean that all refugees from the territories in question support this movement.

The best proof of the German Nation's position in regard to the Polish western territories is the innumerable statements of the foremost politicians and other representatives of German society. From their statements it is undeniably clear that the former German territories should remain an inseparable part of Poland. Below are three indicative opinions:

On October 5, 1956, Carlo Schmid, vice president of the West German Parliament, declared in a speech at Bad Neuenahr, in which he made it to understand that Germany should reconcile itself to the loss of the former eastern provinces. Among others he declared that [1]—

1. No one can acquiesce to what has happened in 1945 was legal. No one can deny, however, of the existence of certain facts which will have to be accepted.

2. It would be an error to assume that the unification of western and Soviet zones of Germany could be accomplished without first finding a solution to the Oder-Neisse problem.

3. For moral reasons I could not take part in a movement to expel the Poles (who are also human beings) as was the case with the Germans.

Similarly sympathetic attitude was taken by the President of the West German Bundesrat (Federal Council) and the mayor of the great port city of Hamburg, Dr. Kurt Sieveking who at a foreign press conference on January 27, 1957, declared the following: [2]

"No one can convince himself that the situation which existed in the East can be restored. The human current goes from East to West, not from West to East. Polish boundaries have been shifted again and it is completely understandable that the Poles would finally like to get permanent boundaries."

Dr. Sieveking, at a press conference with Jerzy Kowalewski, who represented Polish publication Trybuna Ludu (Peoples Tribune), stated on December 17, 1956, that [3] "boundary problems assume for Germany more and more a theoretical character. There are more thinking people in Germany such as I than one could assume from the press reports, who represent certain groups of people."

The most significant statement came from the president of the Evangelical Church of Hesse, Pastor Martin Niemoeller. After returning from Poland he reported in Berlin on March 2, 1957, the following: [4]

"The powers which signed the agreement in Potsdam could not, in their negotiations at the future peace conference, arrive at anything else than what they did (arrive) in Potsdam. Should it have been otherwise, the expatriation of the Germans could not have been treated seriously and would have constituted a crime."

Refugee organizations—trouble spreaders

The activity of the German refugee organizations must be accepted in view of the facts as conscious attempt against the will of the majority of the German people to undermine the peace not only of Europe but the world as well. The leaders of these groups, composed from individuals who previously owned large properties on these territories, or had good jobs, have serious influence on German political front and are attempting to exert undue influence on German statesmen, as well as the press. Below are listed quotations proving this an irrevocable fact.

When Dr. Otto Heinrich Greve, member of the West German Parliament, stated that the unification of Germany is dependent on resigning from the territories behind the Oder-Neisse line, he was met with violent attack from the refugee organizations. Replying to this attack he stated on May 23, 1956, by a radio broadcast over the Bavarian Broadcasting Station that the attacks of the refugee organizations is malicious "Brunnenvergiftung" (machinations to raise bad feelings) and added that freedom to think "does not now exist in Germany" and the Sudeten Germans "wish to the sound of the Egerland March to march again to rob foreign territories." [5]

Significantly characteristic is the statement by one of the Belgian publications [6] which wrote that the West German Foreign Minister, Dr. Heinrich von Brentano, who after stating at a press interview held on May 1, 1956, in London, with the representative of the Yorkshire Post, Johnston, that "Germany is not interested in the return of the present Polish territories" and particularly the Sudetenland, had to withdraw his statement under the pressure of the refugee organizations.

The Belgian paper further stated: "Refugees are turning to publications (German) and are forbidding them to discuss these problems without first clearing it * * * with the refugee organizations. These organizations, we should not forget, are not only conducting a dangerous political game but are also perpetrating a hoax, since they do not represent the entirety of the refugees."

Polish or German territories

Territories east of the Oder-Neisse given to Polish administration were not and are not German territories and remained in German possession only for a short period of time.

Not only the territories behind the Oder-Neisse, but also those around rivers Elbe and Saale were inhabited already during prehistorical times by West Slavs, and Poles belong to the latter.

According to acheological excavations made by Polish and German scholars at Biskupin, near Gniezno, at Wolin, at the mouth of the Oder, at Opole, Santok, and innumerable other localities on the Oder and Elbe, Slavonic tribes lived on these territories already in the 13th century B. C. A renowned German scholar stated that "Elbe River was the east boundary of the Germans." [7]

Below are listed territories and dates during which Germany held the lands which are today an inseparable part of Poland:

Eastern Upper Silesia, 156 years (1763–1919); Western Silesia, 182 years (1763–1945); Pomerania with Gdansk (Danzig), 126 years (1793–1919); Western Prussia with the province of Malborg and Warmia, 173 years (1772–1945); East Prussia, 288 years (1657–1945); Western Pomerania with Szczecin (Stettin), 297 years (1648–1945).

These territories are today in the hands of their rightful owners—the Poles.

What Is This Thing Called Freedom?

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DAVIS of Georgia. Mr. Speaker, I have read with much interest an editorial entitled "What Is This Thing Called Freedom?" in the June 27 issue of the DeKalb New Era, published at Decatur, Ga.

This editorial is a strong protest against the current wild orgy of wrongful usurpation of powers by the Supreme Court.

I insert this editorial herewith, and recommend it to the consideration of those who appreciate our form of government and who believe it should be preserved and protected:

WHAT IS THIS THING CALLED FREEDOM?

There is surely great rejoicing in the secret chambers of the Soviet Union these days as they begin to realize the full impact of the recent decision of the United States Supreme Court in freeing five convicted Communists for conspiring to overthrow this Government.

These men were convicted by a jury in Los Angeles and sentenced by a Los Angeles United States district court. The jury thought that they were participants in "a highly organized conspiracy with rigidly disciplined members subject to call when leaders felt that the time had come for action."

The Supreme Court threw the conviction and the sentences out on a strange and fantistic theory, that the district court had erred in not instructing the jury that they must "distinguish between advocacy of forcible overthrow as an abstract doctrine and advocacy of action to that end."

Webster defines the word "abstract" as a thought apart from any particular instances or material objects or expressing a quality thought of apart from any particular or material object.

In other words what the Supreme Court really said was that so long as anyone preached the overthrow of this Government, but did not advocate any particular manner or method by which to do this, they were guilty of no wrong. Some overt act must actually be undretaken before they could be guilty.

This is like going to the edge of a precipice with a person who has repeatedly said that he wished you were dead, permitting him to get just back of you and tell you how much he would like to kill you, and you not being able to do anything about it until he actually pushes you from the rear and throws you into eternity. After your mangled remains are picked up at the bottom, what care you for abstract talk crying for your death? It is too late then for such high-spun doctrines.

This, in our opinion, is carrying the right of freedom of speech a bit too far. We believe that there is a vast difference between freedom and license. We believe that the Court in this instance has put into the thousands of secret and powerful agents of communism in this country a carte blanche license to kill us whenever their leaders feel that the time had come for action.

In believing thus, we are not, as some ultra liberals say of us, "witch hunters." We are merely being realistic about the whole matter because we happen to love our country very dearly and believe that we should pre-

serve it for our children's children in such a condition that they can be happy here as we are in the Nation our fathers gave to us. If this is witch hunting we are proud to say that we had rather be live witch hunters than dead liberals. No, this is not witch hunting in any sense of the word, but just a very intense desire to protect the people of a happy God-fearing Christian nation from the vandalism of a godless and ruthless power.

As surely as there are beginnings of freedom there are also thoughts and actions of men that are beyond the bounds of freedom. Freedom is but an island between two extremities. Before freedom there was tyranny and oppression. Beyond the bounds of freedom where license rules there are the same ruthless tactics, except they are more cruel in that those who have once had freedom and lost it suffer more than those who never knew freedom.

Veterans of Foreign Wars and the William Girard Case—Statement by Cooper T. Holt, Commander in Chief

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including herewith a statement that was to have been made by Dr. Cooper T. Holt, commander in chief of the Veterans of Foreign Wars of the United States, before the subcommittee of the House Foreign Affairs Committee on the so-called Bow resolution, House Joint Resolution 16.

Mr. Holt had no opportunity to present the position of this great veterans' organization because there were no hearings, and the bill has been reported favorably to the House. The statement of Commander Holt with reference to the case of Army Sp3c. William Girard follows:

I have been very critical of the State and Defense Departments as a result of the developments in the Girard case. I have stated, among other things:

"It appears to me that whoever made the agreement"—that is the one giving Japan the right to try American servicemen—"has bartered away the constitutional rights of an American citizen, in this case a citizen protecting our very freedom on foreign shores."

That was a serious charge, but a charge which, I believe, was justified. At this time I would like to submit to you the evidence on which it is based.

The Veterans of Foreign Wars has always opposed the NATO Status of Forces Treaty and related executive agreements. Resolutions expressing this opposition have been adopted at every one of our national encampments since 1953 when they first became effective.

Our opposition is based not only on concern for the rights of American servicemen as such, but also on our desire to protect the Constitution and sovereignty of the United States. It is our firm conviction that these treaties and agreements constitute an unnecessary surrender of sovereignty that has resulted in violations of the constitutional rights of American citizens.

Article I, section VIII, of the Constitution states:

"The Congress shall have power * * *. To make rules for the Government and regulation of the land and naval forces. * * * To provide for organizing, arming and disciplining the militia, and for governing such part of them as may be employed in the service of the United States. * * * To make all laws which shall be necessary and proper for carrying into execution the foregoing powers."

This is an explicit statement that the governing and regulation of United States military forces is the right and responsibility of the whole Congress and of no one else. The President, according to the Constitution, is the Commander in Chief of the Armed Forces created by Congress, but the right to raise such forces and govern them is the exclusive domain of Congress. Its rules govern and restrict the President in the exercise of his powers as Commander in Chief.

The Congress last carried out its responsibility in this field on a comprehensive basis in 1951 when, after much research and study, it enacted the Uniform Code of Military Justice to replace the old Articles of War and also authorized a new manual for courts-martial.

The Uniform Code of Military Justice is the constitutionally authorized regulation concerning the rights of American servicemen who are accused of offenses in this country or abroad, the procedures to be used in trying them, the sentences meted out as punishment following conviction, and so forth.

There is no reason why this code should not be the only code applicable to American servicemen, no matter where they are stationed and no matter where or when they commit an alleged crime. This statement is supported by many authorities on international law, by decisions of the United States Supreme Court, and also by decisions of foreign courts, which hold that a nation maintains complete jurisdiction over its troops when they are stationed in a friendly country and that such troops are immune from local criminal jurisdiction.

Oppenheim, in his work International Law (fourth edition, vol. 1, sec. 445), states:

"Whenever armed forces are on foreign territory in the service of their home state, they are considered extraterritorial and remain, therefore, under its jurisdiction. A crime committed on foreign territory by a member of these forces cannot be punished by the local civil or military authorities, but only by the commanding officer of the forces or by other authorities of their home state."

Wheaton, in his Elements of International Law (sec. 95), states:

"A foreign army or fleet * * * stationed in the territory of another state, with whom the foreign sovereign to whom they belong is in amity, are * * * exempt from the civil and criminal jurisdiction of the place."

Birkhimer, another recognized authority of international law, says in Military Government and Martial Law (sec. 114):

"It is well settled that a foreign army permitted to march through a friendly country, or be stationed in it, by permission of its government or sovereign, is exempt from the civil and criminal jurisdiction of the place."

In *Coleman* v. *Tennessee* (97 U. S. 509), the United States Supreme Court handed down a decision from which the above quotation from Birkhimer is taken almost word for word. The Court also stated in this decision:

"The sovereign is understood * * * to cede a portion of his territorial jurisdiction when he allows the troops of a foreign prince to pass through his dominions."

This was a reiteration of an earlier decision written for the Supreme Court by Chief Justice John Marshall as far back as 1811 in the case of *Schooner Exchange* v. *McFaddon* (11 U. S. 116), in which he said: "a sovereign is understood to cede a portion of his territorial jurisdiction * * * where he allows the troops of a foreign prince to pass through his dominions."

In *Tucker* v. *Alexandroff* (183 U. S. 424), the Supreme Court discussed this prior decision of Marshall's at considerable length and indicated complete approval of it. It is also worth noting that this decision of Chief Justice Marshall has been praised by many writers on international law and, in 1939, Lord Atkin, speaking for the Judicial Committee of the Privy Council, referred to it as "a judment which has illumined the jurisprudence of the world."

In *Dow* v. *Johnson* (100 U. S. 158), the Supreme Court again upheld the generally accepted and traditional viewpoint that troops stationed in a friendly foreign country are completely under the control of their home State and that the sovereign of the country in which they are stationed has no jurisdiction over them.

In 1909 the Permanent Court of Arbitration at The Hague also affirmed in the Casablanca case the exclusive jurisdiction of a nation over its own troops when they were stationed in a friendly foreign country.

In 1943 a question was before the Supreme Court of Canada as to whether members of United States military forces were exempt from criminal proceedings in Canadian courts. On May 27, 1943 the United States Government submitted to the court its views "on the right under international law of members of the Armed Forces of the United States on Canadian territory with the consent of the Canadian government to immunity from the local jurisdiction in criminal matters."

The United States memo said that practically all leading authorities on international law in modern times had considered this issue. It quoted one authority after another—Vattel, Hall, Wheaton, Westlake, Twiss, Phillimore, Holland, Lorimer, Wildman, Hannis Taylor, Hyde; French authorities such as Calvos, Foelix, Travers and Clunet; the Germans Holtzendorff and Heyking, and the Italian authority Adinolifi—each one of which upheld the view that a nation maintains complete jurisdiction over its military forces when they are stationed in a friendly foreign country and that those forces are immune from the laws of the country in which they are stationed.

It pointed out that in the case of *Tucker* v. *Alexandroff*, even Judge Gray, in his dissenting opinion, stated:

"The opinion of Chief Justice Marshall in the case of The Exchange has ever since been recognized as laying down the principles which govern the subject."

Also mentioned in the United States memo was the case of *Hamilton* v. *McClaughry* decided by the United States Circuit Court (Kansas) in 1905. This case involved an American soldier who killed a member of his Regiment while both were stationed in China during the Boxer Rebellion to protect American property. The court upheld the doctrine of United States jurisdiction over its troops stationed in foreign lands, cited the Supreme Court decision in the case of *Coteman* v. *Tennessee* as authority and added:

"It therefore must follow, of necessity, if any punishment shall be meted out for the many crimes committed by persons in the military service of the United States during the occupation of China, such punishment must be imposed under the 58th article of war, or the offender go unpunished; and

this is true, whether the military occupation of China by the forces of this Government was by or against the consent of the Government of China."

Other facts cited in the United States memo in support of the claim that United States troops stationed in Canada were immune from Canadian jurisdiction:

In 1925 the Supreme Court of Justice of the Republic of Panama had upheld the view that troops stationed in a friendly foreign country were immune from its jurisdiction and, in ruling on the case of a United States soldier accused in the death of a Panamanian, declared:

"The judicial authorities of the Republic of Panama have no power to judge the accused."

During World War I, Britain and France recognized "the exclusive competence" of the United States to try American servicemen stationed within their borders and accused of crimes. A similar agreement was made between the United States and Belgium and between various other allied powers in World War I.

In 1942, during World War II, an agreement of the same type was concluded between the United States and Great Britain—and Australia, China, Egypt, India, Iraq, Liberia, and New Zealand also recognized United States jurisdiction over American troops stationed within their borders and accused of criminal acts.

The summary of the United States memo to the Supreme Court of Canada read, in part, as follows: "It will have been seen from what has been said above that by the almost unanimous opinion of writers on international law and jurists who have dealt with the subject, members of the armed forces of a state on foreign territory with the consent of the territorial sovereign are immune from the local jurisdiction in criminal matters. These views are based on and supported by international practice as well as reason."

It was on the basis of the overwhelming majority opinion of the highest courts and of authorities on international law that President Eisenhower, in prescribing the current Manual for Courts-Martial in 1951, found that:

"Under international law, jurisdiction over members of the Armed Forces of the United States or other sovereign who commit offenses in the territory of a friendly foreign State in which the visiting Armed Force is by consent quartered or in passage remains in the visiting sovereign."

President Truman made a similar finding in 1948.

It is clear, therefore, that if the United States were today to insist on complete jurisdiction over all its troops everywhere, it would be taking a stand for sovereign rights which are traditional under international law, a stand that is just. It follows, too, that when the United States surrendered its sovereignty in this field in 1953, it made a concession that was legally unnecessary and, I intend to demonstrate, one that was violative of the basic rights of American citizens.

I regret very much to say that I firmly believe that the rights spelled out for American servicemen by Congress in the 1951 Uniform Code of Military Justice—the rights constitutionally given to all members of our Armed Forces accused of crimes—were abrogated only 2 years later when the Status of Forces Treaty was ratified by the United States Senate—and that they have since been several times abrogated by the President of the United States through executive agreements. These agreements, by giving foreign courts the power to try American servicemen who are accused of crimes, have deprived those men of basic rights bestowed upon them by the Congress which, the Constitution says, has sole jurisdiction in this field. Regrettably, the Senate did the same thing when it ratified the NATO Status of Forces Treaty.

It is true that, under the Constitution, treaties become the supreme law of the land, and that the NATO Status of Forces Treaty was concluded in a constitutional manner. It is therefore law. But no law can be absolutely construed to be constitutional until it has been ruled such by the Supreme Court. The Status of Forces Treaty has never been considered by that Court and there are very compelling reasons to believe that, if and when it is, the Court will find it unconstitutional.

Just last week the Supreme Court reversed the convictions of two women tried for murder under the Uniform Code of Military Justice. It did so on the grounds that trial by courts-martial violated the constitutional rights of civilians to indictment and trial by jury.

It is worth noting that the Government had supported the trials on the ground that they stemmed from legislation necessary and proper to carry out United States obligations under international agreements. The Government uses the same argument to defend the Status of Forces Treaty. The Court replied to this argument:

"The obvious and decisive answer to this, of course, is that no agreement with a foreign nation can confer power on the Congress, or on any other branch of the Government, which is free of the restraints of the Constitution."

As is well known, some foreign courts which now try American servicemen are not only free of the restraints of the Constitution, but also free of the restraints of the Uniform Code of Military Justice—which is the only congressionally authorized limitation of the rights of Armed Forces personnel.

Justice Black wrote in the majority opinion:

"The United States is entirely a creature of the Constitution. Its power and authority have no other source. It can only act in accordance with all the limitations imposed by the Constitution. When the Government reaches out to punish a citizen who is abroad, the shield which the Bill of Rights and other parts of the Constitution provide to protect his life and property should not be stripped away just because he happens to be in another land.

"This is not a novel concept. To the contrary it is as old as government. It was recognized long before Paul successfully invoked his right as a Roman citizen to be tried in strict accordance with Roman law."

The Supreme Court, I believe, might well uphold the right of American servicemen to be tried "in strict accordance" with the Uniform Code of Military Justice—and throw out any treaty which denies them the rights set forth in that code. The Court has stated very clearly that no treaty can deprive a citizen of constitutional rights. The soliders' constitutional rights are in the Uniform Code of Military Justice.

Just a few moments ago I quoted the 1948 and 1951 findings of Presidents Truman and Eisenhower that, under international law, the United States and other sovereigns maintain jurisdiction over their troops when they are stationed in friendly nations. That paragraph had another sentence tacked on to the end of it which I quote here because it deserves comment:

"This" that is, the right to jurisdiction over their own troops "is an incident of sovereignty which may be waived by the visiting sovereign and is not a right of the individual concerned."

That statement, I feel certain, would be qualified by the Supreme Court. It sounds too much like a statement of an absolute monarch, a king whose people are subjects. A sovereign can waive rights, but a President of the United States is not an absolute sovereign. He cannot waive an American citizen's rights through an Executive agreement. And even the sovereign treatymaking authority of this country—the President and Senate together—cannot do that. This is a government of people, not of Presidents or of Senates. The constitutional rights of citizens can be taken away only in grave emergencies. The sovereignty of the President, and of the President and Senate acting together, is limited by the rights of the individual. The President and Senate are servants, not masters. This statement, therefore, cannot be interpreted as meaning that the constitutional rights of American citizens—soldiers or civilians—can be traded away by a treaty or executive agreement.

The Veterans of Foreign Wars has always opposed, and today demands that the Status of Forces Treaty and related Executive agreements be canceled, for the very reason that through them the treatymaking power has been used to deprive American Armed Forces personnel of their constitutionally bestowed rights.

The Veterans of Foreign Wars is not, and never has been, impressed by the so-called practical arguments that have been used to excuse this violation of fundamental rights. This is a matter of principle on which we will not compromise.

A few years ago, proponents of the treaty and agreements were using the practical argument that no injuctices had been done to any servicemen under them and that the criticism and opposition of veterans groups, based on principle, was therefore unreasonable and noncompelling. They have dropped that argument now that enough time has passed to demonstrate that the injustices which were actually inevitable under these agreements have taken place.

Some of the arguments used to defend these treaties are actually weird. Representatives of the State Department, for example, have claimed that foreign courts have actually leaned over backward, that they have been overlenient in prosecuting members of our Armed Forces.

For the sake of argument I will grant that this has been true in some cases. But this argument, as a defense of the treaty, is ridiculous. It means, as a matter of fact, that justice is not being done under the treaty. It means that foreign courts are giving American troops one kind of treatment for violations of their laws and their own citizens a different and harsher treatment. This naturally arouses resentment and serves as an impediment not only to our defense effort, but to good relations between this country and its allies. Furthermore, it is not good for the discipline and morale of our own Armed Forces stationed abroad and tends to encourage disrespect for the law on their part.

The alleged leniency of foreign courts, then, is actually a strong argument against the NATO Status of Forces Treaty and its related executive agreements.

It is also a fact that these treaties and agreements, as they exist today, are discriminatory.

Japan, which was our enemy in World War II, has the right to try American servicemen. On the other hand, the Government of the Philippines and the Nationalist Government of China, which are, and have been, among our stanchest allies do not have that right. This is bound to arouse resentment and I have no doubt but that, as persons familiar with the Far East have asserted, this fact had something to do with the recent unfortunate riots and destruction of Amercan Government property on Formosa.

It has been publicly reported that the discriminatory nature of the status of forces agreements is the major reason why the

Philippine Government is now demanding renegotiation of the 1947 executive agreement which gives the United States 99-year extraterritorial rights to military bases there.

There are many reasons why treaties and agreements giving foreign powers criminal jurisdiction over American troops are wrong from the constitutional viewpoint. First of all, many men who serve overseas are draftees. Unlike vacationers who travel in foreign countries and thereby voluntarily yield certain constitutional rights, these men are forced by law to perform duties in the armed services. They are sent overseas whether or not they want to go, and then placed under foreign courts.

It is an undeniable fact, too, that this means that our servicemen, without their own volition, are placed in a position which might be described as one that psychologically incites them into running afoul of the law. Military life is not a pleasant one for the average civilian. Even when serving here he is denied normal family and human relationships to a considerable degree. This is particularly true when he is in a foreign country. When he has time off, his opportunities for wholesome recreation and normal human relationships are often extremely limited and there is not much he can do with himself.

Under these conditions many men will often have a drink too many simply because they have nothing else to do and this frequently results in their getting in trouble with the law for some violation or other. There is no excuse for murder, theft, rape, and other obvious crimes, but it is a fact that the majority of American servicemen overseas are not fully aware of all the things that may be violations of the laws of the nation in which they are stationed and, because of language differences, etc., they cannot be expected to know them.

In addition, if they must stand trial, they often cannot understand a word of what is going on in the court room. This unquestionably impairs their ability to defend themselves even though they have the services of a competent interpreter. It is therefore a serious impairment of their rights, particularly if their attorney is not so expert in the language of the country that he can catch every nuance in the statements of the prosecutor, witnesses, and all those associated with the trial.

Most important of all, perhaps, is the fact that in some countries the Napoleonic code governs the courts. The accused must prove his innocence. United States law presumes a man innocent until proven guilty, and this precept is carried over into our courts-martial. Just 2 years ago, Time magazine quoted a French legal authority as saying "We run our courts to convict the guilty, not to acquit the innocent." Presumption of innocence has always been regarded as a fundamental right of Americans, including those in service. How can a treaty be constitutional when it deprives a man of this most fundamental right?

It is undisputed that in some cases criminal penalties handed down by foreign courts are such that they would be considered cruel, inhuman, and unjust by United States standards. In spite of a specific proviso in the United States agreement with Japan that such sentences will not be imposed on our military personnel, 2 servicemen were recently sentenced by Japanese courts to terms of 5 years and 2½ years at hard labor for offenses which, in this country, would probably bring no more than 90 days imprisonment.

Even in cases where sentences imposed would be considered fair by American standards, we must take into consideration the fact that the prison standards in many countries are much below those here, so far below, in fact, that incarceration in them for any length of time amounts to unusual punishment.

One must only recall recent developments in Japan and Formosa to realize, too, that because of the emotional state of the people there it is often extremely difficult for an American serviceman or officer to get a fair trial. Feelings have been intense and, in some cases, hysterical. This is not conducive to justice, and is a fundamental impairment of a serviceman's rights because the trial cannot be moved to a court in an area where this condition does not exist.

There are other factors which, realistically, we must also consider. In France, for example, the Communist Party is the largest single political party. Italy has the largest Communist Party outside the Iron Curtain. There is considerable Communist infiltration of all walks of life in these countries.

Is any member of this committee prepared to say that there are no Communist judges in France, no Communist prosecuors, or that Communists are not selected for jury duty? Can an American expect a fair trial if a Communist or pro-Communist is sitting on the bench, acting as prosecutor, or serving on the jury?

Inasmuch as one of Moscow's main objectives today is to break up the NATO alliance, deprive the United States of its overseas bases, and drive it out of Europe, it is only reasonable to assume that any Communist associated in any way with the trial of an American serviceman would do everything possible to use the trial as a means of arousing anti-United States sentiment and hindering not only our diplomatic relations but also our defense effort. This injures not only United States interests, but also the basic rights of American military personnel who may be tried in France. They become political pawns in the eyes of such people.

It has frequently been argued that the surrender of our sovereignty over American troops through the NATO Status of Forces Treaty and similar executive agreements has been a concession we have been forced to make in the interest of national defense, that we want our troops in Western Europe, in Japan, Formosa, the Philippines, and must make this concession to get them there.

It is true that American troops stationed abroad add much to the defense of our own country. But this is a mutual-defense arrangement. Our allies need our troops stationed abroad as much, if not far more, than we do.

I believe that if the issue were put to them properly our allies would agree to restore to our military authorities complete sovereignty over our servicemen. No nation should object to fair and equal treatment. We could grant them complete sovereignty over their troops stationed in this country in return for United States sovereignty over our troops stationed within their borders. While it is true that there are relatively few foreign troops in the United States and well over 1 million United States servicemen on duty abroad, it is also true that the American military personnel are making a great contribution to, and a sacrifice for, the security of our allies. They deserve not only justice but special consideration for this.

We have made concessions to all these nations on many issues. We have given them billions of dollars in aid. Is it unreasonable to ask them to give us sovereignty over our own forces when we are perfectly willing to give them the same sovereignty over theirs?

Recently we have heard much about the fifth amendment in this country—much defense of traitor Communists and their fellow travelers who abuse the fifth amendment. Self-styled liberals and saviors of the Constitution and the United States are most vocal on this subject. At the same time, these people have for years shown a strange and colossal indefference to the constitutional rights of the American serviceman, specifically those fifth amendment rights threatened by the NATO Status of Forces Treaty.

For a change, I would like to hear some of these people, most of whom are supporters of the NATO Status of Forces Treaty, speak out for the fundamental rights of the loyal members of our Armed Forces who are serving overseas to protect this Nation and others from the Communist aggressors, the rights of whose fifth column agents seem to be so close to the hearts of some people in this country.

The whole Congress is charged with regulating our Armed Forces. The Uniform Code of Military Justice comprises the only departure from the full protection of the Bill of Rights that the Congress has approved for military personnel accused of crimes. Yet, because of treaties and executive agreements, our military personnel are being tried by foreign courts that do not grant the same protections as the Uniform Code of Military Justice and the Manual for Courts-Martial authorized by it.

Never before in the history of the United States, prior to 1953, were American servicemen tried by foreign courts. These men are wearing the American uniform in foreign lands; many of them are risking their lives daily to protect the very rights that are being denied them by the NATO Status of Forces Treaty and related executive agreements. I therefore urge this committee and the whole Congress to take immediate steps to see that these rights are restored by repeal of these treaties and executive agreements.

Now a few words about the case of Army Sp3c. William Girard, who has been indicted by a Japanese court for inflicting bodily injury causing death and will go to trial on this charge at some indefinite date in August.

Under the Executive agreement with Japan now in force, that country has jurisdiction over American Armed Forces personnel only in cases arising from an act or omission that is not done "in the performance of official duty."

Japan clearly does not have jurisdiction over Girard because, in interpreting the agreement, the phrase "in the performance of official duty" has been universally accepted as meaning "on duty," as opposed to "off duty." According to traditional United States degnition, Armed Forces personel are on duty 24 hours a day, unless specifically placed on an offduty status through the granting of a furlough or a pass. Japan's claim to jurisdiction, based on the charge that Girard did not act "in the performance of official duty," is therefore completely unjustified.

This position is supported by the fact that the agreed official minutes of the agreement with Japan, which supplemented and are supposed to clarify and define the provisions in the agreement to avoid disputes in interpreting it, contain the following statement. This statement, by the way, is a clarification of paragraph 3 (a) (ii), which states that the United States will have primary right of jurisdiction in "offenses arising out of any act or omission done in the performance of official duty":

"Where a member of the United States Armed Forces or the civilian component is charged with an offense, a certificate issued by or on behalf of his commanding officer stating that the alleged offense, if committed by him, arose out of an act or omission done in the performance of official duty, shall, in any judicial proceeds, be sufficient evidence of the fact unless the contrary is proved."

If a certification by a commanding officer shall be "sufficient evidence of the fact" in any judicial proceedings unless the contrary is proved, it is certainly reasonable to say that it was understood that it would also be "sufficient evidence of the fact" in the dis-

cussions of the Joint American-Japanese Committee, unless it was proved false.

Secretaries Dulles and Wilson, in their statement on the Girard case, said that Girard's division commander had certified that Girard's action was done "in the performance of official duty." This certification was not proved false in the Joint Committee meetings, and yet it was, in effect, rejected by both sides.

This amounts to a breaking of the spirit, if not the actual letter, of the agreement by both sides—by Japan because it claimed jurisdiction in spite of the certification by Girard's division commander and without proving that that certification was false, and by the United States through its surrender of jurisdiction to Japan even though Girard's commanding general certified that he should have been tried by a courts-martial. According to the spirit of the agreement, Japan made unreasonable demands and the United States made unnecessary and unreasonable concessions—at the expense, I might add, of an American soldier.

I have every reason to believe that when United States authorities turned Girard over to a Japanese court they violated a specific promise which had been made to him—inasmuch as this promise is made to all men assigned to duty in Japan. In the hearings on the NATO status-of-forces agreements held by the House Foreign Affairs Committee in July 1955 there was inserted in the record (p. 319) the official text of the briefing that is given to all American troops sent to Japan. I quote from that briefing:

"The United States has primary jurisdiction over military and civilian personnel who commit offenses while on official duty * * *. For example, if Sergeant Smith, while driving a Government car on official business, kills a Japanese pedestrian, the sergeant is subjectly only"—and I emphasize the word "only"—"to court-martial since the United States has primary jurisdiction because the offense took place while the soldier was on official business."

Applied to the case of Girard, this was a promise that he would be tried only by a United States court-martial because he was "on official business" when the offense took place.

The briefing also points out that Japan can ask the United States to give up its primary authority to try a service man if it feels the case is of particular importance. This is a reference to the proviso in the agreement that the state having primary jurisdiction shall give sympathetic consideration to a request for waiver of that jurisdiction from the other state when that state considers such a waiver to be of particular importance. But the surrender of Girard by United States authorities does not come under this part of the agreement and cannot be excused because of its existence.

In his case Japan did not recognize the primary jurisdiction of the United States and request this country to waive it because it was a matter of particular importance. On the contrary, Japan flatly denied that the United States had primary authority—and the United States acceded to this unfounded contention, thereby breaking its word to Girard. Nowhere in the briefing is there a hint that such action would ever be taken in the case of any American serviceman. As a matter of fact, the whole tone of the briefing indicates just the opposite.

According to Secretary of the Army Wilber Brucker, this is the first time, to the best of his knowledge, that an American serviceman has been turned over to a foreign court for trial as a result of an action performed while on duty.

When Rear Adm. Charles E. Hubbard, deputy Chief of Staff for the Far East Command, turned Girard over to Japanese jurisdiction, he admitted that he was setting a precedent in surrendering to a foreign court a member of the United States Armed Forces charged with committing an offense while on duty.

It is clear from the joint statement issued by Secretaries Dulles and Wilson that Girard's rights have been traded away for political considerations and in the interests of our international relations. If this becomes the custom, what is going to happen to the morale of the million and a half or so members of our Armed Forces who are serving abroad? How secure will they feel in their rights?

And if it is correct for the Government to trade away the rights of servicemen for diplomatic considerations, what is to prevent it from trying to trade away the rights of the ordinary American civilian for the same reason? This is the key, the essential issue in this case. It is a breach of the Constitution and one that threatens the individual liberties of all Americans.

The rights spelled out in the Constitution are supposed to be inviolate except insofar as a grave national emergency may justify their temporary suspension. But now we have reached the point where diplomatic considerations, rather than the Constitution, are apparently the touchstone of the liberties of American military personnel.

Furthermore, on the basis of the Girard decision, any nation with which this country has an agreement concerning jurisdiction over our Armed Forces and which claims jurisdiction for itself and persists in that position, causing a deadlock, will be able to get the United States to surrender its sovereignty despite any agreement that it need not do so. This is exactly what happened in Japan. The United States representative had orders to claim United States jurisdiction but, if a deadlock should develop, to agree to surrender that jurisdiction to the Japanese.

This is a particularly worrisome development when it is known that Communist groups in Japan have been partly responsible for creating the furor over the Girard case. It means that, indirectly at least, Moscow has called the tune on United States surrender of its sovereignty there. If this can happen in Japan, it can also happen in other countries. Communists can start agitating, create an artificial national and international issue—and another American's rights will go down the drain, along with a little more of our country's sovereignty.

That is something the Veterans of Foreign Wars does not want to see—any more, I am sure, than the members of this subcommittee, the whole Congress, and the great majority of our people want to see it. Most important, we do not want any individual American's constitutional rights impaired or lost. That is why we strongly urge this subcommittee to take the lead in pressing for the repeal of the NATO Status of Forces Treaty and related Executive agreements.

Before bringing this statement to a close, I would like to point out that it was prepared before Federal District Judge Joseph C. McGarraghy ruled on June 18 that Girard should not be turned over to a Japanese court for trial. In his decision Judge McGarraghy upheld a number of points made in this statement. He emphasized that it was uncontroverted that Girard, at the time of the incident, was acting as a member of the American Armed Forces in the performance of his official duties as guard. Not only had Girard's commanding officer so certified, the judge pointed out, but Secretaries Wilson and Dulles admitted this in their joint statement of June 4 and, during the hearing before him, even the United States attorney said that the Government conceded this point.

The judge then pointed out that, under the Constitution, Congress has the power to govern our military forces, that it had adopted a Uniform Code of Military Justice which applies to all persons in military service and establishes every procedure to be followed in prosecuting them for offenses committed in the performance of official duty. The judge therefore ruled that the Government's determination to turn Girard over to a Japanese court would violate rights of the petitioner guaranteed by the Constitution of the United States inasmuch as his on-duty action, under both the Constitution and the agreement with Japan, made him accountable only to United States Federal jurisdiction.

This, in effect, upholds my earlier charge that the Federal Government was prepared to trade away Girard's rights for reasons of international diplomacy.

Girard's plea to the court did not raise the issue of whether the agreement with Japan is a violation of the constitutional rights of American servicemen and Judge McGarraghy therefore did not touch on it. It is still my feeling, however, that this viewpoint will probably be upheld if the issue is put to the Supreme Court.

In closing, I want to again thank the members of the subcommittee for giving me the opportunity to testify.

Investigating Committees

EXTENSION OF REMARKS
OF

HON. LeROY H. ANDERSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. ANDERSON of Montana. Mr. Speaker, I include the following editorial from the Daily News of Havre, Mont., titled "Investigative Committees May Need Overhauling." It was written by J. R. Larcombe:

INVESTIGATING COMMITTEES MAY NEED OVERHAULING

The sorry spectacle of the Becks, senior and junior, refusing to acknowledge themselves as father and son on the ground that such admission might incriminate is only one of the latest in a long series of racketeers' contempt for our governmental processes, but it is sufficiently nauseating to make a good many people wonder whether it might not be a good idea to take a new look at congressional investigating committees.

A labor racketeer is no better and no worse than any other kind, be he bootlegger, slot-machine impresario, or just plain parasite, but even the notorious Frank Costello made a better case for himself than have the Dave Becks in their useless and contemptuous appearance before the United States Senate.

This business of arrantly guilty people hiding behind the fifth amendment which was designed to protect possibly innocent people from deliberate harassment may make sense to trained legal minds, but it makes little or none to the rest of us.

If these congressional committees are only semilegal arrangements having no actual power as has a civil court, then possibly they are not longer of use. They could even impede ultimate justice because of the nationwide publicity some cases receive; with the consequent difficulty in securing an unbiased jury when and if these scamps are brought into a formal court.

It seems to us that if these people are going to continue virtually to defy investigating committees, they don't belong before them. They might better be brought before a Federal grand jury on evidence secured by

the FBI. We don't believe Mr. Dave Beck would have suffered such a severe loss of memory in front of a grand jury, nor would he have dared to hide behind the fifth amendment more than 200 times. He would have talked freely or else come out with a nice little Federal indictment hanging around his fat neck. Probably both.

We are not too much sold on these investigating committees anyway. The primary business of Congress appears to be legislation. Certainly they are seldom worth the money they cost, especially since they have no real power worth using. Mostly they get headlines for some publicity-hunting Member of Congress who might better be attending the basic business for which he was elected.

Senator ESTES KEFAUVER used his rackets investigation and some hundreds of thousands of dollars of public funds as a means of promoting himself for the Presidency. He sent not a man to jail, and the whole spectacle was generally useless.

Maybe a new look at this investigating business is in order. Why shouldn't Senators legislate and the police investigate?—J. R. L.

The Private Power Company Takes a Free Ride on the Taxpayers—Hollering About Low Cost Public Power That Pays Its Own Way

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. ENGLE. Mr. Speaker, this week I put in the CONGRESSIONAL RECORD a statement showing that the Pacific Gas & Electric Co. in California has secured the second largest tax writeoff in the Nation, and suggested that that company would do well to follow the example of the Idaho Power Co. and disgorge its tax subsidies. I include in the RECORD two editorials from the Redding Record-Searchlight dealing with this matter. I call attention particularly to the reference made to the crocodile tears shed by the power company while it condemns the fact that the common people are getting the benefit of low-cost public power which pays its own way.

The editorials follow:

[From the Reading Record-Searchlight of June 6, 1957]

WHO GETS A FREE RIDE?

The claim of great benefits to the Federal Government from private development of power on the Trinity project sounds a little hollow when you note that the Idaho Power Co., which was to benefit the Federal Government by using what could have been a Federal dam site at Hells Canyon, has now received a big Government subsidy in the form of a rapid amortization for tax-deduction purposes.

Isn't it possible that the same thing will happen on the Trinity, and that P. G. & E., after saving the taxpayers the expense of a power house, will get a handout of taxpayers' money, just as Idaho Power did?

Secretary of Interior Seaton refers almost sneeringly to the preference customers who will have to pay an extra $115 million for their power under partnership as being only 7 percent of the people of California. In the same vein, P. G. & E. spokesmen in San Francisco asked why such customers should get a free ride at the expense of water users and taxpayers generally. In other words, it's fine if a big corporation, enjoying a monopoly situation, gets a free ride at taxpayers' expense, but it's immoral for the taxpayers' own agencies (city electric systems, public utility districts, farmer cooperatives, etc.) to take advantage of power from a public project unless they first pay tribute to the monopoly.

[From the Redding Record-Searchlight of June 13, 1957]

MILLIONS, INTEREST FREE

How'd you like to have Uncle Sam give you an interest-free loan of $78,959,499?

Pacific Gas & Electric Co. got the equivalent of such a loan, in the form of accelerated depreciations for tax purposes, according to a tabulation placed in the CONGRESSIONAL RECORD by Representative JOE L. EVINS, of Tennessee. EVINS figures the total subsidy to P. G. & E. will amount to $267,962,101 over a period of years.

EVINS explains how it works:

"A tax certificate permits the recipient to amortize his capital investment in 5 years instead of the much longer period provided by conventional practice. The actual life of power projects is normally considered to range from 25 to 50 years. On a $2 million powerplant construction—with a 50-percent of $1 million tax certificate grant—the company would be permitted to depreciate $200,000 a year instead of $20,000 each year under normal procedure. Assuming that the company was already in the 52-percent bracket, as most of them would be, the tax saving, as compared to what it would have had to pay if it had followed the 50-year depreciation pattern, would amount to $93,600 per year. Over the 5-year period the total saving would be $468,000. So during the 5 years the company enjoyed rapid amortization it would pay a total of $468,000 less in taxes than under the normal procedures—the private utility company also would have the benefit of using the funds represented by the tax saving, and, therefore, the total tax relief amounts to an interest-free loan from the Government."

So here is the private company, one of the favored few who get fast tax writeoff privileges, complaining that Federal power from the Trinity project would go to a favored few—by which it means cities like Redding and utility districts like those in the Shasta Dam area and Sacramento.

And it's going to save the taxpayers $50 million by building the Trinity project powerhouses. It can do that handily out of its $78 million interest-free loan from the taxpayers.

North Shore, Mass., Chapter Wins Stevenson Trophy

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. BATES. Mr. Speaker, it is a privilege and an honor to incorporate in the RECORD a resolution of the National Association of Accounts designating the North Shore, Mass., chapter as the 1957 winner of the Stevenson trophy cup.

This chapter, which was formed only 5 years ago, is to be commended for this rare distinction and it is my pleasure to advise the House of its outstanding achievement:

Be it known that—

Whereas during the year ended May 31, 1957, in a nationwide interchapter trophy competition carried on in the United States and its possessions by the National Association of Accountants, formerly known as the National Association of Cost Accountants; and

Whereas because this competition is carried on between 131 chapters in as many separate locations in the country and its possessions, having an aggregate membership of over 40,000 individual members; and

Whereas because the competition, known as the Stevenson Trophy Competition, measures the relative achievements of the various chapters in their effort to carry out activities which further the advancement of knowledge and education in the science and practice of accountancy; that

Therefore we recognize and know the outstanding achievement of the Massachusetts North Shore chapter of the National Association of Accountants, being the 1957 winner of this aforementioned interchapter competition and awarded the Stevenson trophy cup by the president of the National Association of Accountants on June 27 at the 38th annual conference of the association held at the Sheraton Park Hotel in Washington, D. C.

Even the Flies Were Dying

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. ENGLE. Mr. Speaker, the problem of taking care of the growing thousands of people who seek recreation on the public land areas of the United States is dramatically set forth in the attached editorial of June 24, 1957, appearing in the Redding Record-Searchlight. The fact is that serious health problems can arise by the overcrowding of the inadequate facilities presently provided on recreational areas. I know the Appropriations Committees are doing the best they can with this matter, but I trust that a reading of the editorial would encourage their efforts.

The editorial follows:

EVEN THE FLIES WERE DYING

A fellow who was there reports that over the Memorial Day weekend there were 100 trailers at the undeveloped Jones valley arm of Shasta lake and sanitation was so bad even the flies were dying.

We didn't see that spot, but we did observe the jam at Bailey Cove, where all the tent spaces were filled, where the boat launching ramp had a waiting line and where the parking area was filled to overflowing. There is a critical situation that calls for immediate congressional action.

Shasta Lake is a Federal body of water, created by Shasta Dam, and the United States forest service has jurisdiction over the recreational areas around it. But so far it hasn't had the funds to meet its responsibility. Each year the number of users increases, with outboard boaters coming from hundreds of miles away. The forest service hasn't been able to add camping spots and boat launching facilities half fast enough.

It looked for a while as though the forest service could get started this year, because it announced a 5-year Operation Outdoors program to total some $85 million to meet the recreational needs of the national forests. But with the big cut-the-budget drive on in Washington, this essential and long-delayed program is likely to get slashed.

Some forest facilities can, perhaps, be postponed. Campers can camp in the woods even if improved campgrounds aren't provided. But Shasta Lake is attracting people by the thousands, and unless there are facilities for them, it can create a mess that will be a discredit to the Federal Government.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Two Hundredth Anniversary of Emmitsburg, Md.

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. BEALL. Mr. President, the great Free State of Maryland recently had the pleasure of observing the 200th anniversary of one of its friendliest and most charming communities, the town affectionately described in its local newspaper as "picturesque, historical, and tranquil Emmitsburg." Ever since 1757, when Samuel Emmit bought the 2,250 acres of land on which the town now stands, the area has grown and prospered in faithful accord with the most glorious traditions of its mother State and our entire Nation. Consequently, it was a special pleasure for me to participate in the opening ceremonies of Emmitsburg's bicentennial celebration, and I know that our fine Governor, Theodore R. McKeldin, also felt highly honored when he was privileged to deliver an address on the climactic evening on which the 8 days of festivities were brought to a close. As is his custom, the Governor delivered an exceptionally noteworthy speech, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. THEODORE R. MCKELDIN, EMMITSBURG BICENTENNIAL, EMMITSBURG, MD., JUNE 29, 1957

Right gladly do I pay homage to Her Gracious Majesty, the Queen of Emmitsburg, salute her court, and present my compliments to the nobility and gentry here assembled on this bicentennial celebration.

It was a happy inspiration to give the pageant the name of Valley Echoes, for to one whose ear is attuned to the voices of history it is an echoing valley indeed. Poised on the dividing line between North and South, and also what was, for the first 200 years of our history, the dividing line between East and West, Emmitsburg has been in position to hear the clamor from all regions. Her ear has been closed to none. In her situation no voice was strong enough to drown out all others.

Mason and Dixon divided North and South. The Appalachians divided East and West. Emmitsburg, standing where the surveyors line begins to cross the mountains was for a long time a central spot. At the extremities men heard little save their own voices and often made bad decisions because they did not know what others were saying. But this valley echoed to them all and Emmitsburg heard them all. It is not surprising if there developed in this region a way of life so comprehensively American, so typical of all America that to the North and the South, to the East and the West, people sometimes failed to recognize it for what it was.

Hardly any strong voice raised in America has not echoed in this valley. It heard the Indian war-whoop long before the white man came. It heard the crack of the flintlock rifles of the fur traders and after them the axes of the pioneers. Scouting parties from the neighborhood of Fort Duquesne spoke here the accents of France, and in later years the creaking wagon wheels of migrants mingled with German and Irish and Scottish voices as the flood of population poured through Pennsylvania and on to the South.

Afterward, when an enemy army held Philadelphia, and Congress fled to Lancaster and York, Emmitsburg was on the edge of the hurricane, and again in the last act of that drama, when the North had been recovered and Cornwallis at last was penned with his back to the sea, Emmitsburg was in almost the same relative position.

Eighty years later, during the last great tragedy attending the building of the Nation, in those days, as G. K. Chesterton wrote:

"When Lee, the last of the heroes, came
With the men of the South and a flag like flame,
And called the land by its lovely name
In the unforgotten song."

This valley echoed to the thunder of battle at Antietam and Gettysburg. An echoing valley, indeed, and dull must he be of soul who could pass by unhearing and uncaring.

All this you have summed up with poetic insight in the pageant presented today. It is a fine work, a work worthy of a people who know that to preserve the memory of the great days of the past is the best way to invigorate the present and to assure the coming of great days in the future. It is the kind of work that preserves and enriches civilization.

For that reason I suggest to you another significance that this occasion has. Echo, according to the storytellers of ancient Greece, was once a maiden who incurred the wrath of Juno by talking too much; so Juno decreed that thenceforth she could use her voice only to repeat what was told her, and to this day Echo only gives back what she has heard.

Thus far, in considering the valley echoes we have paid attention only to the voices of the past. But I submit that Echo can move both ways; and I believe that an attentive ear will enable us to hear, or at least guess at, some echoes of the future. For remember, what we hear is only a repetition of what we have given out in the first place—changed in tone and resonance, no doubt, but basically the same.

What sort of echoes will this valley hear in the years that are to come? It is a solemn thought because the answer depends upon what we utter now.

No wise man can doubt that this Nation at present is engaged in a gigantic struggle for survival. It is not a military struggle, although it may come to that. It is a struggle for the minds and hearts of men, an effort to convince men who have never enjoyed it that liberty is more precious than anything else in life, more precious, indeed, than life itself.

This is very difficult indeed. In some ways it is the hardest struggle in which the American people have ever engaged. But the difficulty of the war measures the greatness of the victory. If the American people can win the major portion of mankind to an appreciation of freedom, we shall have done a far greater thing than we did when we defeated Germany and Japan; for this is a battle in the realm of the mind and the spirit, and "he that ruleth his spirit is better than he that taketh a city."

In a struggle for the minds, rather than the bodies of men the weapons are not fire and steel, but ideas. In this combat we are using every weapon available—propaganda, military aid, economic aid, everything else we can think of—but the best of all weapons in such a struggle is the power of example. All the talk in the world is not half as effective as one demonstration of liberty in action.

This brings the business straight home to every community in America. I referred to Emmitsburg as being on the edge of the hurricane in the Revolution and again in the Civil War; but this time you are right in the storm center, for the United States of America, the whole country, is the storm center. If the ideal of liberty fails here, it has no chance at all anywhere else. If we can't make it work, nobody can; and it would be nonsense to recommend to other people a system that we can't make work at home.

This lends to what may seem to be small affairs a terrific significance. For instance, the refusal of a college to admit one particular student doesn't seem to be an earth-shaking event; yet when the University of Alabama refused a women on account of her color, there were protests that amounted to disturbances of the peace in Cairo and Bombay. It was not the student that counted; it was the fact that the United States seemed, in the eyes of Asia, to be refusing to practice what it preaches.

By comparison with Paris and London and Tokyo, Emmitsburg is a small place, but do not think that this means that whatever happens in Emmitsburg must be a small event. By sturdily defending equal justice under law in Emmitsburg, you vindicate the ideal of human liberty in Shanghai and Calcutta; and never say that that is a small thing.

During the late war there was a popular song intended to apply to military combat, but there is one stanza in it that I think we can well adapt to the fight in which we are now engaged. It runs:

"Praise the Lord and wheel into position,
Praise the Lord, we're on a mighty mission,
Praise the Lord and pass the ammunition,
And we'll all stay free."

The ammunition in this case is not shot and shell, but justice and fair dealing as between man and man, in Emmitsburg, in Baltimore, in Alabama and everywhere else in this country that claims to stand for justice and fair dealing as the strong bulwarks of the republic. "We're on a mighty mission"—no truer word was ever spoken. We're on the mightiest mission that ever was undertaken, nothing less than the establishment of righteousness that "exalteth a nation."

Some people don't believe it. Some people don't believe that righteousness has anything to do with international affairs, but the plain fact is that such people don't know what righteousness is. They think it means psalm-singing and long prayers in public places.

Well, I will admit that that kind of righteousness has no place in diplomacy. But there is another kind. There is a

righteousness that makes a man tell the truth even when it is damaging, that makes him keep his contract, even when its costs him money, and that prevents him from kicking another man when he is down. And that kind of righteousness, applied to international affairs, is what "exalteth a nation," and does more than fleets and armies to make it secure against attack.

But it doesn't begin with the President and the Secretary of State. It begins at the grassroots. It should come to flower in Washington, but it begins in Emmitsburg, and all the other cities and towns and villages and open country in the United States.

People shouted for liberty in Emmitsburg 200 years ago and the echoes are still ringing in this valley. Let us shout for it again. Let us demonstrate right here that a decent respect for the rights of others is the surest guaranty of our own, knowing that the power of that example will spread to a distance beyond calculation and for a time beyond the predictable future. For thus, and only thus, can we make sure that when Emmitsburg celebrates its tricentennial the valley echoes will still lift the hearts of men as they lift our hearts today. By so doing we shall cause the echoes of the past to join those of the future in a harmony that is the hope of the world.

What America Means to Me

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very eloquent and inspiring message entitled "What America Means to Me," by J. Edgar Hoover, Director of the Federal Bureau of Investigation, which appeared yesterday in This Week magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT AMERICA MEANS TO ME

(By J. Edgar Hoover)

The American ideal is woven of a thousand things. It is woven of unfaltering faith in God, of faith in the destiny of this Nation, of heroic battles such as Bunker Hill, and Gettysburg, and the Marne, and Anzio, and Iwo Jima.

Threaded through the fabric is the patience of a Washington, the wisdom of a Franklin, the humility and compassion of a Lincoln, the integrity of an Eisenhower, the courage of an unknown soldier, the vision of a Jefferson and the sacrifice of a Nathan Hale.

It is laced with the memory of men's words: "I have not yet begun to fight," and "I only regret that I have but one life to lose for my country."

The American ideal is embodied in our Nation's integrity and honor, and in our homes, where respect for the rights of others is taught by precept and example. It is part and parcel of our Bill of Rights, and the constitutional concepts which recognize that all men are free and equal.

The American ideal embodies the sum total of the wisdom, the courage and the sacrifices of our Founding Fathers. It includes gratitude for our many blessings and a firm resolve to be worthy of them.

Finally, the American ideal has its roots in religion. Without religious inspiration, the American ideal would die. It is the American precept that men shall live as equals under a government by law, which is embodied in the greatest of all laws: "Whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets."

Legislative Monstrosity

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Legislative Monstrosity," from the June 19, 1957, issue of the Savannah, Ga., Morning News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEGISLATIVE MONSTROSITY

The republican concept of Government as established by the Constitution was dealt a severe blow by a majority of the House of Representatives on Tuesday when they passed, over strong Southern opposition, the iniquitous Eisenhower civil rights bill.

The bill will, among other things, set up a gestapo-type Federal investigation service under the Attorney General empowered to bypass State courts and go right into Federal court to prevent alleged violations of civil rights even before they occur. And the Federal courts will be empowered to assume direct jurisdiction in such matters and hold trials in which the defendant is denied the right to be judged by a jury—thus wiping out a concept of Anglo-Saxon justice dating back to the Magna Carta.

In effect the act, in the name of civil rights, interposes Federal jurisdiction between an individual and his local and State courts before remedies in those courts have been exhausted, and hales the individual directly before a Federal tribunal for trial, without a jury, not only for an alleged offense he has committed, but for an alleged offense the Federal agents think he might commit at some time in the future.

The only recourse would be to the United States Supreme Court, which precludes any hope of objective judicial review of any tactics which might be employed in the name of civil rights.

The bill, if it passes the Senate, would establish the climate for the growth of a reign of terror against anyone holding views which might differ with those prevailing among the political leaders in power at the time. It may be turned any or all directions to crush individual liberty in the name of civil rights, subject only to the cosmic configurations that characterize the thinking of the Supreme Court on such matters.

It is up to the Senate to rise in righteous indignation and block passage of this legislative monstrosity spawned by the cheapest type of politics. Constitutional Government must not be destroyed for expediency by shallow politicians in the name of civil rights.

Funeral Rites of Hon. R. Gregg Cherry

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. WHITENER. Mr. Speaker, on Thursday, June 27, 1957, the funeral of a great North Carolinian, the late former Gov. R. Gregg Cherry, was held in the First Methodist Church, Gastonia, N. C.

I was very much impressed by the splendid remarks made by my pastor, Dr. Wilson O. Weldon, as a tribute to the life and works of Governor Cherry.

Under unanimous consent, I insert these remarks in the RECORD as a further tribute to this fallen leader.

ROBERT GREGG CHERRY

(Funeral remarks by Dr. Wilson O. Weldon, minister, First Methodist Church, Gastonia, N. C.)

The story of this man, of whose memorial rites each of us is a part, is a story of American greatness. Not born to promise, as men measure it, yet he was one who came to be entrusted with the highest office within the gift of his city and of his sovereign State of North Carolina.

Others have written of his accolade of achievements; I speak of him as the man, with a great and a good heart.

Some, when elected to high public office, become proud and arrogant. Not so with Gregg Cherry: he was friend to the bootblack as well as to President of the United States.

Ever a friend of the underprivileged, his warm heart reached out to help the needy. How many deeds of charity, how many gifts of kindness no one really knows but the Father above.

From early days, through struggle, hardship, and diligence he sought an education. Through his college days at Trinity College and the Duke University Law School he continued his diligent quest for knowledge. Throughout his life he manifested a deep interest in higher education, and he used the high office of Governor to alleviate human suffering. He mastered law to such an extent that I doubt any other lawyer ever failed to respect his skill and brilliance as an attorney.

Not long after I become his minister he gave me an autographed copy of his addresses and papers delivered during the years that he was Governor. With a smile upon his face, and a characteristic twinkle in his eyes, he added, "Preacher, you might get a sermon out of reading them." And I did. Here it is—something he said in an address to the laymen of his own church at Gastonia in 1948:

"Much of the restlessness inside us arises from the false assumption that what is outside a man or woman has the power to create happiness. Yet, nothing outside you or me can make us happy and progressive if there is no spiritual reservoir inside." (P. 806.)

John Harden, who served as his secretary while Governor, has written of him:

"Always, in everything he did while leading North Carolina, and even while preparing for that leadership, he was a combination of soldier, lawyer, and man. The qualities that he gave those lives, those careers, could never be separated, and may I add that he was always especially a man—warm, human, un-

selfish, and devoted to a belief in a people and a way of life that was and is North Carolina."

Not many weeks ago Mrs. Weldon and I called at the home of the Cherrys, unexpected and unannounced. 'Twas one of the most pleasant and interesting evening conversations I've ever had across the years of my ministry. His keen insight, his appraisal of men's virtues, his sharp humor, his warmth of compassion continue to shine like stars in my memory.

And a few days thereafter I stopped by his law office. When another friend had left, I closed the door and then talked in prayer with the Maker of us all. When I had finished, he took my hand and said, "Parson, they helped my body down at the Duke Hospital, and now I feel better inside—you know what I mean." I knew, and you know, what he meant.

Friends, that's the Gregg Cherry I shall remember and for whom I shall thank God. And it is in the spirit of those lines which he loved to quote that I bid you remember him, too—

"When earth's last picture is painted
And the tubes are twisted and dried,
When the oldest colors have faded,
And the youngest critic has died,
We shall rest—and faith, we shall need it—
Lie down for an aeon or two,
Till the Master of all good workmen
Shall set us to work anew!

"And only the Master shall praise them,
And only the Master shall blame,
And no one shall work for money,
And no one shall work for fame,
But each for the joy of working,
And each in his separate star
Shall draw the thing as he sees it,
For the God of things as they are."

—*Rudyard Kipling.*

Russell Lauded on Rights Stand

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. BROWN of Georgia. Mr. Speaker, I, under unanimous consent, insert in the RECORD an article entitled "RUSSELL Lauded on Rights Stand," by Paul Wooton in the June 21, 1957, issue of the Times-Picayune, of New Orleans, La., quoting Representative EDWIN E. WILLIS, of Louisiana, in paying a well-deserved tribute to Senator RICHARD B. RUSSELL, of Georgia.

The article follows:

RUSSELL LAUDED ON RIGHTS STAND—SENATOR ASSET TO SOUTH, SAYS LOUISIANA SOLON

(By Paul Wooton)

WASHINGTON, June 20.—"What an asset DICK RUSSELL is to the South" That exclamation came from Representative EDWIN E. WILLIS, of Louisiana, when asked Thursday what he thought of Senator RUSSELL'S comment on the effort to bypass the Judiciary Committee and put the House-passed bill on the calendar.

The Georgia Senator urged his colleagues to pay no attention to the smokescreen the so-called liberals have set up. It is charged that they have little real interest in voters in Southern States. Their real objective, RUSSELL declared, is integration in schools. There the hate-the-South campaign would bear political fruit, because then every school board official could be put in jail if the schools were not integrated. The hate-the-South effort is the most determined one launched since carpetbag days, RUSSELL thinks.

A terrible price will be paid if the Senate establishes a precedent under which a bill is sent directly to the calendar without prior references to a committee, he said.

RUSSELL said he would not discuss the merits of the bill because it has none. There are only demerits to talk about, he said. It has given rise to a propaganda campaign, RUSSELL stated, "to make it appear that southerners are prejudiced, bigoted, and, indeed, a brutish people." He quoted from American Mercury, a northern magazine, which reveals the sinister design of leftwing schemers to discredit "the South with its deep-running conservatism and unshaken Anglo-Saxon traditions." All this is being prompted, says the magazine, by the "political potency of the northern Negro vote."

At one point in RUSSELL'S remark he said the civil-rights bill as passed by the House "wipes out individual rights, and liberties which the Anglo-Saxon race has cherished and on which it has depended for a thousand years. It would vest in an appointed official, the Attorney General, power over the American people which no President, elected by the people, ever has had."

RUSSELL'S hard-hitting speech, said WILLIS, who took a leading part in the House fight, is only the beginning. Southern Senators are prepared, he said, "to pour it on" until the devastating character of the proposed legislation is thoroughly understood by the people.

Strontium, Secrecy, and the AEC

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. PORTER. Mr. Speaker, the survival of human life in the face of the danger from nuclear weapons is by far the most important question before this Congress. Yet, for many reasons, this question has not been framed or squarely presented to this Congress.

Alton F. Baker, Jr., editor, and Robert B. Frazier, associate editor, of my hometown newspaper, the Eugene Register-Guard, had as their lead editorial on June 20 the following:

STRONTIUM, SECRECY, AND THE AEC

Almost daily now more people are becoming concerned about the fallout of radioactive material from atomic-bomb tests being conducted by this country, Great Britain, and Russia.

Evidence and arguments presented by scientists indicate that people should be concerned. Only recently, about 2,000 scientists signed a declaration of conscience urging the United States to quit testing atomic and hydrogen weapons.

The Atomic Energy Commission, to date at least, recognizes danger to the human race is involved but it has contended that tests so far have not reached the danger point. This is the most painful part of the argument. Who is right? The many scientists who say we should stop or the AEC, which, among other duties, has the problem of keeping us ahead in the atomic-weapons race?

The answers given by the AEC are really not satisfactory. Many news stories contain remarks to the effect that amounts of fallout discovered in various locations around the United States are not thought to be dangerous. But, so far as we know, the AEC has never told us in any detail why it considers that tests performed by the United States and other nations are in the realm of safe dosages of radioactive fallout for the world's population. The inference that we are yet safe has certainly been disputed by many esteemed scientists.

Another important point in this bomb-testing issue was brought home by Prof. Raymond T. Ellickson, head of the University of Oregon physics department in a speech to the Eugene Rotary Club. Dr. Ellickson said, "Why don't we stop our testing now before more nations start tests?" His inference was that we are way ahead in the atomic arms race so why shouldn't we quit tests while we have all the marbles? This question is mightly hard to answer. Scientists, including those with the AEC, say that we can detect atomic explosions regardless of where they are set off. If another nation tried to conduct secret tests, the world would soon know.

But here again is another dilemma that arises from the same question Dr. Ellickson raises. How far ahead are we in the perfection of hydrogen and atomic weapons? Does the AEC have information that we are not ahead at all in this horrible race? We don't really know. Much important information on the issue is top secret, and we, in this democratic Nation, are kept in the dark in the interest of national safety. Dr. Ellickson, we are certain, would be the first to admit there is much vital information of which he has no knowledge.

But Dr. Ellickson, inquisitive scientist that he is, has been able to piece together information from various sources which makes him believe the results of more and more fallout can be hideous. He told the Rotarians that if no more bombs were tested, the rate of dangerous fallout on the earth would continue to increase (from past tests) until 1970. And what is the biggest danger we know about now? It is strontium 90, an element that resembles calcium and is eventually assimilated into the bone structure of human beings, particularly children. It increases the danger of bone cancer and leukemia, and through the blood stream, it can cause the transformation of genes. The factor that raises a great moral issue for our generation is this: Regressive genes, that could deform the human race, would not appear for perhaps several generations. We may not hurt ourselves but what are we doing to our children and their children? Where is the danger point of too much strontium 90? Does anyone really know? Dr. Ellickson points out that in concentrated form, one-third of a pound of strontium 90 would be enough to kill every person in the United States.

We are convinced that the AEC has a responsibility, indeed a duty, to tell the facts, as it knows them, to the people of this country. Then the people should have the right to decide what we should do about our bomb tests.

Last week I filed a bill to ban further tests of nuclear weapons so long as other nations also refrained. The text of the bill is as follows:

Be it enacted, etc., That, notwithstanding any other provision of law, no device designed to produce a nuclear explosion shall be tested by explosion by the Government of the United States until such time as the Atomic Energy Commission shall report to the President that a nuclear explosion has occurred on or after the date of enactment of this Act and that such explosion was not the result of any activity of the Government of the United States. The report of the Atomic Energy Commission as well as the

evidence upon which it is based shall be published in the Federal Register within fifteen days after such Commission has made such a report to the President.

Hundreds Face Job Loss in Lead-Zinc Shutdowns

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. DAWSON of Utah. Mr. Speaker, the lead-zinc crisis which has been called to the House's attention so frequently during the past few weeks involves more than mines, it also involves miners with families to feed.

Several of us from these mining areas have introduced legislation to implement the long-range minerals policy recommendation for a sliding scale of excise taxes on the imports which have depressed the market for these two metals. Every week of inaction on this legislation means more news stories like that which follows, from the Salt Lake Tribune of June 26, 1957:

HUNDREDS FACE JOB LOSS IN LEAD-ZINC SHUTDOWNS

(By Robert W. Bernick)

Hundreds of additional lead-zinc miners are being served with severance notices in western United States as more lead-zinc mines prepare to close in the face of price declines and mounting foreign imports.

American Smelting & Refining Co. will close three metal mines in Colorado, New Mexico, and Washington, the Tribune was informed.

Combined Metals Reduction Co., Salt Lake City, associated with Crested Buttes Co. in operations on the King lease near Crested Buttes (Gunnison), Colo., announced closure of mine and mill, affecting 30 workmen.

E. H. Snyder, CMR president, also announced that the Pioche District, Nev., operations of the company would be closed by August 1, unless there was an improvement in prices of the two metals.

Only action by Congress on increase in tariffs on the imports of these metals would buoy prices at this stage, in the opinion of most observers.

Meanwhile, American Smelting & Refining Co. was mailing notices of severance to some 80 employees at its Keystone mine and mill at Crested Buttes, the Tribune was informed. Some 80 miners and millmen on day pay will be affected by the closure July 15. A few miners will be kept at work on a development project at the properties, the Tribune learned.

At American Smelting & Refining Co.'s Ground Hog Mine at Silver City, N. Mex., and the custom mill at Deming, N. Mex., some 200 miners and millmen would be affected by closures scheduled next month. Other mines shipping to the Demming concentrator also would presumably close down.

A low-grade open cut zinc property near Colville, Wash., along with a mill near Colville, also will be closed by American Smelting, the Tribune was advised. This Vanstone mine and mill employs an estimated 80 persons.

In all, the shutdowns at the King Lease and those involving American Smelting & Refining Co. bring to more than 400 miners and millmen who will face unemployment next month. An additional 150 miners and millmen at the Pioche District properties of Combined Metals Reduction Co. would be affected in August, Mr. Snyder said.

During the last few months, as the domestic mining industry has seen lead prices skid to 14 cents and zinc to 10½ cents a pound, mines and mills have been closed down in the Tri-State district of Oklahoma, Kansas, and Missouri, and in Utah, Idaho, Colorado, Nevada, New Mexico, California, Montana, Washington, Oregon, and Arizona.

Declines in prices result from ruthless dumping of lead and zinc metals on American shores by companies engaged in low-wage, foreign production of the commodities.

Policies of encouraging foreign production of metals by the United States State Department have thus resulted in grave contraction of minerals development in the Western States with consequent unemployment to citizens of the region.

Chiropractic Profession Sponsors Annual Chiropractic Day, September 18, 1957

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. MUNDT. Mr. President, the health of our Nation should be foremost in our minds, for we all know good health is as vital to the individual human as is peace of mind. It is for this reason, then, that I call to the attention of my colleagues a special observance to take place in September. The chiropractic profession—the Nation's second largest profession of healing—will observe its annual Chiropractic Day.

Chiropractors throughout the United States, Canada, and many foreign countries, will celebrate the 62d anniversary of the discovery of chiropractic by the late Dr. Daniel David Palmer. This observance will be held on September 18, 1957.

In connection with this important observance, I wish to submit for the Appendix of the RECORD a statement by Dr. Emmett J. Murphy, of Washington, D. C.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY DR. EMMETT J. MURPHY

On September 18, chiropractors will look back to survey 62 years of progress wherein the chiropractice profession has been raised to a firm basis of professional skill and ethical standards, and to the point where chiropractic today enjoys the prestige, standing, and material rewards of other professions.

Chiropractic is the second largest healing profession in America. It is classified as 1 of the 4 major healing professions, along with medicine, dentistry, and osteopathy by the Executive Office of the President of the United States, Bureau of the Budget, Washington, D. C.

Recognizing the goals already reached by this prominent profession, and the confidence of 33 million people who have received chiropractic care in the United States and Canada, it is indeed proper that we all should pause for a moment to consider the basic principles which form the foundations for this growing profession in our Nation today.

A fresh concept in the art of healing based upon the neurological, physical, and mechanical approach, rather than the chemical, was given to the world 62 years ago. For it was in 1895 that Dr. Palmer brought to the modern world the benefits of chiropractic principles.

After exhaustive research, Dr. Palmer in 1895 introduced to our world these principles which have been carried on by chiropractors who are devoted to the prevention and treatment of disease and to the promotion of public health and welfare.

The specific function by which the chiropractor is distinguished from other modes of healing is his adjustment of vertebral subluxation of the spinal column to restore normal nerve function.

The remarkable effectiveness of chiropractic methods in health care has won for chiropractic a permanent place in the family of health sciences, and in the hearts and homes of suffering humanity.

The rapid acceptance of this science in the past 62 years leads us to inquire of the standards in use today. And extremely exacting standards they are found to be.

Chiropractic colleges are required to give 4,000 academic hours in a standard 4-year course to obtain accredited ratings. A basic course of 4,400 hours is recommended. Up to 2 years of professional (college) education is required by many State chiropractic laws of licensure.

The following typical or basic curriculum for approved chiropractic colleges is based on the profession's code for a minimum of 4,000 hours in a 4-year course:

	Hours
Anatomy, including embryology and histology	740
Physiology	240
Biochemistry	180
Pathology and bacteriology	520
Public health, sanitation, hygiene	160
Practice of chiropractic principles and technique, neurology and psychiatry, pediatrics, dermatology, and syphilology, urology, ophthalmology, otolaryngology, first aid and roentgenology	1,960
Obstetrics and gynecology	200
Total	4,000

The average graduate of an accredited chiropractic college is as well qualified to practice chiropractic as the average graduate of an accredited medical college is to practice medicine, and often must pass the same board examination in the basic sciences to gain a license.

Throughout the Nation and world, chiropractors will hold observance of Chiropractic Ray on September 18, 1957, with the fullest understanding that because of the freedoms enjoyed in the Western World, a new profession can gain public acceptance on its merits as has the profession of chiropractic in a short 62 years.

Government Cotton Policy

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. TALMADGE. Mr. President, the American Cotton Manufacturers Institute, Inc., of which my good friend and fellow Georgian, Hon. L. G. Hardman, Jr., of Commerce, Ga., is president, re-

cently issued a "Statement of Fundamentals Regarding a United States Government Cotton Policy" in which it enunciated certain basic provisions which the Nation's textile industry believes should be embodied in any new Government cotton program which may be enacted by Congress.

This statement of fundamentals which evidences the sincere interest of the textile industry in the welfare of the Nation's cotton farmers was prepared by a special committee of prominent textile executives headed by Hon. C. A. Cannon, president of Cannon Mills Co., of Kannapolis, N. C.

In order that every Member of the Senate might be apprised of the views of our country's great textile industry on this question of national concern I ask unanimous consent, Mr. President, that the industry statement be herewith printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF FUNDAMENTALS REGARDING A UNITED STATES GOVERNMENT COTTON POLICY—AMERICAN COTTON MANUFACTURERS INSTITUTE, INC., JUNE 27, 1957

The American Cotton Manufacturers Institute has refrained, in past years, from taking a position on specific proposals for Government cotton policy.

We believe the determination of cotton policy should rest with the producers of cotton.

We continue to adhere to this belief but, at the same time, feel that our experience in processing the raw material and merchandising its products should be considered with regard to certain fundamentals which must be a part of any successful long-range program for cotton.

It should be clear, at the outset, that the cotton manufacturing industry is not seeking "cheap" cotton. Contrarily, the record shows that the industry has enjoyed good earnings when cotton prices were at high levels. The industry is interested in competitively priced cotton; otherwise, its cotton products cannot be priced competitively.

As manufacturers, we like cotton. Our heritage is closely geared to a cotton economy.

We have hundreds of thousands of employees who share with us a stake in the future of the product.

We have billions of dollars invested in plants and equipment; over the years we want to invest billions more.

We are not satisfied with a stagnant rate of cotton consumption in a period of rapid population increase when practically everything else the public uses is enjoying a vast upswing in consumption.

It seems clearly indicated that consumption of textile fibers and/or textile substitute materials will increase, both in this country and abroad. The question is whether a fair share of the increase will go to cotton or whether cotton policy will force us, as the primary processors, and the consuming public, away from cotton and toward cotton's competition.

The ability of cotton to compete is directly related to the soundness of Government policy. The continued use of emergency palliative may bolster the situation temporarily, but such expedients fail completely to generate the expansion process. There is urgent need for a positive and courageous course of action on the part of both Government and the entire raw-cotton industry.

TWO COURSES OPEN

The United States cotton industry, from the farmer through the final processor, stands at a point of determination regarding a course for the future.

One course leads very shortly to consumption by our domestic mills of around 8 million bales and an insecure export market for perhaps 3 to 5 million—for a total offtake of 11 to 13 million bales—with a downward trend. This course would tend to make it impossible to price cotton's products competitively, and accordingly, lessen interest in cotton's future.

The other course leads shortly to domestic consumption of 11 to 12 million bales and an export market for 5 to 6 million—for a total offtake of 16 to 18 million bales—with an upward trend. This course would lead to a renewed confidence on the part of the domestic consumer and the investment of hundreds of millions of dollars each year in the processes necessary to keep the product competitive.

THE FUNDAMENTALS

With the foregoing background, and an unlimited interest in the subject, it is our considered judgment that for our whole industry to be vigorously alive and growing, any permanent policy for cotton must involve these fundamentals:

1. An immediate and significant increase in coton acreage above the 17½ million acres that was allotted this year, and which likely will be allotted in 1958 under present law. The efficiency of the cotton farmer, the ginner and, in fact, the whole raw-cotton industry, is bound to suffer under such an acreage restriction.

2. A clear-cut procedure for improving the net income position of the cotton farmer. Unless this result is obtained, no cotton program can succeed over the years.

3. A one-price system, with the price realistically geared to competitive factors, including foreign-grown cottons and other important competing materials. Obviously, price alone will not determine cotton's ability to compete. But without a competitive price cotton cannot compete regardless of how favorable all the factors may become.

(Two experiences of the past year have demonstrated in an almost sensational manner the influence of price on consumption. First, when the export price was made competitive, foreign sales of American cotton skyrocketed beyond even the most optimistic predictions. The second experience involves the impact of price on a domestic market. When farsighted western cotton producers and the Congress teamed up to make competitive the extra long staple cotton produced in this country, offtake again exceeded the most enthusiastic predictions and the extra long staple producing industry was given a new birth.)

We are positively convinced that a competitive price for all cotton in the domestic market will have just as sensational a result.

4. The objective of encouraging cotton to move through normal trade channels, rather than through Government hands. Whenever cotton is forced through Government hands, efficiency is reduced and costs increase.

5. A sizable reduction in the enormous cost of the present program and a clear objective for further reductions in the years ahead. There are signs that neither the Congress nor the public will tolerate a continuation of the present high cost of the cotton program. On the other hand, there is certainly justification for a Government outlay that is geared to a realistic program of self-help for the cotton farmer, particularly one that in the beginning represents a substantial reduction below current costs.

6. The exclusion of any form of processing tax on the manufactured product. It is completely fallacious to assume that any product can be helped by being taxed. It is not possible to equalize the competitive disadvantage that would be created for cotton products by taxing the whole wide range of materials with which cotton competes. Furthermore, the whole American business system and the public rebels at the concept of taxing one product for the benefit of another.

CONCLUSION

Given a program involving the above fundamentals, the American cotton textile industry with all the enthusiasm and determination at its command pledges itself to a program of vigorous product improvement, market expansion and increased consumption of cotton. We reemphasize our deep conviction that the results will exceed expectations.

Income Tax Deductions for Civil Defense Volunteers

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. BEALL. Mr. President, ever since I introduced my bill to provide income tax deductions for civil defense volunteers, I have received a much heavier than usual amount of correspondence from patriotic Americans who are alarmed at the reported apathy which surrounds much of the vital CD program. An extremely thought-provoking letter and a newspaper article pertaining to this matter were sent to me recently by Mr. Sherley Ewing, director of Maryland's Civil Defense Agency, and I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

STATE OF MARYLAND,
CIVIL DEFENSE AGENCY,
Pikesville, June 14, 1957.

Hon. J. GLENN BEALL,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR BEALL: The enclosed news account from the Baltimore Sun concerning civil defense expenditures and efforts in West Germany would seem to merit your consideration when the Senate considers the Federal civil defense budget and other civil defense legislation.

When a nation which has lived through the awesome impact of modern warfare on the home front and presently has real survival problems in the cold war devotes such a proportion of its limited economy to civil defense preparations, it is time for our legislative leaders to carefully scrutinize the extent of the effort authorized in our country under current policy and appropriations. This great and resourceful Nation of ours should meet realistically the question of whether we should, or should not, make a sincere governmental effort toward preparations for the civil aspects of our national defense system.

Vast sums are not necessary but no Federal executive agency has ever been able to accomplish its assigned responsibilities without a fair share of the gross Federal budget. When zoos and many other amenities of our high standard of living get more governmental attention than civilian sur-

vival it is time for all of us to decide if we are really giving more than lip service to the civil defense effort.

Sincerely yours,

SHERLEY EWING,
Director.

BONN PLANS CIVIL DEFENSE—TO SPEND $450 MILLION IN 3 YEARS ON PROGRAM

BATTLE CREEK, MICH., June 11.—West Germany is getting ready to spend $450 million in the next 3 years to set up a civil-defense program, its Minister of the Interior said today.

Dr. Gerhard Schroeder, visiting Federal Civil Defense Administration headquarters, said his nation's first civil-defense law would go into effect later this month.

Shelter is West Germany's biggest civil-defense problem, Schroeder said. With 52 million population in an area little larger than Michigan, evacuation will not work—there is no place to run to, he said.

By next April it is planned to require that all new houses and industrial buildings in communities over 10,000 population include shelters in their design, Schroeder said.

REMODELING PLANNED

Effort also will be made to remodel existing buildings provide shelters and to improve shelters left over from World War II, he added.

"The big problem for us is whether we should start with a large shelter program," Schroeder said. "Everyone is quite willing to have shelters but if you ask someone to pay for them—that's a different thing."

He estimated cost of the program at the mark equivalent of about $4 billion and commented:

"When it comes to paying the cost, the German people are like your own—they don't want to build the shelters at their own expense."

Schroeder said he found the American civil-defense system outstanding. He said he especially wanted to study its organization and training methods.

"We have been slow in building up our military defense and even slower in civil defense," he said. "Now we face the difficult problem of building both at the same time."

FACE DIFFICULT PROBLEM

The problem is mainly economic although it is also administrative, Schroeder explained. The Interior Ministry is not set up to deal with all the executive duties required, he said, so a separate civil-defense agency will be set up under the Ministry's direction.

Schroeder was accompanied by his personal adviser, Albrecht Krause; Walter Bargatsky, chief of the West German Public Safety Department; and Hanns Rode, commercial secretary of the West German Embassy in Washington.

The party visited New York last week. After conferring here with Federal Civil Defense Administration officials, the group left tonight for Minneapolis to study that city's civil-defense program. The party then goes to Washington for further talks with the Federal Administration, Val Peterson.

Church Versus Dictatorships

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. PORTER. Mr. Speaker, decency and democracy are synonymous. No religious group favors dictatorships. Eventually a dictator's crimes result in strong and united opposition from persons of faith and character. In connection with my attempts to persuade our Government to discard neutralism in our relationships with Latin American countries and to distinguish between the democracies and the dictatorships, I was most encouraged to read in the July 1, 1957, issue of Time magazine, page 31, the following:

THE AMERICAS—CHURCH VERSUS DICTATORSHIPS

In Cuba's Sierra Maestra Mountains last week, a Roman Catholic priest lived with and ministered to the band of rebels led by Fidel Castro. In Colombia a cardinal of the church heard the warm praise extended by a people who regard him as a ranking hero of the revolution that tossed out dictator Gustavo Rojas Pinilla. From Cuba to Argentina, the church is taking a critical look at its old role as friend of the top dog and is often charting a new, antidictatorial course.

In official church doctrine the change is rooted in the Rerum Novarum encyclical of Pope Leo XIII, who in 1891 urged fairer treatment of such working masses as largely inhabit Latin America. In vigorous execution in Latin America, the policy is only about 2 years old and is rooted in the Vatican's conviction that dictatorship and poverty breed communism. "Experience has taught," says a high Vatican spokesman, "that a system of freedom is in the end best for church interests. Any privilege that may be gained through a dictatorship is soon more than offset by hatred against the church."

PERÓN'S LESSON

The bitter object lesson that brought this awakening was Argentine Dictator Juan Domingo Perón. Supported by the church at first, he later grew furious at Catholic meddling in political affairs. The strongman slapped taxes on Catholic property, tossed priests out of the country and set his bullyboys to burning churches. In today's Argentina priests who fought Perón are now the dominant force in the church.

Church leaders in Colombia showed strking courage during the final year of Dictator Rojas Pinilla. Pastoral letters issued by Crisanto Cardinal Luque last year, one of them condemning Rojas' "Third Force" political movement, were the first serious whacks at the strongman's prestige. During the brief spate of violence the churches sheltered rebels, and when it was all over jubilant monks streamed out making victory signs to the cheering crowds. Luque has since warned the military junta that replaced Rojas that it must turn over power in free elections or lose church support.

A BETTER WORLD

Though some Vatican leaders still call the Latin American clergy as a whole the church's "biggest single blot," the new ways are spreading. In Habana, Manuel Cardinal Arteaga has avoided taking sides, but Archbishop Enrique Pérez Serantes of Santiago specifically condemned government violence in a pastoral letter last month. Most of the priests in Oriente province openly sympathize with Rebel Leader Castro. In Venezuela the leading Catholic prelate, Caracas Archbishop Rafael Arias, dared to condemn the stern dictatorship of Marcos Pérez Jiménez for the inequitable distribution of the country's great wealth.

Much of the new political approach originates from a Jesuit priest close to the Vatican—grey, ascetic Father Riccardo Lombardi, who heads a new organization called Per un Mondo Migliore (For a Better World). To the "Better World" school in the Alban Hills near Rome, priests come from all over Latin America to hear fervent weeks of lecturing on the new policies. Moreover, Father Lombardi recently traveled to Mexico, gave a special course to 100 bishops, including Cardinal Luque, gathered from all Latin America. His student-priests can use the church organization as an ear to the ground that no secret police force can match. When chances of success are reasonably safe, they speak out. In 93 percent Catholic Latin America, it is a plan of action that should make the sturdiest strongman shiver.

Importance of American Merchant Marine to the American Farmer-Miner-Manufacturer in World Trade

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. WILEY. Mr. President, I am pleased today to pay tribute to a fine high-school student, Barry L. Nichols, of Superior, Wis. This young man has been awarded a national prize in the 1957 Harold Harding memorial essay contest for an outstanding paper on the subject, The American Merchant Marine—Its Importance to the American Farmer-Miner-Manufacturer in World Trade.

On reading this fine essay, I was deeply gratified by the display of insight into the problems of Great Lakes and world shipping, as well as the importance of the merchant marine to the economy of our country.

I would like, of course, also to commend the Propeller Club of the United States for sponsoring this contest—which it has done for the past 22 years.

This essay by Barry Nichols represents a real result of the Propeller Club's efforts to widen the educational horizons and deepen the understanding of our high-school students in the maritime problems of our Nation.

I request unanimous consent to have the essay printed in the Appendix to the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE AMERICAN MERCHANT MARINE: ITS IMPORTANCE TO THE AMERICAN FARMER-MINER-MANUFACTURER IN WORLD TRADE

(By Barry L. Nichols)

As you first gaze upon the great waters of the world and upon the ships which sail them, you begin to gain an understanding of the great work being done by the ships of the merchant marine. The huge vessels gliding over the quiet, then stormy waters which form the great highways of the world are of vast importance to everyone in this mighty country of ours. In time of peace as in time of war the ships of the American merchant marine carry the lifeblood of the Nation.

Shipping by coat is the most economical moving system known, and without it the cost of our products would be higher making it harder to compete on the international scale. Merchant ships are as important to the farmer as his tractor. One acre in every 10 of crops is grown for shipping abroad; and 1 dollar in every 8 of the farmers income comes from overseas sales.

Few realize the part played by the Great Lakes fleets of the merchant marine in the serving of the people. Boats with a length of two city blocks or more carry the iron ore, grain, coal, and other products essential to our well being. These huge ships carry the iron ore from the majestic mines in Minnesota down the chain of lakes to the vast manufacturing towns in the Midwest. This shipping gives work to the countless number of miners needed to mine the ore of Minnesota.

The manufacturer thus benefits from the low cost of transportation of the raw materials and he then can convey the savings to the people at home and abroad. This cuts production costs of the finished products and makes the cost of our cars, and other steel products lower. It also benefits the American farmer in two ways: The cost of his machinery is less and he can, by this savings, sell his products at a lower price helping him to compete on the international level. With his machinery the farmer can harvest his vast acres of golden grain, toasted by the brilliant sun, and send it down the lakes to the mills at Buffalo. Here it is made into the food which will feed the peoples of the world.

The Great Lakes, as a whole, reach across half of the North American Continent forming an immense highway to the many countries of the world. In order for the fleet to carry the ore from Minnesota to the vast manufacturing towns in the Midwest, five locks were built at Sault Ste. Marie. The tonnage now passing through these locks is greater than that of the Panama, Suez, Manchester Canals and the Rhine River combined.[1]

Vast manufacturing towns have been built up by Great Lakes shipping. Cities like: Milwaukee, Chicago, Gary, Detroit, Toledo, Cleveland, Pittsburgh, Youngstown, Erie, and Buffalo make the Midwest the greatest manufacturing region the world has ever known. This also has caused the shipping industry of the Great Lakes to be the envy of the rest of the world. No wonder, for it is built on private ownership and free enterprise.

Men have long dreamed of a great seaway, a highway of the world. The growth of shipping on the Great Lakes has been part of the life of many people. One of the earliest settlers in the Duluth-Superior area, George R. Stuntz, saw the growing future of shipping. In the middle 1800's he wrote of the Duluth-Superior area in his memoirs, "I saw as surely then as I do now that this was the heart of the continent commercially."[2] Stuntz dreamed of the Great Lakes as a vast highway across the Nation. Today it is the greatest highway known on which lake carriers each year travel with a mileage equivalent to nine trips to the moon. Also, today the Duluth-Superior harbor is the second largest seaport in tonnage, rivaled only by the New York Harbor.

Our American merchant marine will soon be augmented and solidified by the completion of the St. Lawrence seaway which will cause this highway across the Nation to become a highway to the doorsteps of the entire world.

From across the many miles come the products of our Nation; across the waters come our lifeblood, making ours the greatest Nation in the world.

Panama Canal: Capacity Reduced by Water Shortage

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. THOMPSON of Texas. Mr. Speaker, in my remarks in the Appendix of the CONGRESSIONAL RECORD of June 4, 1957, I commented at some length on the possibility of the capacity of the Panama Canal being threatened by shortage of water for Gatun Lake incident to the current prolonged and severe dry season in the Canal Zone. A special dispatch from Balboa, C. Z., published in the June 28, 1957, issue of the New York Times, indicates that this fear has now materialized, with notification to shipping companies of draft limitations for ore carriers and supertankers.

No doubt this depletion of water, after the rainy season gets underway, will pass by. But it is well to remember that there is a periodic cycle of excessively dry years in the Canal Zone and more water crises will develop in the future. These may be considerably aggravated by the steadily increasing traffic, which is now at its highest point in history with more than 8,320 tansits in the fiscal year 1957.

It is fortunate that the water problem has long been foreseen by far-visioned Panama Canal engineers. The construction of the Madden Dam and power project in the 1930's was an important step toward its solution, but now it appears that the project is not enough to meet future needs of interoceanic transit.

The attention of the Congress is invited to the thoughtful article, "The Panama Canal: A Challenging Problem for the United States," by William R. McCann, E. Sydney Randolph, Edward C. Sherman, and William G. B. Thompson, all experienced engineers with Panama Canal, subsequent business, and other civilian experience. This article was published in a statement by Senator THOMAS E. MARTIN, of Iowa, to the United States Senate in the CONGRESSIONAL RECORD of January 17, 1957.

One of the points stressed by these independent engineers in listing the principal marine problems of the Panama Canal is the limited operating range of the Gatun Lake water level (87–82 feet). In meeting this difficulty they propose to raise the summit water level to its optimum height, approximately 92 feet, thereby deepening the channel and providing more water for lockages.

Thus, the current water crisis of the Panama Canal is a danger signal that dramatizes the entire canal problem, of which the summit water level height is but a single element. Together with its other problems, the canal situation calls for a program of major improvement of the waterway and not for mere treatment of symptoms.

The questions involved in the canal policy problem are too grave to be saddled on routine administrative officials, but must be assumed by the Congress, which is the ultimate authority.

Again I wish to stress the necessity for early action on pending measures to create an independent Interoceanic Canals Commission to make a complete and up-to-date study and to advise the Congress in the premises. The growing traffic at Panama demands this course, which, as stated many times previously, I still believe to be the only means whereby this vital question of policy can be adequately resolved in the best interests of the United States as a whole.

The indicated special dispatch follows:

DRAFT CURBS SET ON PANAMA CANAL—LOW WATER LEVEL LEADS TO LIMITATION ON BIG TANKERS AND ORE CARRIERS

BALBOA, C. Z., June 27.—Shortage of water for operating the Panama Canal has necessitated notification to shipping agencies that draft limitations for certain vessel types—such as ore carriers and supertankers—must be lowered about 6 inches.

Abnormal lack of rain in Gatun Basin and unusually heavy traffic have combined to lower the lake level from 85 or 87 feet to 82.

Temporary limitation on the draft for heavy, cumbersome ships will continue until the level reaches 83 feet.

The limitation does not preclude the transit of such ships but may cut their loadings. Relatively few ships are affected. The lake level today was only 8 inches above the record low since the canal was opened. A low of 81.39 was recorded in May 1926, and again in May 1933. But traffic was lighter then. Also, ships required smaller, shallower draft. Hence today's water shortage is more critical than that of the 1930's.

Only the continued lack of rain for 2 more weeks could drop the lake level to a new low.

Each ship in transit results in a loss of 52 million gallons of water to the canal—enough to supply the population of a city of a half-million people for a day. An average of 26 ships passed daily during May.

The water shortage also forced the canal to cut the use of its hydroelectric plants and switch to emergency diesels. Some diesel power has been used since early May. This week another diesel station was placed on 24-hour operation to save water.

Visit to Washington, D. C., of Asian Delegates From the Moral Rearmament Assembly of Nations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared relating to the visit to Washington, D. C., on June 28, 1957, of Asian delegates from the Moral Rearma-

ment Assembly of Nations at Mackinac Island, Mich.

There being no objection, the statement was ordered to the printed in the RECORD, as follows:

STATEMENT OF SENATOR WILEY RELATING TO VISIT OF ASIAN DELEGATES FROM THE MORAL REARMAMENT ASSEMBLY OF NATIONS AT MACKINAC ISLAND, MICH., TO WASHINGTON, D. C., JUNE 28, 1957

Lincoln once said, "The dogmas of the quiet past are inadequate for the stormy present." In a world that has grown smaller through man's ingenuity, the power politics of the last century and the first 50 years of this century have proved inadequate. New conditions require new remedies or new approaches. Secretary Dulles has said, along the same line, "The capacity to change is an indispensable capacity. Equally indispensable is the capacity to hold fast that which is good."

Let me ask a few simple questions:

Is there any other way to meet head-on the challenge of Moscow's fight for Asia and Africa except by our usual diplomacy and by building up our military and economic strength?

Are we cognizant of the tremendous effort that the Kremlin is putting forth to inoculate the minds of the youth of other nations with their ideology? If so, what are we doing about it that is effective?

Is there any ideological stimulus available for the youth of all nations that would unite them in a great effort to stand for freedom, peace and friendly relations?

Do we realize the tremendous conflict going on for the souls and minds of men. Do we realize it—we in America living in the land of the highest standard of living ever attained by the human race—or are we drugged—as some say—by our materialistic success—drugged so that we cannot see the real path before us?

In Washington last Friday was a group of men and women who may hold the ideological balance of power in their nations. They come from the Moral Rearmament Assembly of Nations at Mackinac Island, Mich., under the leadership of Dr. Frank N. D. Buchman of Pennsylvania.

Among them are the leading members of the Japanese, Philippines, and Ghana Parliaments, and 120 leaders of the Seinendan, the Japanese Youth Federation of 4½ million.

The Seinendan have been a primary target of the Communist strategy since they represent the future of Japan. One hundred from the Seinendan were invited to Moscow. Dr. Buchman invited 100 to Mackinac to find a superior ideology. The invitation was so effective that only a handful were found prepared to go to Moscow.

Moscow has 4 ships moving through the Mediterranean and the Pacific whose 1 job is to pick up the youth of every branch of national life who have been invited to Moscow; 2,000 from Egypt, 2,000 from Britain, 1,100 from India, 650 from Japan; 16,000 are already in training in Russia from North Korea.

Sixty-nine special trains are already laid on for the Moscow festival.

One thousand, three hundred buses are being used from inside and outside Russia and a 600-car pool established in Moscow for the chief delegates.

One man from French Africa who is in Mackinac tells us that 70 delegates were invited from his country, given their return fares and the equivalent of $850 in cash over and above expenses. That is how the government uses its transportation and its finance when it aims to capture the youth of the world.

Many of the men who were in Mackinac from central Africa, from Britain, France, Germany, Italy, Scandinavia, and especially from north Africa, are men who were invited to go to Moscow. They say, "No alternative program is offered to us except moral rearmament, and it will be the salvation of our countries. But there is not much time."

What is happening to the Seinendan in America shows what can be done when we move effectively. British businessmen who saw what was happening at Mackinac were so impressed that they have pledged finance to bring plane loads of leading students and other youth from Europe to Mackinac.

It is a question of getting the right return on the money which we are nationally investing in aid to these countries. A Korean labor leader said, "After 3 confused and rushed months in America on a Government-sponsored tour, my meeting with MRA was an experience more valuable than anything in my 42 years. I was shown so much in America that was interesting, but had no application in Korea. In MRA everything I learned could immediately be applied in my own country."

A prominent American industrialist who has had the spending of millions of dollars of Government money, says, "You can do more with a dollar in Mackinac for America than anywhere else in the world."

In Mackinac there are not only leaders of youth who have chosen moral rearmament instead of Moscow, but there are men like the first bipartisan delegation from the Ghana House of Parliament ever to represent their country overseas. Russia was the first country to invite a delegation at 5 minutes after midnight on the day of independence, but the first delegation to leave the country has come to moral rearmament.

There is a delegation from Cyprus which contains both Greeks and Turks. They say they find the only hope here.

Leaders of black and white from South Africa, including the President of the Supreme Court of Southwest Africa, and the African leaders who have bitterly fought the whites, are also united in this conviction.

The Middle East—Jordan, Iran, Lebanon, and key countries like the Sudan, also Pakistan and India represented by members of Parliament and industrial leaders, come because they know the situation is desperate. The Indian Government is doing everything it can now to stop the drift of labor, political, and youth leaders to Moscow, but without an answering and superior ideology they face an impossible task.

This is the significance of Mackinac and of the visitors to Washington on Friday. They are finding an ideology of freedom based on absolute moral standards and the guidance of God that can answer communism and the corruption and division that follow materialism of every kind in East and West.

The delegates from Mackinac include:

Mr. Niro Hoshijima, signatory to the Japanese Peace Treaty and senior member of the Japanese Diet.

Senator Mrs. Shidzue Kato, who received the largest majority of votes of any man or woman in the history of the Diet in the recent election.

Senator Takeshi Togano, chairman of the Transportation Committee of the Diet.

Senator Tsuyoshi Suzuki, former chairman of the Telecommunications Workers of 150,000 men in Japan.

Senator Roseller T. Lim, of the Philippine Congress, chief delegate to the ILO Conference in Geneva.

The Tolon Na, a leader of the opposition in the Ghana Parliament and one of the chief architects of their new constitution.

Maj. Jerry Palaypay, Malacanang Palace, Manila; adviser on student affairs to President Garcia.

Mr. Rajmohan Gandhi, grandson of Mahatma Gandhi.

Mrs. Yukika Sohma, daughter of the late Honorable Hukio Ozaki, member of the Diet for over 60 years, who gave the cherry trees to Washington.

Mr. Takasumi Mitsui, of the Mitsui industrial family who had over a million employees before the war.

Mr. Sontoku Ninomiya, the founder and former president of the Seinendan, Japanese Youth Federation, of 4,300,000.

Mr. Kasuyoshi Mitsugi, chairman of the Tokyo region of the National Railway Workers.

Mr. Alberto Javier, member of the Advisory Youth Commission.

MRA is not another religious sect, although its ideology contains the fundamentals found in all religions—the teaching of honesty, purity, unselfishness, love, and the Golden Rule.

Friday last, I had an experience that I shall long remember. A Japanese told me, through an interpreter, "I came to America hating America because I was at Nagasaki, and there I lost all my loved ones. I have been to Mackinac Island, and the hate has gone out of me. I know I have something better to do than to hate."

I talked with a Filipino and with the grandson of Mahatma Gandhi; they, too, were seeking the answers and felt they had found some of them.

After the group had luncheon as guests of the Members of the Senate, they proceeded to the House of Representatives where, I understand, they were received by Speaker SAM RAYBURN.

Secretary Benson and the City Folk

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Arkansas Gazette, dated Friday, June 21, 1957:

SECRETARY BENSON AND THE CITY FOLK

One of the strangest spectacles on the American political scene can be found in the Department of Agriculture where Secretary Benson and his aides have launched a campaign to sell the country a new farm program. The core of the program is a lower floor under price supports and looser planting controls.

Mr. Benson regards this as the "next logical step" toward solving the Nation's farm problems. The first step came when he talked Congress into giving him the authority to set support levels of basic farm crops according to a flexible formula that would allow the supports to drop to 75 percent of the "fair market price" called parity. Now he would like to remove the formula so that he could set the supports at any level he might choose—between zero and 90 percent of parity.

Mr. Benson's strategy in this campaign is to drum up so much popular support that the Members of Congress cannot resist the pressure. The interesting part of the campaign is not so much what Benson and his aids are saying (it is the same thing they have said all along) but the groups to whom they are directing their appeal.

The Secretary led off the crusade with a speech at New Orleans before a cotton trade group. The reaction among the cotton merchants—as would be expected—was excellent, but there probably was not a full-time farmer in the house. At about the same time an Assistant Secretary was speaking to the

margarine manufacturers. Other speeches have been to processors of farm commodities, traders and consumer groups. The theme of the whole campaign seems to be that price supports and production controls have not solved farm problems, but have saddled taxpayers with added costs and consumers with higher prices. Therefore, the whole program should be dumped.

This argument seems to be scoring bull's-eyes with everyone except the farmers. The pro-Benson Wall Street Journal reported:

"Agriculture Secretary Benson is winning important allies in his campaign to put across lower farm price supports. City folks are rallying behind him. The Secretary counts on an urban rebellion against costly farm subsidies to help push his program past bitter congressional opposition next year and letters pouring into his office encourage this hope."

The Journal, presumably after a look at the mail, admitted that Mr. Benson was getting few pats from the farm folks." A Minnesota Republican farmer was quoted as saying: "I was surprised and disappointed to see you are now advocating throwing the farmer overboard entirely."

Political overtones can be detected throughout the entire campaign. In the first place, the timetable seems to be worked out so that the climax of the pressure will be reached next year. If Mr. Benson should succeed, it would mean that the new farm program would take effect just before the election and would leave no time for a serious collapse of farm prices before the votes were in the box. At the same time, the Republican politicians would be in position to offer the Benson program as the solution to high living costs and taxloads, and thus appeal to the city vote.

The declining farm population is a major factor in the calculation. Mr. Benson and the GOP strategists apparently now figure that they could more than offset any losses in the dwindling rural vote if they pick up additional support in the cities.

The strangest phase of the spectacle lies in the fact that Mr. Benson is so obviously concerned about the processors of farm commodities, rather than the farmers themselves. The system of balances on which our Government is based presupposes that one Cabinet member will represent Labor, another Commerce, and another Agriculture. Carried to its logical conclusion, the Benson program would not only leave the farmer without representation, but would place the Department created in his name in the position of working directly against his interests.

The farm problem is very real, and the old program of price supports and acreage controls offers no effective solution. But certainly the secretary of Agriculture is not going to find any answer in a campaign that appears deliberately to set the self-interest of the city dweller against that of the farmer.

Congressman Lane Supports H. R. 4 Providing Increased Annuities for Retired Federal Employees

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my statement before the House Committee on Post Office and Civil Service on June 29 in support of legislation to increase annuities for retired Federal employees:

STATEMENT OF CONGRESSMAN THOMAS J. LANE BEFORE THE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, IN SUPPORT OF LEGISLATION TO INCREASE ANNUITIES OF RETIRED FEDERAL EMPLOYEES, JUNE 29, 1957

Mr. Chairman, 139 identical bills to provide annuity increases for all those Government workers who were "pensioned off" before last fall, is evidence of the overwhelming support for H. R. 4.

The legislation passed in 1956, to increase annuities for those retiring after October 1, 1956, added part of another ceiling to the civil service retirement system, but neglected to complete the job. H. R. 4 will remedy that inequity by providing higher coverage for all those retired in the years before October 1, 1956.

To do less than this would be a cruel breach of faith.

The men and women who gave 30 or 40 years of devoted service to the Federal Government, in the expectation of receiving an adequate annuity, have suffered from the gradual attrition of their annuities. The steady increase in the cost of living, has left their fixed pensions far behind. The social security contract that we made with them, has not been fulfilled. In many cases, this has resulted in actual hardship, and in all cases it has deprived them of peace of mind.

It is this depreciation in the value of their pensions that has resulted in an unfortunate situation which we intend to correct.

As the span of human life is lengthening, and increasing millions of our people are living on retirement, this raises social and economic problems that must be met, in the national interest. The needs, and the purchasing power of this group cannot be neglected without danger to the general welfare.

Furthermore, what we do here will be observed by, and will have an effect on the morale of all Federal employees. Realistic adjustments to meet changing conditions, are necessary to maintain the good faith implicit in the United States civil service retirement system.

The cramped retirement dollar is not what it used to be.

It has lost in purchasing power, as prices have gone up.

Barring a major economic setback, which no one expects, it looks as if we are in for a long period of gradual inflation.

Those living on fixed incomes, become the casualties of this trend, unless the Government provides increases in public pensions to keep the purchasing power of their retirement income at full value in relation to the cost of living. By this precedent, we hope that private retirement plans will make the same accommodation to the economic facts of life.

The escalator clause providing for automatic increases in wages to offset the rise in the cost of living, is basic to the contract between labor and management in several of our larger industries.

In principle, we should apply this thinking to our legislation regarding the retirement system for Federal employees.

Although it might be impractical to legislate such a formula, we are nevertheless, duty-bound to make upward revisions in retirement rates, to keep faith with the annuitants, in response to the faith they placed in us.

The sliding scale arrived at in H. R. 4 seems to be the most reasonable solution to the problem.

It ranges from a 25 percent increase of the present annuity for those who retired prior to October 1, 1956, to 30 percent for those who retired prior to October 1, 1951—for annuities which are $1,500 and under. It increases all such annuities in excess of $1,500 by 10 percent. It limits such increases to $750 per year, and excludes for computation purposes the amounts purchased by voluntary contributions. Provides that all such increases operate to increase the annuities of survivors.

The virtue of this bill is that it provides proportionate adjustments in a fair manner, and in language that is clear and understandable.

The Civil Service Retirement Fund, financed by 6½ percent contributions from Federal employees (which, incidentally, is much higher than the contributions of employees in private industry to the Social Security fund from which they receive relatively higher benefits) is in sound condition.

This bill requires on or after July 1, 1960, a yearly appropriation to compensate the retirement and disability fund for the extra cost of the increase in annuities. For any fiscal year for which such an appropriation shall not have been made, the proposed increases shall be canceled. But the Congress will be under a firm moral obligation to provide for such compensation to the fund.

Retirement 'security' must be genuine security and protected against depreciation.

The fact that H. R. 4 has already been endorsed via identical bills submitted by almost one-third of the membership of the House, is indicative of the overwhelming sentiment in its favor.

The Congress will increase the annuities of Government employees who retired before October 1, 1956.

To keep faith with them.

Government Spending Must Be Reduced

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. WHARTON. Mr. Speaker, most of us fully realize the enviable position of the family farm in the history of our country. It is outstanding and our rural people are practical folks and straight thinkers.

Unfortunately, our farm economy has fallen behind the rest of the country in recent years and it is not a matter of partisan politics. I doubt that many of us here in the House have been satisfied with the farm programs and their operation during the past 2 or 3 administrations. Many thousands of farmers have not participated in these programs at all. Our people deserve something better and I suspect that an improved farm program will receive unanimous support whenever it is proposed and proven to be beneficial to all.

I submit for the RECORD a recent article from the Cobleskill Times, an outstanding publication in my own district, setting forth the views of one of our local farm bureau units on the present farm situation and their reaction after 20 years of so-called farm programs.

The article follows:

SAYS GOVERNMENT SPENDING MUST BE REDUCED

"Governmental spending must be drastically reduced and confiscatory taxation must be eliminated." This was the view taken by Farm Bureau Kitchen-Konference No. 4 during a recent meeting in Warnerville, held at the home of Mr. and Mrs. Harold Lockwood.

Complete elimination of many of our Government's so-called fixed-cost programs and drastic revision to others, were the only means suggested by which these measures could be effected.

The group viewed, with concern, the long distance that the Nation has traveled down the road to socialism. The philosophy that government can do better for its people than they can do for themselves was completely rejected, with the predominant view being that the government that governs the best, governs the least.

Some of the programs that the group recommended be left to States or local governments were payments to States for welfare clients, public health, education, and the school-lunch program.

The need for national defense is, of course, obvious but the group felt that with tighter integration of the Armed Forces, a degree of efficiency could be achieved whereby our defense could be bought for far less than $43 billion.

FARM PROGRAM

In regard to the Government's farm program, the group felt that after 20 years of trial and error, the program has proven itself to be a gigantic failure. In all this time, the Government has failed to repeal the law of supply and demand, nor could any evidence be found that the farmer's economic standards have been improved by any of the various price support schemes.

In general, it was thought that all segments of our population should not only welcome, but should demand the cessation of governmental handouts which invariably bring about the conditions of governmental control and mammoth waste.

The Supreme Court

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. BURDICK. Mr. Speaker, the decision of the Supreme Court of the United States in the Jencks case, holding in substance that the files of the FBI must be turned over to any defendant who is tried on charges investigated by that organization, threatens its usefulness and efficiency to a very great degree. For all practical purposes this puts the FBI out of business, and will also prevent convictions.

If a defendant has the files, he will naturally be in possession of the names of those who have cooperated with the FBI, and many of the persons who have given it information will not be living when the trial is completed. When a great number of these informers are shot down or pushed out of a 14-story window, new informers will hesitate to pass their knowledge on.

If we had lawyers sitting on the Supreme Court instead of professors and lecturers, this thought of squelching informers would have occurred to them. Just ask yourself how many experienced trial lawyers are on that Court.

In prosecuting liquor-running cases in the Federal Court in North Dakota I very often found it necessary to not call an important witness at all. I knew perfectly well that if he testified in open court against the defendant his life would not be worth a nickel. I therefore took his story in confidence, got the general line of the defendant's action and then proved my case by the witness I did not call. With all the precautions I took to protect the lives of witnesses, one that I did not call was shot down anyway because the defendant surmised that this witness had given me information.

Now, after this decision of the Supreme Court which opens the FBI files to a defendant how easy it will be for the defendant, who is usually befriended by a gang, to have this witness show up in a wooden box. I don't think that any member of the Supreme Court who supported this decision intended to make it possible for arch criminals to suppress the evidence against them by murder, but what they decided in that opinion had the effect of making witnesses easy marks for an assassin.

One of the very reasons why J. Edgar Hoover has been such a tower of strength in the prosecution of Federal violators is that he never went back on his word with an informant and made certain that he had all the protection possible from the revenge of underworld gangs. He never exposed any witness to risks that might take his life.

The majority of the Supreme Court evidently never thought of this, and as the matter now stands, witnesses are going to volunteer nothing to Mr. Hoover, as they will consider their lives more important than to give him information which will all be disclosed to the defendant before the trial begins.

This decision encourages crimes. It encourages the underworld, and it is a blow to law enforcement. Congress should immediately pass an act setting aside this opinion, which it has the power to do.

A few good lawyers on the Supreme Court would not do a bit of hurt at this time. No good lawyers who knew beans about criminal trials would ever have signed the opinion in the Jencks case.

Panama Canal: Policy Should Be Reiterated

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. FLOOD. Mr. Speaker, in an address to the House on May 29, 1957, I discussed at some length the juridical foundations of the Panama Canal and the propaganda campaigns aimed at meeting its control and ownership from the United States. This agitation, instigated by the international Communist apparatus and stimulated by events at Suez, has assumed voluminous proportions.

In that light, a recent news story from Panama City, Republic of Panama, by Edward Tomlinson, distinguished radio commentator and Latin American correspondent of the Scripps-Howard newspapers, published in the June 3, 1957, issue of the Washington, D. C., Daily News, is of special interest to the Congress.

As to the firebrands mentioned in the story, it has long been evident that certain elements among the Panamanian people have lost sight of some key facts in the history of their independence. The Republic of Panama grew out of the Panama Canal enterprise, on which its well-being still largely depends. It would be most unfortunate, indeed, if the policy of the Government of Panama with respect to the canal should be based on the views and demands of the more radical elements of the Republic rather than on those of the more thoughtful and experienced leaders.

As stated in my address on May 29, it is the duty of the Congress to reiterate without further delay the policy of the United States to maintain, operate, sanitate, and protect the Panama Canal under terms provided by treaty.

To this end, I have introduced a concurrent resolution reiterating and emphasizing the long established policy of the United States in regard to the Canal Zone and Panama Canal based strictly on formal treaty provisions.

Favorable action on the measure at this time is respectfully urged. The prevailing confusion on the subject now evident requires it.

Under leave accorded to extend, I include the indicated news story and House Concurrent Resolution 205:

[From the Washington Daily News of June 3, 1957]

DEMANDS LESSENING TO NATIONALIZE CANAL

(By Edward Tomlinson)

PANAMA CITY, June 3.—Panamanians insist they have never agreed, by treaty or any other way, that the United States should exercise complete control, as if she were sovereign, over the 10-mile strip of territory usually referred to as the Canal Zone.

But some of the extreme nationalists seem less sure than they were 6 months ago of the advantages which nationalization of the canal would bring to the Panamanian nation.

SUEZ EVENTS

A number of recent developments have contributed to this apparent change of thinking. Most important is what is happening to Suez and Egyptian dictator Nasser himself. Far from crippling Britain, France, and other European countries permanently, the taking over of and blocking of the Suez Canal merely inconvenienced them temporarily. Their oil supplies were not completely cut off. Large quantities of petroleum products flowed around Africa by tanker, at not much greater expense.

Saving on canal tolls helped to make up for the extra expense of the trip around the Dark Continent. Additional supplies were made available from Venezuela and the United States. In fact, by the time the canal was cleared of the wreckage wreaked upon it during the brief hostilities between Egypt and the French, British, and Israelis, the European nations had practically stopped rationing gasoline and oil.

PIPELINE

Now the big oil companies are getting together to build a huge pipeline from the great fields of Saudi Arabia, Iraq and others to the Mediterranean. Contracts have already been let for the construction of the

biggest tankers in history, so as to transport increasing quantities around South Africa.

Worse still, the Nasser strategy has alienated several of the Arab countries. They do not like their economic prosperity interfered with, even by a sister Arab nation. In short, it is beginning to sink in on the Egyptian strongman that "sovereignty" over a great world waterway is somewhat of an empty luxury if other nations find they are no longer wholly dependent upon it. All this has had a sobering effect upon some of the less flaming politicians here.

REALIZATION

One prominent Panamanian put it all in a few words, "we must realize that the whole world has taken wings. Planes now carry everything from cattle to giant machines. Maritime, or surface transportation companies, already are finding it difficult to pay expenses, much less make a profit. Even a canal such as this one may not long remain indispensable.

"Today it means the difference between our economic independence and starvation, and our firebrands better let up on their propaganda before they find the world using some other means of transportation between the Atlantic and Pacific."

House Concurrent Resolution 205

Whereas there is now being strongly urged in certain quarters of the world the surrender, by the United States, without reimbursement, of the Panama Canal, to the United Nations or to some other international organization for the ownership and operation of the canal; and

Whereas the United States, at the expense of its taxpayers and under, and fully relying on, treaty agreements, constructed the canal, and since its completion, at large expenditure, has maintained and operated it and provided for its protection and defense; and

Whereas the United States, following the construction of the canal, has since maintained, operated, and protected it in strict conformity with treaty requirements and agreements, and has thus made it free, without restriction or qualification, for the shipping of the entire world; and, in consequence of which, with respect to the canal and the Canal Zone, every just and equitable consideration favors the continuance of the United States in the exercise of all the rights and authority by treaty provided, and in the discharge of the duties by treaty imposed: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That (1) it is the sense and judgment of the Congress that the United States should not, in any wise, surrender to any other government or authority its jurisdiction over, and control of, the Canal Zone, and its ownership, control, management, maintenance, operation, and protection of the Panama Canal, in accordance with existing treaty provisions; and that (2) it is to the best interests—not only of the United States, but, as well, of all nations and peoples—that all the powers, duties, authority, and obligations of the United States in the premises be continued in accordance with existing treaty provisions.

Speaking of Liberty

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. BEAMER. Mr. Speaker, in my newsletter No. 13 released on June 19, 1957, I reported on one subject as follows:

Speaking of liberty, Soviet Communist Party boss, Nikita S. Khrushchev, on the precedent making TV interview seen in the United States on Sunday, June 2, said that eventually the United States of America will go Socialist.

Let's show him. We should be concerned with the avowed Socialist or the card-carrying Communist, but we must be more fearful of those people and of those groups that knowingly or unwittingly espouse and promote doctrines and programs that are socialistic.

What is government ownership but socialism?

As an example, certain individuals and groups seem to be attempting to make a campaign issue out of Hells Canyon where private industry was authorized to build certain dams. Repeatedly, there are voices heard in the Congress (I read the CONGRESSIONAL RECORD daily) that prefer Government ownership of this project. Some of these people also cry against the accelerated tax amortization permitted under the law to the private corporation that is constructing these dams. Thousands of tax benefits of this nature have been granted for years and all of this, in turn, has returned millions of dollars in taxes to the Government. If the Government built and owned the dams, no taxes would be returned and the taxpayer would feel another enormous gouge in his pocketbook.

President Eisenhower, answering a newsman's inquiry about Mr. Khrushchev's remark, replied that, during the 3½ years that remained in his term, he would pledge continued opposition to the advance of socialism.

Hundreds of Government operations that formerly competed with privately owned industries have been closed, but there are many more that continue as a burden on the taxpayer. The accumulation of Government-owned businesses has helped to increase the budget—all inheritances from previous Congresses.

In 1953, it was found by the new administration that the Federal Government was engaged in some $40 billion worth of business ventures, including baking, furniture making sawmill operations, ropemaking, dry cleaning, and others too numerous to mention. Since that time, many of these activities have been sold or terminated. The Defense Department alone has closed some 250 business-type activities and plans to halt many more. This program, if continued in all departments, will put this previously tax-exempt business on the tax rolls—and will help to reduce your taxes—and help to stop socialism in the United States of America.

If this principle is followed, there will be no more socialism in the United States of America.

Since that time I have read the debate and noted the results of the voting of the Senate that would place the Federal Government in the position of building and owning this Hells Canyon Dam. At the same time, some newspapers carried pictures of certain Senators expressing jubilation at the outcome of the Senate vote.

That expression is their privilege but it is not my conviction. My job and jubilation will be expressed when the House of Representatives rejects this action of the other body. If, for purely political reasons, it could happen that the majority in the House unfortunately would concur, then my faith will be placed in the veto that the President possesses.

I feel confident that he does not want any more socialism. I know that I do not want. Let Mr. Khrushchev keep his socialism in Russia.

Illness has kept me absent from recent sessions. I hope by all means that the doctors will permit me to return to vote against this further gouge of the taxpayer and against any further advance of socialism.

Tom Whelan: Who Excelled as Athlete, Coach, Educator, and Human Being

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. LANE. Mr. Speaker, young boys have their heroes. So do grown men, and women.

In this life, we need people to show us the way; people whose ability, and courage, and character, inspire us to follow their example.

Such a man was Thomas J. Whelan, whose home was in Lynn, Mass. He was born to be a leader, and he applied this God-given talent to the task of helping others.

As an outstanding schoolboy athlete, and later as a professional, he gave himself unsparingly for the team. His capacity for bringing out the best in all who were fortunate to know and to work with him was the quality that endeared him to thousands.

As star athlete, wartime pilot, coach, teacher, principal of Lynn English High, husband, father, and in every public-spirited activity that crowded his busy life, he was a man to admire for the goodness that radiated from him.

His death, on Wednesday, June 26, marked the end of a life to remember.

He passed on to join the company of old friends like Jim Thorpe and Knute Rockne.

As evidence of his community's affection for him, and under leave to extend my remarks in the RECORD, I bring you the following editorials from the Lynn Telegram-News, and the Daily Evening Item, the two newspapers of Lynn, Mass.:

[From the Lynn (Mass.) Telegram-News]

TOM WHELAN

Tom Whelan is dead. The seemingly indestructible legend of the baseball diamond, football gridiron, and track field has been stilled for once and for all by the one Referee who never errs.

Tom lived to be 63. Thank God for that. Had he died as a young man there would have been thousands the poorer for lack of his guidance and influence. If ever a man inspired men and boys, it was the earnest, soft-spoken English High principal whose every minute upon earth was devoted to the improvement of his school and community.

Tom Whelan—professional athlete, coach, educator, man—in which capacity did he excel? That poses a difficult question but most who knew him go along with the latter category. It is man's goal in life to live in the image and likeness of his Creator. From the time he was a small boy selling newspapers and carrying his baseball glove

over his route with him, Tom had the mark of greatness about him.

The sport pages will recount his exploits, how he helped dedicate the Haverhill High School Stadium by catching two touchdown passes for a Georgetown victory. How his visit to the mother of a flier companion who had been killed in an air crash with him during World War I cost him his first baseman job with the Chicago Cubs. How each and every team he ever placed on the athletic field, track, or basketball court did him proudly.

But the miles of copy on the sporting pages won't capture Whelan the man, the loving father, the devoted husband, the kindly principal, the worrying friend. Here was a man who would have had to earn a $50,000 salary to do all of the things he wanted. He was a celebrity among men operating on a workingman's salary.

If Tom had accepted the numerous offers which came to him over the years and struck for the big money, how much more could he have accomplished? Would his children have more education or be more devoted? Would his brothers and sisters admire him any more? Would his grandchildren have new terms to describe their love and affection? It doesn't seem so.

Tom Whelan strode the path of greatness throughout life. Even during the past 3 years when his robust health failed, he shone radiantly in the full brilliance of the spotlight. His friends loved to be in his company. Hundreds of students felt it a privilege to ask, "Hi, Mr. Whelan, how are you feeling?"

The oldtimers who remembered him with the old Cornets felt honored to be able to call him by first name and hail him "Hi Tommy." He would take each and every one of them by the hand as if they were among the most important people in his life.

While Tom always regretted not staying in the major leagues longer, they were about the only big leagues that escaped him. He was a big leaguer in the home, in the school, and in his neighborhood.

With all of his gifts and talents, Tom couldn't have complained had he married a mediocre woman. Strangely enough he shared his life with a gem that was always the leading entry in his scrapbook. Mildred and Tom Whelan, what a team they made. What a family they gave to the community. Could any man have been any richer?

We'll hear much in the next few days about Tom Whelan. But all of it put together and multiplied many times could never begin to scratch the surface of the man.

Here is the living, shining, breathing example of the fact that God is good.

Here was a man so good in life that in death, he is even greater.

[From the Lynn (Mass.) Daily Evening Item]

THOMAS J. WHELAN

The greater Lynn community and scholastic circles throughout New England were shocked yesterday at the news of the death of Thomas J. Whelan, principal of Lynn English High School since 1944 and a prominent figure in baseball and football circles for many years.

Tom Whelan brought to his important educational responsibilities the principles of fair play and good sportsmanship which he learned on the athletic field and as coach and "father confessor" to countless amateur and professional athletes.

His own brilliant career as an athlete began nearly half a century ago when he led Burrill Grammar School to the championship in the old grammer school league. He played shortstop at English High for 2 years and then went to Worcester Academy where he continued his brilliant career in baseball, football, and track. Later he won enduring fame with the legendary Notre Dame football team under the fabulous Knute Rockne and developed a friendship with that great coach which continued until Rockne's tragic death. After two seasons he shifted to Georgetown University where he starred in all sports.

World War I saw him serving his country as a Navy flier, and at the close of the war he became a professional football player. Then came his guidance of the Lynn baseball team in the New England League, his work as a scout for the New York Yankees and his unabated interest in football.

At English High he held the affection and esteem of the faculty and student body alike. Young athletes adored him and turned to him constantly for advice and counsel.

A former president of Lynn Rotary Club, Mr. Whelan devoted many years to the work of that organization and was also active in many civic and philanthropic organizations.

The last few years of his career were plagued by frequent illnesses and major surgery on several occasions. The city of Lynn has lost an outstanding citizen in his death, and the condolences of the community go out to his widow and children, whom he adored.

The United States Naval Reserve as an Element of the Navy for World Peace

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts of an address given by Thomas Moore Carruthers, captain, United States Naval Reserve, on June 25, 1957, to the graduates of the Washington Area Naval Reserve Officers School:

THE UNITED STATES NAVAL RESERVE AS AN ELEMENT OF THE NAVY FOR WORLD PEACE

We hear so much these days about world peace yet on all sides we continually learn of new conflicts breaking out in various parts of this old world of ours. If you will just stop to examine the situation you will find, I believe, it is nearly always the case of the aggressor jumping on the fellow who is not fully prepared to defend himself—or it is a case of the "bully" riding herd on the "little fellow."

Have you ever heard of the "bully" pouncing on the fellow who has his "dukes up" and ready to fight? No; and I do not believe you will find such a case down through history. Why? Because the aggressor knows that the country that is prepared to fight will have too much opposition to offer.

The United States Navy offers a very great potential in this atomic-hydrogen age. Why? Because the ships of the Navy provide very ideal launching platforms for those missiles yet they are not fixed targets for the enemy to shoot at, their mobility being a great asset over the fixed land launching site. Hence, if my logic is correct, the Navy provides an excellent means toward world peace, for moving offensive weapons are far more difficult to hit than those anchored or fixed.

The Naval Reserve is a real part of that Navy, too. The United States Naval Reserve has a great potential as one of the elements for preserving the peace of the world. As a vital part of the naval forces it can assist in keeping the United States a real military power to be reckoned with, and at the same time, the members of the Naval Reserve can "kill two birds with the proverbial one stone," so to speak, helping ourselves and our country at the same time, which I will detail in another part of this talk.

This now brings me to my main point, "the place of the Naval Reserve in the overall structure of the naval forces as an element for world peace", and how we, as naval reservists, can play a part, and at the same time enjoy benefits.

If I may be so bold, and it is with all due deference and respect for the regular Navy, I would say that without the services of many thousands of reservists we would not have been able to operate successfully in World War II.

A great many of you, I among you, were in World War II as members of the Naval Reserve. Most of the crews and officers of both the ships and the land bases were reservists. They supplied a very tremendous manpower and "know how" to assist the regular forces. All of us did what we could, cheerfully for the most part, I dare say, to help our country in its death struggle. Prior to the start of World War II the total strength of the Naval Reserve was pitifully small, so thousands had to be trained quickly for the need was more than urgent. So as to prevent such a condition in the future a strong Naval Reserve foundation has been provided as the answer.

Whereas we tried to fit ourselves into the naval organization, naturally there were various and sundry conflicts of opinions between the "regulars" and the "reservists." However, I feel that all in all we reservists got along excellently, had a part in the war, and returned to our civilian work better people and dedicated to the cause of the Naval Reserve as a strong arm of the naval organization.

Where are we now as members of the Naval Reserve? What has it to offer? But more important is what can we do to make it a better and stronger part of the naval forces? I would like to dwell on this point for a few moments.

Kindly bear with me for using the word "I" several times, but I do believe my own case is a rather typical one of many in the Naval Reserve and you may place yourself in my shoes for comparison.

I was commissioned in 1940, called to active duty in the summer of 1941. I must admit I was quite surprised to receive the active duty orders since we were not at war, so I packed and set out for the Norfolk Naval Base with a feeling of unprepardness, since I had not had the advantage of any Reserve training programs and in a very concerned state of mind. However, there was a good reason for calling me, I was told, and on December 7, 1941, came the proof of that reasoning.

Between 1941 and the end of the war my geographical knowledge was considerably enlarged at the expense of the Government. While it was not a preferred itinerary nor the modes of travel always first class, I did get the opportunity to travel to many parts of the world—some I do not care if I never see again. So you may say the Naval Reserve gave me the chance to travel and enlarge my knowledge in several fields. Tulagi, Guadalcanal, Bougainville, Ulithi are definitely one-time spots while Hawaii, New Caledonia, and some others would be nice to see again. I was being paid for all this journeying, too.

The Naval Reserve offers us fine opportunities to better ourselves while on inactive "active" duty and, at the same time, we can be a strong part of that element for peace.

To illustrate, let us assume we have served on active duty at some period and are now members of the Reserve in good standing, hence eligible to work for the benefits to be offered us. We can increase our opportuni-

ties for promotion, at the same time adding to our knowledge by (1) belonging to a Reserve outfit—such as NROS—and attending drills, (2) taking correspondence courses, (3) active duty for training. As we do these things we not only enrich our knowledge and add to our finances but we unknowingly, and knowingly, spread the word among many people of an active Naval Reserve at work. We will assist in building a strong confidence in the Armed Forces among our local neighbors. This feeling will permeate into foreign lands where our allies will absorb into their lives a strong confidence, too, and our enemies will become more fully aware of that real confidence among our people and our allies, causing such enemies to stop and think more before putting their aggressive plans into operation.

Why? You may ask. Because where a nation has confidence among its people in their armed forces and in themselves the enemy will think twice before moving to some overt or feeler act.

So, to help build up and preserve national confidence and ready fighting might, the members of the Naval Reserve can play a most important role by taking pride in their organization, better qualifying themselves in the eyes of their neighbors through the opportunities offered, instilling confidence whenever possible in our people, by being a real member of the team—as Admiral Halsey so often termed his commands.

Remember, too, that while you are accomplishing all of these vital items you are building retired pay benefits for old age without having to put 1 penny of cash into the plan.

If we do these, as we should, then the Navy has an auxiliary arm that will swing a might wallop when needed—and I might add without it they could be sorely handicapped in the hour of that need. It behooves us to fight for a strong Naval Reserve, to fight to get all the things needed to make and keep it strong. If we do these things, we will have offered to the Nation strong avenue for world peace—and if the big fight with the enemy should come, we will find the Naval Reserve ready to do its part, and more, to defend our Nation.

So, in closing, I wish to urge you to work and dedicate yourselves to the best interests of the Naval Reserve, the Navy, and the Nation—and, once again, congratulations on your successful completion of your NROS courses.

Poznan: A Year After

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following dispatch by Sydney Gruson of the New York Times in which he describes the observance of the first anniversary of the riots which took place in Poznan, Poland, 1 year ago last Friday:

RIOT ANNIVERSARY SOLEMN IN POZNAN—CEMETERY CEREMONIES HONOR 55 DEAD—THEN 200,000 JOIN CHURCH PROCESSION

(By Sydney Gruson)

POZNAN, POLAND, June 28.—Under somber rain-laden clouds that matched the people's mood, Poznan today marked the riots of last June 28 with the calm and dignity sought by the nation's Communist leaders.

Ceremonies honoring the 55 dead of those riots were brief and simple. They began at 10 a. m. and they were over by noon. The clouds blew away shortly afterward and Poznan went about its normal business for the rest of the day in sunny, muggy weather.

Then, after gathering in the old town square, a crowd estimated at up to 200,000 marched through the city to cap the week-long Corpus Christi celebrations.

Ostensibly there was no connection between the anniversary of the riots and the demonstrative show of devotion to the Roman Catholic Church. But, as one woman said, "This is our way of honoring the dead and what they did for us."

HYMNS SUNG IN STREETS

Hundreds of girls in their white first-communion dresses strewed flower petals in the streets before priests garbed in splendid vestments. The crowd massed thickly behind them, singing hymns including the once-forbidden "God Save Poland."

The first time this old hymn had been heard on the streets of Poznan since the Communists took power after World War II was during the riots last year. The procession wound through some of the streets where a year ago the people had erupted in fury against oppression.

They passed by the jail that had been sacked and through Freedom Square. The procession had been held through what has become known as the bad years but never on this scale and never before had it been permitted to pass through the center of the city.

It was a sign of the changes that the Poznan riots had helped to bring about.

OFFICIAL AT ONE CEREMONY

The Government's participation in honoring the riot dead was confined to the observance at the cemetery known as the Citadel, after the old nearby fort dominating the city. Antoni Laster, Deputy Minister of the Interior, was present, but the eulogy was read by a worker from the Henryk Cegielski factory.

Last June's riots had flared out of a street demonstration for bread and freedom by Cegielski workers, five of whom died in the fighting. Soldiers, members of the security police, and civilians, including a 13-year-old boy, also were killed in the demonstrations, which led to Poland's release from Stalinist domination.

Facing 300 persons on the slopes of the cemetery, Kazimierz Bzowy read a typewritten speech describing last year's events as a tragedy among brothers now united in death. This was the theme sounded by Wladyslaw Gomulka, first secretary of the United Workers (Communist) Party, when he gave official approval to the commemoration services recently.

Thirteen of those who died are buried at the Citadel. All graves were covered with flowers.

At the city's other cemeteries delegations laid wreaths on graves and stood silently or dropped to a knee to pray.

NO SERVICES ARE HELD

Church bells throughout the city began ringing as the mourners reached the cemeteries. However, no priests were in attendance and no religious services were held.

But at the Citadel and at Junikowa Cemetery, by the graveside of 13-year-old Roman Strzalkowski, the crowds spontaneously burst into the hymn Holy Mary, Queen of Poland.

Emotions were held tightly in check except at the boy's grave. There two scouts stood as a guard of honor, their faces rigid with strain. Occasionally a former schoolmate came up with a fistful of red and white carnations and broke down in tears.

The boy's gravestone, as did so many others, said simply that he died tragically last June 28.

Obscenity and the High Court

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Richmond News Leader, of Richmond, Va., of June 28, 1957, on the subject of one of the recent decisions of the Supreme Court of the United States. This is only one of the many flagitious decisions of the Supreme Court handed down since it has been presided over by Chief Justice Warren. The "New Deal" and the "Fair Deal" Courts have reached a low state in the opinion of lawyers, but the present Court has hit the rock bottom. The Congress must take some action to correct these decisions and to restrain the Supreme Court from making further decisions of a similar nature.

The editorial is as follows:

OBSCENITY AND THE HIGH COURT

It is curious, in a sense, that Members of the Congress who are now assailing the Supreme Court of the United States have failed to include an opinion by Mr. Justice Brennan this past Monday in their bill of particulars. The opinion affirmed the conviction of two men charged under separate State and Federal obscenity statutes, and perhaps in their amazement that even one State law has been upheld, critics of the court have missed the ominous significance of the opinion as a whole.

In considering the Court's decision, it is important to keep in mind that one of the defendants, David S. Alberts, was convicted under a California State law. The other, Samuel Roth, was convicted under a Federal postal statute which makes every obscene, lewd, lascivious, or filthy book, pamphlet, picture, etc., nonmailable matter.

The majority of the Court (to quote from Mr. Justice Harlan's dissenting opinion) "brushed aside with perfunctory ease the vital constitutional considerations which * * * differentiate these two cases." It did not seem to matter to the majority "that in one case we balance the power of a State in this field against the restrictions of the 14th amendment, and in the other the power of the Federal Government against the limitations of the 1st amendment."

Harlan went on to emphasize that a State has inherent power—the power that stems from State sovereignty itself—to enact any sort of obscenity laws it wishes, provided only that such laws do not deny due process of law to persons who may be charged thereunder. Harlan said this:

"What, then, is the purpose of this California statute? Clearly, the State legislature has made the judgment that printed words can deprave or corrupt the reader—that words can incite to antisocial or immoral action. The assumption seems to be that the distribution of certain types of literature will induce criminal or immoral sexual conduct. It is well known, of course, that the validity of this assumption is a matter of dispute among critics, sociologists, psychiatrists, and penologists. There is a large school of thought, particularly in the scientific community, which denies any causal connection between the reading of pornography and immorality, crime, or delinquency. Others disagree.

"Clearly it is not our function to decide this question. That function belongs to the State legislature. Nothing in the Constitution requires California to accept as truth the most advanced and sophisticated psychiatric opinion. It seems to me clear that it is not irrational, in our present state of knowledge, to consider that pornography can induce to a type of sexual conduct which a State may deem obnoxious to the moral fabric of society. In fact the very division of opinion on the subject counsels us to respect the choice made by the State."

At another point in his dissenting opinion, Harlan said this: "Since the domain of sexual morality is preeminently a matter of State concern, this Court should be slow to interfere with State legislation calculated to protect that morality." For these reasons, said Harlan, he too would vote to affirm Alberts' conviction under California law.

But Roth's conviction was something else entirely. "I do not think it follows," said Harlan, "that State and Federal powers in this area are the same, and that just because the State may suppress a particular utterance, it is automatically permissible for the Federal Government to do the same * * * The substantive powers of the two governments, in many instances, are distinct * * * The interests which obscenity statutes purportedly protect are primarily entrusted to the care, not of the Federal Government, but of the States. Congress has no substantive power over sexual morality. Such powers as the Federal Government has in this field are but incidental to its other powers, here the postal power, and are not of the same nature as those possessed by the States, which bear direct responsibility for the protection of the local moral fabric."

Harlan elaborated his views at some length. We urge every reader to take the few minutes' time required to ponder these further comments:

"Not only is the Federal interest in protecting the Nation against pornography attenuated, but the dangers of Federal censorship in this field are far greater than anything the States may do. It has often been said that one of the great strengths of our Federal system is that we have, in the 48 States, 48 experimental social laboratories. * * * Different States will have different attitudes toward the same work of literature. The same book which is freely read in one State might be classed as obscene in another. And it seems to me that no overwhelming danger to our freedom to experiment and to gratify our taste in literature is likely to result from the suppression of a borderline book in one of the States, so long as there is no uniform nationwide suppression of the book, and so long as other States are free to experiment with the same or bolder books.

"Quite a different situation is presented, however, when the Federal Government imposes the ban. The danger is perhaps not great if the people of one State, through their legislature, decide that Lady Chatterley's Lover goes so far beyond the acceptable standards of candor that it will be deemed offensive and nonsellable, for the State next door is still free to make its own choice. At least we do not have one uniform standard. But the dangers to free thought and expression are truly great if the Federal Government imposes a blanket ban over the Nation on such a book. The prerogative of the States to differ on their ideas of morality will be destroyed, the ability of States to experiment will be stunted. The fact that the people of one State cannot read some works of D. H. Lawrence seems to me, if not wise or desirable, at least acceptable. But that no person in the United States should be allowed to do so seems to me to be intolerable, and violative of both the letter and spirit of the first amendment."

Now, in the Roth case, the trial judge delivered a charge to the jury which the majority of the Supreme Court approved. It is a Federal criminal offense, the jury was told, to sell any book which "tends to stir sexual impulses and lead to sexually impure thoughts." Further, the jury was instructed that it should act for "the common conscience of the community" in deciding whether the offending material would be calculated to corrupt the mind of "the average person in the community."

In his dissenting opinion, Mr. Justice Harlan said bluntly that "the Federal Government has no business, whether under the postal or commerce power, to bar the sale of books because they might lead to any kind of 'thoughts.'" Yet that is precisely the conduct approved on Monday by a majority of this strangely "liberal" court.

Let us carry this sinister opinion a step or two further. Let us suppose that there is, in Philadelphia or New York, some unenlightened individual who objects strongly to interracial marriage. He writes a pamphlet on this subject, in which he dwells upon the evils of interracial sexual union. Complaint is made to postal inspectors, and the author is brought before a jury in a Federal district court. This New York or Philadelphia jury, finding the pamphlet offensive to the common conscience of the community by present-day standards, convicts the defendant under the postal statute. He goes to prison and the pamphlet becomes nonmailable matter anywhere in the United States. Thereafter, any person anywhere in the country, who aids in the circulation or disposition of the pamphlet by mail becomes subject to a fine of not more than $5,000 or to imprisonment of not more than 5 years, or both.

It is a handy little weapon that Mr. Justice Brennan and his colleagues forged on Monday. To be sure, the weapon is two-edged; by the same processes of reasoning, ardent segregationists might seek to have representatives of the NAACP arrested for mailing "obscene" matter advocating abolition of miscegenation laws. Our Virginia board of motion picture censors, which had been pretty well killed off by earlier opinions of the Court, may find in Mr. Justice Brennan's opinion some legal grounds for banning Island in the Sun or other motion pictures calculated, in the board's view, to corrupt the morals of the average citizen.

But what the Court's opinion does to free speech, and what it does in warping the delegated power, to establish post offices and post roads, every man may see for himself. The High Court has handed down a dozen evil opinions this year. The opinion that decided *Roth* v. *United States* and *Alberts* v. *California* carries seeds of tyranny that will match any planted so far.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following weekly newsletter to my constituents for the week concluded June 29:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

JUNE 29, 1957.—The Supreme Court decisions this week caused many thoughtful members concern far beyond the legislation under consideration. Decisions results: In Washington a convicted rapist was freed, though guilty by everyone's admission including his own; convicted Communist conspirators were freed, no question of their guilt; the powers of Congress to investigate and to question were curtailed, and Communists immediately flouted the House Un-American Activities Committee's jurisdiction in California hearings; the FBI files were declare open to defendants in criminal trials; vertical stock ownership of one company in another was condemned. There is a pattern emerging to these and earlier rulings by the Court which should concern every American. The reversal of time-honored rulings has the effect of new legislation, much as if Congress had passed new laws. The overriding danger is the aid and comfort given our avowed enemies, including the Communists, who are dedicated to discredit and overthrow our Government. The Supreme Court has bypassed Congress, and lessened its coequal importance. The sentiment is growing that its time for Congress, as representative of all the people, to reestablish its rightful legislative role. This may include quite properly some "pinning back of the ears" of the Supreme Court. Legislation to accomplish this, so far as possible, is being introduced. I shall report more on these bills in the future.

The continuing attack on business and businessmen by the Congress is a surprising matter to me. This is to be expected of Communists and socialists but not by American citizens nor Congressmen representing these citizens. Rather than praise capitalism, profit, stockownership, savings, and the underlying qualities required—initiative, planning, hard work, ambition, sacrifice, individual responsibility, and obligation, we confiscate the property of the most successful (up to 91 percent), denounce capitalism (although anyone with savings is a capitalist if he collects interest), deride bankers (who only invest the savings of others and then pay them interest), and discredit those who succeed. Simultaneously we subsidize those who pressure the Government hard enough for help, at the expense of the taxpayers. At the moment the Interstate Committee is concentrating on the regulation of the natural-gas producers by Federal law, not freeing them, so free-enterprise competition can keep prices down; Government is castigating bigness as though it were a sin, although we get the good things of life materially, like cars and most manufactured goods, from successful big operations (Premerger Notification Act now before committee); public power advocates (Hells Canyon) are trying to replace private business with Government operation; Congress is giving away food hand over fist; Federal public housing is replacing private or local government's efforts. Meanwhile, the Hoover Commission's practical and commonsense suggestions for getting the Government out of business in hundreds of activities are stalled by Congress. Why? What's the answer? Is there a pattern here, too? True, it's all embraced in the liberal's philosophy. Are the Congress and Supreme Court patterns related?

The Small Business Act was passed (1) making the Small Business Administration a permanent Government agency; (2) increasing money for loans; (3) to procure Government contracts; (4) to lower interest rates. I could not accept this emergency program as a permanent addition to the taxpayers' burden. The bill passed 392 to 2. I was 1 of the 2. I protested in this way: "Mr. Speaker, I do not consider this a vote for or against small business or small-business men—I, too, want to help the small-business man, if the Federal Government can do so appropriately. By this vote, I wish to stress that the way to help a small-business man is to return to him some of his tax money which can be done by cutting the size and cost of Government, not by making businessmen dependent on Government, and by such reliance on Government, increasing his taxes

to pay for the service. As a Congressman, my views can be expressed in only one way, by the votes I cast. * * * Again, my vote is not a protest against the effort and efficiency of officials of the Small Business Administration, but is against the increasing encroachment of Federal Government in our lives, jeopardizing our very freedom and this includes economic freedom. This bill is a further part of the web to ensnare the people in the bureaucracy of big government. Therefore, I voted against the bill."

The Senate in conference with the House increased the appropriations which the House had cut (Senate, the upper body, always ups the cost), restoring $3½ million to the independent offices appropriation and $23 million to the Health, Education, and Welfare Department, money laboriously saved by the House. Economy? Then, the House failed to limit the Senate's expenditures on their new office building and furniture.

Importation of Firearms

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. HOLTZMAN. Mr. Speaker, I am today introducing a bill which would prohibit the importation into the United States of certain firearms.

I had introduced similar legislation in the 83d and 84th Congresses, but these measures prohibited only the members of the armed services and their dependents from bringing into this country pistols, revolvers, and other types of small firearms. The Department of the Army had submitted an adverse report on this legislation, primarily due to the fact that it was felt that the bill would be discriminatory toward military personnel and their dependents.

This year I have eliminated the provision restricting the ban to members of the Armed Forces only, and have asked that the prohibition be extended to everyone—civilian and military alike—who would bring such weapons into the country.

I have been in touch with many law-enforcement officers throughout the United States, and the vast majority of them have endorsed the legislation and have agreed that any attempt to keep dangerous weapons out of the hands of criminals, potential criminals, children, and irresponsible individuals should receive the full support of all those interested in combating crime, and lessening the occurrence of tragedy which results when some of these guns are accidentally fired. Our own district attorney, in Queens County, N. Y., one of the most heavily populated counties in the country—the Honorable Frank D. O'Connor—has agreed with me that the supply of illicit weapons should be stopped at its source, and fully supports the proposed measure.

Statistics have shown that as many as 50,000 of these contraband weapons have been brought into the United States on just one troopship returning from the European theater. Multiply that by the number of troopships and the number of civilians bringing such weapons into the country and we have an astounding figure.

I have been informed that in one county of New York City as much as 75 percent of the crimes of violence have been and are being committed with these so-called souvenirs. Every day we read in the papers or hear over the radio and television of tragic accidents which occur, and crimes which have been committed with these weapons.

I feel that something should be done to curb the easy accessibility of these guns, and I feel that this proposed legislation, together with efforts made on the local level, will do much to bring about a reduction in crimes, and to minimize future accidents which maim or kill so many individuals.

Mr. Dulles and the China Situation

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. BURDICK. Mr. Speaker, I heard the speech made by Secretary Dulles at San Francisco, concerning Red China and the proposal to admit that country into the United Nations, and the proposed abandonment of the non-Communist Chinese, who are now members of the United Nations.

This was a very well-thought-out speech, and I hope the administration will not yield to any appeasement in pursuing this policy. If and when the Red Chinese are admitted to the United Nations it will be the time for us to withdraw from it. With Red China and Russia members of this organization these two nations will control it.

Both of them are aggressors, and have been so branded by the U. N.; yet if Red China is admitted, the control of the organization to preserve peace will be under the complete domination of these aggressors. The U. N. ostensibly exists for the preservation of world peace, yet the two major nations—with Red China in—will control the U. N., and will be doing just the opposite of what it was organized for. This arrangement will simpify matters, for the Russians then can commit acts of aggression and invasion, and this peace organization will approve that action.

Mr. Dulles sees this situation clearly, and he is to be congratulated for the utterance of these views. Let us hope that the destructive element of appeasement will not intervene to change our stand. The day of appeasement is past. Appeasement has made many million prisoners, and there will be no free world as long as we surrender any part of our policy to that weak sentiment of conciliation.

Why are the people of Hungary, Czechoslovakia, Poland, and the Baltic States prisoners today? The answer is appeasement, which was first initiated by the Prime Minister of England, Chamberlain. He justified his action for what he called "peace in our time." We appeased Stalin at Yalta and Russia again at Potsdam. If we had stood our ground then there would be no East and West Germany today, but one nation, and a tower of strength against communistic aggression. We could have done more then than it is possible to do now, but continued appeasement will open the gates to a flood of communism flowing to every corner of the globe.

If the Dulles speech is an expression of the attitude of the administration, then I say we are on the right track.

Tribute to Hon. R. Gregg Cherry

EXTENSION OF REMARKS
OF
HON. ALTON LENNON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. LENNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Wilmington Morning Star of June 26, 1957, in tribute to an outstanding governor of North Carolina, a courageous leader in the Democratic Party, and a great American whose passing is a profound loss to the citizenry of North Carolina:

GOVERNOR CHERRY, SOLID PARTY MAN

The passing of R. Gregg Cherry brings to mind a seldom-told tale of an excellent governor, an interesting and intelligent man, and a workhorse for the Democratic Party.

From orphan to Governor—that is the story of Mr. Cherry. But his greatest work was something that passed almost unnoticed. Certainly he never gained the recognition for it that he rightfully deserved.

During the Democratic National Convention when Harry Truman was running on his own there was a terrible split in the ranks. The Dixiecrats and other splinter groups were active within the party. As head of the North Carolina delegation, Mr. Cherry was attending the convention.

The dissatisfied groups gained strength. Several delegations got up and left the convention. Suddenly all eyes turned to the North Carolina Governor. If he made any move to leave the floor Truman would be dropped. Governor Cherry did not move.

Then the pressure was put on. Delegate after delegate from the dissatisfied politicians attempted to lure Governor Cherry into taking a walk.

But the Governor was first, last, and always a team man. He put party above partisan politics. And although the Dixiecrats managed to enter a slate of candidates for the Presidency, and did pull a good number of votes in the South, it was Gregg Cherry who held the line and delivered the candidacy—and the election—to Harry Truman.

The Governor's reward?

A Democratic victory was his only desire—and he got that in November.

Quick of wit, perhaps one of the most popular of all governors with newsmen who covered the capitol in Raleigh, R. Gregg Cherry will go down in Tar Heel history as a man who served his State and his party well and, when the chips were down, he was an impossible man to defeat in the hard game of American politics.

The Onassis Contract With the Maritime Commission

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. ZELENKO. Mr. Speaker, the distinguished chairman of the Merchant Marine and Fisheries Committee, the Honorable HERBERT C. BONNER, of North Carolina, has indicated that he will call for the appearance of Secretary of Commerce Weeks and Secretary of the Navy Gates before the committee, of which I am privileged to be a member, to elicit from either or both of these distinguished Cabinet officers pertinent testimony to help the Congress and the people of the United States to find out whether there is any policy of national defense relating particularly to maritime matters which will protect the interests of this country in time of emergency.

Recently the Merchant Marine Committee concluded hearings on the so-called trade-out-and-build policy of the Maritime Administration, which permits the transfer of American vessels to foreign flag. During the course of the hearings, it became apparent that in many instances the interests of the United States were not being fully protected.

In the matter of the trade-out-and build contract between the Maritime Administration and one Aristotle Onassis, a purported Greek shipowner, there was involved a $200-million windfall to this person.

After hearings before the committee, the Maritime Administration agreed to revise and amend the Onassis contract and to tighten up its provisions so that any losses to this country in the matter of defense, taxes, and American labor would be minimized or mitigated.

During the course of the hearings, which were particularly illuminating, the looseness and laxity of certain of the negotiations and provisions of the Onassis contract became apparent. I repeatedly warned that the best interests of the United States were not being served in dealing with Onassis, especially since he had already been in difficulty with our Government.

In the Washington Daily News of Monday, July 1, 1957, there appears an article which is of the utmost significance. Apparently the very ships which were the subject of the recent hearings are to be a part of a transaction with Colonel Nasser, of Egypt, in the joint program of Nasser and Onassis to build a pipeline in Egypt to freeze out United States interests.

When we consider that Russian arms and Russian technical help are being sent into Egypt, when it is further considered that Nasser is pro-Communist and anti-Western, the inescapable conclusion must be reached that the United States and its Western allies will have no effective control whatsoever of any of the vessels being permitted to be transferred or any of the vessels flying the flag of the Onassis interests. With Russia controlling Egypt by arms and military, it is obvious that none of the Onassis ships, whether directly owned by him or under his control, will ever be permitted to wander too far from the Soviet reach.

In view of this latest development, I have written to the Maritime Administration to halt all proceedings under its contract with Onassis; and I shall ask my distinguished chairman, Representative BONNER, to determine what, if anything, the Maritime Administration knows of the substance of the article which follows:

DEAL WITH NASSER: ONASSIS BACKS SUEZ PIPELINE

CAIRO, July 1.—President Gamal Abdel Nasser teamed up today with Greek tanker magnate Aristotle Onassis to build a Suez to Port Said pipeline—Colonel Nasser's biggest coup since nationalization of the Suez Canal.

The $37 million project will take about a year to complete. The pipeline will have an initial capacity of 500,000 barrels per day.

Huge supertankers—too big to use the Suez Canal—would load oil in the Persian Gulf, and unload it into the pipeline at Suez. Other supertankers would reload at the Port Said terminus, 102 miles away.

The project would allow Mr. Onassis to use his fleet of supertankers, including the 47,000-ton King Saud I instead of having to send it around the Cape of Good Hope.

Mr. Onassis flew to Cairo Thursday and began immediate talks with Hasan Ibrahim, head of the canal organization.

Mr. Onassis has been plugging for a Suez pipeline since 1954 when he built the King Saud I and found it was too big to move through the canal.

Construction of the pipeline would dull the edge of present western plans to build various Middle East pipelines to reduce Western Europe's dependence on the Suez Canal.

The project also would diminish the importance of any Israeli pipeline between Eilat on the Gulf of Aqaba and some Mediterranean port.

Informed sources said plans call for establishment of an Egyptian joint stock company holding a 12-year concession to build and operate the pipeline. Sixty percent would be held by the Egyptians and 40 percent by foreigners, chiefly Mr. Onassis.

At expiration of the concession period Egypt would take over full operation. In the meantime the Egyptian Government would receive 50 percent of the collected charges as royalty.

For Summit Meeting

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. COOLEY. Mr. Speaker, I submit for the RECORD a very interesting article by an old schoolmate of mine, Brig. Gen. Hugh B. Hester, United States Army, retired, entitled "For Summit Meeting," which appeared in the recent edition of the Winston-Salem Journal. The article is full of food for thought and I hope that it will be widely read:

FOR SUMMIT MEETING

To the EDITOR OF THE JOURNAL:

Must political man, blindly and endlessly, repeat his follies? Must society experience the ghastly and sordid carnage of world conflict, generation after generation, and primarily because of the failure of leadership? Need the United States pay the Soviet Union the supreme compliment of imitation by parroting "Nyet" to every suggestion for the negotiation of a peace, and thereby only help prove that the cruder conduct in international relations, like the baser monetary metals, drives out the finer? And is it not important for the leaders of all the great powers, in today's mad rush to fill the supposed mideastern vacuum, to remember that Hitler, too, partly perhaps because of his rude manners and vulgar display of military might, evoked considerable admiration in the early stages of his bid for world domination?

Throughout much of the thirties, the leaders of the Soviet Union, inside and outside the League of Nations, were pleading for disarmament, for collective security. Again they are doing this, and, in addition, calling for summit meetings. And again the "politik real" boys—the emigre school which brought catastrophe to Europe through its philosophy of brute force, even before its present leaders finally secured their American papers—are proclaiming it just another sign of Soviet weakness.

Enlarge the Crusade for Freedom, expand Radio Free Europe and Asia, appropriate more money for the Voice of America, tighten up the economic boycott, increase the already unlimited arms race and this godless creation, communism, they assert, will surely disappear. And somehow, perhaps automatically and autonomously, for again they do not disclose the source of their information, poverty, ignorance, and bigotry will disappear from this earth. Just why this did not happen before the first Communist state appeared in 1917, is, also, not explained.

This propaganda line, of course, is not new. The British and French leaders were so hypnotized with this hope, between the two world wars, that they joined with Hitler in propagating this fiction, and, in anticipation of the hoped for event, opposed all attempts for an enlarged collective security system which might include the Soviet Union. The United States also, of course, preferred her splendid isolation à la Taft and Hoover. All three refused to accept the basic fact that peace is indivisible, that it is a single fabric woven of a continuous thread, the unraveling of which anywhere means its eventual unraveling everywhere.

Unhappily, I am forced to agree with Mr. Khrushchev that the only possible way to avoid world war III soon is through some working agreement between the U. S. S. R. and the United States. This is so because none of the vital international issues of today such as are involved in Germany, Eastern Europe, Middle East, Formosa, Korea, Vietnam, and arms reduction, or collective security, can be settled without this cooperation. The Soviets are no more likely to agree to the unification of Germany inside NATO than the United States is to its unification inside the Warsaw Pact. And certainly no great power will permit encirclement by hostile states any longer than necessary. The United States would almost certainly risk war now to prevent an encirclement such as her leaders are attempting to impose upon the Soviets of China and Russia.

Make no mistake of it: This so-called containment policy is a one-way, dead-end street, leading only to war. For this reason, all who would avoid world war III should urge President Eisenhower to agree to a summit meeting of the great powers now, as has recently and separately been proposed by Nehru, Mollet, and Bulganin, and earlier by Churchill and Eden.

HUGH B. HESTER,
Brigadier General, United States Army (Retired).
PHILADELPHIA.

Freedom of Debate in the Senate

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. TALMADGE. Mr. President, on Friday, June 28, the Special Subcommittee on Senate Rule XXII of the Senate Committee on Rules and Administration had the privilege of hearing testimony by Hon. John J. Wicker, Jr., of Richmond, Va., representing Hon. W. C. (Dan) Daniel, national commander of the American Legion.

Mr. Wicker's presentation on the subject of continued freedom of debate in the Senate of the United States made on behalf of Commander Daniel was masterful and persuasive, and, in order that all Members of the Senate may have the full benefit of it, Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD. I further ask unanimous consent that the introduction of Mr. Wicker as given by the distinguished junior Senator from Virginia [Mr. ROBERTSON] precede the text of Mr. Wicker's testimony.

There being no objection, the statement and the introduction were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR A. WILLIS ROBERTSON IN INTRODUCING HON. JOHN J. WICKER, JR., BEFORE SUBCOMMITTEE OF RULES COMMITTEE, JUNE 28, 1957

Mr. Chairman, last year when the Senate Judiciary Committee was conducting hearings on a so-called civil rights bill, I introduced as a witness the same gentleman who is with me today.

I have known him for many years, first, as an outstanding lawyer, as a member of the State Senate of Virginia, and as one of the founders of the American Legion and a former Virginia State commander of that organization.

He is a former chairman of the Judiciary Committee of the Virginia Bar Association and a present member of the executive council of the insurance law section of the American Bar Association.

He was president of the electoral college of Virginia in 1944 and chairman for the first half of the 1945 constitutional convention of Virginia. He has served on several State commissions and boards.

Most important, for our present purpose, however, he is an astute student of the law and a dedicated believer in the principles of constitutional liberty and in the institutions, including the Senate of the United States, which are designed to preserve that liberty.

Last year he gave a convincing and scholarly argument against proposed legislation which he and I both felt would constitute a threat to constitutional liberty. Today I am sure he will be equally skillful in presenting his views on why it would be dangerous and undesirable to change the rules of the Senate in a way which might remove some of the protections of minority rights which were deliberately provided by the Founding Fathers or prevent the full discussion of constitutional issues which is necessary for the preservation of the spirit as well as the letter of that great document.

It is a pleasure for me to present to this committee the Honorable John J. Wicker, Jr., of Richmond, Va.

STATEMENT OF JOHN J. WICKER, JR., ATTORNEY AT LAW, REPRESENTATING W. C. (DAN) DANIEL, NATIONAL COMMANDER OF THE AMERICAN LEGION, BEFORE THE SUBCOMMITTEE OF THE SENATE COMMITTEE ON RULES AND ADMINISTRATION, IN CONNECTION WITH HEARINGS ON PROPOSED CHANGES IN SENATE RULE XXII (CLOTURE RULE)

Mr. Chairman and members of the subcommittee, my name is John J. Wicker, Jr. I am an attorney at law, and for many years I have been a member of the bar of the Supreme Court of Appeals of Virginia, of the Federal courts in Virginia, and of the Supreme Court of the United States. I am also a former Virginia State senator and I was temporary chairman of the 1945 constitutional convention of Virginia. I reside, as I have for most of my life, in Richmond, Va.

I am appearing before you at the request of W. C. (Dan) Daniel, the national commander of the American Legion, and upon his authority, to express the views of the national commander—with which views I am in full accord—concerning a number of resolutions pending before you to amend and modify rule XXII of the Standing Rules of the Senate (relating to cloture). The national commander was invited to appear before you by the distinguished Senator from Georgia, Senator Herman E. Talmadge, and being unable to appear in person because of previous engagements, he has requested and authorized me to appear in his stead.

GENERAL PURPOSE AND EFFECT OF PENDING RESOLUTIONS

While the several resolutions pending before you with regard to cloture have some differences in language and in detail, they all appear to have the same general intent and purpose and would probably have the same general effect, viz. to make it possible for less than two-thirds of the duly elected Members of the Senate to shut off debate and to deprive more than one-third of the duly elected Senators of their right of unlimited debate.

PENDING RESOLUTIONS WOULD PERMIT 49 SENATORS TO SILENCE 47 SENATORS

As the rule now stands, the views and voices of United States Senators upon pending legislation can be shut off by the concurring vote of 64 out of the 96 elected Senators. Under these pending resolutions, cloture could be applied and debate terminated at any time, by the concurrence of only two-thirds of these Senators actually voting on the resolution of cloture, provided that they constituted at least a bare majority of the total membership.

Thus, the sentiments and opinions and judgments of a large number of duly elected United States Senators—voicing and reflecting the sentiments and opinions and judgments of the citizens of their respective States—could be stifled and silenced by the active concurrence of a bare elected majority. And this would be true regardless of how fundamentally important the issue might be.

While the rule now requires 64 affirmative votes to apply cloture, the pending resolutions would reduce that required number by 15, almost a fourth, so that the required minimum would be only 49 Senators, provided not more than 24 other Senators actually voted the other way. Forty-seven Senators might be opposed to the pending legislation and/or opposed to cloture; but unless at least 25 of them were actually present and voting, their opposition would be ignored and count for naught.

SENATE AND HOUSE ARE COORDINATE AND OF EQUAL DIGNITY BUT FUNDAMENTALLY DIFFERENT

Our Founding Fathers very wisely provided for two distinct bodies in the Federal legislative branch. The House of Representatives, chosen on a population basis and constituting a large representative body, is fresh from the people as a result of elections every other year. The Senate, being a smaller and consequently much more deliberative body, with each State being represented by two Senators regardless of wide variations in population and area, has its membership elected for 6-year terms with only one-third of the body being elected every 2 years.

Anyone making even a cursory study of the fundamental principles and aims and purposes which the framers of the Federal Constitution had in mind in providing for these two bodies, so vastly different in their size and basis of representation and terms of office and times of election, will recognize that while the powers of the two Houses are coordinate, their methods of operation would, in many particulars, be vitally and fundamentally different.

LIMITATION OF DEBATE APPROPRIATE AND NECESSARY IN HOUSE BUT NOT IN SENATE

Obviously anything like unlimited debate in any legislative body as large as the House of Representatives (numbering 435 Congressmen) would be completely out of question. Consequently limitation of debate in the House of Representatives is not only traditional and historical, but is also absolutely necessary in order to permit the House to operate.

By sharp contrast, however, the Senate, with a total membership of 96—substantially less than one-fourth of the number of the House—can operate efficiently and effectively without limitation of debate. In fact, the Senate has actually done so throughout its existence.

ANYTHING IMPORTANT ENOUGH TO JUSTIFY CLOTURE WILL HAVE ACTIVE SUPPORT OF AT LEAST 64 SENATORS

Anything so serious and so dangerous to our American form of Government—as shutting off debate and stifling free expression and argument by United States Senators—should never be sanctioned without the affirmative concurrence of at least two-thirds of the membership of the Senate. If any real emergency arises that requires and justifies a limitation of debate, surely the emergency would be recognized and acted upon by at least two-thirds of the Senators. And any proposition of that kind which cannot secure the active voting support of at least two-thirds of the duly elected Senators does not deserve to be adopted.

With only two Senators elected by any one State to represent that State and its people, it would be unreasonable to silence those Senators from expressing their views fully—especially on measures which they believe may involve a violation of fundamental constitutional rights—unless at least two-thirds of the membership of the Senate affirmatively vote to close debate.

Any attempt to shut off debate which cannot command the affirmative voting support of at least 64 out of the 96 elected Senators must have inherent in it such weakness and such objection that it deserves to fail.

MINORITY OF SENATORS OBSTRUCTING WILL OF MAJORITY IS SOMETIMES BEST FOR PUBLIC WELFARE

It is claimed that rule XXII permits a minority to obstruct the will of the majority. If that be true, it is not necessarily a damning indictment because our history shows many instances in which a bare majority, if unfettered and uncontrolled, would have done willful violence to the legitimate rights of minorities.

To enable cloture to be applied upon the concurring vote of less than two-thirds of the elected Senators would undoubtedly result in the hasty enactment of some legislation which would otherwise be defeated if

debate were sufficiently prolonged to enable the American public to become fully informed as to the merits or demerits of the proposed legislation and to transmit their sentiments to their representatives in the Senate. In the very nature of things there is not as much opportunity for this formulation of informed and considered public opinion in connection with the passage of legislation in the House of Representatives, but this opportunity should by all means be preserved in the Senate.

MINORITY OF SENATORS MAY ACTUALLY REPRESENT MAJORITY OF CITIZENS

A minority of Senators may actually be representative of a large majority of American citizens and of American territory. For example, there are 10 States having a combined total of only 20 United States Senators, and yet these 10 States have a combined population constituting a substantial majority of all the citizens of the United States of America, and also a majority of territory. Even as it stands now, the rule is fraught with some danger of unduly stifling debate; but this danger certainly should not be increased, as it would be, by a weakening modification of the rule by the pending resolutions.

PRESENT RULE HAS NOT KILLED PERMANENTLY ANY MERITORIOUS LEGISLATION

Of all the legislation that has failed of passage at one time or another in the United States Senate, because of unlimited debate, very few measures have failed of ultimate enactment. In fact, the few that have failed permanently were those that were of such a vicious type, fraught with such genuine peril to our American system of government, that they fully deserved the defeat they experienced.

SENATE EXPECTED TO BE MORE DELIBERATE THAN THE HOUSE

In view of the important differences in size, basis of representation, terms of office, times of election, prerogatives and functions, the Senate was designed and intended to operate quite differently from the House. It is not unreasonable to say that the Senate was intentionally created of such size and type as to make sure that many things hastily approved by the House would not receive the approval of the Senate.

Elected entirely every 2 years, the House is fresh from the people and, quite naturally, reflects the current popular sentiment of the people at the moment. But the Senate, elected by thirds over a period of 6 years, represents a much broader span of public opinion. Consequently, from the very beginning of our Government, the Senate has been expected to be more deliberate than the House; ordinarily to concur in House action but just as properly to refuse concurrence when any sizeable segment of the Senate has reasonable doubt of the long range wisdom of House action.

MORE DELIBERATE SENATE ACTS AS BULWARK AGAINST EXECUTIVE DOMINATION

While the House and the Senate are of equal dignity, there are many important functions performed solely by the Senate; for example, the confirmation of executive appointments and ratification of international treaties. If limitation of debate could be brought about by less than the concurring vote now required, it is conceivable that the Senate might not be able to discharge its important functions as intelligently as it should, and as it now does.

The smaller size, staggered changes of personnel and representation on the basis of individual States rather than population, all combine to show that the Senate was consciously designed to act also as a safeguard against executive domination. Otherwise, why is it that the Senate, rather than the House, must approve or reject important official appointments made by the President? Obviously because—ordinarily although not always—the majority of the House is more apt to be of the same political party or governmental persuasion as the President. Thus, ordinarily, the House is more likely to go along with Presidential policy. The Senate, however, being more removed from the popular pressures and changing passions of the day, is more apt to apply its own deliberate judgment. And whenever necessary, in the interests of constitutional government, the Senate is expected to act as a deterrent and checkmate against hasty action—regardless of whether that action originates in the House or in the Senate.

It has been true in the past, and may well be so in the future, that it is a minority of both parties in the Senate that must be counted upon as the last bulwark against improper, harmful legislation. And this bulwark should not be destroyed or weakened, regardless of how high and noble the motives of the proponents may be.

HISTORY WARNS OF DANGER OF RARE MAJORITIES

With no reflection upon anyone, let us remember that most of the foreign tyrants of the past have acquired absolute and despotic power on the temporary but surging wave of popular sentiment of the day, allegedly to promote social welfare and so-called civil rights, etc. Few indeed would have succeeded in their autocratic seizures if their countries had been blessed with a legislative body with the courage, power, and deliberative character of the United States Senate. In the few instances where there was indeed a legislative body at all comparable to our Senate, the first step of the tyrant and his cohorts was to suspend or repeal all rules which permitted anything less than an absolute majority to oppose him. Of course, it may be said that such a thing could never happen here. Well, that same thing was said, and believed, in every country before it succumbed to the tyranny of a dictator.

WHY WEAKEN MINORITY IN THE SENATE TO STRENGTHEN MINORITY OUTSIDE?

It is a strange and paradoxical thing that many of the leading proponents of cloture, who seek to make it possible to stifle the voice of substantial minorities in the United States Senate, appear to be doing so principally in the hope of thereby bringing about the passage of pending legislation, allegedly designed to protect miscellaneous minorities of people here and there in the United States outside the Senate. It would seem that Senators should be at least equally zealous in protecting the rights of their fellow Members of what has well been described as the most august deliberative body in the world as they are in seeking to set up a vast bureaucracy of Federal inquisitors and prosecutors to ferret out and punish fancied grievances of a comparatively few individuals.

RULE XXII HAS PROVEN ITS VALUE TO PUBLIC WELFARE AND SHOULD NOT BE WEAKENED

Rule XXII has had considerably more than a century of useful life and it would not be for the best interest of the United States and its people, or of our American form of government, to emasculate or otherwise weaken this rule.

The modification and weakening of the rule would bring about far greater bitterness and resentment than whatever may be occasionally aroused by the operation of the rule as it now stands.

Artificially Fattened Poultry Sold for Food May Be Poisonous

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. BURDICK. Mr. Speaker, in previous news releases I have issued I pointed out that estrogen pills inserted in animals and poultry for fattening purposes are on the suspect list of dangerous food additives, as found by the International Union Against Cancer meeting held in Rome, Italy, in August of 1956.

That is only part of the story. Recent events have pointed up the need for a compulsory poultry inspection bill similar to the compulsory red meat inspection bill enacted in 1906.

The Delaney committee found that in 1950 a chemical known as diethylstilbestrol, in 15 milligram pellets, was used on about 30 million chickens, and that its use was on the increase. A mechanical injector, similar to a hypodermic syringe, implants the pellets in chickens' necks just below the head. They are used purely for monetary reasons in the belief that they will step up the rate of growth as much as 20 percent, and cause a more even distribution of fat. This chemical, said the Delaney committee, is so potent and dangerous that it cannot be purchased in drugstores without a physician's prescription. The testimony of experts is conflicting concerning the safety of human absorption of the flesh of such treated poultry. Therefore, I ask, why should the doubt about its harmful effects be resolved in favor of its use, when scientists and so-called experts are sharply divided as to its long-range harmfulness on human health?

In 1952, 50,000 pounds of such treated chickens were condemned by the Food and Drug Administration as unsafe for human consumption. Sixty percent of the sampled chickens contained unabsorbed portions of these pellets in areas of the neck which would remain with the consumer after normal severance of the head from the carcass. There was evidence before the Delaney committee that the fat of fowl treated with stilbestrol differed chemically from that of normally fattened birds, and that it was watery and inferior culinarily; and there was additional evidence that the fat of birds so treated contained greater deposits of fat than the flesh of non-treated birds. There was also evidence that male birds so treated rapidly lost many male characteristics; combs, wattles, and reproductive organs shriveled, and the propensity for crowing and fighting disappeared.

The above facts stress the need for a compulsory poultry-inspection bill. Such a bill—S. 1747—recently passed

the Senate. Its counterpart—H. R. 6814—was recently favorably reported by the House Agriculture Committee. Such a bill would tend to prevent the processor, or the dealer in such contaminated poultry from sending it into the channels of interstate commerce.

Why should not the meat of poultry which has been treated with estrogens be labeled so as to reveal that fact? Why should not restaurants serving such estrogen-treated food be required to advise customers by proper means so that they will know what they are eating and the risk being taken? Why should not the processors of such estrogen-treated poultry be required to prove beyond a reasonable doubt that such poultry is safe for human consumption before they should be permitted to sell it?

The facts cited above furnish potent support for the passage of my House Resolution 212—which is now before the Rules Committee—so as to procure proper strengthening of the Food, Drug, and Cosmetic Act of 1938.

The City of Clinton, in Laurens County, S. C.

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech by State senator, Robert C. Wasson, an able and distinguished State senator from Laurens County, S. C., in the senate of South Carolina, on the passage of H. 1414, a bill to change the name of the town of Clinton to the city of Clinton, in Laurens County, on March 14, 1957.

The city of Clinton is one of the most progressive cities in South Carolina, and we are very proud of that fine city. I am desirous of having the people of the Nation see just what this beautiful city has to offer.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR ROBERT C. WASSON, OF LAURENS COUNTY, IN THE SENATE OF SOUTH CAROLINA, ON THE PASSAGE OF H. 1444, A BILL TO CHANGE THE NAME OF THE TOWN OF CLINTON TO THE CITY OF CLINTON, IN LAURENS COUNTY, MARCH 14, 1957

Prior to the building of the railroad between Laurens and Newberry, there was, at a distance of 9 miles from Laurens, an intersection of 5 roads known as Five Forks. The railroad crossed this point and here a station was built. As early as 1809, before the existence of Five Forks, there was a settlement about a mile east known as Holland's Store. It was the community's only merchandising place, and as far back as 1830 was likewise the community post office.

It was about 1850 that the railroad was completed and a station established at Five Forks. This meeting of roads for years had been the gathering place for the sportsmen of the surrounding community. Here a racetrack was maintained; horseracing, chicken fighting, drinking, etc., were freely engaged in.

When the station was erected it was soon seen that a town would spring up around this nucleus of racetrack, barroom, and railroad depot. The first buildings were erected between Holland's Store and Five Forks. About 1853 leading citizens began to realize that the new settlement was neither Five Forks nor Holland's, so there arose the important question of selecting a name. Many wanted to retain the title Five Forks, while some suggested Round Jacket in honor of a prominent citizen of the community who wore a waistcoat or vest called in those days a round jacket.

A small group of farseeing citizens realized the need of some concerted action. The village needed not only a name but a general layout as to streets and buildings. These interested men sought the help and advice of their legal adviser and friend from Laurens Court House who acted as chairman of the committee that laid off the first streets. A study of old plats shows that the principal streets followed closely from five roads radiating from a common center; the one toward the east leading to Newberry; west, to Laurens; south, to the Belfast section; and the two to the north to Musgrove Mill and Langston Church. Henry Clinton Young, Laurens attorney, a native of Iredell County, N. C., served as chairman of the committee that laid off the town. To honor him for his valuable services, the local members of the committee named the newly created and then unattractive village, Clinton.

From this meager beginning Clinton has steadily developed and has never lost ground in population from one decade to another. It has grown into a symmetrical little city, ranking 14th in size in the State today and has all the essential requirements for comfort, convenience, and contentment of the homeseeker. Its early population was 465; in 1880 it had risen to 1,201; in 1900 to 1,860; in 1910 to 3,272; in 1920 to 3,742; in 1930 to 5,643; in 1940 to 5,704, and in 1950 to 7,168. The town is something over 81 years old.

For many reasons, Clinton is widely and favorably known. It is attractive from many viewpoints. It has an elevation of 800 feet above sea level, and is the highest point on the Seaboard Airline in the State. Its location on the top of a broad ridge gives excellent drainage. An ample water supply and complete sewerage system enable it to maintain an excellent health record.

In educational development it boasts of a splendid graded and high-school system with an enrollment, both white and colored, of approximately 2,500. New high-school buildings have been erected for both white and colored pupils of Clinton and recently a contract has been awarded for a new grammar school to be known as Academy Street Elementary School. Clinton offers educational opportunities of unusual breadth. It is possible for a resident of the community to begin his or her studies in the first grade, continue them through grammar and high school and then through Presbyterian College—all of this without a change of residence. It is the home of Presbyterian College under the control of the Synods of South Carolina and Georgia, one of the leading educational institutions in the State for men and women. Recently, a very successful development program for Presbyterian College has been carried on in the Synods of South Carolina and Georgia and over a million dollars has been pledged for the improvement of this institution. It is the home of Thornwell Orphanage, the pride of Clinton and one of the largest Presbyterian orphanages in America. This institution, now in its 82d year of service, is caring for orphan boys and girls, is owned by the Presbyterians comprising the Synods of South Carolina, Georgia and Florida. Clinton is likewise the home of Whitten Village, a fast growing institution doing noble work for the State's unfortunate.

From a railroad standpoint it boasts the mainline of the Seaboard Airline from Birmingham to New York, and an important cross-State route of the Atlantic Coast Line from Greenville to Charleston.

From a highway standpoint, it has the great Piedmont Highway from Charleston to the mountains of North Carolina and the Calhoun Highway from Raleigh to Atlanta. It is connected with several highways under State maintenance.

From a manufacturing standpoint, Clinton has a rather remarkable status. Its principal industries are Clinton Cotton Mills, Lydia Cotton Mills, Hallmark Manufacturing Co., Gwen Evan Mills, Standard Plywoods, Inc., Dapper Hosiery Mills, Inc., Clinton Paper Box Co., Inc., C. W. Anderson Hosiery Co., Inc., Cincinnati Floor Manufacturing Co., and Textile Bobbin Works, Inc. These industries afford a large source of income through their heavy payrolls with a combined total of between 1,950 and 2,250 employees.

The Joanna Cotton Mills, of Joanna, really a suburb (and a most attractive one) of Clinton, is one of the State's fastest growing mills in recent years with a total of approximately 1,500 employees.

The city's fire protection totals 15 miles. It has a modern fire truck, 1 3-stream, triple combination pump engine with firemen on duty day and night.

The city's health record is excellent with 7 physicians in the city and Hays Hospital and Bialock Clinic in the city proper with a total of 34 beds. Whitten Village, orphanage, and college have their own infirmaries to care for their population.

Besides its industries, the city has about 100 business firms, 2 cotton gins, 3 printing plants, 1 fertilizer plant, 1 weekly newspaper, 1 monthly religious magazine, 3 college publications, 1 ice plant, local bank deposits of approximately $7 million, and numerous other successful enterprises, including the new modern Mary Musgrove Hotel with a total of 112 rooms.

Clinton is proud of its churches with 14 white and 3 Negro churches, the following denominations represented: Baptist, Lutheran, Methodist, Presbyterian, Episcopal, Holiness, and others.

The people are reasonably conservative, yet progressive. The gradual but continued growth of the town is a good indication not merely of the advantages of residence in Clinton but also of the enterprise and indomitable pluck of her people.

Clinton is very thoroughly organized. Not only are there scores of societies, circles, and so forth, in the churches, and many others in the institutions but the town at large is quite extensively organized in the matter of fraternal, patriotic and civic organizations. Among the latter the chamber of commerce has made a commendable record during the past 41 years. It is supported by the merchants retail association, by Kiwanis, Rotary and Lions Clubs, and by the woman's club, engaged in civic work. Clinton has much to boast of, but nothing quite equal to its women who are active, energetic, self-sacrificing supporters of every good thing. From the standpoint of social life, the city's organizations contribute in a very large measure to making Clinton an active and cultured community.

Clinton's people are ambitious, public-spirited, intelligent, industrious, resourceful, frugal, home-loving, neighborly and morally substantial.

From an insignificant beginning Five Forks or Holland's Store has grown into "wide awake Clinton"—a delightful place in which to live. New citizens, new enterprises, new capital are cordially invited to investigate Clinton, her advantages and possibilities.

Desired information in regard to the town by those seeking either a location for a home or industry may be obtained by writing to the secretary of the chamber of commerce or Laurens County Planning and Development Board.

Attached is Clinton city data sheet compiled by the State of South Carolina Development Board.

(Senator Wasson wishes to acknowledge the information compiled by the late W. W. Harris, former editor of the Clinton Chronicle and also acknowledge information received from the State development board.)

STATE DEVELOPMENT BOARD, STATE OF SOUTH CAROLINA, COLUMBIA—CLINTON CITY DATA SHEET

General information

Location: In Piedmont area of State in Laurens County.

Elevation: 687 feet above mean sea level.

Type city government: Mayor-council.

Population

	City	County
1940	5,704	44,185
1950	7,168	46,974
Percent growth, 1940-50	25.7	6.3
Percent white, 1950	80.2	68.9
Percent male, 1950	49.5	49.2
Percent native born, 1950	99.7	99.8
Population, 15-mile radius	46,030	----------
Population, 30-mile radius	191,030	----------

Schools—enrollment

City: Grade, 1,617; high, 904.

County: Grade, 7,385; high, 2,758.

Colleges: Presbyterian College of South Carolina.

Hospitals

Bialock's Clinic and Hays Hospital.

Total number of beds, 34.

Number of physicians in city, 7.

Police and fire protection

Number on police force, 14.

Number of fire trucks, 2.

Type fire department force: part paid.

Water pressure, 45 pounds.

Insurance rating, class 7.

Financial data

Bonded indebtedness: City, $740,000; net county, $343,946.

Assessed value of property: City, $2,150,000; county, $12,468,500.

Local bank deposits, $6,674,000.

Property tax rates (per $100): County, $1.90; school, $2.50; city, $5.50.

NOTE.—Tax rates apply to assessed value which averages about 12 percent of actual value.

Tax exemption: For new industry—5 years on all county taxes except those for school purposes.

Churches

Number of white, 14.

Number of Negro, 3.

Baptist, Lutheran, Methodist, Presbyterian, Episcopal, Holiness, and others.

Recreational facilities

Theaters, 2.

Parks and playgrounds, 3.

Other: Swimming pools, tennis courts.

Hotels

Clinton; Mary Musgrove; and 2 motor courts.

Total number of rooms, 112.

Fuel and utilities

Coal: Freight rate from nearest mine, $4.25 per ton, regular; $3.90 per ton, fine.

No. 2 fuel oil: 11.765 cents per gallon in carload lots delivered.

Natural gas: Available.

Water: Hardness—18 parts per million.

Rates: From 40 cents per 1,000 gallons for first 5,000 gallons to 12 cents per 1,000 gallons for all over 3 million gallons.

Sewerage: Septic tanks and secondary treatment.

Electricity: Duke Power Co.

Transportation

Highways: US 76; SC 72, 56, 308.

Railroads: Seaboard Air Line Railroad; Columbia, Newberry, and Laurens (ACL).

Airport: Class 2. Distance to nearest city with airline service—37 miles to Spartanburg.

Labor

Estimated number of persons available for new industrial plant within 15-mile radius, 1,350.

General type: Excellent native-born with agricultural heritage.

Industrialization in county

Six thousand one hundred thirteen persons were employed in industry in county in 1954. Principal industry is textile; others include clothing and hosiery.

Wages in Arizona as Compared With the National Level

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. GOLDWATER. Mr. President, 11 years ago, in 1946, Arizona adopted an amendment to its constitution in the form of a right-to-work law. At the time of the adoption of this amendment, many people in my State were pessimistic about the future of the working man and the future of unions in Arizona.

We now find, after 11 years' experience under this law, that the average wage in Arizona in 1956 was $4,229, while the national average was $4,005, or a difference of $224 in favor of the working man in Arizona.

The national average industrial wage per hour is $2.06. The average Arizona hourly wage for industrial workers, at the end of April, was $2.22.

I read from an editorial which I shall ask to have printed in the Appendix of the RECORD:

Arizona has found in the last 11 years that the right-to-work law didn't mean the end of trade unionism and it didn't mean a heaven for unreasonable employers. It also has not meant, as wage figures show, debasing of wage and salary levels. In fact, Arizona's position before the Nation wagewise is relatively better today than it was in 1946.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How About Arizona Wage Payments?" written by the distinguished editor, William R. Mathews, of the Arizona Daily Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW ABOUT ARIZONA WAGE PAYMENTS?

What has happened to Arizona's wage payments, in relation to the payments made across the Nation, since 1946, the year that the electorate adopted the controversial right-to-work bill?

According to the latest Valley National Bank statistics, the Arizona average wage in 1946 was less than the national average, while now it is more.

Eleven years ago the Arizona average was $2,363 a year and the national average was $2,368—a $5 difference against Arizona.

The latest complete statistics are for 1956; however, it isn't reasonable to assume that they differ markedly from today's. The Arizona average in 1956 was $4,229 and the national average was $4,005—a $224 difference in favor of Arizona.

No claim is made that this altered status came about as a result of the passage of any single peice of legislation. Many factors entered into it, including the growth of industries such as the Hughes plant which require higher-paid skills. However, neither could it be claimed that the right-to-work bill has debased the wage scale in Arizona.

To go back into a little history which newcomers may not know and those with longer residence in the community may have forgotten, the Star opposed the original right-to-work bill. The reasons now are immaterial; the fact is that the electorate voted strongly for the bill and it became law. The Star then felt that if the voters wanted such a law it deserved having an operative status, and so supported subsequent measures to make it a working law, including the ban against the secondary boycott.

No law is going to make relations between human beings, or groups of human beings, perfect. A willingness on both sides to meet calmly and negotiate fairly will generally be productive of successful relations, whether between individuals or between unions and employers.

There have been some perversions of trade unionism which investigators have bared and which it should be difficult for the most ardent unionist to stomach. There have been preversions of the employer relationship which have hurt good employers because of the public suspicion they have stirred up.

Arizona has found in the last 11 years that the right-to-work law didn't mean the end of trade unionism and it didn't mean a heaven for unreasonable employers. It also has not meant, as wage figures show, debasing of wage and salary levels. In fact, Arizona's position before the Nation wagewise is relatively better today than it was in 1946.

Dr. Thomas E. Rhine—58 Years, 6,000 Babies

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks, I present herewith an article which appeared in the Arkansas Gazette on May 26, 1957, concerning the 58 years of public service rendered by my friend and constituent, Dr. Thomas E. Rhine, as a doctor in Calhoun County, Ark. He is a resident of Thornton, Ark., and is well known, not only in south Arkansas but throughout our State, for his outstanding service to his fellow man.

The article follows:

DR. THOMAS E. RHINE: 58 YEARS, 6,000 BABIES

(By J. Willard Clary)

THORNTON.—A country doctor who has been practicing over 58 years has been honored by Presidents, Senators, governors, and many men in high places but he still treas-

wires most the love and confidence of the people he serves.

Few men have ever served so many people through so many years. And yet today—at the age of 81—he covers a territory that exceeds 2,000 square miles and is on call 24 hours a day. He never refuses to make a call, day or night, rain or shine. And there are few homes in Calhoun County in which he has not practiced.

Dr. Thomas Edwin Rhine rode into Thornton on a gray horse on May 17, 1899. He had $40 he had borrowed from a friend and with this began his practice. Fifty-nine years later he has delivered 6,000 babies, has served 3 people for 58 years, has served 24 families for 6 generations, 150 families for 5 generations, and 250 for 4 generations. In over 40 families he has delivered both the mother and father and all their children. And in one case he delivered a women, her 10 children and 4 grandchildren.

Few men have ever won the esteem and gratitude of so many and few have ever been so dedicated to service. In 1903 while making a call on horseback he was thrown in midstream but went on soaking wet to see his patient. Another time his horse ran away with him and he had three ribs broken. He gave himself a hypo and returned to work. In 1902, typhoid fever was a common ailment and at one time he rode horseback daily to care for a family where 10 were sick and for another where 6 were sick. He has performed many an emergency operation in homes, in his office, and even on kitchen tables, and he has used almost every method of transportation to reach his patients, walking, horseback, bicycle, handcar, freight train, boat, log wagon, and once he even rode the cowcatcher of a log train.

His iron constitution and will to serve have amazed the doctors who have attended him but one day in 1924 urgent calls kept him busy from 4 a. m. on. He drove 11 miles over almost impassable roads, stopped for many calls, attended a pneumonia patient, rode a handcar in the rain, and returned late at night completely exhausted. Two days later he awoke to find his right side paralyzed. He was forced to spend 6 months in Little Rock and Hot Springs hospitals and was given no hope of being able to resume work again.

During his enforced rest he discovered a big barn on fire and rushed out and worked as hard as anyone. The next day he announced that if he could undergo that strain he was able to get back in harness again. And despite dire warnings he went back to work in September 1924.

In March 1926 during a flu epidemic he treated 16 patients in his office, drove 100 miles making 40 calls from 7 a. m. to 11 p. m., the greatest number he had ever made in a single day.

Now, 30 years later, he still covers his territory and he still works day and night when called. He was once introduced as "Here is a man, who unlike Rip Van Winkle, has not slept for 20 years."

During the depression years he described his collections: "25 percent paid some, 25 percent paid in produce and the others just couldn't pay at all." He served all alike and took on many other duties such as investigating for the Red Cross, serving on Government loan committees, as county health officer, and as inspector for WPA canning kitchens.

Many times he found the canning kitchens had nothing to can. He hustled among his debtors and got peas, collards, fruit, a hog, or a heifer and took them to be canned. Some of the canned food was stored in a smokehouse at his home, and during that bitter winter it was a daily occurrence for someone to appear at his home with a prescription blank signed by Dr. Rhine and reading something like this: "Give Uncle Sandy a can of beef and some of the other stuff in the smokehouse." Not one can was ever used by the Rhine family.

The esteem in which he is held was best shown on May 17, 1946, when 8,000 people crowded into the small town of Thornton for Dr. Rhine Day. Many members of the medical profession came from far places to join with his friends to honor him. The business houses in nearby cities closed their doors, men of note in State and Nation left their duties to pay tribute to this man of service. His many patients for whom he had practiced 40 years wrote buttons with "40" on them and an "R" marked the hundreds of babies he had delivered. Literally hundreds of telegrams and letters have come from all over the country. President Harry Truman and President Franklin D. Roosevel have written him personal letters and invited him to functions in Washington. In 1949 he was chosen "Doctor of the Year" in Arkansas and was runner up for "Doctor of the United States" when doctors assembled in Washington to name their most honored practitioner. A unique honor is held by Dr. Rhine. After World War II the local veterans formed an American Legion Post and the only charter members were those Dr. Rhine had delivered into the world. This post is the only one of its kind in the world. About 200 of his babies served in the Armed Forces in World War II.

He has spent untold hours fighting ignorance and pleading for cleanups and necessity for vaccinations. He once made a long trip to give preventive shots for diphtheria and no one showed up. A short time later a child died of the disease and then they came by the dozens. One old woman came to his office carrying rusty nails "to keep magnetized and keep up my blood pressure."

One old man was very dirty and refused a bath but finally consented to bathe all except his back. He didn't want to rust out his backbone. Dr. Rhine promised to lubricate his spine and the bath was taken.

In delivering 6,000 babies he has delivered triplets, and he delivered 1 baby that weighed 18 pounds and another that weighed 20 pounds. He delivered 4 babies in 24 hours and all miles apart.

He has treated countless diseases—even leprosy. He diagnosed the first case of tularemia in south Arkansas and many doctors came to see the case. He often has requests by mail for medicine that read something like this: "Doc, I'm hurting all over. Send me whatever I need." Or, "send me some of the bad-tasting medicine like you gave me 2 years ago."

Thomas Edwin Rhine was born April 2, 1876, near Lexington, Miss., the fourth of seven children in the home of Susan Elizabeth Weeks and John Thomas Rhine. When he was 5 years old they moved to Cleveland County in Arkansas with part of the trip made in a covered wagon. When Ed was in the ninth grade they moved to Fordyce. He was a member of the first graduating class of Fordyce High School in 1895. In 1896 he graduated from Clary Training School in Fordyce. After a summer spent teaching school he entered Memphis Hospital Medical College in 1896. His first license to practice was obtained after questioning by three Calhoun County doctors who carried on part of the test during an obstetrical case.

In September 1921 he was married to Nannetta Raines, of Little Rock, who has constantly been by his side and helped him in his practice and who holds equal esteem in the hearts of the people they serve. His three children are Virginia Elizabeth, who is now Mrs. Eric Stein, of Ann Arbor, Mich., Susan Ethel, who is Mrs. O. M. Starks, of Pacomo, Calif., and Patricia Edwina, who is Mrs. Edward E. Brown, of Pine Bluff.

In January 1900 he was named head surgeon of the Stout Lumber Co. in Thornton and served until the mill closed in 1927. He was offered lucrative practice in larger towns. He realized he and his family would have to be deprived of steady income but he decided to remain in Thornton.

"Why these folks raised me. When I go to see them they look at me with confidence in my ability to relieve their suffering. There's a lot of satisfaction in that," he said.

He helped organize the Dallas County Medical Society, organized the Calhoun County Medical Society and became a member of the Ouchita Medical Society and served as its president in 1943. He was a founder of the Southern Medical Association and is a lifetime member of the American Medical Association. He has taken refresher courses in New Orleans Polyclinic, Tulane University Medical School, New York Polyclinic Hospital and has a library of hundreds of volumes and subscribes to the best medical journals to keep abreast of the times, and modern practices.

He is an inveterate joiner. He is an active Mason, a member of the Scottish Rite, a Shriner, Elk, Odd Fellow and a Hoo Hoo. He served 35 years on the Thornton School Board and 15 years as its president.

An ardent sportsman, he is naturally interested in wildlife and fine stock. He is a lifetime member of the Fox Hunters Association and has spent many hours listening to the hounds. No one knows how many fox hounds he has owned or owns now. One of his bird dogs once won a State title. A Duroc Jersey hog he raised dressed over 1,000 pounds and he once showed the champion Duroc Jersey hog at the State fair. His poultry has won State prizes and he gave eggs to all comers interested in improving their stock.

He is a member of the Methodist Church and contributes to all the churches in his territory. He helps keep up five cemeteries and several times he has practiced for a patient many years without pay and at his death bought the casket and clothes for burial.

"That was my way of burying my own mistake," he says.

The faith and esteem in which his friends hold him is well shown by the remark of an old Negro man who said, "Doc, don' you neber quit us cause you is de onliest doctor we's got."

The white folks feel the same way about him.

Presidential Succession

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on Presidential Succession, written by the distinguished senior Senator from Rhode Island [Mr. GREEN]. The article appears in the Dickinson Law Review, of Dickinson College, in Carlisle, Pa.

It is an extremely provocative article, and in view of the long and varied experience of the distinguished senior Senator from Rhode Island as a teacher of law and in Government, I particularly commend it to the attention of my colleagues. The senior Senator from Rhode Island has exerted a leadership in the field for many years, and is especially well qualified to discuss this crucial question. I am sure all Senators will

be interested in reading his latest thinking on this subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENTIAL SUCCESSION

(By the Honorable THEODORE FRANCIS GREEN, United States Senator from Rhode Island)

(Introduction)

During the past few decades the importance of the office of the President of the United States has greatly increased, paralleling the rise of our Nation to its current status as a leading world power.[1] Now, more than ever before in our history, it is imperative that transferral of the executive power of the United States from one individual to another be accomplished smoothly and with a minimum of disruption in the processes of government.

Experience has demonstrated that in many areas of the broad field of Presidential succession the law is uncertain, imperfect, or incomplete. For example, grave illnesses of certain Presidents in the past have threatened the orderly processes of government and caused serious international concern.[2] If tomorrow we suddenly find ourselves in an unprecedented situation involving Presidential succession the attendant crisis could jeopardize not only our own security but that of our neighbors in the free world.

In order to discuss intelligibly the problems relating to Presidential succession and to consider proposed solutions of those problems, a definition of the term "Presidential succession" is the first stem. The definition should be broad enough to include the normal succession which occurs when the incumbent President is replaced by a newly elected President and yet apply also to the unexpected or fortuitous circumstances of removal, death, or resignation of an incumbent President, or his inability to discharge the powers and duties of his office. In its broadest aspects the term "Presidential succession" includes the conditions under which, the order in which, and the extent to which, one person after another succeeds to the office and/or the powers and duties of the United States Presidency.

At the outset, any consideration of this phase of our system of government is replete with profound legal problems and grave constitutional questions. Efforts to study the problems and suggest concrete solutions to them seem only to be made by the Congress at the times when situations become acute and public interest is high. Then as soon as the dangers have lessened, public interest, as well as that of Congress, subsides and affirmative action is postponed. This is understandable in view of the difficulties involved but is no excuse for tolerating further neglect.

For many years I have been acutely aware of the problems inherent in Presidential succession. Although I have opinions on some of the issues involved, I frankly admit that neither do I have all the answers, nor do I believe a sufficiently concentrated analysis of the current laws and authoritative recommendations has been made on which to predicate positive legislative reform. Several years ago I arrived at the conclusion that the most appropriate method of dealing with the situation would be the creation of a joint committee of the Congress charged with the responsibility of exploring the entire area of Presidential succession and arriving at sound, well-considered proposals for appropriate consideration and action. As a Member of the United States Senate, I have introduced legislation to establish such a joint committee in the last six session of Congress.[3] Three times my proposals received the approval of the Senate, but in each of those instances the particular enabling resolution died in the House of Representatives.[4] However, my enthusiasm for the project has not waned with these disappointments, and I am continuing my crusade for the establishment of a joint committee which will lend the presetige and potency of both branches of the National Congress to this important project.

My most recent endeavor is Senate Concurrent Resolution 2 of the 85th Congress, which I introduced on last January 7. It would create "a joint congressional committee to make a full and complete study and investigation of all matters connected with the election, succession, and duties of the President and Vice President." The Senate Committee on Rules and Administration in favorably reporting my last previous concurrent resolution to the Senate stated, in part:

"The purpose of such contemplated study is to achieve a sound basis for the submission and promotion of remedial legislation necessary to make the statutes certain and complete concerning Presidential elections, successions, and duties.

"All matters relating thereto present legal problems and constitutional questions involving the fundamental concepts of the Federal Government which may be resolved adequately by Congress only after a thorough examination of the whole subject. To this end, a joint committee * * * would be established."[5]

The questions which follow are borrowed from S. Con. Res. 2, wherein they appear as suggested issues for study and recommendations. In this article I shall discuss them briefly and point out specific problems which they entail. I shall not presume to state the precise courses which remedial legislation should follow, because I believe such conclusions should await the completion of the study I propose. I shall, however, make reasoned observations where they seem appropriate.

Whether or not candidates for President and Vice President should be nominated by national conventions, as at present, and, if so, recommendations which should be made to the parties for improving the convention process, and, if not, a method which would be preferable.

I believe that our present method of nominating candidates for President and Vice President should be thoroughly reviewed by a joint committee of the Congress for the purpose of evaluating that method and recommending improvements therein or else the adoption of a preferable process.[6] At least two of my colleagues in the Senate have introduced specific legislation leading to the elimination or reform of nomination by national political conventions.

During the 82d Congress, Senator PAUL DOUGLAS, of Illinois, introduced S. 2570, to authorize the Attorney General to conduct preferential primaries for nomination of candidates for President and Vice President. Although the bill was the subject of a hearing by the Subcommittee on Rules, and was reported favorably to the Senate by the Committee on Rules and Administration,[7] it failed to pass. Mr. DOUGLAS introduced similar measures during the 83d and 84th Congresses,[8] both of which died in committee. Senator GEORGE SMATHERS, of Florida, introduced legislation during the 82d Congress providing for a constitutional amendment which would establish a presidential primary and eliminate nomination by national political conventions.[9]

Whether or not the President and Vice President should be elected by the electoral college, as at present, and if so, whether or not the members should be legally bound to vote in accordance with their instructions.

More than 20 States do not print the names of the candidates for electors on the general election ballots, but instead allow a vote for the presidential candidate of a national convention to be counted as a vote for the nominees of that candidate's party for the electoral college.[10] Yet the Constitution contemplates that electors, once chosen, shall be absolutely free to vote for any eligible person to be President or Vice President.[11] For example, as recently as December 18, 1956, an Alabama elector, Mr. W. F. Turner, who had been elected to vote for Adlai Stevenson and ESTES KEFAUVER, actually voted in the electoral college for Judge Walter B. Jones, of Alabama, for President and Senator-elect HERMAN TALMADGE for Vice President. Mr. Turner is only the most recent of several electors who have chosen to flaunt the wishes of a majority of the voters in their districts, though actually conforming to the original intent of the Constitution: viz, that the electors, not the people, shall choose our Executive.

There are several other weakness in the electoral-college procedure. Possibly the chief adverse criticism of the system is that it permits the election of candidates who trail in the popular vote. That has occurred three times during our Nation's history.[12] Then it is contended by some that, large portions of the electorate are in effect disfranchised by the winner-take-all system within the States. It is also contended that since the people of the United States really do not elect their President, the present system is flagrantly undemocratic. Many persons agree with the statement attributed to Senator JOHN F. KENNEDY, Democrat, of Massachusetts, that "the electoral college is an unnecessary, confusing, and potentially harmful anachronism."[13]

During the 84th Congress a variety of proposals to revise or eliminate the electoral-college procedure were considered.[14] They can be conveniently categorized into those designed:

(a) To abolish the electoral college and elect the President and Vice President by direct popular vote;

(b) To keep the electoral college but to eliminate the discretionary power held—but rarely used—by the electors;

(c) To abolish the electoral college but retain the system of electoral votes, and apportion them among candidates on the basis of number of votes received by each candidate; or

(d) To permit each State, in its discretion, to adopt either of plans (b) or (c) above.

The debate on these proposals has revealed a wide disparity of opinion among Members of Congress.[15] But it has established clearly that there is a general need for change in the electoral procedure accompanied by lack of sufficient agreement on the nature of the best substitute or reform. Since the elimination of the electoral college or any radical revision thereof would necessitate a constitutional amendment, the need is apparent for comprehensive congressional action if the processes of presidential succession—by election—are to be improved within the foreseeable future.

Whether the provisions of Public Law 199 of the 80th Congress, approved July 18, 1947, relating to presidential succession, adequately provide for all possible contingencies occasioned by the removal, resignation, death, or inability of both the President and Vice President.

The Constitution delegates to Congress authority to provide by law for the succession of the Presidency in the event the Nation should at any time find itself without either a President or a Vice President.[16] Pursuant to that authority Congress has enacted three basic statutes over the years.

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

The first, the act of March 1, 1792 (1 U. S. Stat. 240; Revised Stat., secs. 146, 147, 148, 149, 150), designated the President pro tempore of the Senate as third in succession (after President and Vice President). In the event there was no President pro tempore or he was unable to serve, the Speaker of the House was to act as President until the disability be removed or a President shall be elected. During the debates on this bill the question was raised as to who is an officer in the constitutional sense?[17] Since under the literal language of the Constitution[18] Congress can only debate what officer shall act as President. Although some Federal legislators doubted that the Presiding Officers of the respective Houses could qualify, they were notwithstanding designated as successors under the statute.

In 1886 Congress changed its mind and decided that the President pro tempore of the Senate and the Speaker of the House were not officers in the constitutional sense and therefore not eligible to succeed to the Presidency. The act of January 19, 1886 (24 U. S. Stat. 1), provided that the Secretary of State should be third in succession, followed in the stated order by the Secretary of the Treasury, the Secretary of War, the Attorney General, the Postmaster General, the Secretary of the Navy, and the Secretary of the Interior. From time to time bills were introduced to add the heads of newly created departments to the line of succession, but none became law, probably because of lack of interest at those times.

The principal criticism of the act of 1886 was that the President was in the unusual and undemocratic position of being able to select his potential successor through his prerogative of naming his Cabinet members. President Harry S. Truman in 1945 sent a special message to Congress asking that the succession law be changed to correct this anomaly. After much discussion in Congress the law was changed again, by the Act of July 18, 1947 (61 Stat. 380). That act, which is still in effect,[19] provides as follows:

"The Speaker of the House, upon his resignation as Speaker and as a Representative shall act as President in the absence of a President and a Vice President. If there is no Speaker or he is disabled or fails to qualify, the President pro tempore of the Senate, upon resignation as President pro tempore and as Senator, shall act as President. In the event of the absence or inability of either of the above, the Secretary of State shall act as President. The other Cabinet officers follow in the line of succession designated in the act of 1886."

Although Congress has temporarily answered the doubts as to whether the President pro tempore and the Speaker are officers in the constitutional sense, the question may arise again at any time. There are, in addition to this, many collateral questions which should be considered. Of these latter, I would like to touch briefly on one which is within the realm of current possibility.

Under present law the Speaker of the House and the President pro tempore of the Senate, both Democrats, are next in line after the President and Vice President, both Republicans, to serve as the Chief Executive. Should the top two offices fall vacant today, Speaker SAM RAYBURN would become President of the United States. This raises the question of party responsibility. Would a Democratic Speaker be as representative of the electoral will expressed in the last election as a Republican Secretary of State? Should the act of July 18, 1947, be modified to apply differently when the White House and the Congress are controlled by different political parties? That is the question which necessarily provokes the traditional arguments on the advantage of a pure parliamentary system.

Footnotes at end of speech.

How it shall be determined whether the President is unable to execute the powers and duties of the office; and how the extent and duration of such inability shall be determined and defined; and how it shall be decided that the inability requires the constitutional discharge by the Vice President of the powers and duties of the office of President, or results in the succession of the Vice President to the office of President.

During one of the sessions of the Continental Congress when the matter of presidential succession was under discussion Mr. John Dickinson, of Delaware, posed the following question to his colleagues: "What is the extent of the term 'disability' and who is to be the judge of it?"[20] It is interesting to note that nowhere is it recorded that Mr. Dickinson received an answer to his pointed inquiry.

Fortunately we survived the instances in our history when the ability of the President to carry on the duties of his office was highly questionable. The fact remains it is now more important than ever that we come to a definite understanding on the matter of what constitutes "inability" of a President in the constitutional concept. As is evident from the above allusion it was the intent of the framers of the Constitution that their successors in Government should meet the situation of inability to the President in the light of experience and pending circumstances.

The pertinent constitutional passage provides merely that in case of the President's inability to discharge the powers and duties of the office the same shall devolve on the Vice President.[21] The terse language suggests such problems as:

1. How should Presidential inability be defined?

2. Who shall determine that a President is unable to discharge his powers and duties?

3. When such determination is made, what ought to devolve on the Vice President, the office of the Presidency or only the powers and duties of that office?

I do not think that Congress should try to legislate a definition of the term "inability." Rather it would seem advisable, as it evidently did to the Founding Fathers, to allow the term to be interpreted in the light of conditions which obtain at the time. Instead of a cumbersome statutory definition, it might be better to adopt a commonsense rule that the President himself should be the judge of his own ability. However, this assumes that he is able to exercise rational judgment and declare his own inability and its likely extent; so Congress perhaps should lay the groundwork by expressing its interpretation of the Constitutional provision and by establishing a positive procedure.

If a President were physically or mentally unable to decide or declare his inability, the power to so declare the inability might be given, by appropriate statute, to the President's Cabinet. It has been suggested that the authority should be vested in the Supreme Court or some independent commission.[22] To vest authority in the Supreme Court would probably require a constitutional amendment because the Court's original jurisdiction is strictly limited. Provision to decide the issue could follow the pattern of the impeachment process; devoid, of course, of any of the opprobrious connotations sometimes read into that process. A parallel procedure—initiation of the question of the President's inability by the House, consideration of the question by the Senate with the Chief Justice presiding, and a two-thirds vote by the Senate required for a determination or finding of inability—should provide ample safeguards for so grave a responsibility.

In the typical circumstance of Presidential inability I am inclined to the opinion that

Footnotes at end of speech.

it is only the powers and duties of the President and not the Office itself that devolves on the Vice President. The logical implication of the Constitution seems to be that the Vice President in such a situation is merely acting for the President and that the latter recovers his powers when his disability is removed. As we have seen, there is no precedent to guide us except by questionable analogy to those instances when Vice Presidents have succeeded deceased Presidents.

The records of the Constitutional Convention indicate that it was not the intention of the framers of the Constitution that the Vice President or other officer in line of succession should become President in fact.[23] Yet we are faced with an unusual precedent in respect to Vice Presidents who succeeded to the powers and duties of the Presidency upon the death of a President. The precedent originated with Vice President John Tyler, who succeeded President William Henry Harrison, the first Chief Executive to die in office. Despite the objections of many of his contemporaries in high office, Tyler took the position that he was not Acting President, but President in fact. The other six Vice Presidents who succeeded Presidents who had died entertained the same attitude relative to their status when they assumed the powers and duties of the Presidency.[24] These precedents could cause reluctance in a disabled President and his advisers to encourage a Vice President to "take over" through fear that pursuant to the established precedent the Vice President would usurp the Office and fail to return it if the President's inability should cease.[25]

Congressional study of this tangent of presidential succession should have for its main objective the clarification of the status of one who succeeds to the Executive powers and duties. The present obscure situation should be rectified by statute or, if necessary, by constitutional amendment. Proceeding on the theory that the Vice President (or other officer in line of succession) does not become President in fact when he succeeds to the powers and duties of the Presidency under any set of circumstances, the question naturally arises as to whether it might not be advisable to provide for a special presidential election to coincide with the regular election of Members of the House of Representatives in those instances when 2 years or more of the presidential term remain. The proposed joint committee should consider the desirability of a constitutional amendment for that purpose.[26]

Whether the heavy responsibilities of the Presidency make it desirable to create an Office of Executive Vice President.

While not strictly within the area of presidential succession, I deem it advisable to include in the agenda for my proposed joint committee the consideration of the increasing responsibilities of the Presidency and the advisability and possibility of relieving the President of some of his administrative burdens. On January 16, 1956, former President Hoover, in an appearance before a Senate subcommittee, proposed that Congress create a statutory position of Administrative Vice President, to be assigned "such administrative and coordination duties"[27] as the President might be authorized under existing law to delegate to him. The former President emphasized that he was not proposing that the President be relieved of any of his constitutional duties. Mr. Hoover's proposal and other similar proposals and related matters were given complete study by the Subcommittee on Reorganization of the Senate Committee on Government Operations.[28]

CONCLUSION

I have attempted in this short article to review briefly some of the problems inherent in presidential succession and to emphasize

Footnotes at end of speech.

those in dire need of early solution. The limitations of space have necessitated cursory treatment of the problems themselves, and my principal endeavor has been to stress the importance of their solution by the creation of a joint committee of Congress for that purpose.[28] All the items which I would include in the agenda of my proposed joint committee can best be considered together. While it is true that legislative remedies for them would have to be reported separately from several regular committees of the Senate and House, and that some of those remedies would be in the form of statutes and others in the form of constitutional amendments, I believe the first step by the Congress should be a comprehensive joint study of presidential succession in its broadest terms.

On Thursday, January 19, 1956, President Eisenhower held his first full-dress news conference following his unfortunate heart attack. At that conference, in discussing the laws of presidential succession and, in particular, succession pursuant to the disability of a President, President Eisenhower is quoted in the New York Times as having said:

"I think it is a subject that, in its broadest aspects, every phase of it should be carefully studied by the Congress, advised with by the Attorney General, and any kind of advice they want from the executive department, and some kind of a resolution of doubt reached. I think it would be good for the country."

I thoroughly concur in this forthright proposal. Although joint committees do not—except in rare instances—have my favor, it seems to me that the problems attendant upon Presidential succession constitute a rare instance. In my opinion, it is far more important to have some solution to the questions involved than it is to have the best solution, though, naturally, I would like to have the best. We cannot afford to be complacent. We cannot afford to indulge further procrastination in the area of Presidential succession. We must not wait for the impetus of another crisis to drive us to the action I now propose.[29] Any solution we can determine now by cool, deliberate consideration will be far superior to that achieved under the pressure of a sudden emergency.

---

[1] The book, Mr. President, by William Hillman (Farrar, Straus and Young, 1952), is an excellent and intimate portrayal of the problems and responsibilities encountered by the Chief Executive of the United States in today's world. For a more objective appraisal of the burdens of the American Presidency see Senate Report No. 1960, 84th Cong., 2d sess., entitled "Proposal to Create an Administrative Vice President."

[2] In 1881, President Garfield was incapacitated for 80 days preceding his death. During much of the time from September 1919 to March 1921 President Wilson was unable to give proper attention to the Presidential duties. In both instances the inability of the President was a well established fact, but friends and advisers counseled against transferring the powers and duties of the Presidency over to the Vice President in the fear that the President would be unable to regain the office in the event his inability should cease. The recent illnesses of President Eisenhower, which fortunately were of comparatively short duration, serve to point up once again the momentous problems which could arise under obscure provisions for dealing with the Presidential succession in such circumstances.

[3] S. Con. Res. 50, 79th Cong., 2d sess. Submitted by Mr. GREEN January 17, 1946. Agreed to by the Senate March 14, 1946 (92 CONGRESSIONAL RECORD 2237 (1946)). Died in the House.

S. Con. Res. 1, 80th Cong., 1st sess. Submitted by Mr. GREEN January 6, 1947. Died in committee. See author's statement in support of S. Con. Res. 1 printed in Hearings before the Senate Committee on Rules and Administration on S. Con. Res. 1, S. 189, S. 536, and S. 564, 80th Cong., 1st sess., pp. 5–17 (1947).

S. Con. Res. 14, 81st Cong., 1st sess. Submitted by Mr. GREEN, January 31, 1949. Agreed to by the Senate October 17, 1949 (95 CONGRESSIONAL RECORD 14772 (1949)). Died in the House.

S. Con. Res. 23, 82d Cong., 1st sess. Submitted by Mr. GREEN April 9, 1951. Died in committee.

S. Con. Res. 2, 83d Cong., 1st sess. Submitted by Mr. GREEN January 7, 1953. Died in committee.

S. Con. Res. 65, 84th Cong., 2d sess. Submitted by Mr. GREEN January 23, 1956. Agreed to by the Senate February 20, 1956 (102 CONGRESSIONAL RECORD 2499–2502 1956)). Died in the House. (On March 8, 1956, the author appeared before the Committee on Rules of the House of Representatives and urged support of S. Con. Res. 65 and an identical resolution, H. Con. Res. 207, which had been introduced by Representative CHARLES E. BENNETT of Florida.)

[4] S. Con. Res. 50, 79th Cong., 2d sess.; S. Con. Res. 14, 81st Cong., 1st sess.; S. Con. Res. 65, 84th Cong., 2d sess.

[5] S. Rept. No. 1462, 84th Cong., 2d Sess. (1956) 1. Six years earlier the same committee, in favorably reporting a similar resolution, expressed the same objectives (Sen. Rept. No. 1096, 81st Cong., 1st Sess. (1949) 2).

[6] In the words of a popular periodical:

The search for a better way to nominate Presidential candidates is almost as old as the Presidency itself. In the early Presidential elections, candidates were selected by Members of Congress sitting in caucus. In 1824, Andrew Jackson and his followers rebelled against King Caucus, and paved the way for the convention system. In 1905, the Wisconsin Legislature passed a law for direct election of all delegates to national conventions. In 1910, Oregon adopted the first Presidential preference primary. In 1913, President Wilson urged virtually the same plan that Senator SMATHERS now proposes. (Time Magazine, February 25, 1952, vol. 59, No. 8.)

[7] S. Rept. No. 1858, 82d Cong., 2d Sess. (1952). See also Hearing before Subcommittee on Rules of the Committee on Rules and Administration on S. 2570, 82d Cong., 2d Sess. (1952).

[8] S. 1049, 83d Cong., 1st sess.; S. 652, 84th Cong., 1st sess.

[9] S. J. Res. 145, 82d Cong., 2d sess., which died in committee. Twelve States presently require that voters be enabled to express their preference for Presidential candidates. Those States are California, Illinois, Maryland, Minnesota, Nebraska, New Hampshire, New Jersey, Ohio, Oregon, Pennsylvania, West Virginia, and Wisconsin.

Although political parties are not provided for by the Constitution or statute, such parties have the power to determine their own nominees by well established precedent. Under their usual practice at national conventions the major political parties even provide for the possible death of its Presidential candidate.

To establish a procedure to be followed in the event of the death, resignation, or disability of its nominees for President and Vice President, the Democratic National Convention of 1956 adopted the following rule:

In the event of the death, resignation, or disability of a nominee of the Party for President or Vice President, the Democratic National Committee is authorized to fill the vacancy or vacancies, by a majority vote of a total number of votes possessed by the States and Territories at the preceding National Convention; the full vote of each State and Territory shall be cast by its duly qualified member, or members, of the National Committee, and in the event of a disagreement between the two members, each shall cast one-half of the full vote of the State. (Democratic Manual for the Democratic National Convention, 1956, p. 8.)

A similar resolution to provide for the same contingencies in respect to the Republican nominees was adopted by the Republican National Convention of 1956. (See also H. Rept. 845, 72d Cong.)

[10] The present provisions of law relating to the electoral college (enacted by Congress pursuant to Article II, Section 1, of the Constitution, and Amendment XII) are contained in Stat. 672-675 (3 U. S. C. 1–14). Title 3 of the United States Code, which contains said provisions, was enacted into positive law on June 25, 1948, by Public Law 771 of the 80th Congress. In 1957 the day set by the above law for the purpose of counting the electoral votes in Congress, January 6, falls on Sunday. Congress by the Act of March 24, 1956 (70 Stat. 54) designated Monday, January 7, as the day it shall meet in 1957 to count the electoral votes.

[11] According to custom electors usually vote for the candidate who is the choice of their political party. *McPherson* v. *Blacker* (146 U. S. 1, 36 (1892)). The U. S. Supreme Court has ruled that an elector may announce and pledge himself beforehand in support of such candidate. See *Ray* v. *Blair* (343 U. S. 214 (1952)).

[12] John Quincy Adams, in 1824; Rutherford B. Hayes, in 1876; and Benjamin Harrison, in 1888. A collateral problem develops from the failure of a candidate for President or Vice President to receive a majority of electoral votes. Then, under the 12th amendment of the Constitution, it becomes the prerogative of the House of Representatives to choose a President. But since 1801, when Thomas Jefferson was thus chosen over Aaron Burr—after 36 ballots—there has been support for a further amendment to resolve such issues by popular vote.

[13] 42 A. B. A. J. 1037 (November 1956).

[14] See How We Elect Our President: An Electoral College Education in One Lesson, by Joseph F. Dolan (42 A. B. A. J. 1037-1040 (November 1956)).

[15] 102 CONGRESSIONAL RECORD, 4937, 4939, 4941–4977, 4999, 5023, 5035, 5047, 5069, 7359 (1956).

[16] Art. II, sec. 1, par. 6 of the Constitution reads:

"In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall act accordingly until the disability be removed or a President shall be elected."

[17] 3 Annals of Congress, 281.

[18] Supra note 16.

[19] By sec. 202 (a) of Public Law 253 of the 80th Cong., 1st sess., approved July 26, 1947, the Secretary of War and the Secretary of the Navy were eliminated from the line of succession and the Secretary of Defense (created by Public Law 253) was inserted therein.

[20] Farrand, Max, ed. The records of the Federal Convention of 1787 (Yale University Press, 1911), vol. 2, p. 427.

[21] Supra note 16.

[22] There are, of course the corollary problems of determining the duration and cessation of Presidential inability for which similar provision would have to be made.

For an indication of current congressional interest in the problems of Presidential inability see the following bill and joint resolutions introduced during the 84th Cong.: S. 2703, S. J. Res. 30, H. J. Res. 97, H. J. Res. 175, H. J. Res. 176, and H. J. Res. 442. See also hearings before Special Subcommittee to Study Presidential Inability of the House Committee on the Judiciary on Problem of

Presidential Inability, 84th Cong., 2d sess. (1956), and accompanying committee print entitled "Presidential Inability" (January 31, 1956).

[22] Warren, Charles, The Making of the Constitution (1928), p. 685.

[23] In this respect, it is worthy to note an amusing aspect of the impeachment of Andrew Johnson, the Vice President who succeeded President Abraham Lincoln. During the impeachment of Johnson, his opponents, many of whom entertained the view that a Vice President does not in fact succeed to the Presidency, were forced to concede that Johnson was in fact President of the United States in order to proceed with the impeachment process inasmuch as Johnson was arraigned as "President of the United States."

[24] Amendment XX has seemingly given acquiescence to precedent in part since it provides that if a President-elect dies, the Vice President-elect shall become President.

[25] H. J. Res. 441, introduced by Congressman Dodd, during the 84th Cong., contained the following section:

"SEC. 2. If any person shall succeed to the Office of President, not having been elected thereto, and more than 1 year remains of the regular 4-year term, a special election shall be held within 4 months of the date of such succession to elect a President and Vice President to serve the remainder of such term."

[26] S. Rept. No. 1960, 84th Cong., 2d sess., 1956), p. 3.

[27] Hearings were held on this subject matter on January 16, 24, and 25, 1956; and on May 9, 1956, Senator JOHN KENNEDY, chairman of the Subcommittee on Reorganization of the Committee on Government Operations, summarized the unanimous views of the members of the subcommittee and explained its decision to take no further action at that time. See 102 CONGRESSIONAL RECORD, 6932 (May 9, 1956). Two proposals introduced in the House by Congressman FRELINGHUYSEN during the 84th Congress are worthy of note. H. R. 7900 would have established a Commission on the Office of President to look into the possibility of alleviating the heavy burdens of the Office of President and report its findings and recommendations to Congress. H. R. 7901, a more direct approach, would have amended title 3 of the United States Code by inserting a new provision, to wit:

"Section 106a. Administrative Vice President:

"The President is authorized to appoint, by and with the advice of the Senate, an administrative assistant to be designated as 'Administrative Vice President,' and may fix the compensation of such assistant at a rate not exceeding $27,500 per annum. The Administrative Vice President shall perform such duties as the President may prescribe."

In reference to the above proposals it should be noted that Congress made an attempt to relieve the President of much administrative detail by its act of October 31, 1951 (65 Stat. 712), which provides generally for the delegation of specified Presidential functions.

[28] In summarizing congressional inaction and specific abortive attempts in clarification of succession law, one of the foremost authorities on the subject concluded her profound treatise as follows: "More to the point is Senator THEODORE F. GREEN'S resolution which would create a joint committee to investigate all matters relating to both Presidential election and succession." Silva, Ruth C., Presidential Succession. (University of Michigan Press, 1951, p. 166.)

[29] The report of the Senate Committee on Rules and Administration in recommending the establishment of my proposed joint congressional committee, over 7 years ago, read in part:

"Many issues of the utmost importance and gravity will develop, no one of which can be adequately considered without a thorough examination of the entire subject. There also exists in this very important matter a definite interrelationship among the many far-reaching and fundamental questions which must be answered, so that this Nation will not be faced with a calamitous situation imperiling the succession of the Presidency without a legally established solution on which to rely. All uncertainties in a matter of such importance should be eliminated without hesitancy. This can be done by legislation which is based upon the findings of a complete investigation, and which is intelligently prepared and drafted so that all contingencies will be provided for in an adequate manner."

Senate Report 1096, 81st Congress, 1st sess. (1949) 2.

International Geophysical Year

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. THYE. Mr. President today we enter into 18 months of international cooperation for the common good, the International Geophysical Year. We are all proud of our country's participation in this project, and I am especially proud to note the State of Minnesota's contribution, in part, thus far.

I want first to mention a man from my home town of Northfield, Minn., who serves on the United States National Committee for the International Geophysical Year of the National Academy of Sciences, Dr. Laurence M. Gould, the president of Carleton College.

Mr. President, I ask unanimous consent that the list of the men who participated in Operation Deep Freeze be printed in the Appendix of the RECORD, along with a newspaper article that was published in the Minneapolis Sunday Tribune of June 23, which is a very informative article.

There being no objection, the list and article were ordered to be printed in the RECORD, as follows:

Minnesotans—military and civilian personnel—participating in Operation Deep Freeze, the United States International Geophysical Year bases in Antarctica, are:

Robert F. Benson, International Geophysical Year geomagnetism geophysicist, son of Mrs. Esther Diment, 5232 Lochloy Drive, Minneapolis.

Julian P. Gudmunson, chief builder, United States Navy, son of Mrs. Ida Gudmunson, 1131 Norbert Lane, St. Paul. Husband of former Dorothy E. Banning, 822 West 11th Street, Wilmar.

Lt. Donald C. Hauck, D. C., United States Navy, son of Mr. and Mrs. Ruben W. Hauck, Kandiyohi.

John P. Renback, construction mechanic third class, United States Navy, son of Ernest Renback, rural route No. 1, Princeton.

George H. Stewart, aviation machinist's mate second class, United States Navy, son of Mr. and Mrs. F. M. Stewart, 3136 41st Avenue South, Minneapolis. Husband of former Nola C. Nash, 522 Hess Street, Saginaw, Mich.

[From the Minneapolis Tribune of June 23, 1957]

LLOYD BERKNER: MAN WITH WORLDLY IDEAS

(By Victor Cohn)

NEW YORK.—You've heard of the International Geophysical Year. Well, give some of the credit to Sleepy Eye.

Or to a man from Sleepy Eye, Minn., Lloyd V. Berkner, a whale of a scientist.

The IGY—the International Geophysical Year—was his idea.

And what a whale of an idea. Starting July 1, a week from Monday, thousands of scientists from 56 nations will examine this earth with every gadget they have. They will descend in the oceans and go up in the skies, and send rockets and satellites farther. They will float on ice in the Arctic and inhabit the Antarctic.

And it all goes back to what Lloyd Berkner, now of New York, said on the night of April 5, 1950, at a party.

It goes back actually to that Berkner boy who had that doggoned radio station and caused all the static in Sleepy Eye—well, that's what some of the folks said—and who went on to have one whale of an idea after another.

By accident, Sleepy Eye's boy was born in Milwaukee, Wis. His mother just wanted to be near her mother, who lived in Milwaukee.

So Lloyd was born in 1905, then spent his toddling years on his father's farm near Perth, N. Dak., then at the age of 6, finally hit and soon work up Sleepy Eye.

It was his radio station that did it. First, at age 9 or 10, he got interested in electricity. "Then World War I brought radio to everyone's attention," he says.

After the war he devoured a new radio catalog. First he broadcast code, then code and voice.

"Much to my father's consternation," he says, "I cut a hole in the roof of my room and put up a big aerial mast. Later I got up an 85-foot tower."

Some people said he was causing static on their early sets, so he never transmitted before 10 p. m. That meant he usually didn't get to bed before 1 or 2, and sometimes went to school after a night of no sleep at all.

It was all pretty expensive. "I decided to test him once," says his father, Henry F. Berkner, who will be 80 next fall (and is well known as a Federal farm loan agent in Sleepy-Eye.)

"He was about 15 and wanted to build a bigger station. So I told him that if he'd work on a farm, which he didn't like at all, I'd double his money. And he did."

He also put the names Berkner and Sleepy Eye on the front page of the New York Times by taking part in a world record radio-relay—from Hartford, Conn., to Sleepy Eye to Hawaii and back.

But that radio station in Sleepy Eye, it turned out, was just his first idea.

After high school he went to RCA radio school in New York, then to sea.

He then took electrical engineering at the University of Minnesota, and helped build broadcasting station WLB (which in 1945 became KUOM). The LB part, it is said, stood for Lloyd Berkner.

He attended naval aviation school, became an ensign and flew early seaplanes.

He joined the airways division of the Government's Bureau of Lighthouses (which later became the Civil Aeronautics Administration), and in May 1928 was loaned to help Amelia Earhart on radio equipment for her transatlantic flight.

He went on the first Byrd Antarctic expedition as a radio operator.

He studied more physics and joined the Carnegie Institution in Washington. His field was the upper atmosphere, and his

studies of radio-pulsing helped lay the groundwork for radar.

In World War II he helped to develop airborne radar and was on the carrier *Enterprise* when it was hit by eight Japanese kamikazes.

After World War II, Berkner became one of America's senior scientists.

He was executive secretary of the Defense Department's Research and Development Board in 1946–47. He was special assistant to the Secretary of State in 1949 to organize the North Atlantic Pact's first military assistance program.

In 1951—to wind up this list of achievements—he became president of Associated Universities, which runs the Government's Brookhaven National Laboratory on Long Island. He still has that job, a drawerful of high medals, commendations, citations and ribbons, and the presidency of the International Council of Scientific Unions.

Now, about that night of April 5, 1950, and the start of the International Geophysical Year.

"I was in Washington," Berkner says, "and Van Allen called." That's the physicist, James van Allen, now at Iowa State University.

"And Van said, 'Sid Chapman's coming over.' " That's Britain's famed geophysicist, Prof. Sydney Chapman.

"And Van went on, 'I've got a case of whisky, and a half dozen people coming, and we can talk geophysics.'

"Well, we began to talk that night about world geophysical problems and all the frustrations, the things we didn't know. That led me to say, 'Why don't we try to organize a co-operative system of observation?' "

Everyone immediately said, "Why not?" and before the evening was over it was agreed that something had to be done.

World polar years, Berkner pointed out, had been held in 1883 and 1932, about 50 years apart. Why wait another 50 years? he said, "we have so many new instruments now."

He carried the message that summer to one international group. Others took it up, and before you could say International Geophysical Year, one was planned—with Sydney Chapman today the president and Lloyd Berkner the vice president of its international committee.

Haven't some people called things like an IGY and space satellites, and our spending Government money on them, a little farfetched?

"Sure," says this 6-footer, distinguished at 52.

So were the Louisiana purchase and the Lewis and Clark expedition and the Seward purchase of Alaska. They were all thought pretty bizarre at the time. And they've all paid off hundreds of times over.

And scientific knowledge does the same thing.

How do men like Berkner happen? The editor of the Sleepy Eye Herald-Dispatch a few years ago wrote:

"Merchants up and down Main Street tell of Mr. H. F. Berkner making the rounds monthly to pay bills contracted in order to carry on Lloyd's experiments. When the rest of us were paying electricity bills ranging from $5 to $10 a month, the Berkner bill frequently went over $25.

"The Berkners' home was the mecca for other young scientists from all over Minnesota. Frequently the sessions lasted all night, and morning meant a breakfast for a full crew of hungry lads. Rooms were remodeled.

"This isn't intended as a eulogy of Lloyd's parents, but as a reminder to the rest of us that our children are our most cherished heritage and that only through them or their children will we be able to project the things about which we dream."

But it is a eulogy to Lloyd's parents, and maybe to Sleepy Eye.

The Recent Supreme Court Decisions in the Communist Cases

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able editorial entitled, "You Bet We're Afraid," which appeared in the June 30 issue of the Memphis Commercial Appeal, of Memphis, Tenn.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YOU BET WE'RE AFRAID

To writers whose columns appear in this newspaper we grant the right to express personal opinions.

The Commercial Appeal reserves for itself the right to dissent, and that we do emphatically to Inez Robb's diatribe of Friday against the critics of the Supreme Court's recent freewheeling, security-threatening decisions.

In her eagerness to remain a marching member of the ultraliberals—we almost said a card-carrying member of the New York pack—she forgets or ignores the basic issues involved, chief of which is the Nation's right to protect its safety.

In her Friday column Miss Robb asks:

"Are we * * * so terrified of internal subversion on the part of a mangy political party, whose members probably do not exceed 50,000 persons, that we are willing to let civil liberties guaranteed to us by the Constitution go by default?"

Miss Robb should not have resorted to numbers in using that most overworked of all overworked phrases, civil liberties.

We would remind her that less than 5 million Russian Communists hold power of life and death over more than 200 million noncommunists compatriots and, additionally, over millions of noncommunists in enslaved Eastern Europe.

We would remind her that a few million Red Chinese not only hold scores of millions of their compatriots in virtual captivity, but have succeeded in extending their grip into far areas of Asia, and are even now reaching for more.

You bet we are afraid of that mangy political party in which the actual membership in this country probably doesn't now exceed 35,000.

We cannot help but remember its efforts to gain control of the American Newspaper Guild and of the whole communications industry. We cannot forget, as she apparently does, its effective infiltration of the transport industry.

Let the mangy political party of which Miss Robb is so derisive gain complete control of the communications and transport industries and that would be the end of all the civil liberties for which her heart bleeds. It would be the end of all our freedoms.

You bet we are afraid of that mangy political party which succeeded in getting bosom friends and actual agents into high positions of our Government, some of them of the Dexter White, Alger Hiss complexion actually advising on and formulating security policy.

You bet we are afraid of that mangy political party which is an inseparable part of the worldwide criminal Red conspiracy to reduce all free nations to a state of servitude for perpetuation of the slave labor economy and which upholds mass murder as a virtue.

This is the mangy gang which produced Klaus Fuchs, whose "crime of the century" put the Russians a decade ahead in atomic bomb research. As we read the fearless Miss Robb's dissertation on what she calls the yapping of Supreme Court critics we couldn't help but think of Fuchs and of his unlamented coconspirators, Julius and Ethel Rosenberg. And we thought, too, of Dr. Alan May, who betrayed Canada; of Judith Coplon, highly trusted Attorney General's Office employee who stole secret FBI documents and was convicted. She was a Soviet espionage agent whost guilt,, said Judge Learned Hand, is plain.

Her conviction was reversed, not because of any innocence, but because of technicalities of the sort Miss Robb champions. Judith Coplon has never served a day in prison.

While we were thinking of her and the mangy gang to which she betrayed her country, we though also of Jack Soble, who recently pleaded guilty to being a participant in a vast espionage endeavor the extent of which has not yet been revealed.

We would have thought of Benedict Arnold, but he was a piker compared with the agents of the mangy political party.

We did think, and do think constantly, of the late great Justice Oliver Wendell Holmes, who asserted that possession of individual liberties doesn't give anyone the right to shout fire in a crowded theater.

Sit down, Miss Robb.

America's Role in the Mideast

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. HUMPHREY. Mr. President, in yesterday's New York Times magazine section there was an article by our former Ambassador to India, Chester Bowles, entitled "America's Role in the Mideast."

Having just returned from the Mideast myself, I can testify to the importance and accuracy of many of Mr. Bowles' observations about that complex and difficult area. I ask unanimous consent that the text of Mr. Bowles' article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S ROLE IN THE MIDEAST

(By Chester Bowles)

No situation in recent history has created so much official and public confusion as has that in the Middle East during the last 6 months. Alinements, prejudices, and assumptions of long standing have been knocked topsy-turvy by the rush of events.

Our Government found itself voting in the United Nations with our principal adversary, the Soviet Union, against our traditional allies, Britain and France, to support the claims of a military dictator, Nasser, against Israel, the most democratic and creative state in the Middle East. This extraordinary series of paradoxes reflects not only the complexity of the problem, but our lack of preparation for the major role we have been called upon to fill.

There can be no real disagreement about America's immediate security objective in

the Middle East. It is to deny the Soviet Union control or significant influence over this strategically placed area which contains two-thirds of the world's oil resources. Although the United States could continue to prosper without access to this oil, Europe could not. Because the survival of a prosperous and independent Europe is essential to American security, we are directly and deeply concerned with Europe's ability to secure this oil.

American control over the Middle East is neither possible nor desirable. For the long haul, our objectives can only be secured by helping to create conditions there which make for a healthy independence, and an orderly economic and political growth.

In the whole wide world there is no more formidable assignment. The land resources of the Middle East are pitifully slim. The 6 percent of the land which can presently be cultivated is largely controlled by a tiny minority of landlords, and farmed with the crudest and most primitive techniques by peasant-tenants. In most areas the gap between rich and poor is growing explosively.

In recent years a restless new element has been introduced by the growth of the urban populations, largely unemployed or underemployed, poor equally with their rural cousins, suspicious, discontented, ever ready to burst into mob violence. In the cities, also, is a thin layer of intellectuals, largely western education, impatient with their opportunities for growth or power.

In this uneasy situation, rulers confront the ruled with few of the ordinary instruments of stable and effective government. Leadership for the most part rests uneasily on intrigue, sway over the emotions of the city mobs and control of the army and police. Under such conditions, the temptation to divert the people's attention from their poverty and frustration by demagogic speeches against Israel or the Western "imperialistic" nations, is always strong.

This is not a pretty or encouraging picture, yet with qualifications for particular times and places, I think it is a fair one and one which, in itself, would be gravely threatening to our interests. When, in addition, we take account of Soviet long-range objectives in Asia and Africa, the threat becomes critical.

There is nothing obscure about the Kremlin's present global strategy. If the Soviet Union can undermine the economic and political position of the Atlantic nations in Asia, the Middle East, and Africa, frustrate the efforts of indigenous leaders to create political and economic stability, and bring this vast area bit by bit into a close political and economic association with Moscow, it believes that heavily industrialized Europe with its dependent on Asian and African raw materials will be placed under intolerable pressure and forced to come to terms.

With the industrial and military power of Europe added to that of the Soviet Union, isolated America would ultimately adjust as best it could to a Soviet-dominated world or face war under the most adverse conditions. As the Kremlin contemplates this appealing prospect the Middle East must appear the logical place to start. There, it finds certain particularly favorable conditions:

1. By securing control of Middle Eastern oil, the Soviet Union could most quickly bring pressure to bear on European industry.

2. In the abysmal poverty and frustration of the Middle East the Soviet Union finds conditions most favorable for its economic, political, and ideological techniques of subversion.

3. Control over the area would enable the Soviet Union to bring the most direct pressure to bear on the Indian subcontinent and on Africa.

4. In the Middle East the Soviet Union runs the least risk of conflict with China, which has been quietly developing its own plans for the future of Asia.

5. There, nationlism can be stimulated to new heights of antagonism toward the West without danger to the Soviet Union itself. When it has served its purpose the rug can easily be pulled from under whatever wobbly political structure may have been created by pro-Soviet Arab leaders.

Over the past 3 years the new Soviet strategy has been pressed vigorously. So far our principal response has been a crisis-ridden, short-term effort to patch up and paper over the most crucial spots. Indeed, our approach has been an updated, jet-nuclear version of traditional British policy in this area, right down to the sudden dramatic "showing the flag" by the 6th Fleet.

Recently this game has been conducted with considerable skill, and the situation has improved. Nasser's effort to control Jordan has been blocked, Saudi Arabia is becoming disenchanted with Cairo's leadership and there have been favorable rumblings from Syria.

But can we count on this jerry-built structure, resting, as it does, on day-today diplomatic maneuvers with unstable governments to secure America's long-range interests? Let us briefly examine some of the components of our present policy and their long-range implications.

The best advertised and most costly element in our Middle East military defense system is the northern tier, or Baghdad Pact, made up of Britain, Turkey, Iraq, Iran, and Pakistan. Into this alliance, which was designed to block off a Soviet ground force invasion from the north, we have poured substantial quantities of military assistance.

The Turks, with 25 tough, well-equipped divisions are the essential anchor point of the NATO defense line in southeastern Europe. With the Greeks and the Yugoslavs, they are the principal ground force barrier to Soviet military penetration into this area. But can we expect comparable security dividends from the costly buildup of the three nations further east?

Like other non-Communist nations, Iraq, Iran, and Pakistan are entitled to an ironclad guarantee that we will throw our full military power behind them in case of Soviet attack. They are entitled to whatever equipment they need to defend themselves against attack by their Middle East neighbors until effective pressure can be brought to bear through the U. N. They are entitled to our assistance in developing and training security forces that can cope effectively with internal subversion.

But there were signs at the recent Baghdad Pact meeting in Karachi that American influence is increasingly being used to strengthen the nonmilitary aspects of the pact. This is a welcome trend. It indicates a growing realization that million-dollar jets and 8-inch guns capable of firing atomic shells are not the most effective weapons for quelling mobs in the capitals or guerrillas in the hills. Nor can they be expected, in inexperienced hands, to slow down a determined attack by the Red army.

In off-the-record conversations, most American military men frankly admit this. But some add that the real purpose of these massive shipments of military equipment is not to deter a Soviet ground attack, which is the responsibility of the Sixth Fleet and the Air Force, but to give our Middle Eastern friends a sense of prestige and confidence in dealing with their own people and with their neighbors.

Does the Congress which appropriates the money understand and approve of this costly and risky method of confidence building? Under such reasoning is not our equipment more likely to be used to settle regional feuds than to further America's own long-term objectives?

It may be argued that this program is now giving us, not more security, but less. Let us examine briefly some of its implications.

America's massive military buildup of Pakistan was the signal for her nervous northern neighbor, Afghanistan, which is at odds with Pakistan over the border region of Pushtoonistan and which consequently fears an attack by Pakistan, to seek Russian support. The Kremlin responded generously with military equipment, technicians and a $100 million loan. Soviet power and influence is now spreading rapidly to the Khyber Pass.

India, embroiled at a number of points with Pakistan, has also felt it necessary to match our buildup of Pakistan's military establishment. In 1956 over $100 million in hard currency was committed by the Indian Government toward the purchase of British and French planes at full market prices. This money necessarily was withdrawn from the funds available for India's second 5-year plan, the success of which most observers believe is essential to the survival of Indian democracy.

Two years ago the Kremlin offered India all the arms it wanted without political strings on the same easy financial terms that Egypt accepted. Last winter during Marshal Zhukov's visit to India this offer was repeated. As India's harried leaders watch China's rapid economic progress, they must be sorely tempted to accept.

Many observers believe that our military aid to Iraq and Iran helped start the chain of events that led to the Suez crisis. Their reasoning is this: When Syria and Egypt became convinced that we were attempting to split the Arab world, they turned increasingly to Moscow; the Egyptian-Czech arms deal and the nationalization of the Suez followed; growing fear of Egypt's new military power then set off Israel's invasion of the Sinai peninsula.

The military buildup of our Middle Eastern friends has been designed to strengthen our side of the world power balance. But because our efforts have consistently upset local power balances, I believe that further arms shipments will increase the danger of an explosion. Furthermore, our interest in the military aspects of security have resulted in loading Middle Eastern budgets to the breaking point, and diverting not only money but attention from their primary task of improving the lot of the people.

Finally, it has induced us to tolerate racial indignities which violate our most deeply held democratic traditions. Since 1948, we have quietly accepted the right of individual Arab nations to deny even passage through their countries to American citizens of the Jewish faith.

Now we have granted the Saudi Arabian Government the right to bar all Jewish citizens from American mutual defense forces at the Dahran airbase and to deny Christian chaplains the right to wear the insignia of the cross. In the magic name of defense we have thus abandoned one of the principles which distinguishes our system from the totalitarian.

Is it possible to create new policies in the Middle East that will take into account the pressing realities of today, while working soundly toward long-term goals? I believe it is. The following 5-point program may provide the basis for such an approach.

(1) The recent congressional resolution properly commits us to the all-out defense of the Middle East against a military attack by the forces of international communism. This reiteration of a policy that has been backed by both parties since 1945 underscores our responsibility.

(2) Some way must soon be found to stop the arms race between neighboring countries within the Middle East-South Asia area. An American proposal to the Soviet Union for a joint arms embargo (ex-

cluding Turkey, which is part of NATO) appears to be the only practical way out.

Unless such an agreement is reached, subject to rigid inspection, the vicious circle will continue to feed present tensions; more American arms to Pakistan, Iraq, Iran, and Saudi Arabia will be balanced by more Soviet arms to Egypt, Syria, Afghanistan, and perhaps even to India.

(3) A position of strength in regard to Middle East oil resources is essential. This involves not only the ability of Europeans and others to purchase the oil at a fair price but to move it, unhampered, to its destination.

Some observers dismiss this point as irrelevant on the ground that the only market for this oil is the West and that Arab Governments will not cut off their noses to spite their faces. However, the madness that can evolve from extreme nationalism is not always subject to such dollars and cents logic. "We do not want United States dollars, British pounds, French francs, or Dutch guilders," the Voice of the Arabs recently broadcast from Cairo. "Oh, Arabs, our oil is plundered by aliens. It is seized by your enemy. Remember oil, our lost wealth. Oil is for the Arabs."

The Sheikdom of Kuwait, at the head of the Persian Gulf, could provide a dependable source indefinitely if for any reason the oil supplies of Iraq, Iran, and Saudi Arabia were shut off. Although no larger than Connecticut, Kuwait has 22 percent of the entire world's crude oil reserves. It could easily be defended by sea-borne forces against all comers. Only standby storage, loading, and production facilities are required to assure its availability under emergency conditions.

American naval forces have a potentially vital role to play in the area of the Arabian Sea and the Persian Gulf. Their power should be made to correspond to their responsibilities.

It now seems unlikely that we can work out an agreement with Egypt that will guarantee the free flow of all traffic through the Suez Canal. So here again we must consider standby alternatives.

A canal from the Gulf of Aqaba across Israel to the Mediterranean is said to be feasible although expensive. The French are now investigating the practicability of a 32-inch pipeline along this same route. Supertankers which can make the long run economically around the Cape of Good Hope or go through the Suez Canal half loaded at a profit will help further to relieve the pressure.

(4) World opinion will not allow Israel to be destroyed by its Arab neighbors. Yet this is precisely what these neighbors have been promising to do. We cannot induce her Arab neighbors to accept Israel cheerfully. But accept her they must, and this acceptance should be underwritten by a United Nations' guaranty with firm American backing.

In 1955, in deference to Arab pressure, the five sponsoring powers failed to invite Israel to the Bandung Conference. This now gives India, Pakistan, Ceylon, Indonesia and Burma a position of unique responsibility and influence. By establishing embassies in Israel they could do much to convince the Arabs that Israel is here to stay.

(5) Although these steps are all vitally important, they will be meaningless for the long haul without a simultaneous attack on the explosive economic conditions which exist throughout most of the Middle East. Nowhere in the world are nations and people divided so sharply between the haves and the have-nots.

In 1956, four Middle East nations—Iraq, Iran, Saudi Arabia, and Kuwait—earned something over $1 billion from the sale of oil. This is nearly as much as the total hard currency earnings of the rest of Asia and Africa put together.

Of the four other Middle Eastern Arab nations—Syria, Lebanon, Jordan, and Egypt—only Egypt and Syria benefited from oil. This was from canal tolls and pipelines rentals.

Iraq has gone further than any of these nations in putting her oil revenues to work on development projects. Seventy percent of all Iraqi oil royalties are so earmarked. On the Tigris and Euphrates, for instance, new areas are being opened up for cultivation through massive irrigation projects. Yet here, as elsewhere, political reform has failed to keep pace with economic growth. So the traditional bitterness between landlords and tenants has been growing dangerously.

Increased production is vital to the creation of an orderly political system. But without the sense of personal security and belonging which comes from direct participation in the process of growth and a sense of justice in the distribution of the proceeds of growth, increased production may lead to more political unrest rather than less.

Several years ago a Middle East Development Corporation was proposed, to be sponsored and administered by the World Bank under the direction of a board chosen by the Middle Eastern nations. The oil-producing nations would be asked to invest a proportion of their revenues in this corporation each year by purchasing interest-bearing bonds. Loans and grants would also be contributed by the United States and perhaps other western nations.

The corporation would make these funds directly available in long-term loans to those member nations in need of capital. A staff of technicians, engineers, and economic planners would help make sure the money was put to good use. A regional organization of this kind could also take the lead in easing the refugee situation, working out joint use of water resources, encouraging integration between various nations, and generally in directing the attention of the Middle Eastern people away from conflict and toward creative development.

With skillful diplomatic footwork, a large budget and a measure of good luck, we may for a time avoid an outright disaster in the Moslem world stretching from Karachi to Casablanca. But as long as we continue to neglect the human factors that go to make power in our revolutionary world we will be building on sand and ultimately we shall fail. Our present security systems between the Indus and the Nile could be wiped out overnight by a half-dozen well-placed assassinations.

If we are to build more soundly for the long haul, concern for the welfare of underprivileged peoples must become a central premise of American diplomacy. Every statement we make, every move we take should be designed to establish our identification with the welfare of peasants, workers, bazaar keepers, and students. We should act, not out of fear of communism, but because a prosperous and peaceful world can only be created and defended by free people.

No thoughtful citizen expects any administration—Republican or Democratic—to provide quick and easy solutions to this most complex and explosive region. But how long can we afford to ignore the problems which are most in need of answers?

Israel Asks Nothing From Arabs

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Howard Handleman, which appeared in the New York Journal American of June 28, 1957:

WE ASK NOTHING FROM ARABS

(By Howard Handleman)

JERUSALEM.—The onetime Milwaukee schoolmarm who now is Israel's foreign minister pointed her cigarette across the desk for emphasis and said, "We want nothing from the Arabs and we think they know it!"

From there Mrs. Golda Meir expounded a favorite Israeli thesis. There is no issue dividing Israeli and Arab, she said, which could not be settled easily once Arab political leaders resign themselves to the right of Israel to exist.

Even the festering camps for Arab refugees from Palestine, she continued, could be closed quickly and the refugees given jobs and homes in Arab countries if only Arab leaders willed it.

"Even today," she said, "some people are leaving the camps secretly and going to Iraq, where there is need for them. But they must go secretly because no Arab possibly can admit at this time that there is any place for the refugees to go but Israel."

There was something of the classroom manner, still, in the way Mrs. Meir marshalled facts and arguments during the pleasant hour in her shaded, cool office on the outskirts of sweltering Jerusalem.

Sometimes it seemed she was giving the daily lesson from a well-prepared outline. But there was nothing of the classroom in what she said.

Both Israelis and Arabs think they are losing the propaganda battle in the United States and each claims the other has an advantage. As Mrs. Meir put it:

"Israel has no nuisance value in talks with the Americans. It is just the same as in 1938 and 1939. In those years Britain did not have to give a thought to the question of whether the Jews in Palestine would side with Hitler, so Britain had no worry about what we would do.

"Today there is the same situation. Everybody knows we cannot side with Russia. As a result, there is no pressure to give us economic aid for the sole reason of keeping us on the democratic side."

Mrs. Meir quickly added, however, that Israel is completely grateful to the United States for aid that has been given and probably will be given. She stressed that without this United States help, Israel's plight would be alarming.

The lady who looks grandmotherly but who thinks and talks and acts like any other hardheaded, determined statesman, turned to the explosive question of the Arab refugees. The Arabs say there are a million. The Israelis say there are less than that, possibly about 600,000.

"Israel has shown the way to solve the refugee problem," Mrs. Meir said.

"There were two refugee problems in 1948, Arab and Jewish. We have taken care of ours. We opened new lands and took all who came.

"The Arabs could do the same thing. The land is there, on the desert. The water is available to irrigate the desert. The people are available to work the land and live on it.

"But the will of the political leaders is not there."

Commission on Government Security Program

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. COTTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Roscoe Drummond from the New York Herald Tribune of June 23. This article is a thoughtful analysis of the recommendations of the Commission on Government Security.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BEST SECURITY STUDY TO DATE

(By Roscoe Drummond)

The much-needed study of the Government's security program is completed at last. It is long overdue, but the delay is more than made up for by the quality of the report.

The Commission on Government Security, under the leadership of its chairman, Loyd Wright, former president of the American Bar Association; its members drawn from Congress and from the executive; from inside the Government and from outside, has done a superb job.

There isn't a single proposal in it which would give aid or comfort to the disloyal.

There are many proposals in it which would protect substantially the rights of the individual. It proposes a variety of ways to strengthen the security system not only as it affects Government employees, but as it affects defense plants, dock workers, passport regulations; it offers an entirely new program to increase protection for the Nation's vital but vulnerable civilian airlines and airports.

It is characteristic of the Commission's clear thinking that the new provisions to safeguard the rights of individuals are viewed as a means of strengthening the security program—this on the ground that public confidence and individual confidence in the fairness of our Government is absolutely essential to the good operation of any security program.

Among the many recommendations of the Commission which break new ground are these:

1. Creation of a Central Security Office to provide a substantially uniform loyalty system.

2. The Director of the Central Security Office would recruit and train qualified people to administer the loyalty program, its examiners would conduct preliminary hearings; their decisions and those of a Central Review Board would be advisory to heads of departments and agencies.

3. Loyalty would be the only test for screening employees under this program. Henceforth suitability of the employee would be determined by civil service regulations and this would be separate from the loyalty screening system.

4. The same procedures for loyalty clearance will apply to applicants for Government service as apply to employees. Heretofore, applicants have been rejected for loyalty-security reasons without being informed of charges, without having any chance to disprove the accusations, and this often one-sided information has been made a part of the applicant's record and used as an automatic blackball against future Government employment.

5. Several new protections are proposed. Charges suggesting disloyalty would be made fully available to the individual so he can have the opportunity to disprove or explain them. Except in the cases of a regularly established confidential informant engaged in intelligence work for the Government whose identity may not be disclosed without compromising the national security, the accused would have the opportunity to confront and cross-examine the informer under oath, or the adverse information would be discarded.

The Commission usefully points out that one of the major confusions of the last several years has been the attempt to merge loyalty and suitability into one program, and it concludes that the result has been a hybrid product which has created bewildered security personnel, employee fear and unrest, and general public criticism.

Although some administration spokesmen have attempted to blur the situation, the fact is that the vast majority of removals of employees which have been reported as security risk removals have in fact been suitability removals handled under the normal civil service procedures. The Commission concludes that in the comparatively few remaining cases where loyalty was involved, only a loyalty finding—not a personal suitability finding—was needed.

Henceforth, under the Commission plan, no employee or applicant, rejected because of unsuitability, would be stigmatized as a security risk.

I believe that Congress ought not to consider its work done until it acts painstakingly upon the recommendations of this Commission whose work and credentials are so superior.

Events May Force Action on Inflation

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. THYE. Mr. President, there appeared in the Saturday, June 29, issue of the Washington Evening Star an article written by Gould Lincoln under the heading "The Political Mill," an article entitled "Events May Force Action on Inflation." It is a most timely article, and I commend it to the attention of all who wish to read it, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVENTS MAY FORCE ACTION ON INFLATION

(By Gould Lincoln)

Almost it seems industry and labor and the Congress are all in cahoots to force President Eisenhower to propose something drastic, through Government control of prices and wages, to halt the cost of inflation which now threatens the United States.

Take a look at recent happenings. Thursday the United States Steel Corp. announced a $6-a-ton increase in the price of steel. The company claimed it is necessary because of increased labor costs about to arise under its contract with the steelworkers union. At the same time the House Post Office and Civil Service Committee voted to report favorably a bill that would give postal workers an additional $546 a year. A similar Senate committee has reported a bill for a $540-a-year raise. In addition, these committees may report a measure increasing salaries generally for civil-service employees. These combined measures would increase the Government expenditures annually by several billion dollars.

These two examples of inflationary action are expected to be multiplied. The steel companies are expected to follow the lead of United States Steel. Other industries and other labor unions, if past history is a criterion, will fall in line for increased prices and increased wages. The spiral is being given another boost. So far as Congress is concerned, the critics of President Eisenhower's $71 billion plus budget for the next fiscal year apparently have thrown caution to the winds. The Senate recently passed the Helis Canyon Dam bill which it is estimated eventually would cost the Government a billion or more dollars.

PRESIDENT WARNS NATION

Again and again President Eisenhower has warned that unless the American people, including business, management and labor and Congress and the administration itself, call a halt to inflationary increases the alternative will be peacetime Government control. He is violently opposed to such control. At his latest press conference, when he was asked if he was still confident that appeals to labor and industry for moderation on prices and wages will succeed or whether we are approaching the point where more drastic restraints might be necessary, the President replied:

"Of course I believe that if you have to resort, in time of peace, to strict Government control of prices, of wages, services and things, then we are abandoning the system that has made us great and by which we have lived, and in which we believe." He added he assumed that "something more drastic" means governmental authority taking over all functions now entrusted to the interactions of economic forces in the country.

The President made the point there must be statesmanlike action both by business and by labor if inflation is to be checked. And he said: "If we don't do this, I tell you, if you go to specific governmental controls, rigidly applied in time of peace, then you are beginning to help make come true a prediction we heard a few weeks ago from a man who certainly is no friend of ours, and I am not going to be a party to it." He was referring to a broadcast made by the Communist Party boss in Soviet Russia, Khrushchev. And finally the President said: "Unless there is statesmanship exercised both by business and labor as well as sound, sane policies pursued by Government * * * there is real danger of inflation."

In view of the fact that the Bureau of Labor Statistics reported last Tuesday that prices have risen for the ninth consecutive month to an alltime high, and for 14 of the last 15 months, the President's alarm seems to be entirely justified. The Government is watching the course of inflation carefully, but unless a halt is called soon the dangers of an inflation and depression that could wreck this country could be materialized.

EACH SIDE BLAMES OTHER

The steel workers claim that since the postwar period—since 1945—there have been 21 rounds of steel price increases, whereas there have been only 9 rounds of wage increases. They say further that these price increases have yielded the industry more than $3 in revenue for each $1 in wage increases. They insist that wage increases in steel have

not caused a single price increase. That, of course, is the argument of the union. The steel corporation takes an entirely different view. It insists that the price increases have been entirely necessary because of the demands for wage increases. Probably neither side is entirely correct. Certainly we have the hard fact that these increases in prices and wages in a leading industry have played an enormous part in the upward trend of the cost of living. There seems to be no indication so far that the Government is preparing to demand legislation for price and wage control. The question arises, however: How far can this inflationary spiral continue without bringing economic ruin and a depression that, as Secretary of the Treasury Humphrey suggested in connection with excessive Government spending, will curl your hair?

A newly organized Citizens Committee To Curb Inflation, which recently met in Washington, is starting a campaign to educate the country that the public itself has the power to curb inflation. It is to be hoped that the campaign is not too late. And it is to be hoped, also, that more attention will be given to the warnings of President Eisenhower.

The Story of Insecticides

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. PATMAN. Mr. Speaker, at the request of a very prominent and nationally known physician at Atlanta, Tex., Dr. Joe D. Nichols, I am inserting in the RECORD an article by Dr. W. Coda Martin, of New York City, entitled "The Story of Insecticides." It discusses a question of great interest to many people.

The article follows:

THE STORY OF INSECTICIDES

(By W. Coda Martin, M. D., chief of geriatrics clinic, Metropolitan Hospital, and associate visiting physician in geriatrics for the Bird S. Coler Memorial Hospital)

(EDITOR'S NOTE.—This article is a reprint from the September 1954 issue of Natural Food and Farming.)

The story of chemical insecticides and their effects on the human body is an important and topical subject. The effects of these chemicals on humans is a very personal problem today as everyone must eat to survive and all the food grown for the commercial market today is contaminated.

There are two military axioms that may well be applied to the handling of toxic chemicals. They are: (1) Know and understand your enemy so that you can better prepare for defense; and (2) never underestimate your enemy. If you ever served in the Armed Forces, these precautionary rules will be familiar to you.

The chemical insecticides used on our foods and the ones that are used in exterminating household pests can be considered enemies of people as well as insects. No one has ever been able to prove that these chemicals are not toxic to humans. The controversy is only how toxic and how much damage do they produce in the human body.

To help you understand these new chemicals, let's review the history of their development and how they came to be used as insecticides. There are two general classifications of these chemicals. One: chlorinated hydrocarbons which include DDT, lindane, chlordane, benzene hexachloride, aldrene, dieldrene, and so forth. Two: organic phosphorus compounds such as parathione, HETP and TEPP, etc.

We must remember that chemical insecticides, in general, are not new. However, the present group has been in use only since 1938, but it was not until after the war in 1945 that these insecticides were released for extensive use on our foods in the United States.

Back in 1938, when the supply of pyrethrum was cut off because of the war blockade in Europe, a Swiss chemist, searching for new chemicals that would replace pyrethrum and kill insects, resurrected from the chemical archives a chemical compound first made and synthesized in 1874—now known as DDT. We obtained it from the Swiss and used it extensively during the war for mosquito control and for typhus prevention. Because of the wartime emergency, very little study was made on the effect of DDT on humans.

In 1946, following the end of the war, DDT was released by the United States Department of Agriculture for use on crops as an insecticide and pesticide.

The other chemical—parathione—was discovered by our chemists in the secret files of the German Army. It had been under investigation by the Germans for use in chemical warfare as a nerve poison but was never used. Recently the Defense Department released information to the public on this nerve gas for chemical warfare use. These poisonous chemicals are now being used as sprays on our orchards and farms and in the home to kill household pests. We know that these chemicals will kill insects.

The problems that interest us are the following: (1) Does a residue from these chemicals remain on sprayed foods? And (2) if so, what effect does it have on the human body which consumes the contaminated food?

For an answer to the first question, Does residue from these chemicals remain on the food? I would like to quote from a report presented to the Delaney congressional committee investigating chemicals in foods by Mr. Cox, a chemist with the Beech-Nut Packing Co. He states that his company's immediate obligation was to protect the consumer—in this case, largely infants. Wrote Mr. Cox:

"The insecticide DDT as well as closely related chlorinated hydrocarbons has certain toxic properties which have forced us to adopt a near zero tolerance level in baby foods. (He feels that babies should not be given poison.)

"We have found that chlordane, as a soil residue, contaminates carrots. Thus, we avoid the purchase of carrots from areas where chlordane has been used commercially.

"We have encountered considerable difficulty in obtaining peanuts free from (B-H-C) benzenehexachloride. Peanuts are grown in rotation with cotton on which large amounts of B-H-C are used for insect control and remains in the soil.

"Sweet potatoes from South Carolina were contaminated with B-H-C.

"In 1951, we rejected apples from New York State contaminated with B-H-C. (Today they use more parathione as B-H-C produces a change in the taste of foods.)

"Rejected celery from California—also sweet potatoes from California.

"We found that these chemicals tend to penetrate into the edible portions of the foods. Due to this penetration, we were unable to develop any washing, peeling or inactivation procedure which will remove B-H-C."

The Beech-Nut Packing Co. found that chlordane may persist in a relatively unchanged form in the soil for at least 1 year, and in some cases as long as 5 years.

With these statements in mind, we must accept as a fact that a residue of these insecticides does remain on and penetrates into the foods that are sprayed with them.

Now, the second question of interest to us is: Do we absorb this residue into our own bodies and store it in our tissues?

To answer this question, I analyzed the fat tissue from 25 human subjects for its DDT content. Unfortunately, this test requires a fairly large piece of fat which precludes it from a routine office procedure. Therefore, these biopsies were performed at surgical operations and at postmortem examinations. I was careful to choose those patients who gave no history of occupational contact with insecticides. Therefore, we must assume that the DDT found in the fatty tissues came from contaminated food or household sprays.

Twenty-three of the 25 tissue specimens examined showed evidence of DDT. The amounts ranged from 1 p. p. m. to 11 p. p. m., or an average of 3.5 p. p. m.—28 percent had 5 p. p. m. or more This is important because in animal tests it has been shown that 5 p. p. m. will cause liver damage and is considered toxic. DDT level in human fat should be zero.

Dr. Pottenger and Dr. Laug, in tests on people in California, found similar results with even slightly higher level of DDT in the tissue.

What about animals?

Dr. Dendy, at a Texas research laboratory, tested steaks to determine if cows were absorbing DDT from contaminated foods. He found that the lean part of steaks had 4 p. p. m., while the fat had 40 to 60 p. p. m. As you probably know, these chemicals are fat soluable and thus are found in greater concentration in vegetable oils, such as peanut or cottonseed oil, and in human and animal fat. These are the steaks that we eat every day.

The next question that we must ask is—Now that the chemicals are in our tissues, what damage will they do?

The myth has become prevalent that DDT is safe for man—and the general population believes it.

Ask yourself this question—"Are these chemicals less poisonous because you don't see them being sprayed on your foods?" Of course they're not. Suppose someone came into your home as you sat at the dinner table and requested permission to spray a little DDT or some other chemical on the food you were eating. Stop and think—what would be your reaction? The answer is obvious, of course. Yet the farmer sprays your food 6 to 12 times during the growing period.

The Geneva Conference passed laws prohibiting the use of chemicals during wartime on our enemies. Yet we use the same kind of chemicals on our foods with the sanction of our Government. This seems to me to be insane.

I agree with the Department of Agriculture that there is much more research needed on the long-range toxic effects of these chemicals on humans because we hope to be able to continue eating three meals a day for many years to come without being poisoned.

But we do have some knowledge at the present time on the toxic effects of these insecticides on animals and humans. The most recent and positive proof is on animals.

Chlorinated napthalene, a type of chemical similar to that used on human foods, caused the death of $4 million worth of cattle in the United States during the past year through consumption of food contaminated by its use. This fact was revealed in a report from the United States Department of Agriculture researchers at Cornell University and the Tennessee Agricultural Station. They identified chlorinated napthalene as being the causative agent in the death of these cattle. What about the cattle that

did not die but were contaminated? They are in our meat market as revealed by the Texas report.

Dr. Morton S. Biskind has written extensively in various medical journals on the reaction of these chemicals in the human body.

The symptoms of chlorinated hydrocarbon or DDT intoxication consist of all or some of the following:

1. Acute gastroenteritis revealed as nausea, vomiting, abdominal pains, and diarrhea—symptoms similar to those of virus X disease.

2. Other symptoms and signs are: Head cold, cough, and sore throat—similar to a common cold. There may also be pains in the joints, general muscular weakness, and fatigue. Congestion of the lungs and pneumonia is a common finding in acute intoxication.

3. In the chronic state, other symptoms appear and may be persistent. These show evidence of nerve and liver involvement—they are hypersensitive skin areas on various parts of the body—numbness—tingling sensations—itching and headaches. Later, the patient may develop twitching of the muscle and loss of vibratory sensation in the legs which interferes with walking. This shows evidence of nerve involvement.

The brain also reveals signs of intoxication, such as loss of memory, inability to concentrate, dizziness, and, as one patient expressed it, her brain was foggy. With this is associated mental depression and emotional instability. Many patients have gone for psychiatric treatment, of course, without improvement. Skin shows hyperkeratosis—rough, dry, papular skin lesion due to vitamin A deficiency caused by liver dysfunction due to DDT poisoning.

What are the dangers in the future—10 or 20 years from now? No one knows definitely. But as I said earlier, if we understand and know these chemical enemies, we can possibly predict their future reactions and these predictions are not favorable.

The one organ that is severely damaged is the liver. When this occurs, the body's defense mechanism is interrupted and the patient is then susceptible to all the degenerative diseases, such as (1) arteriosclerosis, (2) diabetes, (3) heart disease, and (4) cerebral hemorrhage or stroke—and coronary thrombosis.

How rapidly these conditions develop depends on many factors in each individual. We do know that some individuals are more sensitive to the chemicals than others, and their toxic effects. Time is the only answer to this question—and then it might be too late. Reactions to some of the chemicals can be reversed if detected in time, while in others, after a certain stage is reached, the damage cannot be corrected but continues to be progressive.

It is necessary for you to know what ways of contact with these chemicals will be harmful. As liquid sprays or powder, they can be absorbed by inhalation or directly through the skin.

Tests show that when DDT is sprayed on a cow the chemical will appear in the milk within 24 hours. Veterinarians know that DDT sprayed on cats will cause death.

The same dangers are true of inhalation of the spray into the lungs. It is absorbed very rapidly into the blood stream. A total of three methods of absorption—skin, nose, and throat.

What precautions are necessary to protect yourself if you are exposed to the spray?

Publication No. 605, United States Department of Agriculture, gives the following precautions to be taken with insecticides and fungicides:

"In handling, mixing, and applying poisonous insecticides and fungicides, take special care not to inhale excessive quantities at any time. Well-designed respirators that afford protection to the entire face are available. Therefore, use them when such danger exists. After working with insecticides, wash the hands or any exposed part of the body thoroughly."

Other instructions in regard to parathione state: "Do not get it on the skin, in eyes or on clothing. Wear protective clothing and natural rubber gloves and outer garments made of natural rubber. Wear natural rubber overshoes and protect eyes with goggles. Do not breathe spray or mist. Wear a toxic dust or mist respirator of a type tested by the United States Department of Agriculture. Wash hands, arms, and face with soap and water before eating or smoking."

These precautionary measures make one realize how dangerous these chemicals are.

Now, what is being done to regulate the use of these poisonous chemicals on foods?

In June 1952, the Delaney committee gave its report of a 2-year study of this problem to Congress. Following this, Representative DELANEY introduced a bill in Congress to regulate and control the use of insecticides. The bill was shelved, as it could not be passed. Then in June 1953, Dr. MILLER, a member of the Delaney committee, introduced another bill—H. R. 4272—which has passed both Houses and is now pending the signature of the President. This bill was reduced in effectiveness before it passed. While this discussion is in progress, our foods are subjected to unlimited and uncontrolled amounts of poisonous sprays.

I would like to give you a few dietary precautions for yourselves and to your families: (1) Cut down on fatty foods, such as butter, margarine or other vegetable oils, and cream. These chemicals are fat soluble and are therefore, more concentrated in fats and oils; (2) wash your vegetables and fruits; (3) eat only lean meat; (4) and finally, eat fish, the only food not contaminated.

Many of you will say that I have been eating this contaminated food for years and I am in good health. Perhaps you have a natural resistance for the present time. But remember that most of these chemicals are cumulative, and that you are absorbing more at every meal. One day in the future, you too, will reach a toxic level.

I personally obtain as much food as possible that has not been sprayed—a few farmers have a conscience and will not put poison on vegetables for human consumption.

These are difficult to obtain, but I feel that it's worth the effort. Why are not these foods free of poison available for all to obtain? That is the question each one of you should ask.

The Passport Office

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, July 1, 1957

Mr. COTTON. Mr. President, on behalf of myself and the Senior Senator from New Hampshire [Mr. BRIDGES], I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Nashua Telegraph of June 18, 1957, describing the work of Miss Frances G. Knight in improving the efficiency of the Passport Office.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMAN BOSS UPS EFFICIENCY OF PASSPORT OFFICE

Miss Frances G. Knight, director of the United States Passport Office, has remodeled her department to a high peak of efficiency by introducing step-saving devices she employed in streamlining her own kitchen.

Miss Knight began reorganizing the office 2 years ago to keep pace with the tremendous increase in travel demands. She uses such terms as work flow and traffic pattern in explaining the reorganization.

She says she had been redesigning her kitchen at home and in so doing had figured out how many steps it took to get from the refrigerator to the sink to the range and back to the sink. She arranged her kitchen facilities in the sequence which would save steps in preparing a meal.

"I simply applied the same technique in arranging the offices which process passports," she said. "It saves a lot of footwork and time and it is much easier to detect bottlenecks and errors."

The "work flow," she explains, starts with incoming passport applications and ends after the processing, checking, clearing and mailing of the passport.

"We have developed a movement of work and a flow of activity with a minimum of lost motion," she says.

Efficiency of employees has shown improvement through Miss Knight's housekeeping techniques.

In 1952 the Passport Office produced 1,389 passports per employee. In 1956 it produced 1,593 per employee.

"During the remainder of this fiscal year," she said, "we will have processed passports at the rate of 8 each minute—about 1 every 8 seconds."

In April, some 82,000 passports were processed, the highest total ever reached in a single month.

Currently, applications for passports, the single most necessary document for Americans traveling abroad, are being processed within 4 days of receipt at the office.

The Easy-Money Fallacy

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. RAY. Mr. Speaker, under leave to extend and revise, I am glad to place in the RECORD a thoughtful and timely discussion of The Easy-Money Fallacy. This article appeared in the July 1957 issue of the Guaranty Survey, published monthly by the Guaranty Trust Co., of New York.

The article follows:

THE EASY-MONEY FALLACY

Gross national product is at an alltime high. Industrial production and employment are close to record levels. The purchasing power of the dollar is the lowest in history and still declining. Why, then, the persistent and apparently rising outcry against tight money?

Federal Reserve officials and others have patiently spelled out the nature of the present worldwide inflationary threat and the elementary fact that, at a time of substantially full employment of human and material resources, artificially easy money is practically synonymous with inflation. Yet the belief still seems to be widespread, even in high places, that however good existing conditions may be, easy money would make them better.

This is the easy-money fallacy, one of the oldest in economic thinking, one of the most disastrous in its historical effects, and one of the most difficult to eradicate. Centuries of exhortation and even more centuries of

bitter experience have failed to bring about a general understanding of the simple fundamentals of the role of money and credit in a free economy.

HOW TIGHT IS MONEY?

The easy-money fallacy, as it exists in the United States today, appears to be compounded of a number of mistaken ideas regarding the origin and meaning of the current situation. Mistake No. 1 is the notion that the country is suffering from excessively tight money. Actually, the present level of interest rates is quite moderate for a time of active business. Rates on commercial paper, for example, average about 4 percent, as compared with 6 percent in 1929 and 7½ percent in 1920. Before 1929, a rate below 4 percent was exceptional. As for the 3-percent Federal Reserve discount rate, never until 1930 did any Federal Reserve Bank set a rate below that level. Only in comparison with the abnormally low rates of the depression years and the artificially maintained rates of the war and early postwar periods do the present rates appear high.

Nor is the rate structure in the United States high in relation to those elsewhere. Of the 32 foreign central-bank rates listed in the Federal Reserve Bulletin, only 5 are below that in the United States. The fact is that countries all over the world are experiencing the same tendency toward inflationary overexpansion of credit, a tendency which has carried interest rates in most countries considerably higher than it has here.

With overall statistical indicators at their present levels, it would be difficult indeed to argue that tighter money has adversely affected American business. Here and there a contemplated financing project has been abandoned or postponed, but at a time of intense demand for capital funds and capital goods it is inevitable and necessary that some would-be borrowers find themselves unable to obtain all the money they would like at rates they care to pay, just as some would-be buyers are unable to obtain all the goods they would like at prices they consider satisfactory. At such times, marginal borrowers and marginal buyers are eliminated from the market by rising interest rates, rising prices, or both.

Housing construction is a business that is sometimes cited as a victim of tight money. Yet housing starts financed by conventional mortgages, which have been exposed to the full impact of the rise in interest rates have not declined significantly. The decrease has occurred in starts financed by FHA-insured and VA-guaranteed mortgages, rates on which are fixed by law.

It is at least debatable, therefore, whether the decline can properly be attributed to the inability or unwillingness of home buyers to pay higher rates, or whether it should not be ascribed rather to the preference of potential FHA and VA borrowers to await an upward adjustment of their rates to levels more attractive to lenders. In other words, should the blame be placed on tight money or on unrealistic FHA and VA rates? A rise in the FHA rate in December has been followed by an upturn in starts within that category, providing a further indication that higher rates are not a serious deterrent to business.

WHO MAKES MONEY TIGHT?

Mistake No. 2 is the idea that money has been made tight by governmental policy. Actually, it was more than 6 years ago that the Treasury relinquished its control of the money market. Since then the Treasury, like other borrowers, has sold its securities in the open market at the going rate of interest, not at an artificial rate established by the Treasury and supported by the Federal Reserve System. Monetary policy has been determined by the Federal Reserve, an independent agency, without interference by either the executive or legislative branch of the Government.

Is it the Federal Reserve, then, that has made money tight? Not in any positive sense. Except for seasonal variations, the amount of Federal Reserve credit outstanding has remained almost constant for 2 years. This means that the Federal Reserve has played an essentially passive role, simply allowing the money market to tighten itself as the demand for credit increased. What has happened to the money market is substantially what would have happened in a perfectly free market at a time of very active business.

It is not strictly correct, therefore, to say that the Federal Reserve has pursued a tight-money policy. It would be more accurate to say that the Federal Reserve has refrained from pursuing a policy of artificially easy money, a policy which, in a business situation such as has existed for the last 2 years, would have been a policy of inflation.

The same neutrality that has characterized monetary policy has also characterized fiscal policy. The Federal budget has been brought into approximate balance and held there. At the fiscal level, as at the monetary level, the market has been left very much to itself. If it has become tight, it is because money, along with human and material resources, has been at or close to the "full-employment ceiling," not because any central authority has made it tight.

WHO BENEFITS FROM TIGHT MONEY?

Mistake No. 3 is the notion that tight money is a situation from which banks and other financial institutions prosper at the expense of the Government, business, and the people in general. A moment's objective consideration is enough to show how superficial and inadequate this view is. Which is more costly to the Government and the taxpayers, an increase in interest on the public debt or an inflationary advance in prices that raises the cost of Government all along the line? Which is more injurious to the Government's credit, a decline in the market prices of Treasury obligations or a shrinking dollar that makes savers fear to buy Government bonds lest inflation more than wipe out the value of the interest and leave them with less purchasing power than they had at the beginning? Which is worse for business, a rise in the cost of borrowed money or an unstable currency that upsets all calculations and makes intelligent planning impossible? Which is more damaging to consumers, an increase in their instalment payments or a rise in the cost of living

What about pensioners, beneficiaries of trust funds, those dependent for their livelihood upon the proceeds of a lifetime of saving? They also are among the lenders of money, and they are the most helpless of all the victims of inflation.

As far as financial institutions are concerned, it is sometimes forgotten that the money they lend is not obtained for nothing. Savings institutions that receive higher rates must also pay higher rates to attract money. Commercial banks can obtain reserves to extend further credit only by borrowing from the Reserve banks at higher rates or by selling securities at higher yields and lower prices.

The normal tightening of money at a time of very active business is not good for some and bad for others. It is a natural and necessary feature of intense economic activity, and in such a situation it is indispensable to the maintenance of a stable currency and a healthy economy. Thus it is good for everyone.

A NEEDED STABILIZER

Almost all of the mistaken ideas regarding tight money and easy money arise from one basic error, namely, the failure to understand that an interest rate is a price; that, like other prices; it performs vital functions in a free economy; and that it cannot be manipulated with impunity, any more than other prices can.

The function of prices is to preserve the balance between demand and supply, and interest rates are no exception. Interest rates preserve the balance between the supply of and demand for loanable funds, which in the final analysis means the balance between saving and investment. Artifically low interest rates swell investment demand and at the same time discourage saving, and they can be maintained only by constant injections of additional funds into the money market.

It was exactly such a situation that created the continuous inflationary pressure during the war and early postwar years. As long as the Federal Reserve supported the Government securities market, it was obliged to stand ready to purchase from owners all securities offered at prices corresponding to the predetermined rates. Such purchases increased bank reserves and led directly to an expansion of the money supply. Price inflation was the natural and inevitable result.

TIGHT MONEY AND TIGHT GOODS

The easy-money fallacy will persist as long as men fail to see the intimate connection between the money market and the economy as a whole. The underlying cause of tight money is not to be found in the money market itself but in markets for goods and services. When consumers and investors desire to buy more goods and services than can be produced by existing plant, labor force, and productivity, they find their buying capacity limited by the fact that total income equals total output, and no more. When they try to borrow in order to increase their purchases, they find that money is tight. They tend to conclude that something is wrong with the money market, whereas in reality the basic difficulty is not a shortage of money but a limited supply of goods and services produced.

Money can be produced at will by governmental authority, but goods and services cannot. The supply of goods and services at any given time is limited by the economy's stock of productive equipment, the number of workers available, and the existing level of productive efficiency. These factors of production can be increased only gradually. If the money supply is increased faster, the economy suffers from a situation of "too much money chasing too few goods," and prices in general are forced higher.

Because of this, and because men have clung to the delusion that more money will bring forth more goods and services, economic history through the ages is a record of intermittent currency depreciation, with all the blind injustice, trade disorder, and industrial prostration that follow in its wake. Yet the ancient fallacy refuses to die. The outcry against tight money is its present-day manifestation.

Statement in Support of Increased Annuities for Retired Federal Employees, H. R. 3245

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. MULTER. Mr. Speaker, the following is my statement in support of my bill, H. R. 3245, before the House Post Office and Civil Service Committee, Subcommittee on Retirement Bills, on June 29, 1957:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, NEW YORK, BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, SUBCOMMITTEE ON RETIREMENT BILLS, JUNE 29, 1957

Mr. Chairman and members of this distinguished committee, I am glad to be able to appear before this committee in support of my bill, H. R. 3245, which will provide relief for our hard-pressed retired Federal civil servants. Your committee is familiar with the particular problems of the people who had already retired when the liberalizations in the Civil Service Retirement Act became effective in the fall of last year. Truly, the retired civil annuitant has become the forgotten man in retirement act improvements.

Implicit in the debate surrounding the passage of the Civil Service Retirement Act amendments of 1956 was the idea that similar legislation would be enacted for persons already on the retirement rolls. Indeed it was stated in the Senate that the only reason increases for retired annuitants were not included in the amendments was because it was felt that in the interest of all concerned—both active employees and present annuitants—it would be better to keep the two bills separate. Thus, in my view, when we voted an increase for active employees last session we were accepting the responsibility of making sure that people who had already retired would receive equal consideration.

My bill would provide increases for most annuitants of 22½ to 30 percent. These increases are necessary, I believe, because of the grossly inadequate benefits which so many former civil servants are now receiving. The figures speak for themselves. Almost 40 percent of present civil-service annuitants are trying to exist on benefits of less than $100 a month. The condition of the widows and orphans of deceased workers is even more desperate; 90 percent of the payments of survivors' benefits are less than $100 per month, and 57 percent are less than $50 per month.

The situation of retired annuitants was forcefully brought to my attention by a resolution of the New York State federation of chapters of the National Association of Retired Civil Employees at their convention held in Rochester, N. Y., in April of this year. The resolution cites a report carried in the U. S. News & World Report of August 3, 1956, which shows that "after an analysis of 35 groups which represented approximately 95 percent of our population, it was found that all these groups, based on 1939 income, were receiving larger real income, the increases ranging from 4 to 107 percent. However, the report carried the further shocking figure that civil retirees were down 13 percent, or in other words, were receiving 13 percent under the 1939 level."

The comment of the United States News & World Report—which is certainly impartial on this question—is very much to the point of our discussion here today. That magazine concluded, "People living on pensions are in trouble, unless their pensions are increased as the cost of living rises. This rarely happens. Payments to retired workers, for example, are adjusted by Congress only occasionally. Last year (1955) these payments were increased an average of 10 percent, but this still left retired workers worse off than in 1939."

Since this article appeared conditions have worsened. It is a matter of public record that the cost of living has continued to rise to record highs for every month since this report was made. In August 1956 it stood at 114.5. Today it has risen to 119.6—an increase of more than 5 percent. These facts, I believe, are impressive testimony to the urgent necessity for action on this bill in this session of Congress.

Finally, I am particularly desirous of your enacting the provision in the bill which grants annuities to the widows of employees who retired or died prior to April 1, 1948. These unfortunate women have been denied benefits merely because the civil service retirement system had made no provision for survivor benefits at that time. Simple equity seems to call for action on behalf of these widows, and this can be accomplished at a very reasonable cost.

I appreciate the opportunity to appear before this committee in support of this important legislation, and hope that you will see fit to take early action.

Architect of Survival

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. McCORMACK. Mr. Speaker, the appointment of the Honorable Thomas E. Murray, former member of the Atomic Energy Commission by the Joint Committee on Atomic Energy as its consultant, is a most pleasing one. Mr. Murray is respected, and profoundly so, by countless thousands of persons.

I include in my remarks a fine article entitled "Architect of Survival," written by Rev. Father Edward A. Conway, S. J., and appearing in the December 1954 issue of the publication Voice of St. Jude.

Father Conway is a member of the faculty of Creighton College, assistant professor of political science at Creighton College, is a vice president of the Catholic Association for International Peace, and was for 6 years international relations editor of America. Father Conday is one of the founders and the first finance chairman of the National Committee on Atomic Information. He has written and lectured extensively throughout the Nation on atomic energy problems.

There are few persons better qualified to write such an article about Mr. Murray than Father Conway:

ARCHITECT OF SURVIVAL

(By Rev. Edward A. Conway, S. J.)

(Rev. Edward A. Conway, S. J., now on the faculty of Creighton University, is a vice president of the Catholic Association for International Peace, and was for 6 years international relations editor of America. He was one of the founders and the first finance chairman of the National Committee on Atomic Information and he has written and lectured throughout the Nation on atomic energy problems.)

The slight-figured, granite-visaged speaker at the dedication of Marquette University's new library had just warned his audience against "leaving atomic energy to the experts." The atom for both peace and war is everybody's business. "What our world needs most now," said the speaker, "are achitects of survival—those blessed peacemakers of the Sermon on the Mount. They exist—just as surely as that energy exists which, when released, produces the incredibly gigantic explosions that are now shaking the world."

The date of the address was December 5, 1953, and the speaker was Thomas E. Murray, member of the United States Atomic Energy Commission. This was the fourth of six addresses he delivered at Catholic educational institutions between April 25, 1953, and June 19, 1954: Manhattan College, Seattle College, Duquesne University, Marquette University, Catholic University, and Detroit University. Anyone who has read the texts released by the Atomic Energy Commission should agree that at least one "architect of survival" exists—and that his name is Thomas E. Murray.

Nothing in Mr. Murray's impressive career as industrial engineer, inventor, corporation executive, bank director, and AEC Commissioner suggests that he is an emotional man. But the "incredibly gigantic explosions" (which we now know were hydrogen explosions) have obviously shaken him. "After attending a large-scale nuclear explosion," he confided to his Marquette audience, "one can never forget the sudden deafening, angry roar of tortured nature as energy escapes, in a fraction of a millionth of a second, from its ancient confinement in matter."

At Marquette, Mr. Murray seemed to be describing what happened within himself in that point of time: "Men too have gigantic energies captive in their minds, needing only the compression of circumstances for release into the most varied forms of human activitiy." The H-bomb explosion he witnessed released a flood of authentic eloquence from this hitherto taciturn industrialist.

The atomic situation is so serious that for Mr. Murray no superlatives are too sensational, as these extracts testify:

"This matter of survival has been on my mind especially since a year ago, when I participated in our thermonuclear testing in the far Pacific. From that time on I knew that man's survival must be planned for and worked for, and not just lightly taken for granted as in the past" (Duquesne).

"No one should retreat into a comfortable ignorance of the facts of atomic life in the face of the prospect of a mânmade abomination of desolation" (Manhattan).

"There is the possibility of the inevitable wreck of civilization" (Duquesne).

"As the possibility of total annihilation becomes clearer, our search and prayers for peace must ever increase in intensity" (Manhattan).

"Man has succeeded in making weapons of mass destruction powerful enough to reverse history and to reduce the world to the primitive conditions of the time of Cain and Abel" (Catholic University).

Most disturbing to Mr. Murray is the lethargy of the American public in the face of the current colossal armament race. "The noticeable unconcern about an atomic future which is darker than man has ever faced before resembles the attitude of those who would do away with the reality of hell by refusing to think about it." (Manhattan). At Duquesne Mr. Murray returned to this most illuminating analogy:

"I am inclined to believe that in most cases the choice of hell results from disbelief in its existence. Many of you know how difficult it is in the teaching of religion to get across to modern minds a full sense of the existence of hell. A same refusal to face the ugly awfulness of all-out atomic warfare is the greatest roadblock in our planning for survival. As I see it, our first national task is to develop a real awareness of today's alternatives."

With casual allusion to spiritual realities that must have amazed the myriad secularists in the Government, Mr. Murray drew once again at Duquesne upon his religious background: "We all need a collective realization such as an individual possesses when faced with sudden death. To postpone the soul's parting company with the body, a man often finds energy, will and capabilities

he never before suspected he possessed. If the world can come to realize that this planet, which once was paradise, may soon become an annex of hell, it will find tremendous now hidden reserves to develop nondestructive solutions for the bitter problems that separate the free world from the Soviet."

Our apostle of survival described at Manhattan the three "main approaches to what should now be man's greatest worldly concern—to keep the peace." These he repeated at Seattle a month later. Mr. Murray, who according to an Associated Press feature story of February 13, "starts his day with Mass and Communion and prays for peace," listed prayer as the first approach. (Just recently President Eisenhower told the World Council of Churches that an unending campaign for peace, supported by the prayers of "hundreds upon hundreds of millions" could bring wonderful results).

The second approach to peace, according to Mr. Murray, must remain the preparation of armed power. Behind the shield of our atomic power the free world has gained time to recover the strength to resist Red aggression. And, as he said at Duquesne, we must increase our atomic weapons until the Soviets make some changes in their present diabolical course. He repeated this warning at Catholic University, adding, however, that "at the same time it is all-important that we should vigorously strengthen our resolution to find peaceful solutions to the issues that seem so insoluble now."

Mr. Murray's third main approach to peace is prudence. War, indeed, may be forced upon us, "but war between atomic bomb-possessing nations is much too dangerous a policy to be entered into without a complete and thorough appreciation of its ultimate consequences." This essential prudence does not thrive in a climate of ignorance; it can be gained only through knowledge of the facts of atomic life. "Just as fear of hell has to suffice where love of God is not strong enough to gain us salvation, so, facing up to this most ugly subject short of hell may well be the necessary step to obtaining prudence in the face of chaos."

This call to face up to the facts is voiced repeatedly in Mr. Murray's addresses: "There must be much greater knowledge in our people of the threat to all civilization implicit in atomic warfare" (Seattle). "If ever the free world decides on war, may the American people have a much clearer understanding than they have now of the implications and dangers of atomic warfare" (Manhattan). "If men throughout the world today are not setting their brains and hands more strongly to the work of preventing the human catastrophe of atomic war, the reason is a simple one: men do not yet understand or appreciate their own danger" (Catholic University).

To prayer, power and prudence as approaches to peace, Mr. Murray added at Seattle the virtues of patience and meekness. It takes great moral strength, he said, to use physical power well. "Because of the limitless nature of our destructive potential power we must moderate our forceful capabilities with something of the meekness and patience of the saints. * * * Only with tremendous meekness and patience can we carry the immense responsibility inherent in our possession of modern atomic weapons. The day is passed forever when we can merely praise the Lord and pass the ammunition."

We need those virtues because Russian aggression and subversion is goading the United States, a Nation not famous for serenity, into a great national impatience. We may be asked to face calmly, or at least with patience, years in which our rival will constantly be growing in power, constantly building up its own atomic arsenal. But impatient power is unthinkable in such a world climate. At Duquesne he warned against the ultimate impatience, against resorting to that ultimate remedy of a spiritual brankruptcy of mankind—preventive atomic war. He repeated his condemnation of preventive war at Catholic University and at Detroit. At Catholic University he asserted that "if all out atomic war is to come, it must come only as the last of all last possible resorts. And in the course of its waging, we shall have to remember that the outlaw nature of the enemy does not justify outlaw methods of warfare."

Mr. Murray still believes that this all-out war can be avoided, that "human reason will find some way of securing mankind against the abuse of this new destructive power." To succeed, however, we must "force our imaginations to face our situation after the fashion of men who face a great catastrophe of nature." "God alone knows," he exclaimed at Catholic University, "what atomic war will mean in a comparatively few years if some sane solutions to the atomic arms race are not sound found." Men must realize the present meaning of the word: war. If and when they do, there would "rise in the world a reasoned horror of war, and a rational opposition to all policies that might lead to all-out atomic war."

Cardinal Newman, who conceived "realizing" as not merely an "acceptance of words for things" but rather as "the opening of the mind and heart to a truth so that it becomes a principle of action," would have applauded Mr. Murray's realization formula. The modern meaning of the word "war," says Mr. Murray, must be demonstrated. At Duquesne, Marquette, and Catholic University he daringly proposed that as many as possible of the peoples of the world and their leaders should be invited to witness explosions of large-scale hydrogen bombs. At Catholic University he urged that they "experience, in a way that will leave them undamaged, save in their illusions, what modern war means in all its horror, in all its shocking destructiveness."

This was but one of the unusual measures Mr. Murray has not hesitated to recommend. Obviously directing his remarks to the Government, he called at Duquesne for hard, deliberate changes in our present direction, in order to get squarely on the road to survival. One of his new approaches to the desperate dilemma we face is in the direction of the Soviet Union. He protested against a certain fatalism fashionable in high places, the absence of any hope that peace is possible. Is it entirely unlikely, he asked, that the two nations that fought Hitler might find some common ground on which to stand together against the immeasurably greater menace—the menace of general atomic war? If, for example, the planet were infested by a plague, or if it were invaded from outer space, might not the two nations then join forces to save themselves from destruction? Well, says Mr. Murray, a force just as menacing is already loose in the world. He argues that the United States must first get the cold realization of the extent of this threat. Then, perhaps, it might be possible to bring the same realization into the Soviet mind. What is the basis for that possibility? Because, even in the U. S. S. R. Marx eventually should give way to the commonsense element in the instinct for self-preservation.

In none of his six addresses does Mr. Murray give evidence that he has thought in any organized way about what is necessary for a durable peace besides nuclear disarmament. Scattered statements indicate, however, that he realizes that even effective international atomic control is not enough to guarantee peace with justice. At Catholic University, for example, he had this to say:

"In our efforts toward peace, we are still thinking in terms of power, in terms of our assumed superiority of force. At best we are thinking in terms of 'collective security,' which is at bottom a power concept. (It is likewise the principle upon which the United Nations is currently based.) We shall undoubtedly have to go on thinking in these realistic terms for some time. God knows how long. Nonetheless, we must begin to think in terms of a higher realism—the realism of reason—the realism of law—international law, stated in agreements on the control and use of atomic power.

"We cannot go on indefinitely putting our highest trust in power or in a sheer balance of power. Our highest national responsibility is somehow to bring the new and awesome power we now possess under the rule of law."

Even though Catholics, Mr. Murray continued, have led the field in pointing out the threat of international communism, their task is not yet done. "We must still join in the further lengthy task," he told his Catholic University audience, "of alerting the world to the need of sacrificing some of its conventional habits of political and emotional conduct." But Mr. Murray, in these addresses, did not reach the point of urging Catholics, as the holy father has, to alert the world to the need for those supranational political institutions which will actually embody the realism of law.

He did, however, seem to imply the necessity for such institutions in his address at Duquesne. While challenging his hearers to daring and initiative in the search for peace Mr. Murray adduced as an inspiring example of such qualities the United States decision to attempt construction of the H-bomb. During the first years of the Manhattan project, he recalled, it was considered nearly impossible to build one, and "there was no pressure to develop such a device."

Once the Russians had exploded their own atomic bomb in 1949, he recounted, our Government cast about for a radical initiative that would restore America's margin of atomic leadership. It was then that the present AEC Chairman, Lewis L. Strauss, proposed what he called a "quantum jump" in United States planning—the achievement of the nearly impossible hydrogen bomb. (A quantum jump might be described in layman's language as a revolutionary leap on to a new and unfamiliar scientific plane—something like an aircraft breaking through the sound barrier.) "Now," continued Mr. Murray, "the times cry out urgently for another quantum jump, but of an altogether different kind. This time a quantum jump is needed not in technology—not in scientific knowledge, but in world politics—that most difficult form of the art of the possible."

This quantum jump in world politics for which the times cry out is obviously wider in reach than disarmament alone. It can only be disarmament under "a regime of limited world law administered by a revised United Nations," to quote famed international lawyer Grenville Clark in a recent address to the American Philosophical Society. Mr. Clark went on to cite to his Philadelphia audience Benjamin Franklin's dictum that "the best public measures are seldom adopted from previous wisdom but forced by the occasion." He also conceded the possibility, though not the likelihood, that "a statesman will emerge with both the capacity and the willingness to define and advocate the minimum world institutions that will alone suffice to make disarmament and genuine peace a reality."

Thomas E. Murray may be that statesman. Already his warnings about the occasion—the world's dire peril, have earned him the title: Architect of Survival. If he spells out as eloquently the political quantum jump the occasion is forcing, he may merit a loftier title: "Apostle of Peace."

Jewish War Veterans of the United States of America

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. FULTON. Mr. Speaker, it is a pleasure to call the attention of Congress to the correspondence of the President with Bernard Weitzer, national legislative director of the Jewish War Veterans of America, and to the resolution passed by the national executive committee of the Jewish War Veterans of America urging support of the 1957 mutual security program. At the same meeting the national executive committee of the Jewish War Veterans of America approved the recommendation of their Foreign Affairs Committee, urging full support for the President's budget request for the Armed Forces:

Whereas our organization has for 10 years consistently supported the essential elements of the mutual security program and appropriations fully adequate for the need thereof; and

Whereas the military aid, economic support in the form of loans and grants and technical assistance made available under that program, have strengthened our traditional allies and the independent nations of the world, especially those newly independent since World War II; and

Whereas the results of the mutual security program have inured to our own country's improved military defense and capacity for swift retaliation in the event of any Communist attack; and

Whereas the combination of our own strength and the capacity of the nations which we have aided to withstand the subversive and infiltrating activities of the Communists has served to deter Communist aggression and to frustrate their intent to dominate the world: Now, therefore, be it

Resolved, That the national executive committee of the Jewish War Veterans of the United States of America at its regular meeting in Washington, D. C., May 25–26, 1957, wholeheartedly supports the President's minimum request for funds to carry out the mutual security program as proposed in the President's message of May 21 to Congress and reaffirms its confidence that the dollars thus appropriated will be the most effective expenditure our country can make in achieving a durable, just peace.

JEWISH WAR VETERANS OF THE
UNITED STATES OF AMERICA,
Washington, D. C.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: You may recall that when I had the pleasure of visiting you, last year, with our newly elected national commander, William Carmen, we handed to you copies of the resolutions passed at our 61st annual national convention expressing the full support of our organization for the foreign-aid program which you have presented to the Congress in past years. These resolutions included military aid, economic aid in the form of loans and grants, technical assistance through bilateral agreements, as well as contributions to expanded technical-assistance programs of the United Nations and other types of assistance which buttress the strength of the independent nations of the world.

It is a pleasure to read your strong message to Congress setting forth your detailed recommendations for these foreign-aid programs covering fiscal year 1958. According to our convention resolutions, we would have preferred that these outlays be larger than those for 1957 instead of the decrease which you apparently found necessary.

Though we have become accustomed to terming these outlays "foreign aid," our membership is firmly convinced that this foreign aid is one of the strongest elements of our own defense and our own national interest. Dollar for dollar, these outlays contribute more than any other dollars we spend directly for our national defense; and, besides, they insure a greater likelihood of our living in peace.

We sincerely hope that the Congress will share the views and recommendations of our President on this subject and will, overwhelmingly, vote for the minimum appropriation requests you have made.

With all good wishes,

Cordially,

BERNARD WEITZER,
National Legislative Director.

THE WHITE HOUSE,
Washington, May 24, 1957.

Mr. BERNARD WEITZER,
National Legislative Director, Jewish War Veterans of the United States of America, Washington, D. C.

DEAR MR. WEITZER: I deeply appreciate the support you have expressed for the mutual-security program. In this recognition of the importance of strengthening the saving shield of freedom, you and your associates in the Jewish War Veterans of the United States of America give voice to America's determination to stand firmly against the menace of international communism.

Enactment of the proposed economic and military programs will contribute effectively both to our immediate security and to the promotion of peace in the world. Thank you for your clear expression of what you regard as being in the national interest.

Sincerely,

DWIGHT D. EISENHOWER.

It's How You Live

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. HOSMER. Mr. Speaker, some pretty sage advice was given to high-school and college graduates recently by editorial columnist Larry Collins of the Long Beach Independent. It is worth passing along to readers of these columns.

His editorial follows:

AS THEY GRADUATE

To the young person graduating from high school or college this week 65 years of age seems too distant to even consider. But if they look back on how fast their last 10 years have passed they will get an idea how fast the next 25 years will pass. By then they will be 40 years old or older. The 25 years after that will seem but a breath compared with the last 5 years.

Time passes terribly fast for people who are busy. You have to be a busy person to earn a decent living. Before you know it you are past middle age. By then you had better be set in your life work or you will be one of the unfortunates who are turned away because they are too old. That makes the years 18 to 35 years so terribly important. It makes it terribly important that young people lose no time in getting started and growing with the enterprise they choose to follow.

Oldsters who have kept pace with our changing world—and who keep clear memories of the years they have lived during those changes—have learned some valuable lessons. They were lessons learned by actual experience. Some of them were very depressing experiences. But those are the experiences that build character and teach lessons in a way that is never forgotten. It is unfortunate young people do not take the opportunity of learning these lessons by talking with oldsters—rather than learning them the hard way.

One important lesson is that far too many of us make our decisions on what we want to happen rather than on the facts which indicate our wishes are unsound. Millions of people today refuse to face facts when they are in opposition to their desires. The result is that the facts always win out and the desires are eventually recognized as impossible dreams. But precious time has been wasted.

The young people of today enter a world where they are eurged to go into debt. They hear on every radio or TV how they can get money for the asking. They are not told how they will pay back this money with 30 percent or higher interest. They are told they can enjoy the trip, gadgets, or automobile and pay later. No one tells them they could have a third or more of these benefits if they first saved the money and thus saved the interest. It takes a strong character to stand up against all the urging to go into debt.

The urge to get rich quick has wrecked many a career. The young person who has an urge for some particular vocation is fortunate. He can quickly get started and enjoy the future. But millions of young people have no such urge. They flounder around until they are middle age and then probably end up working at something that interests them little. That is the greatest reason why it is so important to learn a good trade or profession. No matter what it is, you can feel you have something definite. Drifting is a terrible way to spend your life.

We have often used the phrase, "There is no percentage in being a financial success and a personal failure." We know some outstanding financial successes who are abject personal failures. They are failures because they are not respected—are not happy in what they have achieved, and are bored. On the other hand, we know many people in the teaching profession, city employees, small-business people, and ministers who are outstanding personal successes. They live on relatively small incomes—but they live within their incomes—they enjoy their work and they are highly respected.

It is not what you earn—but how you live that counts. These words may fall on deaf ears but we could offer no better philosophy to young people starting out on the road many of us have already covered.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. MILLER of Nebraska. Mr. Speaker, I would like summarize briefly the history of the great Territory of Alaska

which I hope soon will become a valued member of our great team of States.

A possession of the United States since 1867, Alaska has had the status of a Territory since 1912. Here lies a vast area of 586,400 square miles with an undetermined population. The census of 1950 indicated a population of 128,643, but there have been some estimates as high as 200,000.

History tells us Alaska was discovered in the year 1741 by a Danish sailor commanding a Russian ship. Thereafter, Alaska was claimed by Russia.

United States negotiations for the purchase of Alaska started as early as 1855. In 1859 President Buchanan offered Russia $5 million for the unexplored wilderness, an offer which was rejected promptly.

Then in March of 1867 a treaty was signed whereby the United States agreed to pay Russia $7,200,000—a treaty which was heralded widely as Seward's Folly. Nevertheless, the actual transfer of Alaska from Russia to the United States was effected October 18, 1867. Thereafter, Alaska was called a district until 1912 when she was given Territorial rights.

Perhaps the most spectacular story in all of Alaska's history broke in 1896 when gold was discovered in quantity. In the ensuing gold rush it is estimated 100,000 Americans converged on the peninsula—with fame and gold for some—with tragedy and death for others.

The battle for Alaska statehood has been long and relentless. The first statehood bill was presented March 30, 1916, but needless to say, it came to an early demise.

The question of statehood rested then, more or less dormant, until the 80th Congress when hearings were held both in Alaska and Washington. A bill was reported out but there was no further action.

The 81st Congress held hearings in Washington. A statehood bill passed the House on March 3, 1950, but died in the Senate.

In the 82d Congress, the Senate reported out a bill which was recommitted.

In the 83d Congress, the committee reported a bill to the House. Then the Senate Interior Committee combined the Alaska and Hawaii statehood bills and passed the legislation in 1951. Request for a conference was objected to in the House and the matter tabled. Extensive hearings again had brought no tangible result.

In the 84th Congress, the House Interior and Insular Affairs Committee held 10 days of hearings on a combined Alaska-Hawaii bill and reported H. R. 2535. The bill was recommitted.

Mr. Speaker, after weighing the pros and cons of statehood for Alaska over a period of several years, I find myself more convinced than ever that Alaska should become a member of the team of States. The time has come for positive action.

There have been many arguments over the statehood question. I have studied both sides of the case with equal interest in my endeavor to get the thinking of as many of the people of Alaska as possible.

I believe you might be interested in the final results of an unofficial poll I conducted in Alaska through the cooperation of 10 radio stations and 5 newspapers in the larger cities of the Territory.

I asked the newspapers and the radio stations, as a public service, to publish or broadcast this question, "Do you favor immediate statehood for Alaska?" I requested the answers be mailed to my office in Washington, signed or unsigned. A remarkably large number—about 99 percent—were signed with name and address. Incidentally, in these days when we are trying to cut costs, I would like to report this poll was conducted without expense to the Government.

I received 1,916 replies to the question from residents of Alaska. So far as I could learn through routine inspection there seemed to be no duplication.

The vote indicated a considerable opposition to statehood as of this time. There were 522 affirmative votes and 1,394 negative ballots. Many of those who participated in the poll took the time and trouble to write long letters to set forth the reasons for their votes.

Now, we all realize that 1,916 votes would represent only a small segment of the total Alaska population. Only an overall plebiscite would furnish an accurate answer to the thinking of all the people. I had hoped that might be possible but a supporting amendment was rejected by a tie vote in the committee.

Now, may I say the unofficial poll was only one of the factors on which I based my final decision to vote in favor of statehood. While the poll was negative, the other factors were affirmative. At no time did I ever say or indicate the poll alone would govern my decision.

I found that opponents of statehood wrote longer and stronger letters than those who favored statehood. Many of them wrote that statehood now would bankrupt Alaska. Some asked for a 20-year tax moratorium before statehood. Some said they would move out if statehood were granted. Many said the new taxes necessary to support a State would ruin the Alaska economy. Those opposed seemed to be much more fierce in their attitudes than were those in favor.

If Alaska becomes a State, it will be the culmination of a promise of many years standing, according to many letters favoring statehood. Many pointed to taxation without representation, to discrimination in shipping and to so-called "colonialism."

I believe it is agreed that if Alaska does become a State, there will have to be many adjustments made. There must be a complete review and correction of the tax structure, as proposed by Gov. Mike Stepovich in his inaugural address. Alaska would lose some of those special concessions which are given to Territories but not to States. Federal workers would lose the extra pay they receive for duty outside the States.

On the other hand, there would be many advantages to statehood, particularly in view of the amendments to the statehood bill which were approved in committee—such as the extension of the land area for the new State and dropping the ban on foreign shipping which should tend to promote new industry, new population, new development of the untold resources which lie dormant in Alaska.

The last plebiscite held in 1946 indicated a small majority in favor of statehood but similar narrow margins have been true in the cases of many States. I might cite the case of my own State of Nebraska in which the issue was approved by a margin of an even 100 votes shortly before statehood in 1867.

At this time, I would like to present, as fairly as possible, a small portion of the comments addressed to me during the statehood poll:

FOR IMMEDIATE STATEHOOD

The people of Alaska have been steadily preparing for statehood for a good many years and I feel that we are fully ready to assume the responsibilities that go with statehood.

I object very strongly to the blocking efforts from outside interests.

Reason alone would indicate that Alaskans desire statehood. What reasoning man wishes for Government by edict; taxation without representation; discrimination in shipping, highway construction and use of national resources; and trial by judges who are appointed by his rulers?

I am unequivocably in favor of immediate statehood for Alaska and cannot understand why it has been so long denied us.

We do not have a vote in Congress nor a vote for president. We must depend on Federal courts for justice. There is nothing wrong with Federal courts but we have one in Anchorage for a population of 60,000 people and it is 2 years behind in its calendar. I say, let's have statehood.

We Alaskans have contributed much to the welfare of our country. Why should we be denied statehood now?

Alaska has so much to give but is stymied by the restrictions of Territorial government.

I think you will agree that Americans should not be compelled to live under a colonial system, even an American colonialism, if we are going to keep our American way of life and our American ideals.

For the sake of our American heritage and way of life and for the sake of the children and grandchildren of the American citizens who make up the entire Alaska population, Alaska should be granted immediate statehood.

We want the advantages of statehood we used to enjoy when we lived in the great State of Washington. We are disgusted with the way Alaskans are treated by selfish business interests in the States.

I can't understand why any Congressman or Senator can conscientiously oppose giving us the privilege of Statehood. As it now stands, we have taxation without representation.

OPPOSING IMMEDIATE STATEHOOD

The few people now living in Alaska would not be able to pay for the tremendous cost of statehood.

Let's leave Alaska a Territory, not make it a haven for a lot of money-hungry politicians.

We are burdened with such high taxation now there is no incentive to stay.

I definitely think Alaska is not ready for statehood and about 90 percent of the people here are opposed.

The statehood committee is organized and is being run strictly onesided.

The Congress should not turn over this vast undeveloped land to a bunch of fast operators to exploit for their own benefit.

I am not in favor of statehood for Alaska at this time but on the other hand I am not in favor of the present system of treat-

ment but I do believe the present system to be the lesser of two evils.

I am a frequent traveler in the Alaska interior and I know the majority of inhabitants are opposed to statehood but do not have the means or the communications to express their views.

On the practical side, most of us know we can't support statehood.

We got a bunch of amateur politicians trying to appeal to our Alaska pride.

We are taxed very heavy now and can't raise enough money to run a Territory. I don't know what we would do with a State.

It would be pleasant if the politicians would forget themselves for a moment and face the facts and thinking of the people.

We do not complain about being colonials nor do we feel the Federal Government has stifled our growth. There is nothing new that statehood can do for us that the Federal Government has not done for us in the past.

I favor statehood but certainly not until the Territory can manage itself in a more businesslike manner and be in position to support itself.

This is the only organization that can speak for 35,000 of us natives. We are opposed to immediate statehood because you count as permanent the transient population of 100,000 persons, and in addition, you don't allow for the other transients (Government workers) who file their applications for transfer as soon as they get here and yet because they are civilians, can qualify to vote. We natives constitute almost the entire group that "lives off the country." Why hurry? (William L. Paul, Sr., Juneau, Grand President, Emeritus, of the Alaska Native Brotherhood.)

Mr. Speaker, the Interior and Insular Affairs Committee has explored carefully the pros and cons of the question of statehood for Alaska. The bill has been reported. I hope a rule will be granted and that the House again can work its will on this important subject.

It is my hope that the bill will not be joined with statehood for Hawaii. A subject as important as bringing in a new State to the Union ought to stand on its own merits.

I have given long and careful thought to the question of statehood for Alaska. While I am convinced the people will have a rather hard struggle in the early years of statehood I believe in the end, under wise economic and political leadership, they can attain a growth and place of influence that will be on a par with the other 48 States.

It is my considered judgment that, for some reason difficult to understand, there is less sentiment this year for statehood for either Alaska or Hawaii than at any previous time. It may be the same reason that has been reflected in my poll which is about 2½ to 1 against statehood. The people have been writing me long and thoughtful letters. I believe the question most frequently raised was that of poor political leadership. They also frequently referred to the high cost of living in Alaska and the inability of the people to compete with the other States without a tremendous subsidy from the Government.

It is true Alaska's economy is pretty well based on military and Government spending. The Territory receives more subsidy from the Government than any State—subsidies for schools, health, roads, agriculture, public works, and similar items. Many of the letters I received complained bitterly about the Alaska Statehood Commission and Tennessee plan under which this group has $175,000 to spend in promoting statehood for the Territory. I believe there are many Members of Congress who feel that some rather high-pressure methods have been used by the so-called Tennessee group, who, under the original bill, would have taken their seats as Senators and Representatives from Alaska had the bill not been amended to require a new election for these important posts.

There are many who wrote suggesting that a new plebiscite be held, stating that the vote in the last election to approve the constitution and Tennessee plan was mixed with that of voting for fish traps and was not a clear-cut mandate for immediate statehood for Alaska.

Mr. Speaker, I believe the Committee has reported the best bill possible which would grant the Territory statehood. I expect to support it before the Rules Committee, and I suggest that my colleagues give their support to the bill when it comes to the House for consideration.

Murray as Consultant

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the RECORD an editorial from the Washington Evening Star of Monday, July 1, 1957.

This editorial lauds the appointment of the Honorable Thomas E. Murray, former member of the Atomic Energy Commission, as consultant to the Joint Committee on Atomic Energy. The Star joins many other newspapers and citizens in their recognition of the need for the continuance of the valued services of this expert as a public servant. It is most unfortunate that the President relied on the poor judgment of Mr. Strauss and failed to reappoint Mr. Murray. However, the Joint Committee on Atomic Energy showed wisdom and statesmanship in continuing the services of Mr. Murray to our country in this most critical field of endeavor.

The editorial follows:

MURRAY AS CONSULTANT

It is good to know that Thomas E. Murray, even though he has come to the end of his distinguished 7-year service as a member of the Atomic Energy Commission, will continue to play an active role in connection with our country's nuclear policies, military and nonmilitary alike.

This has been made possible by the decision of the Joint Congressional Atomic Committee to retain Mr. Murray as a consultant. He is eminently qualified for such a post. Although there have been deep differences between him and AEC Chairman Lewis L. Strauss, he is—like Mr. Strauss—a man profoundly and selflessly interested in developing nuclear energy in a way that will best serve our Nation and the free world at large. In that respect, dedicated as he is, he is anything but a political partisan, and for that reason, even though they are open to challenge, his dissenting opinions have a special value that commends them to the careful attention of all Americans.

These opinions, as set forth in his latest statement to the joint committee, range over a wide field. He still believes, for example, as he has believed for some years past, that Mr. Strauss and the AEC as a whole are relying too heavily on private enterprise to develop atomic power for peaceful uses. Further, Mr. Murray is convinced that our military strategy has been distorted by an excessive emphasis on superbombs and the theory of deterrence. In his opinion, limited war, not total war, is the more prominent likelihood of the nuclear age, and he therefore holds that we are making a grave mistake in not developing and producing tens of thousands of small A-weapons. Above all, although he favors putting an end to multimegaton experimental detonations, he takes the position that it would be irrational, indefensible and reckless in the extreme for the United States to join in any international agreement calling for even a temporary halt to the testing or manufacture of the smaller weapons.

Other authorities, of course, have strong arguments to offer against such views as these, and it may well be that Mr. Murray is wrong in many respects. Yet, even though some of his sharpest dissents may be oversimplified or mistaken, it is a wholesome thing that a man of his caliber and experience is not withdrawing entirely from atomic affairs just because he is no longer a member of the AEC. Certainly his advice in this field will always be worth listening to as a safeguard against complacency. The joint committee is to be commended for persuading him to continue serving the Nation in that sense.

The Scrap Industry

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. MULTER. Mr. Speaker, the House Small Business Committee recently held hearings on the scrap industry. In this connection, I was pleased to receive the following letter, dated June 26, 1957, from Mrs. J. Monsky of Middletown, N. Y.:

J. MONSKY & CO.,
Middletown, N. Y., June 26, 1957.

Hon. ABRAHAM J. MULTER,
House Select Committee on Small Business, Old House Office Building, Washington, D. C.

DEAR CONGRESSMAN MULTER: May I take this opportunity to thank you for your courtesy to me when I recently appeared before your committee. The questioning which I received showed that you not only have interest in our critical industry but a fine knowledge of it. As a member of the committee charged with the legislative responsibility of looking out for the interests of small business, you are doing a wonderful job.

I assure you that you may not receive a citation from the mammouth steel industry, or even from certain quarters of the scrap industry, but there are thousands of small dealers like me all over the country who appreciate the efforts of such a hard-working and fair-minded committee.

The feeling of many dealers like myself is that the scrap hearings are directly responsi-

ble for the recent published decision of the O. C. C. F. to alleviate restrictive purchase practices of that agency. This is a great step forward and you are to be commended for this result. We can only hope that the hearings will have the same effect on the domestic scene.

I wish you continued success in all your endeavors and want to assure you of my wholehearted cooperation at any time.

Sincerely,

LILLIAN MONSKY
Mrs. J. Monsky.

Address of Hon. Robert C. Byrd, of West Virginia, Before West Virginia Music Operators Association, Inc

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include an address which I made in Wheeling, W. Va., on Saturday, June 29, 1957, at the third annual convention of the West Virginia Music Operators Association, Inc. The address follows:

TRADE ASSOCIATIONS AND THEIR RELATIONSHIP WITH THE GOVERNMENT

Mr. Chairman, Ladies and Gentlemen: When I received your kind invitation to meet with you at your convention here today, I was very glad I was able to accept. Now that I am here, the pleasure of anticipation has been dwarfed by the cordial and friendly welcome you have given me. I was glad to accept your invitation primarily to get a chance to meet with you and to chat with you about things that concern us all. I also want to take this occasion to say a few words to you about trade associations, their place in American life, and particularly their functions relating to the Federal Government.

Trade associations, like the pleasures we get in listening to good music, are too generally taken for granted. They are not fully appreciated. Often they are inadequately supported.

But they are of tremendous importance. Most businessmen belong to at least one trade association, many to two or more. They have become an integral part in the economic and social life of the Nation, so much so that we can hardly conceive of our economy functioning smoothly without them.

How did these associations get started? Actually, of course, no one knows. It is only plausible to assume, however, that associations of businessmen are as old as business itself. As soon as 2 or 3 men started selling wool, or earthenware bowls, or metal ornaments at a primitive bazaar, we may be quite certain that quite often they got together, tossing about such questions as "How's business? What are you asking for this pitcher? Why is the quality of wool so poor this year?" Not much later producers and traders banded together for protection against bandits and pirates.

In the Middle Ages were formed the guilds of both manufacturers and merchants which might be considered more directly as the ancestors of today's trade associations. These guilds assumed a high degree of authority over their members, stipulating standards of output and rules for apprenticeship, fixing prices, and limiting output. They were a substantial power in the municipal and provincial governments in much of Europe as late as the 18th century.

However, there is obviously a vast gulf between such guilds and the trade associations as they have grown up in the United States. American trade associations are essentially voluntary in character and do not engage in such monopolistic activity as imposing prices or restricting production of individual members.

The affinity for Americans to join in groups such as trade associations was already observed more than a hundred years ago by that keen observer of American affairs, Alexis de Toqueville, who remarked in his noteworthy book, Democracy in America:

"Americans of all ages, all conditions, and all dispositions constantly form associations, succeed in proposing a common object to the exertions of a great many men and in getting them to voluntarily pursue it, and have applied this new science to the greatest number of purposes."

A few associations, mostly local in scope, developed before the 19th century, notably the Chamber of Commerce of the State of New York, founded in 1768, and the New York Stock Exchange, founded in 1792. The growth of national trade associations began after the Civil War. By 1900 there were an estimated 100 national associations in existence. By 1920 the number of trade associations had risen to more than 1,000, with many associations in the previous decade having adopted codes of ethics to promote higher standards of competitive conduct. Today there are at least 12,000 trade associations in the United States—National, State, and local.

This phenomenal growth certainly attests to the fact that these associations must be filling a genuine need. They have, in fact, adapted themselves to meet the great variety of needs of businessmen in different enterprises, needs that are constantly changing with shifts in economic conditions, public opinion, and governmental action. Although many of these functions will be familiar to you—some of them your own Music Operators Association undoubtedly undertakes for you—it may be well for us to refresh our memories as to scope of activities in which trade associations commonly engage today.

The trade association is probably first of all a clearinghouse of information that is vital to its own members. It often collects statistics on production and prices that its members need. Some of this information comes from the members themselves; often, other information is also gathered from pertinent public and other private sources. It may carry on any of a great range of advertising programs, making the public more favorably conscious of the products manufactured by its members. It often carries on educational programs of various kinds. This involves, on the one hand, providing information and suggestions for better business practices to members of the association themselves, and on the other, information to a wider public. Thus, trade associations in the food field are generous in furnishing carefully tested recipes to home economics instructors and to food editors in the daily papers. A trade association of savings banks will assist schools in carrying on campaigns encouraging thrift.

Closely related is the whole field of public relations, which includes a host of devices designed to create a more favorable public response to the particular industry involved. These devices run the gamut of news releases, plant tours, correspondence, speakers' bureaus, and a constructive approach to complaints.

Many of the larger trade associations now carry on sizable research projects on behalf of their members. The American Dairy Association, for example, is sponsoring a major research project designed to maintain and expand markets for milk and its products. The National Lumber Manufacturers Association has undertaken many projects of a technical nature, such as development of cigarette burn-proof table tops, utilization of sawmill waste, load tests of 50-foot timber trusses. These research projects are of greatest benefits to the small members of the associations who, obviously, cannot afford the necessary research personnel and facilities on their own. Here again the truth of the familiar motto, "In union there is strength" is borne out.

Trade associations have assisted their members in improving their accounting methods, in standardizing and simplifying their operations, in providing employment services, in cooperating with schools in providing employee training, in developing more effective employer-employee relations. They sometimes provide a certificate for products that meet specified standards.

But the function, or rather the group of related functions, of trade associations, I would like to concentrate on most here and now, is their role in governmental affairs. This is a tremendous and a complicated role. It is a well-known fact that, for better or worse, Government and business have come into an ever closer relationship, with more and more points of contact, over the years. The growth of antitrust and related legislation designed to assure fair and reasonable competition; the regulation of various industries such as railroads, airlines, radio and television, electric and gas utilities; the protection of consumers and investors by such agencies as the Food and Drug Administration, the Federal Trade Commission and the Securities and Exchange Commission; the impact of taxes on corporations and other businesses; the reliance of the Government on industry for the materials and equipment needed for a successful prosecution of war and for an effective national defense—these are just a few of the illustrations of areas in which Government and business have impinged more and more on each other. In almost every instance, trade associations have performed an important service as a "middle man" between the Government and the particular industries involved. They are the ones who keep their membership informed as to legislation, both that which is passed and that which is proposed, and administrative action, affecting their members. They are the ones whom Government officials often turn to to get expert opinion on industry matters, and to obtain consultants, "dollar-a-year men," and other assistants needed in a war or defense emergency. They are frequently called upon to supply data essential for administrative action.

We often think of trade associations as lobbyists. Now, at first glance this sounds evil. The term "lobbying" has come into bad repute. But this is due largely to a few relatively isolated instances of unethical pressure having been brought to bear on individual Members of Congress, or other officials of the Government. Actually there is nothing improper about trade association representatives informing the Members of Congress and officials in the executive branch of the Government, just how they feel a specific legislature measure or executive order will affect the businesses in their own industry. On the contrary, no better way has yet been devised for Government officials to get, in a quick and efficient manner, a well-focused presentation of a particular industry point-of-view. It is vital for Government officials to have these views if they are to pass on legislative proposals with intelligence.

Trade associations not only furnish Government officials with industry opinion; they also supply the Government with a great deal of invaluable statistical information, information which is then, in most instances,

made available to the whole American people. Take, for example, probably the single most convenient official compilation of statistics put out by the Government, the annual Statistical Abstract of the United States. In the back of that book are listed the sources of statistics used in the tables comprising this volume. You would be amazed at the number of trade associations listed there. To mention only a few, there are the American Iron and Steel Institute, the American Petroleum Institute, the Association of American Railways, the Automobile Manufacturers Association, and the National Lumber Manufacturers Association. These associations, and many more, compile and publish statistical information that is relied upon implicitly by Government officials in their day-to-day operations. Without these data, our stock of information about economic trends would be seriously deficient. Moreover, trade associations have been very helpful in assisting the Bureau of the Census and other official statistical agencies in deciding what information would be most useful for them to obtain and in assuring the cooperation of their members in the gathering of the requisite statistical data.

Of course, the trade association, as a middleman, does just as effective work in transmitting governmental views, laws and documents, to its members, as in giving the Government the benefit of industry statistics and viewpoints. Many trade associations have a legal branch whose primary obligation it is to keep their members informed of Federal, State, and local legislation, actual and proposed, that is pertinent to their operations. By keeping their membership thoroughly informed as to governmental policies and practices, trade associations frequently are helpful in a kind of watchdog operation over governmental affairs. They are able to, and have, pointed out cases of governmental waste, duplication, and inefficiency, which can then be more expeditiously corrected.

I have already mentioned, in a general way, how useful trade associations have been in the national defense effort. I think this is important enough that I should like to cite a few examples, again indicating the variety of trade association activity. In World War II, the National Electrical Contractors Association surveyed 6,000 electrical contractors to find 750 firms qualified to fill war orders. The American Association of Nurserymen gave the Army advice on plants and shrubs to use for camouflaging important civilian and military installations. The National Restaurant Association revised the Navy cookbook. The Association of General Contractors helped the Army develop a corps of men trained in the care of heavy construction equipment. Many of you, I am sure, could add instances of which you are personally familiar.

In concentrating as I have, and I believe, rightly so, on the constructive work done by trade associations, particularly in their dealings with governmental groups and agencies, I would not want to leave the impression that trade association activity has in each instance been in the public interest. There is in fact always the danger to be guarded against of collusion in terms of fixing prices or quantities or standards of production, which would clearly be in violation of the antitrust laws. There have been a few court cases in which trade associations have been prosecuted because of such unlawful activity. However, the percentage of trade associations that have become thus involved is very small and these court cases have made it reasonably clear as to what the proper limits of trade association activity are.

All in all, I am sure that we must agree that the record of trade associations in this country is an admirable one. The activities they have undertaken in the public interest are legion. They have facilitated the smooth functioning of business operations in hundreds of fields. They have made possible a mutual understanding between business and Government that would be quite inconceivable in their absence. I have every confidence that they will continue to perform ever more efficiently and usefully in the years to come.

Our Irradiated Children

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. DINGELL. Mr. Speaker, I believe the amazing and enlightening article by Drs. Jack Schubert and Ralph Lapp, "Our Irradiated Children" which appeared in the June 17, 1957, issue of the New Republic is of extreme interest and importance. The article is a condensed version of a chapter from their book Radiation: What It Is and How It Affects You. In order that as many people as possible may read this commentary under unanimous consent I insert it in the RECORD at this point:

OUR IRRADIATED CHILDREN

(By Jack Schubert and Ralph Lapp)

No mother would knowingly increase the chances that her child might eventually develop cancer, leukemia, bone disturbances, or inability to produce healthy offspring. Yet the sober facts are that thousands of infants and children in the United States are needlessly exposed to more radiation in one year than would be allowed atomic energy workers in a lifetime.

Where do these needless excessive radiation exposures to children take place? The answer is simple: usually in the privacy of the physician's office or in the hospital. How long has this situation existed? The answer: at least since 1907, when irradiation was first used to treat an enlarged thymus in an infant. Has the overuse of radiation to children decreased since the 1940's when information on radiation hazards became universal? Here again the answer is simple but unbelievable: excessive radiation dosages to children have increased as shown by surveys of radiation practices made in earlier years and up to the time of this writing.

There are at least three important reasons for the exceptionally hazardous nature of radiation exposure to young, growing persons: (1) Their tissues are generally more responsive to radiation effects than are those of adults; (2) their long life expectancy means that the damage of a delayed radiation-induced injury is far more important than it would be in the case of one whose advanced age makes what may happen in 20 years a matter of academic interest only; and (3) the accumulation of radiation does to the reproductive organs of children means that the chances of passing on hereditary defects to their descendants are enhanced.

It has been estimated both by Dr. Stanley H. Clark, medical physicist at the Cedars of Lebanon Hospital in Los Angeles, and by the United States Public Health Service, that 25 million diagnostic X-rays are given per year, excluding those in mass chest surveys, and of these 5 million are fluoroscopic. Of these 5 million, about 1.5 million are of people in the 0-to-30-year age group. Further, of the 4 million treatments using X-rays which are made in 1 year, 1 million are for nonmalignant disorders such as warts, skin conditions, infections, enlargement of the tonsils, and many others.

In order to get perspective on the magnitude of the radiation doses given some children, let us take as a guide the recommendations made by the eminent Committee on Genetic Effects of Atomic Radiation in their report issued in 1956 by the National Academy of Sciences:

"This report recommends that the general public of the United States be protected, by whatever controls may be necessary, from receiving a total reproductive lifetime dose (conception to age 30) of more than 10 roentgens of manmade radiation to the reproductive cells.

"Of this reasonable (not harmless, but reasonable) quota of 10 roentgens over and beyond the inevitable background of radiation from natural causes, we are now using on the average some 3 or 4 roentgens for medical X-rays. This is roughly the same as the unavoidable dose received from background radiation. It is really very surprising and disturbing to realize that this figure is so large, and clearly it is prudent to examine this situation carefully. It is folly to incur any X-ray exposure to the gonads which can be avoided without impairing medical service or progress."

Leukemia is a rare disease in which uncontrolled overproduction of the white blood cells occurs. It is invariably fatal but may run its course over several years. It may be induced in animals by exposure to a large dose of radiation or small repeated doses over periods of months or years. In the group that was 0 to 19 years of age at Hiroshima, 21 cases of leukemia were found by the end of 1954—9 years after the dropping of the bomb. These were children who were exposed to radiation within 1,500 meters of the center of the explosion, which means that they received dosages of 300 r or more. Not more than two cases of leukemia would have been expected in an unexposed Japanese population of the same age and numbers. Leukemia has been observed in children who were exposed to X-rays in infancy during treatments for enlargement of their thymus glands. The connection between X-rays used to irradiate the thymus and the increase in leukemia which results has been clearly pointed out in the reports of the National Research Council issued in 1956.

Several cases of cancer of the thyroid have been reported among children years after they had been given X-ray treatment around the neck for nonmalignant conditions such as enlarged tonsils, suspected enlargement of the thymus gland, adenoids, bronchitis, enlarged glands in the neck, deafness, and many other disorders. Many of the children were less than 2 years of age when they received radiation. The first indications that there might be a connection between cancer of the thyroid and irradiation of the neck were reported at Memorial Hospital in New York by Doctors Duffy and Fitzgerald in 1950. They found that most of their patients with this disease had received irradiation to the thymus some time between the 4th and 16th month of life.

On the average, it took 7 years after the irradiation for the thyroid cancer to appear. Studies reported by Dr. Dwight E. Clark, of the University of Chicago, have confirmed the increased incidence of thyroid cancer from a study of many more cases. As little as 200 roentgens seems to have produced cancer; this is a far smaller dose of radiation than had ever before been observed to produce a cancer in human beings.

X-RAY AND THYROID CANCER

Is cancer of the thyroid increasing? Dr. Clark marshals evidence to show that it is indeed increasing rapidly:

"Although it is still a relatively uncommon condition, the number of cases diagnosed is becoming more frequent. * * *

From 1900 through 1930 only eight cases of carcinoma of the thyroid in individuals under 15 years of age were reported * * * from 1931 to 1940, 34 cases * * * from 1941 to 1950, 50 cases. * * * The recent increase is so large, * * * it must represent a true increase."

The increasing incidence of carcinoma of the thyroid in children and adolescents seems to correlate with the greater use of X-ray for benign conditions about the head, neck, and upper thorax.

Studies are still continuing in order to pin down the correlation between thyroid cancer and prior radiation. The British Medical Council has reported cases of cancer of the pharynx and larynx in patients who have had X-ray treatments around the neck for benign conditions such as tuberculous glands. In some cases the cancers did not develop until more than 30 years after the radiation, and there was an overall average of 20 years.

A similar hazard arises from use of the radium applicator, a mechanical device which holds a small quantity of radium salt. The applicator is designed for insertion into the body cavities or application on the skin whenever radiation treatment of a selected region is desired. One type of which at least 2,000 are in use in the United States and Canada, is designed for the treatment, usually in children, of excessive nasopharyngeal lymphoid tissue. The dosage in roentgen equivalents delivered by the device was directly measured by the physicist, Dr. C. B. Braestrup of the Department of Hospitals in New York City, who found that during the usual course of treatment the applicator delivered as much as 20,000 roentgens to the surface of the tissue and from several hundred to several thousand roentgens deep within the tissue. Patients received repeated treatments, some at yearly intervals.

RADIUM RACKET

We must point out that treatments by radium applicator are so profitable that in some cases financial, rather than medical, considerations may suggest its use. Read what a nose-and-throat specialist, with an active practice, Dr. K. Day, of Pittsburgh, wrote in 1950:

"Over $2 million have been invested by the medical profession in radium applicators. * * * The applicators can now be rented for 1 or 2 days a month, when they can be used successively on an office full of patients and can become a lucrative source of income to the user. * * * The use of radium applicators in the nasopharynx has definitely reached the racket level. * * * It has apparently become the custom to use them for the treatment of symptoms rather than pathologic conditions and, too frequently, the nasopharynx is not even examined before irradiation."

Radiation treatment for skin conditions, begun within a year after roentgen's discovery, creates a special hazard in the case of children. In their widely respected book Therapeutic Radiology, Drs. Holmes and Schulz say this about the use of radiation for treatment of nonmalignant skin conditions:

"In the treatment of benign cutaneous lesions * * * no matter how annoying they are, the fact should be borne in mind that roentgen rays can have a permanent deleterious effect on all tissues, and the possible consequences of treatment, particularly if overdone, must carefully be weighed against the benefit to be expected. It has been said that the skill of the dermatologist varies indirectly with the frequency with which he uses X-rays in the control of benign dermatologic diseases. * * * This agent should never be used in the ordinary dermatologic conditions until all other means of control have been exhausted."

As with other cases the effects of skin damage from radiation may not show up for 10 or 15 years.

Remember that other effects may follow later, including leukemia or skin cancer. Yet these treatments are still given. However, whether more or fewer people are being treated can be revealed only by a comprehensive survey. We do know that at least a million cases of radiation treatment for benign conditions are carried out yearly in the United States alone.

The radiation striking the patient is not always localized, so that many organs other than those under treatment also receive radiation. The radiosensitivity of the blood has already been described. The bone, in general, is quite resistant to radiation damage. It appears that doses of about 3,000 r are needed to induce bone cancer. However, young growing bone is much more sensitive to growth interference, and this is especially true of the very active growing ends. Extreme care must be taken in the amount of radiation given to children for dental examinations. It is possible that repeated dental X-rays to children may so damage the tissues of the gums that serious aftereffects may be expected to develop in their adult teeth.

THE UNBORN CHILD

The younger the child, the greater is the sensitivity to radiation. This brings us to a very important question:

What is the biological and medical evidence for radiation damage to the unborn child? It aids in our understanding to examine evidence in cases where very heavy radiation doses were given to the abdominal regions of pregnant women for cancer therapy. Here the relationship between the irradiation and the result is obvious. Of many examples, we cite the 1929 report of Dr. L. Goldstein and Dr. D. P. Murphy. Out of 75 children born to the heavily irradiated mothers, 38 showed some obvious degree of malformation. Sixteen were microcephalic idiots—a condition resulting from a partial failure of the development of the brain, so that as a result the head is smaller than that of a normal baby. Ordinarily only one such idiot is born in 10,000 births. Studies of children who had been irradiated in utero during the atomic bombings in Japan also showed an increased incidence of abnormalities.

A survey is now underway in England to study the case histories of mothers and children in which the children died from malignancy before the age of 10 during the period from 1950 to 1953. With one-third of some 1,500 cases already investigated Dr. Alice Stewart and her associates conclude that: "The present investigation suggests that besides causing genetic damage, this apparently harmless examination [X-ray] may occasionally cause leukemia or cancer in the unborn child."

These British findings need to be extended, but if they are confirmed it means that roentgen dosages to the fetus are much more damaging than previously thought, and a higher degree of precaution is mandatory in antenatal X-ray examination of women. Our concepts of safe dosages of X-rays will have to be revised so far as the X-ray diagnoses of pregnant women are concerned.

Until now we have mainly examined some of the effects on blood, skin, and bone to children who were given radiation for treatment of benign conditions. The most inexcusable situation, however, is the giving of excess doses of radiation to children simply in the course of routine examination or for a trivial and unnecessary item like shoe-fitting.

According to United States Public Health reports, there are approximately 10,000 X-ray shoe-fitting machines in use in the United States. Obviously it is important to know precisely the radiation doses received by the children as well as by clerks and other persons in the vicinity.

Careful measurements of the radiation dosage delivered by X-ray shoe-fitting machines were reported in Boston in 1949 by Charles R. Williams, an industrial safety expert. He found that dosages to the foot ranged from 0.5 to 5.8 roentgens per second. For a 22-second exposure, which is commonly used, the feet received from 10 to 116 roentgens. Remember too, that one child may have his feet examined many times while trying on different shoes. Similar dosage measurements have been reported by the United States Public Health Service, which states that the average dosages to the children's feet are between 7 and 14 roentgens per exposure.

The use of these machines cannot be condemned too strongly, and it is a measure of the ineffectiveness of regulations and an amazing laxness or ignorance that the use of the machines has not been outlawed everywhere. It is encouraging that some states, such as Pennsylvania, have banned them.

THE HAZARDS OF FLUOROSCOPES

The use of diagnostic X-rays in pediatric practice presents a very disturbing picture. Let us start the story with the report of H. M. Parker, physicist now in charge of radiation safety at the Hanford atomic energy works, and Dr. Franz Buschke, radiologist, of Seattle. In 1941 they presented a joint paper on "Possible Hazards of Repeated Fluoroscopies in Infants." They pointed out that some pediatricians give monthly fluoroscopy to infants the first 6 months of life, and that some continue through the first and second years. The potential hazard of fluoroscopic examination to infants is very high, particularly in view of the large dosage delivered. This hazard is increased because "even many specialized radiologists do not know the actual output per minute of their diagnostic machine."

In order to check the potential hazards, Buschke and Parker measured the actual amount of radiation delivered during fluoroscopic examination of infants. They investigated seven machines selected at random and used in offices of reputable pediatricians. Not all the 7 pediatricians did routine or even regular repeated fluoroscopies, but Buschke and Parker found that all 7 had one thing in common—none of them knew how many roentgens their machines were delivering.

Here are the facts: The average dose given by all the machines was 25 roentgens per minute. Assuming that the average rapid fluoroscopy by an experienced examiner takes about 20 seconds, this means an average of 8.3 roentgens, or 100 roentgens in the first year of life (if routine monthly fluoroscopies are done). However, Buschke and Parker state that "we know from experience that some of the fluoroscopies last considerably longer." They found one machine delivered radiation at the rate of 200 roentgens a minute—a dose rate high enough to cause death from radiation within a month following a 10-minute continuous exposure.

It was further mentioned by Buschke and Parker that even though the measured doses decrease in passing through the infant's body, the most endangered organs such as the ovaries, testicles, spine, and extremities in infants are quite close to the radiations.

It is often very difficult or impossible to pin down damage due to radiation. In reference to doctors who point to pictures and records of all the healthy babies which were under their care as proof that radition is harmless, Buschke and Parker wrote:

"The appearance of a baby does not say anything about the future development of the child. Since we do not expect mainly gross variations but more a general but immeasurable deterioration in those who will be born, the normal appearance of a baby and even of an adult is meaningless."

Buschke and Parker's paper was published in 1942. Did it have any effect on the overuse of fluoroscopy? A survey has recently

been made of Drs. Vallaer and Zavon, of the College of Medicine of the University of Cincinnati. Writing in the Journal of the American Medical Association for October 1956, Dr. Zavon gave a preview of their findings: "What is most disquieting is that the situation described in 1955 is virtually unchanged from that described by Buschke and Parker in 1942."

WHAT CAN YOU DO?

If you are a parent or expect to be one, you may by now be asking yourself what you can do to prevent having your children, born or unborn, exposed to unnecessary and perhaps harmful radiation. There are cautionary procedures which you can follow to minimize the hazards of radiodiagnosis and radiotherapy.

You may be somewhat embarrassed about examining your doctor on his knowledge of radiation, but it is well to remember that the risks involved in continuous exposure before the fluoroscopic screen are much greater than from an ordinary X-ray photo, and to find out first of all which form of irradiation is to be used. Our advice is to follow these few rules:

Rule No. 1: Ask your doctor whether he is going to take X-ray photos. If he says "No," and uses an X-ray machine, he is using fluoroscopy. In that case it may be well to pause and consider.

Rule No. 2: If you suspect that you are pregnant, tell the doctor that you wish to have the routine X-ray examination postponed.

Rule No. 3: If you know that you are pregnant, do not allow any X-rays unless they are quite localized, as to an extremity, or unless there is preferential shielding of the womb or unless the condition is so critical as to warrant the calculated risk.

Rule No. 4: If it is necessary for you or your children to undergo radiotherapy, ask if the condition being treated is malignant. If it is nonmalignant, ask the doctor about alternative modes of treatment.

Rule No. 5: Tell the doctor that you are keeping a personal radiation diary for yourself and your family. * * * Ask him to give you in writing a summary of the X-ray or radium treatment, including a specification of the roentgen dosage, the area treated, and an estimate of the doseage to the gonads.

Let us conclude with the sage advice of Dr. R. W. Miller of Rochester.

"X-ray irradiation is atomic energy. By its overuse in pediatrics a child's tolerance for this physical agent may be dissipated. The child of today faces a life of repeated exposures to atomic energy. Even if he does not become an aviator exposed to the elevated cosmic ray dosage of high altitudes, or a worker in industry where X-rays or radioactive power are employed, or a hospital or laboratory worker exposed to X-ray machine emanations and radioisotopes, he is still apt to be a soldier or civilian involved in an area of radioisotopes contamination, or a patient who needs diagnostic fluoroscopy or X-ray therapy. With the possibility that atomic energy will be so frequently encountered in the life of the immediate future, it would seem advisable to limit elective [pediatric roentgen] procedures as much as possible."

REA Interest Rates

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I would like to offer for consideration of my colleagues resolutions recently adopted by the delegates of the Dairyland Power Cooperative at La Crosse, Wis. At a time when the House prepares to consider the Hells Canyon dam legislation it is fitting that we consider the recommendations of 93,041 patrons of electric cooperatives in Wisconsin, Minnesota, Iowa, and Illinois. In considering those recommendations it is also important to remember that the total of the money disbursed to the Rural Electrification Administration by this cooperative since its origin amounts to $10,696,046 which includes total interest payments of $3,603,895 and prepayments on principal of $1,565,810.

If we could count on the same sort of returns on our loans to our friends overseas as we get from our rural electric cooperative patrons I am confident there would be less question about making foreign loans. I recommend a study of this record of repayment especially to those of my colleagues who may feel that it is consistent to offer waivers of interest and even principal payments to our foreign friends and at the same time consider increasing the rate of interest charged against our own citizens who have achieved so much in providing electric service for themselves.

The resolutions follow:

RESOLUTION ADOPTED AT THE MEMBERSHIP MEETING OF THE DAIRYLAND POWER COOPERATIVE HELD JUNE 5, 1957, AT LA CROSSE, WIS.

STABLE AND FAIR REA INTEREST RATES

Resolved, That the delegates to the Dairyland Power Cooperative assembled in its annual meeting approve and endorse the remarks and position stated by President John E. Olson in his report to the members, relating to interest rates, as follows:

"Another controversy shaping up is over REA interest rates. You are all familiar with this issue. When the REA program was established, interest rates were legislated which would provide that they equal the average cost of money to the Government on long-term borrowings. In 1944, because of the redtape involved in establishing each new advance of REA loan funds at a different rate of interest, the Pace Act was passed pegging future interest rates at 2 percent. This 2-percent rate was established based upon a long-term average rate of interest cost to the Government. The Pace Act was a revision of the REA Act which recognized the 8 years of REA experience and was calculated to project the REA program into the future on a long-range basis. In addition to establishing a permanent 2-percent interest rate, the Pace Act changed the amortization period from 25 to 35 years. At the moment of the adoption of the Pace Act money was costing the Government considerably less than 2 percent, and on the average has been less than 2 percent since then. As a matter of fact, the Government has made a profit of $47 million on REA loans as of the end of 1956.

"However, during the past 3 years as a result of the hard-money policy of the national administration, interest rates have, temporarily at least, increased above 2 percent. Judging from history, it is doubtful that such hard-money policy will be permanent. At any rate, the temporary effects of such political expediencies are not a proper justification for upsetting the long-range REA program.

"As you might expect, the hue and cry was immediately set up, by those wishing to embarrass REA, that interest rates should be increased. We recognize that loans at 2 percent today are causing withdrawals from that $47 million profit made by the Government on previous REA loans. But we must recognize, too, that REA loans are and must be long-term loans. There may be withdrawals, and there may be increases over the years in the profit made by the Government on a permanent 2-percent interest rate on REA loans. However, we supported the Pace Act in recognition of this fact of life, and we fully expect that the Congress will recognize that in the long run the 2-percent rate is a valid one in protecting the interest of all taxpayers.

"Where does this hue and cry come from? Certainly not from those interested in the welfare of our rural citizens. Certainly it does not come from those who have seen and appreciate the transformation that cooperative rural electrification has brought to rural America. Certainly not from the average taxpayer who recognizes that programs, such as the REA program, are building the economic power of millions more Americans to help them contribute toward the cost of government.

"Each and every member cooperative and Dairyland has a great stake in the outcome of this issue. Two per cent interest on principal over a 35-year period amounts to a very large interest bill. For the calendar years of 1955 and 1956, for instance, Dairyland's expense for interest amounted to more than 13 percent of total operating expenses."

RESOLUTION ADOPTED AT THE MEMBERSHIP MEETING OF THE DAIRYLAND POWER COOPERATIVE HELD JUNE 5, 1957, AT LA CROSSE, WIS.

ATOMIC ENERGY

Whereas the dedicated purpose of Dairyland Power Cooperative to improve the standard of living of rural people will be advanced and nurtured by the early development of low-cost fuel through the use of atomic energy; and

Whereas the Federal Government has already invested $16 billion in the development of the use of atomic energy, and is in the most advantageous position to immediately proceed with the final development of atomic energy in the generation of electricity on a basis that will make such processes freely available to all types of organizations generating electricity on a fair and equal basis, regardless of size or financial ability of such organizations; and

Whereas it is our judgment that it is the responsibility of Congress to carry on a positive action program for the research, development, and production of electricity from atomic fuel under direct Government mandate and under legislation authorizing sufficient funds to build and operate a number of variable-sized generating stations throughout the United States and to continue their operation until the desired competitive price status of the energy produced has been attained: Now, therefore, be it

Resolved, That the Dairyland Power Cooperative go on record urging Congress to enact into law Senate bill 151 and H. R. 2154, which would permit and enable the Government to face up to its responsibility to the people of making finally available processes for the generation of electricity from atomic energy.

RESOLUTION ADOPTED AT THE MEMBERSHIP MEETING OF THE DAIRYLAND POWER COOPERATIVE HELD JUNE 5, 1957, IN LA CROSSE, WIS.

DEVELOPMENT OF HELLS CANYON ON THE SNAKE RIVER

Resolved, That the delegates to the Dairyland Power Cooperative assembled in its annual meeting approve and endorse the resolution of the board of directors relating to Hells Canyon adopted at its meeting of April 18, 1957, as follows:

"Whereas the Congress of the United States will act at its present session on authorizing legislation to construct a high

dam at Hells Canyon on the Snake River; and

"Whereas the proper legislative test to apply to any project like the proposed high Hells Canyon Dam is whether it will provide for the fullest proper use of natural resources and whether private interests are willing and able to do the job as well as can be done by Federal development; and

"Whereas the Federal Power Commission has granted a license to Idaho Power Co. for construction of small, low dams as an alternative to a single high Federal dam despite the findings of its hearing examiner, after a year of hearings, that the best development in the public interest would be a single high dam such as proposed in Hells Canyon legislation; and

"Whereas we heartily concur with the examiner that a high dam providing 2,880,000 more acre-feet of storage for flood control, that would provide almost 40 percent more power; that would permit ultimate sale of the power at less than half the cost compared to projects authorized by the Federal Power Commission, is clearly a superior project in the public interest, particularly because it would be part of a long-term integrated development of the Snake River; and

"Whereas the examiner's reason for recommending approval of a Federal Power Commission license for private development was only because he personally didn't think Congress would authorize promptly the Federal development;

"Whereas Wisconsin, Minnesota, Illinois, and Iowa farmers, as well as farmers in 11 other Midwestern States would realize a saving of approximately $8.40 per ton in their purchase of plant food as a result of a major development of the phosphate resources of this area which would utilize the low-cost power from a Federal dam, but could not practically utilize higher cost power and lesser available capacity from private development; and

"Whereas in 1957, 16 farmer-owned cooperative organizations serving the plant food needs of 2 million farmer patrons in 15 Midwest States have already started development of the phosphate resources of this area but find the cost of concentrating superphosphates at the plant cost $2.10 per ton more for each additional mill in kilowatt-hour cost and the difference between cost of power available from Federal development averages 3 mills compared to 7 mills from private development; and

"Whereas low-cost power would increase the percentage of estimated phosphate deposits feasible for development by more than 300 percent, and such differentials in both price and available supply may often determine whether or not a farmer can afford to follow good soil conservation practices; and

"Whereas Idaho Power Co. already has applications pending for rapid tax write-offs on 2 of its proposed 3 small dams which at 6 percent over 50 years would yield a total subsidy at the expense of taxpayers of more than $325 million or roughly the cost of the Federal high dam, with the further expectation that a similar subsidy will be applied for if it should build the third dam it proposes; and

"Whereas the private development represents partial, piecemeal and less than maximum integration of the potential of our great American water resources at ultimately much greater cost to the taxpayers of the Nation; and

"Whereas this stretch of the Snake River represents the greatest remaining potential dam site in the Nation; now, therefore, be it

"*Resolved*, That we, the members of the board of directors of Dairyland Power Cooperative, which serves more than 90,000 rural families with their wholesale electric power needs in the States of Wisconsin, Iowa, Minnesota and Illinois, do hereby strongly urge that our representatives in the Senate of the United States Congress, and our representatives in the House of Representatives in our United States Congress, do actively support enabling and authorizing legislation to provide for the construction of the high Federal dam at Hells Canyon under auspices of the United States and that construction be authorized with the least possible delay."

The American Merchant Marine

EXTENSION OF REMARKS
OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. MAGNUSON. Mr. President, much has been said and written since World War II about the importance of maintaining a strong merchant marine. But seldom has that subject been driven home more strongly than is done in 2 prize-winning essays written by 2 students in my home State. As a result, Sharon Joh Poulson, 10405 56th Avenue S., Seattle, and Ronald Allen Bechtol, 1908 33d Street, Bellingham, have been awarded national prizes in the 1957 Harold Harding memorial essay contest.

Miss Poulson will receive a round trip to the Hawaiian Islands in a ship of the Matson Line, and Mr. Bechtol a coastwise trip in a vessel of the Moore-McCormack Lines, Inc.

I ask unanimous consent that both essays may be printed in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

THE AMERICAN MERCHANT MARINE—ITS IMPORTANCE TO THE AMERICAN FARMER, MINER, AND MANUFACTURER IN WORLD TRADE

(By Sharon Joy Poulsen)

The American Merchant Marine consists of ships of all types which are privately owned and operated, and are sailing under the American flag. They are available to carry passengers and commerce and to serve in time of need as a transport auxiliary to the United States military forces. The merchant marine is our ocean pipeline in time of peace, as well as in time of war.

The Government of the United States helps to maintain an American merchant fleet because it is essential to our commercial welfare. Our Nation's ocean-going passenger and cargo fleet is also indispensable to our national defense and security.

The American steamship companies help the American shipper—whether farmer, miner, or manufacturer—by assuring him of prompt, regular, dependable service; sales and promotional aid abroad; and equality of rates, regardless of the amount of cargo shipped. We cannot be assured such service, or of such rates, without an American-flag merchant marine. Nor could we be assured with a weak and ineffective merchant marine.

Neither in peace nor in war can America depend upon foreign countries for its ocean transport. To do so under present world conditions would be to invite disaster.

The American merchant marine is sufficient to carry its domestic waterborne commerce and a substantial portion of the waterborne export and import foreign commerce of the United States as well as to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign waterborne commerce at all times.

Our domestic economy is dependent upon foreign trade. Approximately one-tenth of all United States produce is sold abroad; but in some of the larger industries, foreign trade accounts for as much as 35 to 53 percent of all sales.

Our industry is vitally dependent upon ocean transport, both for the import of essential raw materials and for the export of our industrial and agricultural products to world markets. Goods from farms are desperately needed in war-torn and hunger-ridden areas.

The true measure of a port's prosperity is its oceangoing world commerce. It is not alone the shipowners and operators, the shipyards and manufacturers of shipping machinery and parts, who benefit financially. Agricultural areas of the United States have not always been so apt to recognize this fact as have those sections of the country closer to the seaboard. It is good insurance to depend on American ships to transport beef, wheat, cotton, and other farm products to the markets of the world. During the years 1949–51, exports of cotton amounted to 37 percent of the total production; of wheat, exports amounted to 35 percent; and of tobacco, 26 percent.

Future prosperity of the farm population is dependent on the activity of the merchant marine. Farmers have all sorts of new machinery and can produce more than ever. If the United States has ships to carry products to the world ports, the farmers will enjoy a scale of living which was undreamed of in the past. But if he had to depend on the domestic market, the farmer's prospects of a golden age would vanish into thin air.

The miner is faced with the same problem as the farmer: the domestic market cannot possibly support him. He must rely at least partially on foreign trade. The miner makes use of the merchant marine in exporting metals, ores, and other minerals. He also depends on the manufacturer to provide tools with which to mine these minerals. With the miner depending on him, the manufacturer is dependent upon the merchant marine to import the raw materials necessary to produce these tools.

Our industrial society is dependent upon world commerce and the imports of raw materials for our factories and our mills. American industry imports 55 necessary raw materials from all parts of the world. Some of these are manganese, without which high quality steel could not be produced; cobalt and columbium, necessary for the production of jet aircraft engines; chromium, without which stainless and heat resistant steels could not be produced; and nickel.

Of the 20 alloying elements necessary for steel production, the United States is deficient in about a dozen. The United States is self-sufficient in approximately 9 out of the 38 *critical* industrial metals and minerals. We import two-fifths of our copper and nearly one-third of our lead and zinc. These products were all classified as strategic minerals by the Munitions Board. We are almost entirely dependent upon foreign sources for our tin, nickel, and platinum. Eighteen out of thirty-seven most important materials in the telephone come from abroad.

An American-flag fleet is necessary to return basic materials of various types: cork, tin, copra, rubber, and coffee.

In America's vast automobile industry, ships are invisible helpers at either end of the assembly line. They bring in raw materials which are so necessary for the manufacture of the products, and they carry out exports of automobiles, trucks, buses, parts, accessories, and equipment. In 1952, the exports of the automobile industry alone

totaled almost a billion dollars. Of the 184 raw materials needed to manufacture a car, 94 of them must be imported. Three-hundred-odd products from 56 foreign countries are used in making American automobiles.

In all phases of the national life of the United States, the American Merchant Marine is a powerful tool for the production and for the continuance of additional prosperity. We cannot survive without ships.

THE AMERICAN MERCHANT MARINE—ITS IMPORTANCE TO THE AMERICAN FARMER, MINER, AND MANUFACTURER IN WORLD TRADE

(By Ronald Allen Bechtol)

If you have ever watched a great ship unloading at a busy port, you probably did not stop to think how important that ship and others like her are to the prosperity of our Nation. The average American has little idea of the immensity of the services that the merchant marine provides both at home and abroad, even though he feels its influence daily.

Farmer, miner, and manufacturer alike are largely dependent for their prosperity upon the services provided by the ships of the American merchant marine. Passenger liners carry a small amount of the Nation's cargo, but the greatest bulk is handled by ocean freighters, the workhorse of the merchant marine, which maintain scheduled runs to nearly all parts of the globe. Facilities are available on them for nearly every kind of bulk produce imaginable. The familiar tramp steamer, which has no definitely scheduled route, is another cargo ship which can, and will, handle almost any task. Nearly all liquid cargo is transported on tankers and supertankers. Temperatures in their holds can be maintained at a point exactly suited to the materials being carried. Reefers, or refrigerated ships, are equipped with refrigeration units which enable them to safely carry perishable products for long periods of time. These ships and more constitute perhaps the greatest merchant marine the world has ever known.

The American farmer, miner, and manufacturer form a natural partnership with American shipping. The ships of the merchant marine provide the vital link between our economy and that of other nations. For example, in 1952 our farmers exported one-half of the rice crop, two-fifths of the wheat, and one-fourth of all cotton and tobacco. Also important to our farm economy are exports of soybeans, tallow, raisins, and barley, to name a few. It is apparent, therefore, that the farmer is already dependent upon foreign sales for a large share of his prosperity, and he must greatly expand this market in order to reduce our vast stockpiles of surpluses. Once these markets have been expanded, the merchant marine is the logical means for maintaining them.

Similarly, the miner is dependent upon American shipping as a means to transport his raw materials to the factories and refineries of the world. The demand for coal and oil in Britain and Western Europe has grown tremendously of late because of their declining production and the Middle East crisis. Our tramp steamers and ocean freighters carried them 304 million tons of coal from American mines in 1954. Tankers shipped in excess of 45 million tons of crude petroleum in the same year. In addition, the rates for bulk materials such as ores and petroleum are the cheapest transportation in the world. This means that the miner can realize more from his labor through the services of the merchant marine and that the countries of Western Europe can afford to replenish their diminishing stocks of coal and oil from American mines and wells.

The same gain experienced by the miner through the facilities of the merchant marine is being realized by the American manufacturer as well. Flour from American mills can be shipped as far as China for one-fifth of a cent per pound. Iron ore from Chile or wood pulp from Sweden can be imported for nearly the same rate. These rates are what allow our country to produce the goods for which we are suited and import the remainder. Following this principle American manufacturers imported in 1954, 486 million tons of coffee, 452 tons of cocoa, and like amounts of many other raw materials. By the same token, our manufacturers can export cheaply to other countries, thereby maintaining needed foreign markets through the facilities of the merchant marine.

The valuable services afforded to our economy by the merchant marine are not, however, confined to overseas trade. Domestic shipping along our coasts, lakes, rivers, and canals is just as important to our daily lives. To the long list of seagoing vessels can be added Great Lakes ore carriers, barges, and innumerable other ships. Each plays its part in the commerce of America.

The cheapest, safest method for the farmer to get his produce to domestic markets is by ship. Boats ceaselessly ply the waters of inland waterways and coasts carrying cotton, tobacco, wheat, and corn to include just a few. On the Great Lakes alone 6,600,000 tons of grain were shipped in 1953. Shipping facilities along the farming regions of the Mississippi and the Gulf of Mexico have increased tremendously of late. The number of barges alone has almost doubled since 1940.

The miner is also concerned with this development in domestic shipping. His shipments of petroleum from countless wells along the Gulf of Mexico to refineries on the Atlantic coast constitute a large portion of the cargo carried on inland and coast waterways. Perhaps the most familiar sight along the shores of the Great Lakes is that of the hard-working ore carrier, for in 1953 they carried over 106 million tons of ore to the blast furnaces of Buffalo, Pittsburgh, and the surrounding area. Mainly due to the ore, the Great Lakes carry more tonnage in one year than the Panama and Suez Canals combined.

Likewise, it is not unusual to see barges and ships laden with cereals, farm machinery, or even automobiles on the waters of the Great Lakes and our coastal and inland waterways. These waterways allow the manufacturer to decentralize industry and still get his products cheaply and safely to market.

The next time you visit a busy port, pause a moment to realize the importance of the vital service provided our economy, our farmers, miners, and manufacturers by the American merchant marine, the lifeline to the markets of the world and home, our merchant marine.

Government Action To Warn Public of Dangers to Health Involved in Use of Cigarettes

---

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, July 1, 1957

Mr. NEUBERGER. Mr. President, I believe the time has come for the United States Government to warn its people of the very grim and direct perils involved in the use of tobacco in general, and in the use of cigarettes, in particular.

The statistics on the prevalence of lung cancer among inveterate smokers can no longer be disregarded. Furthermore, the Ministry of Health in Great Britain has just announced that the Government of that country will take active steps to bring to the attention of the public the risks at stake in smoking cigarettes. Can our own Government do any less?

The American Government warns us about dishpan hands and about what pests can do to plants and flowers, but it takes little interest in publicizing the damage tobacco tars can do to the human lung. By contrast, the Parliamentary Secretary of Health told the House of Commons, in London, last week:

The government feels that it is right to insure that this latest authoritative opinion is brought effectively to the public notice, that everyone may know the risks involved in smoking.

Mr. President, the wealth of a nation is in the health of its people. Responsible and reliable medical experts now believe that cigarette smoking is injurious to health; that it particularly endangers the lungs; that it may even be a factor in malignancies of the lung. At the American Medical Association convention held in New York City, in June, it was announced that deaths from lung cancer are 1,000 percent greater among men who smoke cigarettes than among nonsmokers.

Therefore, Mr. President, I believe it is pertinent and appropriate that the Department of Health, Education, and Welfare in the United States should undertake a mission similar to that of the Ministry of Health in Britain—namely, to acquaint Americans with the perils to health attendant on the indiscriminate and reckless use of cigarettes.

I ask unanimous consent that an article from the New York Times of June 28, 1957, announcing the action of the British Government in this respect, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITISH GOVERNMENT TO WARN ON SMOKING

The British Government announced today it would warn the nation of the dangers of smoking.

The Government will aid circulation of a medical research council's report that concludes that cigarette smoking is a direct cause of lung cancer.

J. K. Vaughan-Morgan, Parliamentary Secretary to the Ministry of Health, told the House of Commons, "the Government feels that it is right to insure that this latest authoritative opinion is brough effectively to the public notice that everyone may know the risk involved in smoking."

The Medical Research Council reported a high statistical link between cigarette smoking and lung cancer.

The report added, "In the opinion of the council, the most reasonable interpretation of this evidence is that the relationship is one of direct cause and effect."

(The American Cancer Society made its final report to the American Medical Association June 4 on a statistical study of smoking and death rates. It found "an extremely high association" of cancer of the lung with cigarette smoking. The Tobacco Industry Research Committee commented that this statistical statement did not prove

cause-and-effect relationships. The origins of cancer will eventually be learned by careful laboratory and clinical study, not through statistical reports, it said.)

The Medical Council's findings were based on 19 investigations made in the last 8 years in Britain, the United States, West Germany, the Netherlands, Switzerland, Norway and Finland.

The Ministry of Health distributed copies of the report to local health authorities immediately after publication. Mr. Vaughan-Morgan said the report would be publicized as a news even by the state-run British Broadcasting Corporation.

The council noted a very reat increase in lung cancer in the last 25 years paralleling a very great increase in cigarette smoking and estimated that one out of every eight life-long heavy cigarette smokers would die of lung cancer while only 1 in 300 nonsmokers would die of the disease.

It said that the evidence of the studies made had been uniformly in one direction and that the evidence was not very considerable.

The Tobacco Manufacturers Standing Committee took issue with the council's findings. A statement said:

"The manufacturers do not know of the presence of any carcinogenic (cancer-causing) substance in tobacco smoke in quantities which conceivably could cause cancer in human being from smoking."

CALLED MATTER OF OPINION

The manufacturers' statement said that at the present stage of research any conclusions were a matter of opinion. It noted that scientific authorities held differing opinions. It said the possibility that the statistical link between smoking and cancer might be largely or wholly of a noncausal nature had been inadequately investigated.

The Research Council is Britain's most respected authority on medical matters. It allocates both Government and private research funds under the authority of the Privy Council.

A recent study of the death rate among doctors more than 34 years old was incorporated in the council's report. It showed that the death rate mounted in relation to the number of cigarettes smoked, reaching a rate of 2.76 per thousand among heavy smokers—40 times the rate among nonsmokers.

The study defined a heavy smoker as one who smoked 25 grams of tobacco or more every day. There is about 1 gram of tobacco in a cigarette.

The councils report said that men who stopped smoking, even as late as their early forties, would reduce their chances of getting lung cancer by at least one-half.

Mortality among cigar smokers was far lower than among cigarette smokers, the report said, and lower still among pipe smokers.

Address by Joseph P. Henican, Jr.

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. HÉBERT. Mr. Speaker, the name of Henican has been associated with cotton for the last 2 generations.

Joseph P. Henican, Sr., was president of the New Orleans Cotton Exchange during his lifetime. His son, Joseph P. Henican, Jr., is now the president of the New Orleans Cotton Exchange.

Mr. Henican, who parenthetically is an old schoolmate of mine and lifelong personal friend, recently gave a most informative radio address over radio station WWL in New Orleans on the problem of cotton in this country. The problem of cotton is a continuing problem in this body.

Mr. Henican's discussion brings into focus most vividly this complex and vexing situation. I thoroughly agree with him and earnestly suggest that the Members of this House avail themselves of the opportunity of reading his comments which follow:

ADDRESS BY JOSEPH P. HENICAN, JR.

Good morning, ladies and gentlemen.

I am honored to have been asked by George Shannon to be guest editor this morning for Farm Front Reporter, and I am privileged to address this program's great audience for while my subject is one which primarily concerns the people whose livelihood comes from the land, or from the products of the land, it is one which vitally affects every American consumer, that is to say, it affects every one of you who are listening.

The primary agricultural product with which I am presonnally concerned is cotton, and my subject is the need for a change in the national farm program to salvage the American cotton industry. Necessarily, such changes also concern all products of the land, are the people who grow and distribute them, and all the people who buy or sell these products, in raw and finished forms.

Now I suppose that my activities over the past 18 months may well qualify me as the man in the controversial news of the cotton industry. This is because—along with my associates on the New Orleans Cotton Exchange and on the New York Cotton Exchange—and with increasingly strong support from people in all phases of the cotton industry, notably the producers of cotton, I have devoted my efforts toward a united industry effort to effect certain changes in the national farm program essential to the well being—I might even say to the ultimate survival—of the cotton industry and its members.

Happily, there is at this time strong evidence of a growing unity in approaching these problems. I am not so naive as to suggest I know the answers to all of them, or that the solution we present is the only one, or the best. But I am convinced that the answer must and will come from within the industry itself.

It is reasonable and sound to believe that the people whose heritage is from cotton, whose livelihood is from cotton, and whose future is dependent upon cotton, can cope with the problems of today, as we have for generations.

You know, there is a fabled Chinese figure that shows a man riding backward on a donkey, and the proverb it illustates is: It's better to know where you have been than to see where you are going.

Well, perhaps we can tell more about where we ought to go if we take a look at where we have been, and where we are now.

So let us look back to the twenties. It was then, in my opinion, that our present troubles began. Raw cotton prices had been high, but by natural causes rather than artificial ones, war, inflation, the boll weevil, and the wartime interruption of foreign production.

The resulting high prices encouraged expansion of production and the purchase of new land, much of it bought on credit at very high prices.

American cotton producers began to feel trouble in the latter twenties, as Europe suffered a contraction in buying power and was forced to reduce imports of cotton, particularly American cotton, which had to be paid for in dollars.

In 1929 the situation became serious. It was in that year the Agricultural Marketing Act was enacted and the Federal Farm Board was established. The Farm Board tried, through market operations, to support a level of prices that would make it possible for the farmer to survive. Though successful, their operations left the Farm Board with heavy stocks which were liquidated at lower prices and at a great loss. This was our first experiment in price-support operations.

The thirties ushered in a great depression, with agriculture appearing to be in the greatest distress.

Consequently, the early New Deal years became years of experimentation in agricultural relief, loans to support prices, compulsory plowups, payments to farmers, taxes on processors, stamp plans, and export subsidies.

The program which finally took hold was price supports through nonrecourse loans.

Farmers with the highest cost of production, those who were the least efficient, were in greatest distress. Solicitude for agriculture was directed to them. The support prices were therefore established at levels which enabled these least efficient farmers to make ends meet.

From then until today, we have had prices supported at levels conceived to protect the high-cost producer.

The effect of such protection on marginal producers and marginal lands was to keep both in cotton, hurting both themselves and cotton growers in general.

Its effect on the efficient producers was to encourage expanded production wherever conditions were favorable to high production per man and low costs.

Its effect in general has been to push the national average unit cost of production to a level which handicaps American cotton in competing effectively against foreign cotton production.

There was another price to pay for the tremendous expanded production of cotton, for we found that prices which attracted expanding production did not foster the growth of demand, but did stimulate production of substitutes, like rayon, paper, and plastics.

Faced with a choice between cutting price supports or reducing production, the decision was to make all cotton growers reduce acreage in approximately uniform proportion.

This introduced into our economy the theory of scarcities. Agricultural legislation was then focused on a single objective—a high level of price support. We would maintain prices by not producing. This was a very serious mistake because it flaunted the basic laws of God.

We know now that curtailing acreage and curtailing production are very different matters. Farmers have learned to do near-miracles through intensive cultivation of less acres, and I suspect the end of higher yields is not yet in sight.

But this is not the worst of it. Farmers are discovering the curtailment of acreage below the appropriate invesment in land and equipment increases the unit cost of production.

And since we could not inflict acreage curtailment on foreign cotton growers, our price supports accelerated the production of foreign cotton, and of subsitutes at home and abroad. We have priced American cotton out of the domestic and foreign markes.

Since 1935, because of nonrecourse loans, we have on three separate occasions accumulated burdensome surpluses. Twice the surpluses were rescued by war. Presently, the third and largest surplus is being liquidated at a tremendous cost to the American taxpayer through a giveaway program.

In the course of experimental failures, important lessons have been learned, and certain facts upon which to base future consideration stand out.

1. Farm prices are not made in Washington. They are made where the consumer accepts or rejects our cotton.

2. It is impossible to control production of agricultural commodities by law.

3. We can price our products out of the market.

4. Price does have a function.

5. Surplus cotton in Government storage is not a good thing.

6. We cannot give away the surplus.

7. We do have to worry about agriculture because the population will not catch up with production.

This brings us to the present. Let us examine it.

1. Only 17½ million acres are being farmed in cotton despite the fact that cotton farmers have an investment in land and equipment capable of farming 20 to 21 million acres.

2. Cotton producers are caught in a price-cost squeeze.

3. Rayon production in the United States has increased from almost nothing to the equivalent of 3½ million bales. Rayon has taken the place of cotton in automobile fabrics and in household and other uses.

4. Foreign production of cotton has increased by 14 million bales and foreign production of rayon by about 10 million bales.

5. World consumption per capita of textile fibers has increased and is increasing but it has remained almost static for cotton; synthetic fibers enjoying almost all the increase.

6. Small towns and trade centers in the South are being destroyed. Congressional districts are being eliminated.

7. There is no longer need for some gins, warehouses, transportation facilities, and banks. Corrollary services, such as mercantile stores, doctors, lawyers, etc., are no longer required in some localities.

8. The century old private marketing facilities are being destroyed. There is little use for the street buyer, the FOB man, the small interior merchant, those who have efficiently and effectively gathered in the crop and distributed it at a very cheap cost.

9. The cotton futures exchanges have practically ceased to perform an economic function and unless the present program is changed will be forced into liquidation.

10. Surpluses have been reduced at a terrific cost to the American taxpayer.

11. Farm population is being annually reduced. It is now estimated that only 2½ percent of the entire American population is engaged in cotton growing.

12. The trend toward socialism in Government, reflected in the cotton industry from producer to the consumer, is obvious. It is only a question of time until an agency of the United States Government will be the only buyer and seller of the annual American cotton crop.

In looking to the future, I am not entirely pessimistic. For the past year or more, as a member of a watch-dog committee of the futures exchanges, I have conferred with outstanding private trade leaders; farm organization executives, State officials, United States Senators, and Congressmen. I have participated in trade forums and testified before congressional committees.

The results have proven beyond a reasonable doubt that there exists an almost unanimous realization that the programs that have operated for the past 30 years are so fundamentally and basically unsound that they must be changed and, thankfully, there is an almost unanimous desire to change them. Only the degree of immediate change seems to be debatable. Most interestingly, it is the cotton producers themselves, at least the better thinking ones, who fully appreciate their plight and are the source of the efforts to have changes effected.

Any program which is finally adopted should have the following chief objectives:

1. Reduction of surplus to normal levels.

2. Prevention of accumulation of new surpluses.

3. Complete elimination of the Government from all phases of the cotton industry.

4. Increased consumption of cotton through realistic and competitive prices at mill and retail levels.

5. Make cotton competitive in price and quality in both domestic and foreign markets.

6. Protect the farmer's income and permit him to use his land and equipment more effectively.

7. Provide means for orderly marketing through the normal channels of trade.

8. Make a disaster loan available to the cotton farmer at some reasonable level below commercial market values.

In my opinion, if cotton prices were allowed to compete with foreign cottons and synthetics in the domestic market as well as in the foreign markets, American cotton producers could harvest 20 to 21 million acres; domestic consumption of cotton would increase to between 11 to 12 million bales; exports would continue at 5 to 7 million bales; the expansion of the production of foreign cotton would be stopped and the expansion of synthetics, both in foreign and domestic markets, would be greatly retarded. It has been proven beyond a reasonable doubt, through the special export program, that the consumers of the world demand American cotton when it is priced correctly and when it can compete in quality. The record further indicates that American cotton has recaptured some markets lost to synthetics in foreign countries. It is only logical to conclude that if the American cotton farmer is given the opportunity to compete in the domestic market at realistic prices, the identical results will accrue, namely, that domestic consumption will increase and that some markets lost to synthetics, paper and plastics will be recaptured.

It is indicated that there will be at least four bills in Congress before the recess. Hearings are proceeding at the present time before Senate and House Agricultural Committees out of which must come relief for the cotton industry.

One of these bills, introduced by Senator SYMINGTON, of Missouri, and Congressmen ABERNETHY and JONES, and cosponsored by several southern Congressmen, represents the thinking of an industrywide group. The proposals in this bill would:

1. Curtail production until surpluses are liquidated.

2. Gradually eliminate all acreage controls as the surpluses are depleted, with the ultimate objective of approximately 21 million acres.

3. Allow prices to seek their competitive levels in domestic and foreign markets.

4. Protect producers' income through compliance payments against their domestic allotments, represented by certificates paid for by the buyer.

5. Provide for a disaster loan available at some slight level below prevailing world prices.

These proposals have had the approval of:

1. Eight cotton producer organizations.
2. The National Ginners Association.
3. The National Warehouse Association.
4. The National Crushers Association and
5. The American Cotton Manufacturers Institute.
6. The American Cotton Shippers Association and
7. The New York and New Orleans Cotton Exchanges.

Whether Congress will act on any of these bills at this session is questionable. It is hoped that some program will be adopted to become effective for the 1958 crop so that we do not have to suffer with the present programs for the next two seasons. I feel rather confident that something will be done.

To those of my listeners who have an interest in the existing cotton problems and wish to discuss them further, I would like to invite you cordially to drop by the New Orleans Cotton Exchange when you are next in New Orleans. Your mail will also be welcomed.

To those of you who agree with our position on the existing problems, we suggest you communicate with your Congressman, and urge him to call for public hearings and to support the Symington and Jones bills—Senate bill 2226 and House bill 7816—that will take the Government out of the cotton business and keep the grower, the merchant, the ginner, and the exchanges, in. Twenty years ago cotton cooperatives urged farmers, "Don't sell your cotton, market it." Today the whole industry might well cry, "Don't pawn our industry to Government bureaucrats."

I thank you.

Testimony on Behalf of the Presbyterian Church in the U. S. A.

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. FULTON. Mr. Speaker, I submit for the attention of Congress and the American people the excellent testimony on behalf of the Presbyterian Church in the U. S. A., presented by Dr. James H. Robinson, pastor of the Church of the Master, New York, N. Y., before the House Foreign Affairs Committee, May 29, 1957.

This fine statement likewise shows the history of the action and pronouncements of the various general assemblies of the Presbyterian Church in the U. S. A. as far back as 1949 indicating clearly the consistent support of the church of United States Government programs of technical assistance and economic aid abroad. The statement follows:

My name is James H. Robinson and I am the senior pastor of the Church of the Master, one of the Presbyterian churches in the city of New York. The Presbyterian Church in the U. S. A., which I represent before this committee, is a denomination with 2,809,603 members, having congregations located in all of the 48 States as well as overseas.

The general assembly of the Presbyterian Church is the highest judiciary of our church, made up of equal lay and clerical representatives of the entire denomination. Although it does not pretend to speak for every Presbyterian, the assembly can be said to enunciate the official position of the Presbyterian Church in the U. S. A. Each year, through a long and careful process of study and discussion, the general assembly seeks to address itself to what it regards as the most important issues for which the church, as a Christian community, feels a sense of responsibility.

I am authorized to appear before the Foreign Affairs Committee of the House of Representatives to summarize the general assembly's view on the vitally important problems of mutual security legislation and foreign aid. We believe, with the President, that foreign aid that is related to our country's security as well as that which is not related

to security, is equally in the national interest. We feel that it is humanitarian, realistic, and in our own national interest to support foreign aid wisely conceived and effectively carried out.

It is appropriate and significant that the major church bodies in America, including the Presbyterian Church in the U. S. A., are almost unanimous in their support of foreign aid.

The following statements, taken from general assembly pronouncements of recent years, indicate clearly the consistent support our church has given to United States Government programs of technical assistance and economic aid:

"The point 4 program, 'a program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas. * * * Our aim should be to help the free people of the world, through their own efforts, to produce more food, more clothing, more materials for housing, and more mechanical power to lighten their burdens.' This program, properly divorced from partisan politics, holds the promise to enormous benefits for the backward peoples of the world. However, if this program is to fulfill its promise, it must be surrounded by sufficient safeguards, lest it become, or appear to become, the scheme of imperialism and exploitation. We urge continued study of this program as it unfolds throughout the coming year." (General assembly of 1949.)

"The technical-assistance program of the U. N. and the point 4 program of our Government should be strengthened and expanded now so that economic and social justice within and between nations may become a reality. With two-thirds of our fellow men living in underdeveloped regions of the world, such programs are of greater significance to the hope of a free world than the development of military strength." (General assembly of 1952.)

"We encourage the continuation and extension of the program of technical assistance by our Government to underdeveloped regions. We urge the close coordination of this program with similar efforts carried on by the United Nations." (General assembly of 1953.)

"In 1953 the general assembly, in a farsighted step, recommended an increase in technical assistance. In the past year the allocation of funds for this program, which has so much in common with our own missionary ventures, has regrettably been decreased, and the program itself has unfortunately been absorbed into the Foreign Operations Administration, where it constantly runs the risk of being identified with military advantage. There needs to be a clear definition of the intent of this consolidated program so that it is not regarded as being designed solely to serve our national security aims. We urge the Congress and administration to reevaluate continually this now combined technical and military program." (General assembly of 1954.)

"We believe that Government programs of foreign aid should not be trimmed down or withdrawn so long as they serve human needs. These programs should be (1) based on actual needs without regard to political pressures or military considerations; (2) developed in such a way as not to disrupt foreign economies; and (3) so administered that the aid serves the purpose for which it is intended.

"We call upon our Government to continue its support, without diminution, of international programs designed to minister to human needs and to assist less developed lands—such as the U. N. International Children's Fund, the expanded program of technical assistance, and relief projects in Korea, the Middle East, and other areas of need. We reaffirm support of our Government's program of technical assistance and cooperation as being an appropriate and effective means of helping others to help themselves." (General assembly of 1955.)

"Acknowledging that the foreign policy of all nations is developed in terms of their own self-interest, but believing that what ultimately serves the total good best serves the individual state;

"Aware of the continuing need to stress economic aid to underdeveloped areas and conscious of the fact that Communist nations are using economic aid as an effective political weapon;

"Believing that there is need for assurance of continued economic aid to underdeveloped regions;

"The 168th general assembly urges our Government, (1) to give assurance of appropriation of funds for economic aid on a long-term basis, and (2) to review and debate foreign-aid proposals without acrimony and partisan maneuvering so that decisions will be made on the basis of human welfare." (General assembly of 1956.)

Our general assembly, therefore, urges and supports continued constructive foreign aid on the part of our Government both directly and through the agencies of the United Nations. We realize the need for continuing study of our aims, improvement of our methods and techniques, and we also recognize the need to eliminate waste and avoid mistakes. Constant reevaluation and constructive criticism and reappraisal are both helpful and necessary. Consequently, we are greatly heartened and impressed by the serious reviews of foreign aid by four major governmental agencies and by some of the voluntary studies made by private groups and institutions.

But we wish to point out, (1) that the solid achievements accomplished by our foreign-aid programs far outweigh the mistakes and the apparent waste, (2) that it is not necessary to curtail or abandon foreign aid to correct mistakes and improve methods and techniques, (3) that we may very well be entering upon the most crucial period of the cold war and to lose the hard-won advantages we have gained, or to leave the crucial areas to a menace we would not follow ourselves is the fallacy of a dangerous illusion, (4) that millions of people all over the world turn to us in the United States not so much for charity as for assistance and guidance. We must not betray that confidence, but rather use it to help them help themselves.

Our position in support of mutual aid arises out of a conviction that our Nation has a moral responsibility to help meet the urgent human needs of the world. God has given our land not only one of the richest areas of natural resources, but He has also given our Nation such an opportunity for world leadership as has never been the good fortunte or the responsibility of another nation in the history of civilization. A religious concern for our world and the awareness of our moral responsibilities is at the heart of our Nation. Futhermore, economic stability and social justice are indispensable to the peace and security of the free world.

Whatever we do to strengthen our allies and to assist the people of the underdeveloped areas to a better and more secure way of life, to the end that they may help themselves also strengthens our own security. We do not consider foreign aid as giving for the sake of charity, but mutual interdependency and the collective security without which even the strongest nation of the free world cannot be safe. It is not only unrealistic for a government to act without consideration of its own interest, it is definitely out of order. But in the modern world, national interest has a broad gage for whatever happens to assist people in a village in Asia, a rural area in the Middle East, or a seaport in Africa often best serves our national interest. Those of us in this world who love freedom, peace, justice, and democracy are, as the Psalmist says, "Bound in the bundle of life."

Living in a world where the evil that is communism seeks to remake the world in its own evil image, and vigorously attempts to influence the masses of underdeveloped areas and marshal their increasing numbers behind its nefarious schemes, by devious methods and techniques, we believe we must maintain a strong military institution and continue our mutual aid abroad. However, we also believe there should be a shape and unmistakable demarcation between military aid on the one hand, and that aid which is economic, social, and educational, on the other.

There can be no doubt that we are involved in a titanic struggle for the minds and souls of men, for the survival of the free world as we know it, for human dignity and decency and for peace and justice. We must be prepared to see this struggle through successfully, and consequently, to establish our mutual aid on a sound and continuing basis, with long-range planning rather than hastily contrived methods to meet each crisis as it arises. We believe the needs of this hour demand continuity of policy and operation and the creation and training of adequate personnel with the experience and the skills to meet the special problems which evolve from the international scope and the human factors involved in foreign aid.

It is our conviction that this is a moral struggle between tyranny and freedom. We would be greatly derelict of our religious and moral responsibilities if we allowed ourselves the tragedy of defeat by refusing to make the sacrifices and establish mutual aid sufficient to help our brothers throughout the world to that security and self-respect God intended for them and at the same time assure both them and ourselves of ultimate victory.

We believe that our Government should lend every encouragement and support short of monetary contributions to increased voluntary foreign-aid programs, on the part of foundations, churches, educational institutions, business, labor, and other organizations. Some of the best relationships between ourselves and the people of the world and some of our finest friends abroad have been won by voluntary efforts on the part of our citizens.

What we ask of our Government we have also demanded of ourselves and asked of all our church members. In recognition of our Christian responsibilities to world needs, our religious obligation to alleviate human suffering and the long-range planning necessary to meet those needs and to help our brothers to a more abundant life, the Presbyterian Church U. S. A. has just adopted a 5-year advancement program with a greatly increased budget. We are convinced that the citizens of the Republic will support a farsighted plan of mutual foreign aid which is dynamically presented and ably administered when they understand that peace, security, justice and freedom are at stake, just as readily as the members of our denomination have eagerly supported the increasing responsibilities for our own missionary foreign-aid programs. We believe that the blessing of God will be upon us, our church and our Nation if we face our task with a sacrificial spirit, courage, faith, intelligence, and above all, with humility.

Camp Red Cloud

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. JOHNSON. Mr. Speaker, there was recently dedicated in Korea, an Army camp named "Camp Red Cloud" in honor of a Congressional Medal of Honor winner, Cpl. Mitchell Red Cloud, Jr., from my hometown, Black River Falls, Wis.

This Winnebago youth died heroically defending his fellow soldiers from attacking enemy forces during the action in Korea. On May 18 of this year, Lt. Gen. Arthur G. Trudeau, of the United States Army, helped dedicate Camp Red Cloud in a "little spot here among the chestnut trees of Uijongbu." He noted that Corporal Red Cloud shed his blood with 140,000 other Americans that Korea might have a new birth of freedom.

Camp Red Cloud is halfway around the world from the tall, silent pines of the corporal's home. In bearing his name it will reflect some of the courage, vitality, and love of freedom for all men exemplified in the sacrifice of its namesake. Under leave to extend my remarks I would like to insert the complete address of General Trudeau at the camp dedication:

DEDICATION OF CAMP RED CLOUD, ARMED FORCES DAY, MAY 18, 1957, BY LT. GEN. ARTHUR G. TRUDEAU, UNITED STATES ARMY

In this year of 1957, the scientists hope to launch an earth satellite in their probing of outer space and the secrets of the universe. In America, we are celebrating the 350th anniversary of the formation of the first European colony on our eastern coast. Although America began to assume reality in the European mind since 1492, the Spaniard had done little and the French and English less until the 17th century and the settlement of Jamestown in 1607.

During the next 275 years the courageous natives of our continent, the American Indian, frequently but futilely resisted the irresistible advance of English, French, Spanish, Dutch, and even Russian colonization of our great land.

As the possessor of many of the most ennobling characteristics of a race, the American Indian was second to none. Unfortunately, the tides of history never gave him much of a chance. But where courage, tenacity, and sacrifice are held high, the American Indian had no peer.

Of such stock was Cpl. Mitchell Red Cloud, Jr., in whose honor we are gathered on this, our Armed Forces Day. His mother was the daughter of Chief Winneshiek of the Winnebago Tribe. Red Cloud's father was the son of Glory-of-the-Morning, daughter of a Winnebago chief. The Winnebagos were proud warriors.

Corporal Red Cloud represented sturdy people who not only lacked the luxuries but seldom enjoyed even the comforts of life. However, they abounded in courage and tenacity—traits all too badly needed in these days when the comforts and complacency of the country store, cocktail lounge, and country club tend to blind us to the fact that leadership requires something more dynamic, not only of the few but of the many.

As the wearer of the heavyweight championship belt of the free world, America must continue to generate those qualities that made for our greatness in the melding of our ancestors from many nationalities and races.

When Corporal Red Cloud met the Communist onslaught he neither feared nor fled but staunchly refused to yield before the pressures he had come 10,000 miles to destroy. For this he gave his life but in the words of Horatius:

"How can man die better than facing fearful odds,
For the ashes of his fathers and the temples of his gods."

I hope we retain the virility and ability to go forward on this spirit despite the enervating influences of the present day. For myself, I would be quite content if I knew I could someday rest as serenely as Corporal Red Cloud does, his deeds recorded in history and his brave soul welcomed by his God. America was built by brave and fearless men; it can only advance the same way.

I trust that when we have some day eliminated the Communist menace and returned to America, the good people of Yang-gu and Korea will preserve this little spot here among the chestnut trees of Uijongbu in remembrance of Corporal Red Cloud, an American Indian who with 140,000 other Americans shed their blood that Korea might have a new birth of freedom and that America, blessed as she is, might fulfill some small part of her obligation to, and her destiny in, a free world.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Labor Answers Your Questions

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 2, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio dialog between Mr. A. J. Hayes, AFL–CIO vice president, and the Senator from Oregon [Mr. MORSE] and myself.

There being no objection, the dialog was ordered to be printed in the RECORD, as follows:

LABOR ANSWERS YOUR QUESTIONS

(An AFL–CIO public service radio series, program No. 9, Labor's New Broom, No. 1. Guest, A. J. Hayes, chairman of the AFL–CIO ethical practices committee, AFL–CIO vice president, and president of the International Association of Machinists. Panel, Senator PAUL DOUGLAS, of Illinois; Senator WAYNE MORSE, of Oregon. Moderator, Harry W. Flannery. Running time, 13:30)

Mr. FLANNERY. Labor answers your questions.

Labor is front-page news these days because of racketeering within the ranks of labor. People are asking questions. They want to know whether the congressional investigations help to clean out the racketeers. They want to know whether many labor officials are among the offenders. They want to know what labor itself is doing about it.

In this program, labor answers your questions. Here to discuss the situation is the chairman of the AFL–CIO ethical practices committee and two Members of the United States Senate who have been active in congressional investigation procedures. The chairman of the AFL–CIO Ethical Practices Committee is Al J. Hayes, who is also an AFL–CIO vice president and the president of the International Association of Machinists. The Senators are PAUL DOUGLAS, of Illinois, and WAYNE MORSE, of Oregon.

The broadcast comes from the office of Senator DOUGLAS in the Senate Office Building here in Washington.

Mr. Hayes, will you begin by saying whether congressional investigations are helpful or not helpful in carrying out the AFL–CIO Ethical Practices Codes.

Mr. HAYES. Well, of course, Mr. Flannery, in connection with congressional investigations, organized labor is for democracy and we are, therefore, for congressional investigations.

And we are no more opposed to congressional investigations in connection with the affairs of labor unions than we are in connection with any other matters that Congress should properly investigate. With regard to the investigation of practices in the labor movement, we feel that the investigations thus far have been of material assistance to us. We're convinced that even the ethical practices committee and the AFL–CIO council could not have brought out all of the things that have been disclosed so far by the Douglas committee and by the McClellan committee.

I say that with some reservations, however, where we are opposed to inquisitions. We are opposed to investigations that are not objective, that are conducted for the purpose of punitive legislation.

Mr. FLANNERY. Senator Douglas?

Senator DOUGLAS. Well, I'm very glad to have Mr. Hayes say this because a congressional committee has two powers that a voluntary organization cannot have, namely, it has the power of subpena, and it has the power to put witnesses under oath; these are great advantages. We found them to be very helpful in our investigation of health and welfare funds.

I do want to say, however, that any congressional committee should be very careful of the rights of individuals whom they summon before them or who are reflected upon. We followed the practice of sifting all evidence in executive hearings before they were brought out in public so that there would not be indiscriminate name dropping and indiscriminate smearing.

Secondly, if we found that someone was going to be adversely reflected upon by the testimony of another witness, we notified him in advance that this was going to happen, and gave him a cordial invitation to appear with the right of making a statement immediately following any adverse reflection upon him. All witnesses were given the right of counsel. And counsel were permitted not merely to advise the witnesses, but also to make statements in their own behalf.

We've tried to make it possible for witnesses who might be put on the spot to get their story across to the public at the same time that our questioning got across to the public, so that both sides would have the right of equal access to public opinion.

Mr. FLANNERY. Senator Morse, I think you've been rather active in connection with procedures of these committees?

Senator MORSE. Yes; I have, but before I discuss that poli t I want to say something personally to Al Hayes on this program. I want to say that Al, you and George Meany and the other officials of your great labor organization, have performed some great acts of labor statesmanship in recent weeks in connection with the house cleaning that you are carrying on within the ranks of labor.

Senator DOUGLAS. WAYNE, I want to join in that and say that it is one of the most encouraging developments in American life, and I only wish that other groups would evidence the same desire for the good name of their organizations and their professions that the AFL–CIO has done.

Senator MORSE. I know you share that view, PAUL, but I have said so many times on the floor of the Senate and elsewhere in America—that the democratic processes of the American labor movement will take care of the racketeering and the communism and the crooks within the labor field—but that we, the Congress, have the duty to help strengthen your arm. And that's why I think these congressional hearings are so important. I'm glad to have you, Al, go on this program and say to the American people that labor welcomes these congressional investigations. I knew that was your position, but I agree with PAUL and I agree with you they should be conducted with fair procedure.

Now I want to make this point very quickly: For 10 years I have been urging some reforms in procedures of congressional investigations, along the line of procedures that PAUL DOUGLAS in his investigation work has voluntarily applied. But I think that they ought to be required as a matter of Senate rules.

And here they are very quickly:

Whenever a Senate committee brings a charge against any person that involves an allegation of crime, then, I think, certain basic procedural guaranties should automatically attach themselves to that hearing:

1 (as PAUL indicated). The right to be represented by counsel.

2. The right to have a bill of particulars, or in other words, an indictment; that somebody not be hailed before a Senate committee for example and not know what he's in there for until he gets in the committee room.

3. The right to put on your case in your defense in an orderly way with the assistance of counsel, and not be interrupted by a Senator when he sees he doesn't like the answer he's getting, and stop you in the middle of a sentence and not even let you complete your sentence. He should have the right to put on—as we lawyers say—a case in brief in an orderly fashion. And

4. The right to be confronted by your accusers and cross-examine them.

Now that's been my criticisms of congressional committee hearings and investigations when charges of crime have been involved. And I'm going to continue to fight for that kind of reform.

Now having said that, I want to say that at the beginning of the McClellan committee hearings I said let's have a thorough going investigation of corruption in American unionism, and let the chips fall where they may, but let me quickly add I also pointed out when you get into any of these charges, whether its racketeering or bribery or any of the others, you've got to have two people for racketeering and bribery; you've got to have an employer on one side of the deal, and a crooked labor leader on the other side of the deal. And I've been urging an equal investigation of the collusive activities of crooked employers along with crooked labor leaders.

Mr. FLANNERY. Mr. Hayes?

Mr. HAYES. Well, Senators, first of all let me express my appreciation for the nice things that you have said about the federation and some of us in the federation; we certainly appreciate that. But I think that I ought to add that while we are the first to admit hat we need the aid and assistance of investigating committees in order to ferret out the things that are wrong in the trade-union movement, I don't think we ought to mislead the American public to believe that because of the disclosures thus far in the Douglas investigation and the McClellan committee investigations, that the entire labor movement is corrupt.

Senator DOUGLAS. No; no.

Mr. HAYES. That is not true. The fact of the matter is that only a very, very small segment of some of the leadership in the trade-union movement is currupt. Unfortunately, the publicity that the disclosures have received thus far has misled many of the people and the public who have no other source of knowledge to believe that most of the trade-union movement is corrupt. And that isn't true. The publicity has not been balanced off with information from the other side of organized labor's ledger; organized labor has made a great contribution to our society.

Senator MORSE. But I would like to comment on something else that Al Hayes said earlier when you pointed out that only a small percentage of labor leaders are in the corrupt class, just as only a small percentage of employer representatives are. I have said so many times that 99 percent of labor leaders and employer representatives are dedicated men and women.

I want to say a word now to representatives of other groups listening to this program—if you are a lawyer, if you are a doctor, if you are a teacher, or farmer, businessman, consumer generally. I'd have you always remember that your standard of living that you enjoy today wouldn't be what it is if we hadn't had the great, free American labor movement through our history; because the right of freemen and women to organize and bargain collectively for better wages, hours and working conditions, in my judgment, has been fundamental in the raising of America's standard of living to what it is today; because when you don't have that kind of organization, you have exploitation of the workers because of the frailty of human nature that creeps into employers. It's just to be expected and, therefore, in spite of all this castigation labor is getting these days, I am going to raise my voice again in warning the American people—watch out for an antilabor drive in this country because it is not against labor alone, it is against you no matter what economic group you belong to.

Mr. HAYES. I might comment in connection with the statement that I made, and that you just repeated, about not all labor being corrupt, that the American public probably doesn't know what these statistics are: There are 136 unions affiliated with the AFL–CIO, and those 136 national and international unions have 16,000 fulltime paid officers. In addition to that, there are more than 60,000 officers of local unions, and of this number, that does not include some 500,000 shop committeemen and stewards and local representatives, but of this entire number in the Douglas committee hearings and the McClellan hearings thus far, testimony has been submitted to indicate that 13 may be guilty of some wrongdoing. I am sure that there are more than 13; but assuming there are more, the significance is that the 13 that have thus far had testimony presented against them which indicates they may be guilty, and the additional number that there may be, is still a very, very small percentage of the total number of representatives of the trade-union movement.

Senator MORSE. Oh, I was just going to talk with PAUL on this program about the code of ethical practices Al Hayes has laid in front of us here this morning. I am going to put them in the CONGRESSIONAL RECORD today, but I wish every American citizen could read your own proposals, Al, for a code of ethical practices, because it is clear proof of what PAUL and I have been saying: labor itself will do a great housecleaning job once these facts are brought to light.

Mr. FLANNERY. Thank you, gentlemen. Because of time, we shall have to continue this discussion in another program. We shall again present Al J. Hayes, president of the International Association of Machinists, vice president of the AFL–CIO, and chairman of the AFL–CIO ethical practices committee; and Senators Wayne Morse, of Oregon, and Paul Douglas, of Illinois. Next week, we will discuss the AFL–CIO ethical practices codes themselves. Copies of the AFL–CIO ethical practices codes, now six in number, will be mailed free to any interested listener. Just write "codes" together with your name and address on one side of a postal card and mail to AFL–CIO Radio, Washington, D. C. That's AFL–CIO Radio, Washington, D. C.

Remember, next week, Mrs. Hayes and Senators Morse and Douglas discuss the AFL–CIO's "new broom"—the ethical practices codes.

This is Harry W. Flannery speaking for the American Federation of Labor and inviting you to be with us next week at this same time to continue this discussion on labor's "new broom" in the public service series, presented with the cooperation of this station, Labor Answers Your Questions.

Freedom of the Press

EXTENSION OF REMARKS
OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 2, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that I may have printed in the Appendix of the RECORD an address delivered by me to the Texas Press Association State Convention at San Antonio, Tex., on June 29, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOM OF THE PRESS

(Address by Senator RALPH YARBOROUGH, delivered to the Texas Press Association State convention at San Antonio, Tex., June 29, 1957)

Members of the fourth estate, fellow Texans, I am very pleased that you asked me to meet and talk with you here today. I want you to share that pleasure, so let me say, right here at the beginning, that I didn't use to be in the newspaper game, myself. This ought to give you relief, if not a pleasurable feeling. I understand from my friends in your profession that this makes me a rare specimen, if not a unique one.

I do plead guilty to having earned my first dollar turning an old Washington hand press on the Chandler Times for my old friend and your former president, R. T. Craig, of Athens. But your profession requires men of special training and I was never able to qualify as a newspaperman.

I've been in Washington less than 60 days but I've learned some new procedures and had some old truths reaffirmed. Among these old truths is the fact that Texas is fortunate in having a Speaker in the chair of the National House of Representatives. This Texas Speaker is no ordinary Speaker; he is longest in point of service of any of the Speakers who have graced that chair. In my opinion, Speaker SAM RAYBURN is the greatest Speaker of the House of Representatives in the entire history of this Nation. This is not merely the verdict of partisan politics. Impartial historians approve this verdict.

Historians have pronounced him the ablest legislator ever developed by the American legislative system. SAM RAYBURN is always on the side of the people. His service to Texas and the Nation would fill volumes and in time these volumes will be written by a grateful people.

And in the majority leader of the Senate, LYNDON JOHNSON, Texas has as able a parliamentary leader as has ever represented this State there. Energetic, astute, and resourceful, he seems to be everywhere in the Senate Chamber at the same time.

Texas is fortunate in having the leaders of both Houses of Congress from this State.

I am especially pleased to be here with you today, because you are meeting in San Antonio. This lovely city is to me, as it is to all Texans, a dear and special shrine. Here, we Texans lost a battle, but won the time to win freedom. From the ashes of the devoted dead of the Alamo, a new flame of liberty fired the hearts that won liberty for Texas.

Freedom is a curious commodity. It must be preserved over and over again—and in many ways. Won at an Alamo, a San Jacinto, a Yorktown on this day, it must be resaved at a Marne, an Iwo Jima, a Normandy beach, a 38th parallel on the next. And freedom must also be secured over again every day, in a thousand and one ways in a thousand and one places—mostly in ways far less spectacular than in battles and wars.

Now I do not believe that freedom for all is something distinct from freedom of the press. Rather, I believe that the ramparts of freedom are continuous, and that a breach anywhere is a threat to the whole citadel.

But I do believe, with Thomas Jefferson, who said, "our liberty depends on freedom of the press, and that cannot be limited without being lost," that the press has a special function in the defense of freedom that has to be exercised earlier and oftener than the average citizen is called upon to exercise his.

As I see it, the press' theater of war for the preservation of freedom is within the hearts and minds of the people. It is not the press' function to fight the conventional battles and wars, though it does much to assure victory in them. Rather, the press' function becomes supercritical—to use an adjective of the bombmakers of the atomic age—precisely at the moment when the artillery falls silent, the cruisers slip in to their moorings and the bombers come in to their landing places.

Because this is true, freedom of the press is always under attack. Those who would take away all our freedoms have read Jefferson, too; they, also, have learned that the place to begin to destroy our freedom is by seeking to limit freedom of the press. Our history is studded with examples:

You are all familiar with the martyrdom of John Peter Zenger. You know that it was not until 1721, when James Franklin successfully launched the independent Hartford Courant, that a newspaper could be printed without being licensed by the Government and carrying on its masthead the words: "Published by authority."

You know that in 1798 the Federalists in the Congress, angered by independent reporting of their activities, passed the Sedition Act, sending many a newsman to prison for the free exercise of his profession.

Yes, as newspaper men and women, you all know all of the historic attempts at limiting freedom of the press. But did you also know that on June 21, 1957—a week ago yesterday—a presidential commission recommended to the President and to the Congress, legislation which, in my opinion, is a dangerous to press freedom as the Sedition Act?

Buried in the 800-page report of the President's Commission on Government Security—the Wright Commission—is this recommendation to Congress:

"That Congress enact legislation making it a crime for any person willfully to disclose without proper authorization, for any purpose whatsoever, information classified 'secret,' 'top secret,' knowing, or having reasonable grounds to believe, such information to have been so classified."

The proposed bill would make disclosure a felony punishable by up to 5 years in prison and by a fine up to $10,000. These penalties would apply to any person disclosing information—the bill does not specifically mention writers or editors or publishers—even though his intentions are to help, rather than to harm, his country.

The only test under the proposed bill is whether the disclosed document had been classified by a Government official.

Why did the Commission recommend this bill? There already are laws under which newspapers can be prosecuted for knowingly publishing information harmful to the Nation. The test of these existing laws is whether there is intent to do harm to the country, not whether a bureaucrat somewhere has decided a document should be classified.

In my opinion, the proposed bill is an extension of a dangerous threat to freedom of the press contained in a letter written on May 17, 1954 by President Eisenhower to Defense Secretary Charles Wilson.

This letter, which I thought the press never protested strongly enough, was written during the Army-McCarthy hearings. Its aim was to prevent Army Counsel John Adams from testifying as to conversations with Deputy Attorney General William P. Rogers and Assistant to the President Sherman Adams.

The letter was couched in very broad terms and talked of the rights of the executive branch of our Government to keep certain things confidential. This was the place where danger to the press lurked. Almost immediately after the letter was written, executive department agency heads in our Federal Government began applying the precedent set by the letter.

Budget Director Rowland Hughes, using the precedent, refused to allow witnesses to be questioned and certain papers to be produced in connection with handling of the now-famed Dixon-Yates contract. Hughes, citing the letter, said records and conversations involved in reaching decisions within his department were confidential.

Logically extended, the Eisenhower-Wilson letter gave to the head of every executive agency, and those acting for him, a precedent for making confidential anything they pleased to cover up.

Here was a parasol under which Government heads could stand any time an information seeking reporter or, for that matter, a congressional investigating committee, asked him questions.

Many times since the letter was written, reporters and congressional investigators have heard this phrase: "We consider that information to be confidential under the President's May 17, 1954, letter to Defense Secretary Wilson." Bureaucrats using this phrase and its variations have not pleaded that the Nation's security is involved or that information-seekers were after loyalty files, or diplomatic papers or so-called raw investigative files. They simply and arbitrarily said: "Confidential."

This has caused a slowdown in the ability of the Congress to secure information pertinent to its necessary investigations. And gentlemen, I believe you must face the fact that when the power of the Congress to investigate is limited, so is the power of the press to get answers to the questions it asks.

No question of the intent of President Eisenhower is involved here. He stated that the letter he wrote to Wilson would not be used to cover up improper acts. But what about our next President and the next and the next?

No all-out fight was made by either the press or the Congress to outlaw the precedent set in the Eisenhower-Wilson letter, although such a fight should have been made, on a purely nonpartisan, nonpolitical basis.

And now, we are faced with the recommendation of the Wright "Commission on Government Security" of June 21, 1957.

Let us assume that no fight is made against this proposal, either. Let's assume that it has long been the law of our land. What would have happened in the past few years, had such a law been on our statute books?

Here are but a few of the stories of critical national interest which you could never have printed:

The story of the late Bert Andrews, of the New York Herald Tribune, that President Franklin Roosevelt had agreed at Yalta to allow entrance of the Ukraine and Bylorussia to the United Nations. This story was published and no one has ever questioned but that its publication was in the Nation's best interests.

The series of stories by Paul Anderson of the St. Louis Post-Dispatch which led to the full disclosure of the infamous Teapot Dome scandals could not have been published, had this proposal been our law.

Arthur Krock of the New York Times in the early 1930's could not have printed stories informing this Nation that its Government intended to go off the gold standard and to initiate the NRA.

The New York Times in 1945 printed a series detailing the plans of the United States, the Soviet Union, Great Britain and France to form the United Nations. It could not have done so, had this new proposal been law.

I have already mentioned Dixon-Yates. Had the new proposal been law, the Dixon-Yates scandal would never have seen the light of day. And there are many, many others which I could cite. Had this recommendation been law, the tax writeoff granted Idaho Power Co. in the Hells Canyon cases would have been completely hidden from the public.

At this point, I should like to make it clear that I am not condemning the whole report of the Commission on Security. Many of its recommendations are admirable, notably a proposal that henceforth persons accused shall have the right to be confronted by their accusers.

But the proposal that would allow bureaucrats to cover their tracks—even their illegal acts—by the simple process of stamping "classified" on a document, cannot be condemned strongly enough. It is dangerous, not alone to the press, but to all of us because it strikes at the basic right of our citizens to know what their Government is doing. If enacted into law, it would form perfect protection for a series of Dixon-Yates and Idaho Power Co. deals—the sky would be the limit and the people, the press and our democratic way of life would be the losers.

This is a proposal that must be fought—and that fight must be led by men like yourselves. It is a primary duty of newspapers to seek always for access to information about our Government. The burden of proof should always be on the Government to prove why information should not be made public. The press should never be forced to prove why it is entitled to have information about the Government. If the press is ever forced into a position of having to prove its right to access to information, the press will be throttled—and so will the rest of us.

May I now for a moment look at the other side of the press coin, the face of the coin that is responsibility—responsibility to exercise freedom?

Often, to us outside your profession, it appears that editors and publishers in their zeal to defend press freedom often overlook abuses of that freedom.

From the outside, it seems that the mantle of press freedom has been stretched rather wide at times. But, happily, I think, most of the press is itself aware of these shortcomings. I remember reading a speech made by Henry Luce, publisher of Time-Life-Fortune. He said: "That freedom which we so uncritically demand is often nothing more than freedom to pander. If we pander to sensuality that is bad enough. But there may be an even greater danger in the fact that freedom of the press is also freedom to pander to ignorance, to pander to mediocrity, to pander to group passions and prejudices, to pander to hatred and meanness, to pander to all that is unlovely in a democracy."

I know that you, yourselves, are aware of the ease with which the trust that is freedom of the press can be abused. The selection of news to be included or omitted, the treatment of facts in a news story, the headlines given that story, the twist applied by the choice of descriptive adjectives or descriptive phrases—all these offer opportunities for distortion of the truth by the press.

Perhaps this distortion is not always a sin of commission. It may be the result of ignorance or simply of carelessness, but the result is the same. Sometimes it seems to us who must read as we run that the traditional slogan, "all the news that's fit to print" has been altered to "all the news that fits."

I said at the beginning of this talk that I believed the place where the press must fight for the liberty of all of us is within the hearts and minds of the people. I wish to repeat this here, because I do not think that this nation will perish when it loses its fleets and its armies, but only when it loses its certainty that its high mission and destiny is linked with freedom and liberty—the freedom and liberty for which Travis and Bowie and their little band died not so very far from this spot. If we lose that certainty, that is the moment when we shall surrender, not to Russian or Chinese invaders, but to self-destructive panic.

To buttress this Nation against this danger is the noble call of the journalist, the lawyer, the statesman, the industrialists, the theologian, the educator—all of us—doctor, lawyer, merchant, chief.

There is no single repository of the people's liberties; these liberties are not dependent upon one class or one occupation, but upon a general climate of opinion, what the late Justice Holmes called: "a brooding omnipresence in the sky" which is everywhere and nowhere. These liberties are wrapped up in the beliefs and hopes of all of us, sometimes vague and shapeless, sometimes clearly understood, always called forth when, in Lincoln's words, "the mystic chords of memory" call them forth, and appeal to our better natures.

You here are the opinion-makers and therefore must act always when freedom and liberty is in peril—and not just your freedom and liberty.

The press and the people will be free together or they will be enslaved and destroyed together, for liberty like ours is indivisible. Texas is a land of outspoken men, typified in the press by men like H. M. Baggerly, Elton Miller, Ernest Joinex, and Archer Fullingham. I do not believe the Texas press will see this muzzle clamped over its sources of news without protest. Yours is the opportunity to strike new blows for liberty in this generation.

Address by Hon. Chapman Revercomb, of West Virginia, Before State Convention, Veterans of Foreign Wars, Clarksburg, W. Va.

EXTENSION OF REMARKS

OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 2, 1957

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text

of an address delivered by me before the State convention of the Veterans of Foreign Wars at Clarksburg, W. Va., on June 21, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR REVERCOMB BEFORE STATE CONVENTION OF THE VETERANS OF FOREIGN WARS, AT CLARKSBURG, W. VA., JUNE 21, 1957

I consider it a distinct honor to be invited to meet with you on the occasion of your 35th convention. The Veterans of Foreign Wars has a long and distinguished record of supporting those American principles we all hold high. I congratulate you on the significant part you have played in public affairs. I applaud your labors for improvements to your communities, your State, and your Nation.

I speak to you today on a subject which I consider of primary importance—America's security in the nuclear age.

There is no question in my mind but that the Nation's security is still the No. 1 problem facing the Government at this time. I need not remind this audience of the grave responsibility that rests upon the United States for I know of no group of American citizens more deeply conscious of the need for strong defenses than those who are assembled here. That responsibility is thrust upon America because of our high concern for the preservation of the kind of life which has been our heritage and which you yourselves have defended so valiantly.

The one question uppermost in our minds today is: How can we best assure security for ourselves and conditions that will lead to peace in the world?

Disarmament talks are much in the news and we all hope that something constructive will come from these discussions. The United States may well explore sound ways to slow down the world armaments buildup—but I say to you in all earnestness that any agreements to this end can be achieved only if all nations that may be arrayed against each other willingly and sincerely agree to limitations. Moreover, any such agreements must carry assurance of a foolproof inspection.

I feel that such ironclad safeguards are imperative for our own security. We cannot afford to rob ourselves of the power to deter aggression so long as there exists in the world the present danger of destruction by an enemy.

Much is being made today of the danger of radiation fallout from nuclear explosions. It is generally conceded, however, that explosions up to this time have resulted in little danger. I think the scientists are warning us of what may happen if there are too many of these explosions. If such explosions occur to a point where the atmosphere would be saturated with fallout, unquestionably there would be terrible danger, maybe destruction, to the human race. This we must prevent.

At the same time, we must consider the danger of annihilation by an enemy using nuclear weapons. Suppose this country were to end all H-bomb tests. Could we have any assurance whatsoever that a country which has violated agreement after agreement in the past would abide by an atomic limitation treaty unless there be an ironclad system of international inspection?

We must seek every possible means of averting war—but to stop further H-bomb tests without assurance of controlled and inspected disarmament could well spell disaster.

I also call your attention to the proposal being advanced in some quarters that this country relax its present trade restrictions with Communist China. This proposal, to my mind, is a dangerous move and could have serious consequences in southeast Asia and the Far East.

The Chinese Communists have not shown the slightest sign of becoming peaceful. Therefore, to add to their war potential by enabling them to industrialize rapidly would not only be a breach of faith with friendly Asian countries which are resisting Communist domination, but it would also strengthen a country whose Government is unfriendly to us.

It is my convicion that our best assurance of preventing a catastrophic war in the years ahead lies in a strong defense force and real military alliances with friendly nations. If the United States took any other course, I fear we would see one friendly nation after another fall. And we know quite well that, left standing alone, this counry, with all its power, resources, and industrial potential, would have an exhausting experience to try to remain a free nation for long. This, I submit, is a harsh reality that must be faced, for we cannot close our eyes to the fact that this threat exists today.

Nearly every American is convinced, I believe, that the leaders of this country are dedicated to the task of achieving conditions in the world that will lead to peace. In his second inaugural address, President Eisenhower said it is our firm purpose to build a peace with justice in a world where moral law prevails. I quote his words:

"The building of such a peace is a bold and solemn purpose. To proclaim it is easy; to serve it will be hard, and to attain it we must be aware of its full meaning and be ready to pay its full price."

The price we are paying for today's peace is high. More than 60 percent of the Federal budget is for our protection. But the price of war is many times higher. Not only in dollars but in a far more priceless possession—the lives of Americans. I say to you in all sincerity that we must not lessen our efforts at a time when the Western World is growing stronger and the danger of war seems to be receding.

Our defense dollars, let us remember, are being spent not only for our present protecion but for insurance for the future. We must think of them as buying time—time to work toward easing the international tensions, time to establish a more certain and secure peace. But as long as there is loose in the world a country or a power that would destroy us we must remain geared to meet it with force if need be. If we falter at this point, or lessen our efforts, we run a grave risk of losing everything we hold dear.

Therefore, in the interest of our own security and self-preservation, we must continue military alliances with friendly nations. We should, I believe, out of necessity, continue military aid to our allies but the time has come when economic aid must be placed on a loan basis.

It is heartening to me—and I know it must be satisfying to you—to know that the new Mutual Security Act passed by the Senate provides for a development loan fund for development assistance to those friendly nations in need of economic help.

I have urged time and time again that economic aid, when necessary to other lands, be in the form of sound business loans—and it must come as heartening news to Americans throughout the length and breadth of this land to know that at last Congress is recognizing the fact that while we want security, we also have a regard for our own people, their property, and their money.

Direct military aid to allies will continue, but loans to friendly nations requiring economic development aid is far better than grants, handouts, or giveaways. This is far better for the American people, and it is far better for the people receiving such assistance. There is still contained in the bill direct gifts in some instances—but a new and wholesome step has at last been taken—and I hope to see soon all economic help abroad upon a secure and sound basis as we now provide for development operations in the present bill.

There is increasing evidence, that together with our present allies, we are growing stronger all the time and may soon reach the point where would-be aggressors will not dare risk war.

This is the whole aim of our foreign policy. As to defense measures, I believe it to be a sound one. It has kept this country out of a shooting war for more than 4 years, it has undoubtedly kept some of our allies from falling to communism.

And as the anti-Communist alliance grows stronger, as the danger of war recedes, we all look forward to the time when the billions we are now spending for defense can be diverted to internal improvements in our own country, or turned back to the people in the form of tax relief.

I am convinced, however, that the best way to avert war during this fateful era of uncertain peace is to maintain strong defenses and firm military alliances until international tensions have eased and the threat of aggression has diminished. Any other course could well lead to our downfall.

Together, we continue to stand for a strong country, where a free people may be secure and left alone to make their way and make their contributions to mankind's betterment.

Disarmament and Relief of International Tensions

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Tuesday, July 2, 1957

Mr. CASE of New Jersey. Mr. President, it is important, at a time when the United States is engaged in disarmament negotiations, that we remain mindful of the pressing political problems which are yet to be resolved. In an address delivered to the Colgate University Conference on American Foreign Policy at Hamilton, N. Y., on July 1, 1957, the distinguished junior Senator from New York [Mr. JAVITS] ably pointed out this need. I ask unanimous consent that his remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR JAVITS BEFORE COLGATE UNIVERSITY CONFERENCE ON AMERICAN FOREIGN POLICY, HAMILTON, N. Y., JULY 1, 1957

The most important phase of foreign policy which dominates the world scene is disarmament and specifically the current London negotiations. The most striking development in these negotiations is that the United States is seemingly moving toward falling in with what has been the basic foreign policy position of the Soviet Union since at least the Geneva Conference in 1955—that disarmament had to precede political settlements.

Until January 1957, the United States had strongly maintained that political settlements had to precede or accompany disarmament. In fact, until January 1957 we

had insisted that free elections to unite West and East Germany was the essential preliminary to any real disarmament arrangement. Since that time, however, congressional hearings on atomic fallout and the national debate on fallout dangers have made many, in and out of Government, believe that a public climate has been created requiring us to conclude disarmament agreement and to yield ground on what had been the key position of our international policy up to the beginning of this year.

No one can overstate the horrible consequences of a hydrogen bomb and atomic war. Hence, a disarmament agreement, even a "first step" agreement, dealing largely with atomic bomb tests and some inspection machinery, is worth considering to keep the masters in the Kremlin from being backed into an intolerable corner by pyramiding armament expenditure until they feel they can do nothing but launch an atomic war. If we do this, however, we need not and should not completely adopt the Russian thesis that disarmament must precede political settlements, but we should insist on some progress in political settlements, too. I believe that this is the most likely and capable of attainment through making, as part of the present disarmament negotiations, a proposal for strengthening the peace maintenance machinery of the U. N., and it is this which I recommend to our Government.

Accordingly, I urge that our Government in the disarmament negotiations for a first step agreement include as one of the conditions at least the strengthening of the peace enforcement machinery of the United Nations. In this respect, I suggest the following four items as worthy of inclusion and practicably attainable:

1. The establishment of a permanent United Nations peace force analogous to the UNEF now stationed in the Middle East with duties to implement the peace maintenance machinery of the United Nations.

2. To end the use of the veto in questions of membership, measures for the pacific settlement of disputes, and on the distinction between considering procedural and substantive questions.

3. To improve the jurisdiction of the International Court of Justice.

4. To improve the jurisdiction of the United Nations to consider threats to the peace arising from conflicts between non-self-governing or administered areas and the administering power.

Each of these items has an immediate and pressing applicability to world affairs. They could probably be accomplished substantially by interpretations agreed to to be placed on the charter rather than amendment.

It is well known that the tinderbox of the world right now is the Middle East. Establishing a permanent United Nations peace force will help to solve the problem of how long the United Nations emergency force will remain in being between Israel and Egypt in the effort to bring some stability and permanent cessation of fedayeen raids or other hostilities in that area. Removal of the veto for the pacific settlement of disputes may urgently be needed for example in the test of the Eisenhower doctrine for the Middle East which may come if Colonel Nasser uses his newly acquired Communist Russian submarines to disrupt peaceful commerce in the Gulf of Aqaba. It may also be very important if tension in Korea is brought nearer the boiling point by the recent decision to permit the Communists no longer to take advantage of us through the modern rearmament of their forces in North Korea. Improvement of the jurisdiction of the International Court of Justice can serve us very well in order to test out the validity and legality of the way in which Egypt controls traffic through the Suez Canal. Strengthening of United Nations jurisdiction in conflicts between administering powers and non-self-governing peoples or administered areas is especially important in the Algerian question which will actually arise again in the next session of the United Nations General Assembly, and again face the argument of the domestic jurisdiction section of the charter.

Here are practical, definitive, and effective as well as minimal actions to deal with the real causes for the armaments race, which should be made a part of even a first step disarmament agreement, if we are to be realistic and faithful to our own judgment as to the best interests of the free world.

We should not be compromised out of our basic foreign policy convictions by domestic pressures with respect to the dangers of atomic fallout. Our people are adult enough to recognize that in a negotiation such as the one in which we are now engaged on disarmament, the attitude of an agreement at any price is fatal.

The major political issues in the world between the Soviet Union and the United States are the underlying cause of international tension and breed the basic mistrust as to the use of weapons. These are the issues poisoning the world scene. These issues include the division of Germany, Korea, and Vietnam maintained by the Soviet Union and Communist China respectively; the pressure on Japan and Formosa by the Communist bloc; the entry of the Soviet Union into the Mideast as the backer of an Arab hegemony under Communist domination being promoted by Egypt's Colonel Nasser; and the pressure of subversion upon existing governments in these and other areas of the world.

That the Russian thesis is that disarmament shall precede any effort at political settlement is clear from the test of the Soviet disarmament proposals introduced in the U. N. disarmament committee subcommittee as late as April 30, 1957. This document states, "The Charter of the U. N. places an obligation on states to resolve their international disputes by peaceful means and to refrain from the threat of force or the use of force in their international relations." Therefore, the existence of outstanding international issues or disputes cannot be imputed as a justification for the maintenance by states of large armed forces, or as a justification for the armaments race."

In the United States and the free world generally focusing on disarmament while passing over the political issues may increase, not reduce, anxieties and fears. The best example is the impact upon the German Federal Republic already recorded of the current disarmament negotiations in the course of which Chancellor Adenauer's political opponents were charging German unification would be seriously prejudiced by the contemplated disarmament agreement.

On the other hand, a first step disarmament settlement agreement passing over political settlements could, within the U. S. S. R., relieve serious economic pressures attributable to rising armament expenditures, reduce the urgency for political settlements and make more acceptable to the Russian people the iron-fisted control and military occupation of satellites practiced by the occupants of the Kremlin.

We have a right to recall as an object lession the widely heralded Washington Conference of 1922, which resulted in the scrapping by the United States of 28 capital and other ships, by Britain of 24, and by Japan of 16. In connection with this agreement, we pledged ourselves not to add to the existing fortifications on Guam, Tutuila, the Aleutians, and the Philippines. We surrendered our power to act in the Far East not only to preserve the "open door" and the territorial integrity of China, but to protect our own outlying possessions. We soon found out that it was the new air power which profoundly altered military strategy, that the naval race was transferred from capital ships to aircraft carriers, cruisers, destroyers, and submarines. In 1934, Japan denounced the treaty. We ended up with the loss of the Philippines, Guam, and Wake after Pearl Harbor, at least in part because of the way in which our defenses there had been let down.

Testing of Nuclear Devices

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 2, 1957

Mr. YARBOROUGH. Mr. President, one of the most highly respected newspaper writers in the State of Texas is Dick Meskill. An editorial column by Mr. Meskill in the San Antonio, Tex., Alamo Register on June 28, 1957, is a thought-provoking analysis of the moral question involved in continued testing of nuclear devices. This discussion of Adlai Stevenson and the testing of atomic weapons should be read by every American.

I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Meskill's column.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN THE SHADOW OF SAN FERNANDO

(By Dick Meskill)

Somewhat wistfully we remember an editorial that appeared in the Alamo Register last November. The editorial was entitled "An A for Stevenson." The repercussions were loud and clear, and the replies through the mail and in person were numerous. We were supposed to be taking sides politically, though the paper officially disclaimed any political motivation at the time. This paper labeled Stevenson's statements and program on banning atomic and hydrogen testing as the mark of real statesmanship. This paper, in this area, stood completely alone. No other paper in the vicinity took stock of what the presidential aspirant was saying. We said at that time that the whole issue would have been better out of politics and in the field of a moral searchlight. We said at that time that mankind's needs took precedence over political quibbling.

The tide has turned. We are no longer alone. Papers now are stumbling all over themselves trying to reverse their editorial support of a suicidal go blindly ahead policy of testing hydrogen weapons. As for the irresponsible Government statement that since the Pope was not a scientist he should not speak concerning hydrogen warfare and testing, we have only to say that if in the 20th century any major moral question has arisen, then this one which deals with the very future of the species, its welfare and well-being, is that major moral question. And when the Pope speaks on faith or morals, Catholics over the world pay attention. The Pope was not speaking as a scientist. He was speaking concerning the morality of what most scientists had predicted factually. He only issued a moral guide for consideration of the problem.

Scientists now reliably claim that radioactive fallout from nuclear testing can kill, maim, and/or destroy the ability to reproduce in affected people. The majority of

scientists tell us that at this present time on earth there are approximately 10 million people so affected, and that the number is increasing in fantastic proportions following the detonation of each nuclear weapon. An official Defense Department record indicates that in 1960 Russia will be capable of delivering a full-scale atomic or nuclear attack, and that this attack when and if it should come in the United States would kill a minimum of 85 million people, approximately one-half of the population of the United States. Nineteen hundred and sixty is 3 years away.

So what do we do now? Well, one of the most foolish things we have done now is to allow the departure of Thomas E. Murray from the Atomic Energy Commission. Here is the only member of the Commission who has considered publicly the problem of the morality involved in nuclear testing. For his forthrightness on this question, he has brought down on his head the wrath of Mr. Strauss, the head of the Atomic Energy Commission; and President Eisenhower is making no move to save Mr. Murray. I couldn't care less that Mr. Murray is a Catholic and a Democrat to boot. This should not be allowed to enter into the picture. He is, without a doubt anywhere, one of the ablest men on the Commission; he has come up with some very real possibilities concerning nuclear energy, and he has witnessed every major atomic explosion since the first atomic bomb was exploded.

I met Murray 2 years ago in Buffalo, where he was principal speaker for the Catholic Press Association convention. The other speaker was Gov. Averell Harriman. After the big speaking session was through, I had the opportunity of asking Mr. Murray some questions. I was thoroughly impressed by his comprehensive understanding of the problems involved, and by the moral integrity with which he passed judgments. This was a man who is convinced that nuclear warfare means total destruction for civilization unless it is curtailed; that man has no alternative but to acquire a mature moral viewpoint on the use of atomic force if he is to survive; that even a criminal conspiracy, like the Communist conspiracy, which does not understand the meaning of justice, must at least retain an elemental understanding of the meaning of war, of the purposes to which force today can be put.

"The criminal who has lost his moral conscience still retains his instinct for self-preservation," Murray said. "Therefore, he might well be disposed to agree that neither his own purposes nor any other intelligible purposes could possibly be served by unleashing total testing or warfare with nuclear weapons. His views of the nature of man and of the essential purposes of man upon this earth differ totally from our Christian view. But his view of war and testing cannot be thus totally different. There is therefore the serious possibility that he would honestly agree to some kind of disarmament, and if he makes such a move, he should not be discouraged or deterred by petty political and tactical considerations."

I remember being impressed by Murray's next phrase: "By sublime irony fear of the atom may lead to general security and a new moral maturity." And even more impressed by Murray's clear-cut sense of morality: "Man never has anything to fear in God's material creation. His only reason for fear is not with things, but with himself. Man does not need to fear his own intelligence or the products of that intelligence, whereby he is enabled to create. What man must indeed fear is the prideful or impudent use of this divine faculty." Murray is being replaced because he dares to disagree with Mr. Strauss on atomic and hydrogen testing. Mr. Strauss is following the river by permitting unrestricted testing, with each test potentially a cumulative destructive force against all mankind.

Where would United States pride be if we suddenly found ourselves a nation of killed, maimed, or sterile people? But what is more important, how can such initiation be justified under the rocklike code of the Judaic-Christian Ten Commandments? The testing should be stopped now, and measures taken to insure that it is stopped now, the world over.

Golden Corn Tassel as National Floral Emblem

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 2, 1957

Mr. DOUGLAS. Mr. President, on Wednesday, June 26, my good friend, Mr. V. Y. Dallman, editor of the Illinois State Register, Springfield, Ill., devoted his daily editor's column to the support of my resolution, Senate Joint Resolution 105, proposing the golden corn tassel as our national floral emblem. Mr. Dallman is one of the ablest editors of the Middle West, and his original poem in behalf of the corn tassel is of great help to the cause.

Editor Dallman closes his column by quoting the late Gov. Richard Oglesby of Illinois in his tribute to "the corn, the corn, within whose golden heart there is health and strength for all the nations," which was given at the Illinois Corn Exposition, November 23–28, 1908, in Chicago. As we near the 50th anniversary of this exposition, I believe it is fitting that we honor all producers of corn by enacting my resolution and making the corn tassel the symbol of the beauty and the bounty of the United States.

Mr. President, I ask unanimous consent that Mr. Dallman's column be printed in the Appendix of the RECORD so that all Senators may read his tribute.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOLDEN CORN TASSEL SHOULD BE INSPIRING FLOWER OF UNITED STATES OF AMERICA

(By V. Y. Dallman)

TO THE CORN TASSEL

(Named national flower by Senator DOUGLAS)

To all people of the Nation
It's a source of inspiration.
Omens, rich, it is bestowing
When from deep-green stalks it's growing.
And, in sun-kissed, golden glory
Tells America's brave story.
Its gold miracle of seeding
Serves the food which all are needing.
From its generous fruition
Man and beast obtain nutrition.
Through process of distillation
There comes smiles of inspiration.
Worldly cares we are defying
With corn's golden tassel flying.
Great today mankind's elation.
It's the flower of the Nation.

Rejoice, dear readers, in the joyful idea that the golden corn tassel be proclaimed the national flower. Thirty countries have national flowers and we have none.

United States Senator PAUL DOUGLAS has introduced a resolution in Congress to have such a proclamation made by President Eisenhower. Representative Paul Simon, of the Illinois House, has presented a resolution memorializing Congress to take favorable action.

Julia Proctor White, of Peoria, is credited with having originated the suggestion. She insists, however, that Miss Margo Cairns, of Minneapolis, is mother of the thought. It's a glorious idea. We enter into the spirit of it with the utmost enthusiasm.

Senator DOUGLAS becomes poetic in his emphasis of this ideal. He says "Corn, or maize, as the Indians called it, saved the Pilgrims from starvation. * * * It was also one of the New World plants taken back to the Old World and incorporated into the economy and agriculture there." He points out that "over 3 billion bushels of corn are produced each year with an annual value of over $4 billion." Illinois topped all States last year.

All of which brings to mind the late Gov. Richard Oglesby's tribute to "the corn, the corn, within whose golden heart there is health and strength for all the nations." His tribute is a classic which Senator DOUGLAS should incorporate in his resolution.

These are the closing words of Governor Oglesby's tribute voiced in Chicago at the Illinois Corn Exposition, November 23-28, 1908, as he appeared with the popular actor, Joseph Jefferson:

"Aye, the corn, the royal corn, within whose yellow heart there is of health and strength for all the nations. The corn triumphant. That with the aid of man hath made victorious procession across the tufted plain and laid foundation for the social excellence that is and is to be. This glorious plant, transmitted by the alchemy of God, sustains the warrior in battle, the poet in song, and strengthens everywhere the thousand arms that work the purposes of life. Oh, that I had the voice of song or skill to translate into tones the harmonies and symphonies and oratorios that roll across my soul when standing, sometimes by day and sometimes by night, upon the borders of the verdant sea I note a world of promise, and then before one-half the year is gone I view its full fruition and see its heaped gold await the need of man."

Continuing, Oglesby said: "Majestic, fruitful, wondrous plant. Thou greatest among the manifestations of the wisdom and the love of God that may be seen in all the fields, or upon the hillsides, or in the valleys. Glorious corn that, more than all the sisters of the field, wears tropic garments. Nor on the shore of Nilus nor of Ind does nature dress her forms more splendidly. My God, to live again that time when, to me, half the world was good and the other half unknown.

"And now again the corn that in its kernel holds the strength that shall, in the body of the man refreshed, subdue the forest and compel response from every stubborn field, or, shining in the eye of beauty, make blossoms of her cheeks and jewels of her lips, and thus make for man the greatest inspiration to well doing, the hope of companionship of that sacred, warm, and well-embodied soul, a woman."

The Administration's Civil Rights Program

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 2, 1957

Mr. KUCHEL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter to

me from the Attorney General dated May 31, 1957, relating to the proposed civil-rights legislation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., May 31, 1957.

Hon. THOMAS H. KUCHEL,
United States Senate,
Washington, D. C.

DEAR SENATOR: Thank you for the letter of May 15 signed by you and Senator CASE requesting the comments of the Department of Justice relative to the minority report filed by Senators ERVIN and JOHNSTON in opposition to S. 83 (the administration's civil-rights program) and particularly to their discussion of their jury trial amendment. In addition to the comments which follow, may I particularly call to your attention the statement of the American Civil Liberties Union opposing such an amendment to require jury trial in contempt proceedings arising under the proposed civil-rights legislation. This statement was reprinted in the CONGRESSIONAL RECORD for May 22, 1957, at pages 6579–6580.

The proposed legislation seeks merely to apply long-established civil procedures for enforcing Federal laws to civil-rights cases where experience has shown the need for civil remedies. In urging Congress to authorize the Government to institute civil suits for preventive relief in civil-rights cases we are requesting the right to use procedures long available to the Government as a means of enforcing other types of Federal laws. Ever since the adoption of the Sherman Act in 1890 the Department of Justice has been empowered to institute proceedings in equity to prevent and restrain civil violations of the antitrust laws, as well as to bring criminal prosecutions. The Department of Labor uses the injunctive process as a means of enforcing the Fair Labor Standards Act. The Interstate Commerce Commission, the Civil Aeronautics Board, the Securities and Exchange Commission, the National Labor Relations Board, the Atomic Energy Commission, and other Government agencies have similar authority to use civil remedies in addition to criminal prosecutions. In none of these fields are jury trials required in contempt cases.

There are valid reasons for the ever-increasing use of civil suits for preventive relief as a means of enforcing Federal law. Judicial determination of the validity of a course of conduct in advance aids the Government in its primary purpose of preventing violation of law. It also aids the defendant since he can litigate the legality of his proposed conduct without the necessity of taking action at the risk of a criminal conviction if he guesses incorrectly.

All of these reasons exist in the civil rights field, particularly in connection with the protection of the right to vote. The primary interest of the Government is in making it possible for all citizens to vote without discrimination based upon race, creed, or color, not in punishing local officials for denying such rights. Often it is not clear whether the particular conduct of a registrar of voters, for example, does constitute a violation of Federal law. Under present law the Government can only wait until the harm has been done—the rights to vote denied—and then proceed with a criminal prosecution as a means of testing the validity of the registrar's action. The register himself is often caught between community pressures to discriminate and the fear of Federal criminal prosecution with no way to resolve the issue in advance. With civil remedies authorized, the Government will often be able to obtain a judicial ruling in advance of the election which will determine the legality of the proposed conduct of the registrar, removing from him the necessity of risking criminal prosecution and effectively protecting the constitutionally guaranteed right of citizens to vote without discrimination based on race, creed, or color.

Suits for preventive relief under the proposed legislation will be governed by the traditional rules of procedure which have always applied to such suits. The Government seeks no new or radical procedures to govern in junction suits in civil rights cases. Under the proposed legislation the rules of procedure which have traditionally governed equitable suits in the Federal courts would apply in the same manner and to the same extent that they now apply to other suits by the Government for preventive relief. The defendant in an injunction suit in a civil rights case will have the same rights that the defendant now enjoys in a similar suit under the antitrust laws, the Fair Labor Standards Act, or any other one of the Federal laws mentioned above.

These procedural protections are ample to protect all legitimate rights of the defendant. He gets a full hearing before the court on the question whether his conduct violates Federal law and hence should be enjoined. If he disagrees with the determination of the court, he may appeal the ruling for full consideration by the appellate courts. In most cases this is the end of the matter. The defendant obeys the court order and the public interest in the enforcement of the Federal law has been vindicated. But if the defendant chooses to ignore or defy the court order he may be subjected to punishment for contempt of court. Again he is entitled to a full hearing before the court. He is presumed to be innocent, his guilt must be established beyond a reasonable doubt, and he cannot be compelled to testify against himself. If he is found guilty, he again may appeal. And an examination of the cases in recent years demonstrates that the appellate courts are alert to protect defendants against any possible unfairness in contempt proceedings.

It is true that wherever the Government is authorized to sue for preventive relief the defendant is not entitled to a jury trial in contempt proceedings. The Constitution of the United States recognizes the traditional differences between the procedures of courts of law and courts of equity and does not require jury trial in equitable proceedings. As long ago as 1890 the Supreme Court of the United States said: "It has always been one of the attributes—one of the powers necessarily incident to a court of justice—that it should have this power (the contempt power) of vindicating its dignity, of enforcing its orders, of protecting itself from insult, without the necessity of calling upon a jury to assist it in the exercise of this power." In 1914 Congress passed a statute (now 18 U. S. C. 3691) extending the right to jury trial in criminal contempt cases where the acts constituting the contempt also constitute criminal offenses under Federal or local law. This statute expressly excepted contempts arising out of disobedience to court orders entered in suits brought in the name of the United States. Since criminal contempt proceedings are not often sought in private litigation (the Clinton, Tenn., case is one of the few instances of its use), this statute has had little impact upon the enforcement of Federal court orders. In 1932 in the Norris-LaGuardia Act, Congress, after removing almost all of the jurisdiction of the Federal courts to issue injunctions in labor dispute cases, provided for jury trial in contempt proceedings arising under the act. It was only with the enactment of the Taft-Hartley Act in 1947 that the Government was given jurisdiction to seek injunctions in any substantial number of labor dispute cases and that act expressly provided that the jury trial requirement of the Norris-LaGuardia Act should not apply to it. Hence it is probable that the statute which appears to grant jury trial in contempt proceedings for violation of injunctions issued in labor dispute cases (18 U. S. C. 3692) has no application to injunction suits brought by the Government under Taft-Hartley, which are, for all practical purposes, the only type of injunction suits (private or governmental) in labor dispute cases over which the Federal courts have jurisdiction. (See *United States* v. *United Mine Workers of America*, 330 U. S. 258.)

With reference to jury trial, then, the procedure under the proposed legislation would be the same as that which has always governed suits by the Government for preventive relief. This procedure appears at the present time to be effective and satisfactory. I am aware neither of abuse nor of serious complaint of abuse by the Federal courts in contempt proceedings instituted for the purpose of enforcing injunctions issued in Governmental litigation. I foresee no reason why this procedure should not be equally satisfactory in civil rights cases.

Enactment of legislation providing for jury trial in contempt cases arising out of governmental litigation would undermine the authority of the Federal courts by seriously weakening their power to enforce their lawful orders. The effect of adopting current proposals for jury trial would be to weaken and undermine the authority of the Federal courts by making their every order, even when issued after due hearing and affirmed on appeal, reviewable by a local jury. Referring to proposals similar to those now advanced, President (and later Chief Justice) Taft said in 1908: "The administration of justice lies at the foundation of government. The maintenance of the authority of the courts is essential unless we are prepared to embrace anarchy. Never in the history of the country has there been such an insidious attack upon the judicial system as the proposal to interject a jury trial between all orders of the court made after full hearing and the enforcement of such orders."

Furthermore, the proposed amendment to existing procedures that is being advocated under the innocuous slogan of "jury trial" would permit practical nullification of the effectiveness of the proposed civil rights legislation. The enforcement of any court order may require prompt and vigorous action if it is to be effective. Prompt action will often be vital in civil rights cases, especially election cases where the registration period or the election may pass while enforcement is delayed. The injection of a jury trial between an order of a court enjoining discrimination against Negroes in an election and the enforcement of that order would provide numerous opportunities for delay beyond the time when the order could have practical effect.

I hope that the foregoing statement provides the information requested by you. If I can be of further assistance, do not hesitate to call upon me.

Sincerely,

HERBERT BROWNELL, Jr.,
Attorney General.

Exchange Teachers

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 2, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD, 2 articles by 2 exchange teachers, 1 from the United States, teaching in England; and 1 from Scotland, teaching in the United States.

These accounts will be of interest to the Members of the Senate, and should assist them in judging the value of the exchange program. I hope Senators will read the two articles.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

BRITISH AND UNITED STATES TEACHERS FIND JOB SWAPPING IS AN EDUCATION—INSTRUCTORS CREDIT EACH SYSTEM WITH GOOD AND BAD FEATURES—DISCIPLINE, NO MATTER WHERE, IS A LETDOWN

(Last summer 100 American teachers exchanged school positions with 100 British teachers for the 1956–57 school year. The teacher trades, started in 1946, are a part of the international educational exchange program of the State Department. The two stories that follow tell of the experiences and opinions of 4 exchange teachers—2 American and 2 British.)

(By Thomas P. Ronan)

LONDON, June 24.—Teaching for a year in London has proved a gratifying experience for two United States teachers who came here under the Fulbright exchange program.

Miss Isabel W. Hunt switched from a Seattle elementary school to one of the same type here, and Pardon E. Tillinghast made the change from Middlebury College in Vermont to a public (private in the United States) secondary school here. Both have enjoyed teaching and living in London.

The major difference they find in the British educational system is the separation of children at an early age according to their ability and the emphasis on speeding the progress of the brighter ones. Both teachers have reservations about the value of this system, but they feel United States schools could do more to help the brighter students.

Both had assumed that British children were better behaved than their American counterparts; they have been surprised to find that this is not the case.

PERSPECTIVE ENJOYED

Miss Hunt, who taught in Montana before she began teaching in Seattle in 1949, says it has been wonderful to be able "to sit back and evlauate from afar" the United States system of education. And she finds that she has a greater appreciation of that system than ever before.

At Dollis Junior School in the Mill Hill section of London, she has been teaching a class of 9- and 10-year-old boys and girls, the same ages she had at Seattle's Greenwood School. Both are public schools in the United States sense.

The pupils at the Dollis Junior School are graded according to their ability from A down to D.

"I much prefer our own system, where there isn't this kind of segregation," Miss Hunt says after nearly a year of teaching a class from the C and D streams.

"I feel the youngsters I have really have possibilities. And I believe they would have a much better chance of developing and of getting an education if they were in school in America."

DIFFERENT APPROACHES CITED

Miss Hunt agrees with the observation of another American exchange teacher that Great Britain caters to her top 25 percent in education and doesn't do enough for the 75 percent. She says the United States does not do enough for the top 25 percent.

She feels that American elementary school children get a much broader education. They have more science and geography she says. While the English push their children faster in English and mathematics, they do not spend as much time teaching them to understand what they are doing, she believes.

Mr. Tillinghast's students, all boys at the City of London school, range in age from 12 to 17. He teaches history, English and French.

From the age of 12 or 13, the boys are divided into streams graded from A to E. The boys in the top streams get much subjects and move faster.

Those in the lower categories seem rebellious and bored and nearly all drop out at 15 or 16, he says.

AUTHORITARIAN TREND NOTED

He says that one of the ablest masters has not used a cane in 15 years. But he believes the British system is more authoritarian and puts less emphasis on guidance than the American.

Mr. Tillinghast said he had resorted to the cane, a common practice here, with the utmost reluctance after he had concluded it was expected of him.

(By Leonard Buder)

Miss Alexina Skinner, of Dunfermline, Scotland, had been teaching in an American school 1 month last October when a fourth-grader came to class with a portable radio and turned on the World Series broadcast.

When Miss Skinner told the boy to turn off the radio and stick to his studies, the pupil threatened, "If you don't let me listen to the game, I'll jump off the roof, and it will be your fault."

Miss Skinner may have been taken aback by this academic insurrection—incidents like this never happened at home—but she did not bat an eye. Her answer was:

"Happy landing."

Needless to say, the youngster did not jump, and no other pupil in the class dared to question the new teacher's authority.

OCEAN OF DIFFERENCES

But while discipline posed no problem to the Scottish schoolmarm, Miss Skinner and other British exchange teachers here have found an ocean of differences between teaching in the British Isles and teaching in the United States.

Anthony H. Hindley, a 30-year-old art teacher from Barnsley, Yorkshire, has spent the last year at the Pelham Memorial High School in Pelham, N. Y. He feels it is much harder to be a teacher in this country.

"There is much too much organization here," he said.

Mr. Hindley also has had no problem with pupil discipline here. That was because he has kept a tight rein on his students, he said.

PUPIL ABILITY PROBLEM

The English system of separating students according to their scholastic ability is a good one, he maintained. He teaches in the Race Common County Secondary Modern Boys School, which caters to boys of modified abilities.

"Here you have students of mixed ability," he said, "and consequently not all students benefit accordingly. This program is very good for the average students, but it is not good enough for those who are either above or below average."

Mr. Hindley made it clear that he liked the American students he had met. However, he said, they required some understanding.

American boys and girls act more mature and sophisticated, he said, and you tend to expect more of them.

In Scotland, Miss Skinner, who has been teaching 30 years, served as headmistress and teacher of the 1-room Dunduff School. For the past year she has been teaching at Public School 77, 1st Avenue and 85th Street.

WORLD VIEW LACKING

American education, Miss Skinner said, does not place enough importance on physical training. The pupils, she said, do not read as fluently as do the Scottish children she knows, and they do not seem to take as much interest in geography and history.

But—she added that her American pupils seemed very eager to learn and exhibited a real interest in their studies.

Both Miss Skinner and Mr. Hindley said they were very much impressed with what they had seen of this country. When school is over, they will tour the Nation before returning home.

"The United States is fantastic," Mr. Hindley said. "The people here do not realize how wonderful their country is and do not appreciate it as fully as they should. They have everything."

Dishes Issue Is Won by the Senate Ladies

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 2, 1957

Mr. CASE of South Dakota. Mr. President, the facile pen with which Columnist George Dixon depicts the Washington Scene, is very familiar to Members of the Congress. Mr. Dixon's column in a recent issue of the Washington Post and Times Herald appealed to me as a delightful handling of a delicate area in congressional relationships.

I commend for reading by Members of the Senate the feature, "Dishes Issue Is Won by the Senate Ladies," particularly because it relates to our distinguished colleague, the Senator from New Mexico [Mr. CHAVEZ], and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DISHES ISSUE IS WON BY THE SENATE LADIES

(By George Dixon)

The Senate Ladies is an exclusive organization restricted, oddly enough, to Senate ladies. The wife of the Vice President is always the presiding officer. The members meet every Tuesday morning, at which time they discuss the issues of the day, roll bandages for the Red Cross, discuss the issues of the day, have lunch, discuss the issues of the day, cart their soiled dishes to another room where they wash them while discussing the issues of the day, and adjourn, still talking.

At present, the ladies have a small club room in the old Senate Office Building, without facilities for washing either themselves or dishes. At the last meeting they voted unanimously to condemn this situation as deplorable, if not downright un-American. At the same time they voted to demand new, and dishwashable, quarters in the new $22 million Senate Office Building, now under construction.

Mrs. Pat Nixon, her slim shoulders sagging from having carted loads of gravy-smeared dishes down a highly trafficked corridor, gaveled the gathering to order and declared it was high time the Senate Ladies rebelled against anachronistic conditions that would not have been tolerated by the original Colonial Dames.

"What we must do," stated the Second Lady, "is appoint one of our number as a lobbyist to influence legislation. She must call upon the chairman of the Senate Public Works Committee and subject him to an unrelenting pressure campaign."

Thereupon Mrs. Nixon named the lobbyist who left her dishes dirty and took off for the office of Senator DENNIS CHAVEZ, of New Mexico. She informed the latter's secretary, Miss Frances Ortiz, that she would brook no runaround.

After a delay which left her fuming, the emissary was finally admitted to the presence of the Public Works chairman. She stated her mission.

"You are engaged in lobbying, within the meaning of the act," interrupted Senator CHAVEZ. "Have you complied with the law, duly made and provided for, and registered as a lobbyist with the Secretary of the Senate?"

"Please talk English," snapped the emissary.

"Oh," said Senator CHAVEZ, "you speak English? Then you must be the representative of a foreign power. Have you registered with the State Department?"

The lobbyist for the Senate ladies informed Senator CHAVEZ that he would accede to her demands if he knew what was good for him. The solon quailed. With shaking hands, he pulled the telephone to him and called the Architect of the Capitol, J. George Stewart.

"There's a lobbyist for the Senate ladies here in my office," quavered the lawmaker. "She demands a new clubroom in the new Senate Office Building, with facilities for washing dishes. If you don't put it in, I'm in a heck of a fix."

The Capitol Architect promised to insert the new clubroom in the plans. With an expansive air, Senator CHAVEZ turned to the envoy and said, "Well, I fixed it up for you, sweetheart."

"Thank you very much," said Mrs. Dennis Chavez.

Hells Canyon Power Project

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 2, 1957

Mr. YARBOROUGH. Mr. President, from the pen of one of our country's most distinguished commentators on national affairs comes the inside story of the present administration's mishandling of the Hells Canyon power project.

The article by Mr. Thomas L. Stokes which appeared in the June 28 edition of the American-Statesman in my home town of Austin, Tex., is to be commended for its frank and fearless revelation of pertinent data regarding the administration's attempt to substitute a secret deal for a sound, publicly executed and democratically beneficial public program.

I ask unanimous consent to have the article printed in the Appendix of the RECORD. It is fitting that we ourselves examine the similarity, as suggested by Mr. Stokes, between the Hells Canyon program and the now more infamous Dixon-Yates controversy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELLS CANYON IS LIKE ANOTHER DIXON-YATES?

(By Thomas L. Stokes)

WASHINGTON.—If you know what's been going on behind the sleek, shiny front of Eisenhower administration peace, prosperity, and social welfare, there is ironic justice in the administration's defeat by the Senate on the Hells Canyon Dam issue.

For this exposes to public view the behind-the-scene machinations by the administration to hand over valuable natural resources to politically powerful utility interests. The attempt in this case is to turn over this last biggest undeveloped waterpower site on the continent to a private corporation, the Idaho Power Co., of Augusta, Maine.

The other case was, of course, the notorious Dixon-Yates scheme, designed to destroy the great TVA in the Southeast.

The pattern is similar in two ways. For one thing, the administration was severely rebuked in both attempted raids on the public domain. In Dixon-Yates, it confessed its own guilt by canceling the contract. Now, in Hells Canyon, the Senate, in a clear affirmation of majority public opinion in the Pacific Northwest, has voted to authorize the Federal Government to build one high dam at Hells Canyon in the Snake River along the Idaho-Oregon border.

That would be in keeping with the Army engineers' plan for integrated development of the great Columbia River system, in contrast with the three small dams proposed by the Idaho Power Co., which already has started work under license by the Federal Power Commission.

For another similarity, there are the snide, sneaky, backstairs methods that have been revealed in congressional investigations.

It seems timely to take a look at the behind-the-scenes maneuvers, all of which are documented.

Dixon-Yates first. That starts with the Detroit banker, Joseph W. Dodge, Director of the Budget early in the first Eisenhower administration. He wanted a complete change of Government water resource policy so that TVA, and eventually other giant public multipurpose projects, would be turned over to private utility combines. That, however, was no more his business than it is the business of your Uncle Dudley.

One day he was talking to a friend, George D. Woods, chairman of the First Boston Corp., about his plan. Woods had just the man to draft his plan, one of First Boston's own men by name of Adolphe Wenzell.

So Wenzell came to Washington, drew up an overall plan and then another as the first step in taking care of TVA. That was the scheme to contract with a couple of big utility magnates with southern holdings doing business at 2 Rector Street, New York City, Edgar H. Dixon and Eugene A. Yates. They would build a plant of their own in West Memphis, Ark., and produce power that would be sold to TVA. This would have been an entering wedge, supposedly to compensate for power TVA would furnish to the Atomic Energy Commission at Paducah, Ky. When you devise such a devious scheme, you can be sure there's something fishy.

There was. But did the public know anything about it? No, not for several months. Then Senator LISTER HILL, Democrat of Alabama, a sponsor of TVA, exposed in a Senate speech how Wenzell was involved. An investigation conducted by Senator ESTES KEFAUVER, Democrat of Tennessee, showed that Wenzell was a consultant of the Budget Bureau and, at the same time, working for First Boston Corp., which was doing the financing for the Dixon-Yates scheme.

That is known as conflict of interest. It is against the law.

You never saw so much scurrying around in the administration, and wringing of hands in righteous indignation. It ended up by the Government canceling the contract it had originated.

Now for Hells Canyon. The opening scene is in the office of Secretary of Interior Douglas McKay, himself from Oregon in the Pacific Northwest. The time: early in the Eisenhower administration. On his desk before him is a paper he has prepared to back up a memorandum that his predecessor in the Truman administration, Secretary Oscar Chapman, had submitted to the Federal Power Commission.

The memorandum recommended one high Federal dam at Hells Canyon as the way to develop the full potential there, as found by the Army engineers.

Sherman Adams, the President's alter ego calls. He instructed McKay to withdraw the Chapman memorandum, giving notice that the new administration supported the Idaho Power Co. proposal.

McKay put down the phone, reached for his paper, tore it into little pieces and threw it into the waste paper basket. The FPC eventually approved the Idaho Power plan, though its examiner held that one high dam, such as the Army engineers recommended, was the best way to utilize all the potential. Stepping out of his province, he said he did not think Congress would approve that, and so recommended the Idaho Power plan. He is likely to be proved wrong about Congress.

Foreign Students in the United States

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 2, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the New York Herald Tribune concerning foreign students who are studying in the United States, and showing the enormous increase in the need for governmental aid and private aid, in order to forward that most vital activity in American foreign policy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN STUDENTS AND FOREIGN POLICY

Probably one of the best methods of winning converts to the free world's way of life is through education in the nations of the western democracies themselves. Students from colonies, from economically backward countries, from areas which are not able to offer the opportunities of higher education in more than a few fields, are able to see for themselves the advantages of the democratic way of life over that of the Soviet dictatorship. One outstanding example is Prime Minister Nkrumah, of the new state of Ghana, who studied for 10 years in the United States. There is every indication that his leadership of the latest addition to the United Nations will be national, but not neutral, alined with the West.

The Institute of International Education has just reported that a record 40,666 foreign students attended United States colleges and universities during the past academic year. These are the men and women who will return to their native countries to

become leaders in the fields of medicine, teaching, law, engineering, and business. Representing 136 nations, they should be able to spread the story of democracy and of the free world among their fellow countrymen. And the technical knowledges which they have acquired will help advance the progress which some of the more backward countries are making in the areas of industry, public health, agriculture, and education.

It is interesting to note, however, that 45 percent, or nearly half the total studying here last year, were privately financed, while only 11 percent were aided by either the United States or foreign governments in cooperation with organizations such as foundations, colleges, and universities. An additional 26 percent were financed entirely by these organizations. In view of the importance to the United States of training these students here, of offering a greater opportunity to gifted youngsters whose parents cannot afford transportation to the United States in addition to tuition and living expenses for 4 or more years, it would be most gratifying if the percentage of those financed by governments and organizations could be increased. Corporations which do a large export business might find it to their advantage to offer scholarships in some of the smaller, poorer countries. Our Government would certainly find it worth while in the long run to have American-trained technicians in such countries, to say nothing of the added good will. A program of increasing the number of foreign students in this way, by broadening the base to include more of the gifted rather than the financially independent, should be encouraged.

Max Abelman

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks made by His Excellency Felixberto Serrano, delegate to the United Nations from the Philippines, at a reception honoring Max Abelman on his 70th birthday held at the home of Dr. and Mrs. Mortimer J. Lasky, of Brooklyn, N. Y., together with a letter which Mr. Abelman received under date of May 27, 1957, from the President of the Philippines, Hon. Carlos P. Garcia. The tributes paid to Mr. Abelman on his birthday are further evidence of the friendship existing between the people of the United States and the people of the Philippines:

Mr. FELIXBERTO SERRANO. Mr. Abelman, Dr. and Mrs. Lasky and my good American friends and countrymen. I made a special effort to come here this afternoon because I want to show the Laskys my appreciation for their kindness. I met Max for the first time in America 2 years ago when he was given a citation, I believe, by the University of Manila in my country for his humanitarian activities. And since then I had developed with him a tie, and which I can say now had matured to real friendship.

It's pretty hard to say that one is your friend with great sincerity, because someone has said that "friendship is a divinity far more divine than all divinities." And so when you speak of a man as your friend, you must necessarily feel that it—all that it implies: everything, the beautiful and the sublime that it implies. I can say deep from my heart that Max is my friend and a real friend of my people.

I can tell you now that I believe Erlinda feels far more at home here than I am. I really don't know what is happening now with diplomats. We are supposed to be masters of the amenities of social life but in fact we are not. I feel even perhaps more at home with my fellow diplomats than in the average American home. Indeed if I have wanted to be here, it is here in this little home of America, of the average American, when I will know the true American, and the true America.

But we—we diplomats are a peculiar sort of people, very peculiar sort of people. Some say that diplomacy is the art of the possible, and that perhaps is in a sense true because even on what is possible we are finding great difficulties in solution which an average man perhaps might find easy. And so, that is rather the peculiar thing about diplomacy and diplomats. Even in a little gathering like this, we feel a little awkward. And that's why I admire my very good friend and country—countryman Erlinda for feeling perfectly at home here with the Laskys. I hope I could have a piece of her character and her ways. That certainly would make me feel better whenever I go to places like this.

I will tell you this now, my friends, that in speaking now she remarks about Max. I'm speaking as a Filipino, to the Americans; Max has spoken about friendship between the Philippines and your country. The relation that we sustain with you is a very peculiar one indeed. You had discharged the responsibilities of a stewardship over my country for 50 years, and indeed I do not know of any relation between the Governor and the governed which can be considered remarkable in the history of the human race as the one which the American Government and the American people are in my country. So we cannot believe this relation is former. It is a relation that I hope will endure with the years.

And I can assure you that with this little gathering that we have; a few Filipinos and a few Americans here and there, now and then, you can be sure that this will add lustre and greator sublimity to the relation that we sustain with the great American people. We have stood by you in the dark years that have passed. May God helping, we will stand by you in the dark years that are yet to come. I speak on behalf of my people when I say these few words. The Filipino people without question, without treaty, without any kind of this alliance that we are forging here and there, will stand by you any time, anywhere, when the hour of need comes. And I speak in my official capacity as the representative of my people and my government. Of that thought you can be sure, whatever little differences we might have now and then.

Of course we have to differ once in a while. We are human beings. We have our own distinct ways; but important things, identity of purpose, identity of ideals, identity of fundamental ways, and when the danger comes, if we can count on each other, that really is the mighty thing between your people and mine.

In the United Nations it has been my great privilege to work with Mr. Lodge and with the American delegation. There is not a single political issue that had assailed mankind where we had not together sought common counsel. There is not a single thing that he had thought of and his government had thought of on this issue where he had not sought consultation with me, and I did exactly the same thing. And that is the reason why your delegation and mine had worked very harmoniously in the last session. We hope that will continue.

May I expect the Laskys and my new American friends with us today to be perhaps in the Philippines some day. We will give you a piece also of our own Filipino hospitality, if not to equal, at least to approximate the hospitality of the Laskys and the average American wherever I go during my 3 years of stay in this great country. Thank you so much, and may I extend my best wishes to MAX.

Mr. ABELMAN. Thank you.

Mr. SERRANO. Let me tell you that your future years will certainly be as sweet as the past years you have lived. I know that we grow young, we never grow old. And Max, I think, is the one that always grows young. I feel much older really than he is.

MALACAÑANG,
Manila, May 27, 1957.

Mr. MAX ABELMAN,
Brooklyn, N. Y.,
United States of America.

MY DEAR MR. ABELMAN: I have just learned that you are one of the friends of the late President Ramon Magsaysay and that during his tenure, you kept an abiding interest in his administration by corresponding with him.

President Magsaysay, as is the general consensus, was truly a respected leader of international stature. He was not only the best friend of democracy in Asia but he did everything in his lifetime to fight its foremost enemy, communism, on every front. In his passing, the free world has indeed lost a formidable ally.

It is my sincere hope that you will continue to be generous with your abiding interest in this country. On my part, I see no plausible reason why I should depart from the policies of my illustrious predecessor insofar as the cordial relations of my country with the free world are concerned. Those relations being based on mutual respect and understanding and a kinship of lofty ideals, there is certainly nothing more to be desired.

With assurances of my highest esteem, I am,

Very sincerely,

CARLOS P. GARCIA.

Fast Writeoffs Not Real Loss

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. HIESTAND. Mr. Speaker, so many people have criticized the policy of the Defense Mobilization Administration forgiving taxes that a large part of the public seems to think that this privilege constitutes a real tax loss.

Actually, it is simply tax deferment and is well explained in the editoial of the June 24 issue of the Ledger Gazette, of Lancaster, Calif.:

FIGHT CONTINUES FOR PUBLIC POWER

The fight of Senator MORSE to get public power for the Pacific Northwest so that the rest of the country can continue to subsidize that area on an even grander scale, goes on unabated.

The Senate has passed a bill authorizing a big dam at Hells Canyon, and the House will soon act on it.

There is indication that votes have been traded. Senators wanting to get a civil-rights bill passed seem to have supported the Hells Canyon Dam bill in return for support for the civil-rights bill, soon to be considered by the Senate.

To the man in the street this is a very confusing situation. The Idaho Power Co. is now engaged in building three dams on the Snake River in Idaho.

Yet the public power forces under the vocal leadership of Senator MORSE have gotten a bill through the Senate to build a high dam that would, if built, flood the sites on which the Idaho Power Co. is now building.

It makes good sense; doesn't it?

The Pacific Northwest, through Senator MORSE, is actively soliciting subsidies from the rest of the States through the guise of public power.

Power can be sold cheaply to industry, particularly the aluminum industry, if the Government will build the dams and the plants. Power is not cheap power if produced by the Government; it costs as much as the so-called private power. Wages are the same, materials cost the same, construction costs are the same. But financing costs are not the same. And it isn't hard to get a businessman to tell you if he had no taxes to pay and could get his money without paying interest he too could sell power more cheaply.

Now Senator MORSE knows that even the aluminum industries are a little disillusioned about being way out West with their markets way back East. At least one has taken an eastern site in preference to the cheap power available from Government plants in the West.

Part of the argument against the Idaho Power Co.'s development has been that a rapid depreciation allowance granted by the Government would cost the taxpayers $85 million.

A rapid depreciation allowance does allow a business to pay less taxes as long as the allowance lasts, but when it runs out, then the taxes are much higher. And in the overall the same amount of taxes will be paid the Government for you cannot depreciate a thing beyond its value.

Nor was any mention made of the fact that if the Government persists building the high dam that Idaho Power Co. will be able to recover its losses for the construction now in progress.

Nor was any mention made of the fact that if the Government builds a high dam no taxes will ever be paid, which will be a loss much greater than the alleged $85 million.

And if the Government dam is built no mention was made that it will be through the generosity of the taxpayers of States like California that the people of the Pacific Northwest will be able to sell power cheaply because of the subsidy granted them.

Public power proponents always talk about the good of the people. But they never think it. They see it as a way of winning votes with other people's money. They see it as a means of getting control of vast areas because they can control the production and sale of power, and through that the use to which it will be put.

Public power should be called Government controlled power, or politically controlled power, for that is what it is.

We have too much Government control now, we elected Eisenhower to get us less, not more. We elected our Congress to get us less not more.

We urge that the House refuse to pass the Senate bill for a Government dam at Hells Canyon.

We urge that the President veto the bill if the Congress passes it.

The decision to build the dams with private capital should be allowed to stand. After all, the dams are under construction now.

Discussion on Hells Canyon

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. MILLER of Nebraska. Mr. Speaker, the Hells Canyon project has been before the Congress since 1950. It was defeated in the Senate last year by a vote of 51 to 41. It passed the Senate on June 21, 1957 by 45 to 38. The bill has been heard several times before the subcommittee in the House. In the 82d Congress, controlled by the Democrats, there was almost unanimous vote in the committee to indefinitely postpone the bill. During the 83d Congress, when I was chairman of the Interior and Insular Affairs Committee, there was no request for a hearing. In the 84th Congress there were rather lengthy hearings. The printed record shows 523 pages. The subcommittee finished hearings in the 85th Congress on July 2 and voted, 15 to 12, to strike the enacting clause. I believe the full committee will sustain this action.

FEDERAL POWER COMMISSION

The Federal Power Commission, which is an arm of the Congress, held hearings of more than 1 year's duration, covering some 20,000 pages of testimony, on the question of a high Hells Canyon Dam. There has been much complaint about the FPC and its action. The committee should remember that the FPC—Federal Power Commission—is a body created by the Congress. The five members are appointed by the President on a bipartisan basis and they must be approvde by the Senate.

There has been much spleen vented against Mr. Kuykendall, a member of the Commission. Some people blame him for everything that has happened. I would remind my colleagues that he is but one member of this bipartisan board that made the unanimous decision on Hells Canyon.

Mr. Speaker, the FPC engineering staff made a 44,000 man-hour study of the entire Hells Canyon problem. The findings were presented to the Commission by the engineers with numerous supporting exhibits. It seems to me there is no agency in Government which is in a better position to give a fair and impartial judgment, on all the questions raised, than the FPC. The five members are a bipartisan group. They have no ax to grind. Their only job is to consider, under the Federal Power Act, which is the best plan for development.

No committee of Congress would have the time or patience to hold such exhaustive hearings. It should be remembered that after the board made its ruling that the Idaho Power Co. should have a license to build three dams on the Snake River, those who opposed the license appealed to the Supreme Court to overrule that decision. The courts, after reviewing all of the evidence and facts surrounding the case, ruled against those who favor a high dam. The courts upheld the right of the Federal Power Commission to issue these licenses.

The FPC found the three dams licensed by the Commission to the Idaho Power Co. will produce 767,000 dependable kilowatts. This figure compares to 785,000 kilowatts for the proposed Government dam. The Commission said, "the ratio of power benefits to power costs of the 3-dam plan is greater than that of the 1-dam plan."

The Idaho Power Co. has gone forward under its license with the construction of the Brownlee and Oxbow Dams and will be producing power late in 1958. They have spent or contracted to spend up to this date about $50 million. Cancel their permits and the Government would be liable and this would be added to the cost of the high dam.

The Idaho Power Co. will do certain things under the Hells Canyon scheme at no expense to the United States. They will not be reimbursed or will there be an actual Federal tax loss. There are funds for fish protection facilities. There will be a million acre-feet of flood control at no cost to the Government. The Idaho Power Co. has gone ahead in good faith and spent nearly $50 million. The people of the area are desperately in need of power. They will be paying taxes to the Federal Government over a 50-year period of about $283,126,300. The States of Idaho and Oregon over the same time will receive $200 million in taxes.

SIZE OF DAMS

If the Congress authorizes the high Federal dam, certainly the Idaho Power Co. would be in the Court of Claims for damages.

Mr. Speaker, every Member of Congress has received mail stating that the Idaho Power Co. would be building three runt or pygmy dams that would not serve the purpose and use wisely the water of the Snake River.

Well, let us look at these so-called runt dams. The Brownlee that is now nearly half completed is 395 feet high. That is 107 feet higher than the Capitol dome. The Oxbow which will be constructed next will be 205 feet high. That is twice as high as the Bonneville Dam. Hells Canyon, which is to be built on about the same site as the proposed Federal Hells Canyon, will be 320 feet high and that is about twice the height of Niagara Falls. In fact, Mr. Speaker, the so-called hydroelectric heads of the high dam and the three proposed dams, according to the engineers is 602 feet. They are exactly the same.

The three dams will produce about the same amount of power as that produced by the one federally constructed dam. These are electric power projects. There is little or no irrigation or flood control water in either the high dam or the three-dam proposal.

TAX WRITEOFFS

There have been some harsh words said about the so-called tax-write off provisions given to the Idaho Power Co. Personnally I have always been opposed to these so-called "tax writeoffs." However, there have been more than 21,000 such certificates issued in the last 10 years; 927 of the certificates were in the power field. Every State has had tax

writeoffs except one. There is nothing illegal, dishonest, or immoral about the procedure. Indeed, if I were a stockholder in the Idaho Power Co. and the president and the board failed to take advantage of the tax writeoffs, I would want to get a new set of officers. This tax writeoff has been blown up all out of proportion. Quite a number of these tax writeoffs were in the States of Oregon and Washington. I did not hear either the junior or senior Members of the other body from Oregon complain about the writeoffs in their own States. It seems to be wrong only when it comes to the State of Idaho. There certificates were granted as a matter of public policy. The policy was established by the Congress itself. If the law is wrong it should be corrected. The Congress is responsible for that correction.

THE STORY OF LICENSES

There has been nothing sudden about the granting of this license to the Idaho Power Co. The first plans were made in 1946. They applied for permits in 1947. That was 10 years ago. All of this was done up and above board. They made formal application for a license, the first in 1950 and again in 1953. Then, after the longest hearings in history a bipartisan board issued the license. The Commission said this when they issued the license:

> Most of what we have already said indicates that the applicant's three-dam proposal is best adapted to a comprehensive plan of development as required by section 10 (a) of the Federal Power Act.

That was the Commission's findings. It was in the public interest.

COURT DECISIONS

The opponents went to the United States Court of Appeals twice and were rejected. They carried their appeal to the Supreme Court of the United States on two occasions. Each time the courts, after reviewing all of the evidence, held that the licenses issued to the Idaho Power Co. were valid. The company under these court decisions have proceeded and will have the Brownlee Dam completed and producing power in 1958. The Oxbow Dam will be completed in 1960 and, under their license provisions, Hells Canyon should be completed in 1962.

COST OF DAMS

It has been estimated that the cost of one high Federal dam would be about $356 million. When the smaller dams and power lines that must be built downstream to firm up the power are built, the total cost would be $700 to $800 million. Four of the downstream dams have not been authorized. The cost of the three dams by the Idaho Power Co. is about $133 million. They will produce about the same amount of power.

My colleagues should understand that the Pacific Northwest, in the last 20 years, has received about one-fifth of all moneys appropriated for reclamation. I cannot believe that now we should make available another $100 million each year for 7 or 8 years to complete this high Federal dam particularly so when there is a private enterprise group now constructing the needed power facilities.

PRIVATE VERSUS FEDERAL POWER

Some people seem to have the idea that all electric power should be generated by the Government. That is a mistaken idea. Public power should be generated by the Government in areas where private capital is not available. There is no reason for the Government to develop power projects unless those projects are too big for the people to handle.

Now let me state my policy so there will be no misunderstanding. I am from Nebraska, the only completely public power State in the country. I believe in public power where public power is necessary.

I know there are many sincere people in the United States who feel that the Federal Government should develop all of the power sites now existing on the rivers. They have a feeling that these power sites and the water belong to the people; that the Government ought to build power units and then let private power companies come and get the power. There are other sincere people who feel the Government should go so far as to build transmission lines for the power. I respect their views. I would point out, however, that if the Federal Government should do this for power, why not for steel, build the locomotives, control the food, and all other private enterprise systems now existing in the United States. This would be socialism in full swing.

In my opinion there is room enough in this country for both private and public power systems. Our America became great because free men and women were able to go ahead and do the things they want to do with a minimum amount of Government interference. In my humble opinion, our America cannot remain great and strong by expecting the Government to do so many things for people that they could do for themselves.

I did support the great power network on the Missouri and Colorado Rivers because private enterprise was not able to develop these water sites. That is not true of the Snake River. The Hells Canyon is far different than the Colorado or Missouri Rivers. I would say that if private capital were not available, then the Government should step in.

Again I say I believe in free enterprise, one of the foundations of our American way of life. I believe that people should do things for themselves when it can be done. I believe the Government should aid the people in projects which the people cannot handle alone.

In Nebraska it would have been impossible to construct the farflung network of powerlines without Federal aid. We have a great power system. The REA's have extended lines throughout the rural areas so that practically every farmer who wants power can have it. This was done through Federal funds which are now being repaid to the Government over a period of years.

However, private capital is available in the Hells Canyon case. In fact, private capital is now being used in the construction of the first of three dams. There is, then no concrete reason for the Government to step in and furnish Federal funds in competition with free enterprise.

I believe in projects which are an investment in the future of America. I have endorsed and voted for many public-power projects, irrigation projects, flood-control projects, and others where help from the Government is needed.

The high dam would take 6 to 8 years for completion. What will the people of the Northwest do for power in the interim?

The Hells Canyon case should be resolved, once and for all time. There is no sense in this continuing controversy which is wasting time and inflaming tempers. We have heard the arguments—pro and con. The time has come for decision.

Are we going to uphold the studied decision of the Federal Power Commission? Do we believe in free enterprise or are we going to demand the right to socialize every segment of society? Why should we spend $700 million of the people's money when there is private money to do the job?

Mr. Speaker, the Christian Science Monitor of June 25 in an editorial entitled "Beyond the Bonds of Reason," said in part:

> The Senators—many of them milling around excitedly, shaking hands, slapping backs, and otherwise congratulating each other on a splendid victory they had just won. And what was this great achievement 40 Democrats and 5 Republicans were so proud of? They had just voted to spend a great deal of the taxpayer's money to do a job already underway at no taxpayer's expense. Specifically, they had voted to build a Federal dam at Hells Canyon, thereby flaunting the considered opinion of the administration, the Federal Power Commission, and indeed, of the Senate itself last year. In the process they would wash out the 3 dam sites, 2 for which the Idaho Power Co. has already spent $18 million.

A few weeks ago the country listened to Nikita Khrushchev, the Russian dictator, who remarked that our grandchildren would be living in a state of socialism. The actions of the 40 Democrats and 5 Republicans in their vote on Hells Canyon must have given the Russian dictator a wry smile for here was socialism in full action. If the Government is to supply the electric energy for people why not the automobiles, steel, coal, and our food. That would be Rusisa and that would be socialism.

COST AND SELLING PRICE OF FEDERAL POWER

Mr. Speaker, another unfortunate feature in the Pacific Northwest, and I have studied this problem for several years, is the fact that all Federal dams are selling about half of their electric energy at less than the cost of production. Many of these contracts were entered into under the Truman-Chapman-Strauss regime. They are long-term contracts with no right to the preference customer.

The sale of the Bonneville Power Administration for the fiscal year 1955-1956 were as follows:

Total sales, 1955, 21,828,500,000 kilowatt-hours at an average per kilowatt-hour of 2.34 mills.

In 1956, the total sales amounted to 25,973,700,000 kilowatt-hours at 2.32 mills.

The power developed at the high dam will be sold at a cost to every State and taxpayer in the Union. It will be a form of subsidy. It is cheap Federal power paying no taxes. The power will be sold at less than the cost of production. This 4-mill power will be fed into the Bonneville system where it is sold at an average rate of about 2.4 mills.

In conclusion, Mr. Speaker, to put a stop to this hydroelectric construction now underway, which would develop more than one-half million kilowatts of power, and add 1 million acre-feet of flood control storage would be disastrous to the Northwest. Much of this power will be on the line in 1958. There is a real shortage of power. Some of the defense plants last year and even early in this year, were closed down because of a shortage of power. This additional power is desperately needed now. It will take from 6 to 8 years for any power to develop out of the Federal high Hells Canyon Dam.

LACK OF ELECTRIC POWER

What will those who favor the Federal dam say to the farmers when they lack power for pumping or for running their farms? What will they say to the laboring group when the factories are shut down because they lack sufficient power? Do they want to impose a shutdown on this industrial and farm growth making a delay of 6 to 8 years before Federal power could possibly come on the line? What will they say about the great tax loss? These are a few of the problems that the proponents of the high dam should answer. They should also tell the REA's and farmers under the Chapman-Strauss regime why long term contracts were let to private concerns at less than the cost of production with no preference or withdrawal clause for the power when needed by the REA.

Mr. Speaker, I have gone into considerable detail on the pros and cons of the development of power on the Snake River. In the past there has been much emotion in trying to solve the problem. I hope my colleagues will look at the facts in cold, hard logic. When that is done, there is little doubt but what they and the country will come to the conclusion that the three dams to be built by the Idaho Power Co. will best serve the interests of the Pacific Northwest.

Recent Gulf Coast Hurricane

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 2, 1957

Mr. YARBOROUGH. Mr. President, although the loss of life was not nearly so great in my State of Texas during the recent gulf-coast hurricane as it was in our good neighbor, Louisiana, widespread damage, nevertheless, was evident along the Texas coast. I ask unanimous consent to have a portion of a story describing this damage printed in the Appendix of the RECORD. This article, together with shocking pictures of the tragic devastation, appeared in the Beaumont, Tex., Journal, June 27, 1957.

It is unfortunate that we cannot publish photographs in the Appendix, for the drama and storytelling capacity of the accompanying pictures have a telling force, in the devastation they portray.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BEAUMONT, ORANGE, AND PORT ARTHUR SUFFER WIDESPREAD DAMAGES AS HURRICANE THREAT DIMINISHES—STORM STRIKES INLAND ON COAST WITH WINDS EXCEEDING 100 MILES PER HOUR

ORANGE.—One person was killed and two others seriously injured around 2:30 p. m. Thursday from an electrical shock at Second and Green Streets. Jerry Lee Bridges, 32, was pronounced dead upon arrival at Orange Memorial Hospital.

J. L. Downey, 30, and Virgil Smith, 32, were undergoing emergency treatment at the hospital.

All three were employed by the Gulf States Utilities Co. At the time of the accident they were working on power lines felled by hurricane Audrey.

(By Gladys Barrileaux)

Beaumont, Orange and Port Arthur, lashed by the fury of hurricane Audrey, surveyed widespread property damage late Thursday as the storm threat diminished in southeast Texas.

The season's first hurricane smashed inland at the Texas-Louisiana coast with winds of 100 miles per hour velocity. Lake Charles reportedly clocked winds at 105 miles per hour.

The storm was centered 50 miles northwest of Lake Charles at 1 p. m. after roaring inland from the Gulf of Mexico near Cameron, La., around 11 a. m.

Shortly before 3 p. m., winds appeared to be diminishing in Beaumont and skies looked less threatening. The weather bureau said winds and squalls gradually will decrease as the center of the storm moves northward. Tides also were expected to fall and winds and seas will subside along the coast Thursday night.

Beaumont, Orange and Port Arthur reported no deaths or serious injuries, but damage ran high.

While Orange appeared to have suffered the hurricane at its worst, Beaumont's property damage also was widespread.

Reports over the area indicate that much small damage was incurred by many homes and buildings, rather than any major destruction.

Howling winds uprooted trees, snapped power lines and smashed plate glass windows in Beaumont, Port Arthur, and Orange. Many area residents were without electrical power for hours and telephone service was disrupted.

Civil Defense, Red Cross, police and military and civilian units set up emergency operations and provided shelter for hundreds of people. A detachment of 12 Texas State guardsmen arrived at Beaumont Thursday afternoon to assist local police in mopup work.

No report of damage in Lake Charles was immediately available. Communications by telephone between Beaumont and other Louisiana cities, such as Lake Charles and Cameron, were disrupted by the terrific hurricane Audrey.

In Orange, reconnaissance teams of the Red Cross and National Guard began a street-by-street survey of Orange at 2:30 p. m., Thursday to assess damage caused by hurricane Audrey.

Martin Thomen, civil defense chief, said it would take about 2 hours to make a definite estimate of the damage in Orange, but early indications are that it is heavy.

Crews from the Salvation Army earlier started distributing food to those in need. Chaplain Douglas Nelson estimated that approximately 1,200 Orange residents had been fed by 2:30 p. m.

In the meantime, heavy rains continued to soak Orange although the wind strength began to abate. Mr. Thomen said that storm refugees at Stark High School, who numbered nearly 1,000 persons at the height of the storm, had begun to return to their homes.

The second blow of Audrey, which hit Orange after a 2-hour calm during the eye of the hurricane, 9:15 to 11:15 a. m., apparently caused as much damage as the initial blow.

Wind shifts were graphically illustrated in many blocks by uprooted trees lying in opposite directions.

The worst-hit section of Orange was in the newer additions northwest of the city, especially Westmont. Seven or more houses were hit by falling trees, including that of former Mayor Joe Runnels.

Streets remained in flooded condition and many were still blocked by fallen trees at 3 p. m. Thursday. Power was still off in many sections, but Gulf States Utilities Co. reported that emergency crews are still hard at work to restore service.

In Beaumont, police estimated that more than 200 power lines were down. Plate glass windows in more than 45 downtown stores were shattered and police stood guard to prevent possible looting.

All Beaumont radio stations were knocked off the air.

Large trees in the city were uprooted and streets were lined with broken limbs and debris. Numerous TV antennas were bent or blown down and high winds stripped shingles off many homes. Power was out in many homes.

Some 1,500 telephones were reported out. Some of the trouble was caused by trees falling over cables, S. C. Falk, Beaumont manager of Southwestern Bell Telephone Co., reported. Out-of-town crews were being called here to help restore service.

High tides washed out the new bridge at Rollover Pass on Highway 87. The bridge was completed only last year to facilitate movement of fish between the Gulf and east Galveston Bay.

Water was reported 2 feet deep over Highway 87 and Highway 124 along the beach.

Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Dr. Jacob I. Hartstein, dean of the Graduate School of Long Island University, in presenting the Honorable James A. Farley for the degree of doctor of laws, honoris causa, at the annual commencement exercises held on June 7, 1957:

Mr. President, on behalf of the board of trustees, it is my privilege to present for the honorary degree of Doctor of Laws a first baseman of no mean ability in his time, a team player of vigorous loyalty, a political strategist who has called the signals with unmatched brilliance—the former Postmaster General of the United States and since 1940 chairman of the Coca-Cola Export Corp., James A. Farley.

Born and educated in Rockland County, he rose from town clerk in obscure Stony Point, N. Y., to a position of preeminence in the political life of our great Nation. Successively, he served as chairman of the Rockland County Democratic Committee, as secretary and later as chairman of the New York Democratic State Committee, and from 1932 to 1940 as chairman of the Democratic National Committee.

He wrote the monograph on how to greet friends and influence people, and his uncanny recall of names and faces already is committed to the grand legend of American political history. But this is a skill born of a genuine and pervading affection for all people, an integrity in human relations that reaches out to embrace both allies and persons otherwise. His is a gift of statesmanship infectious in its warmth, inspiring in its honesty and yet impelling in its astuteness.

He came from humble beginnings and he rose to become a leader of great influence in our times, and this is the story America delights to tell.

I present, Mr. President, a political savant who has served our people with distinction, a firm advocate of the principles we cherish, a sturdy American whose good right arm is ever extended in friendship.

Mr. President, Mr. Farley.

Murray's Report to the Joint Committee on Atomic Energy

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include the text of Hon. Thomas E. Murray's report to the Joint Committee on Atomic Energy made prior to Mr. Murray leaving the Atomic Energy Commission.

The report made by Mr. Murray is a very important one and warrants the consideration of every person. His report relates to probably the most important question which confronts the world at the present time, not one section but all sections and all peoples of the world.

I also include in my extension of remarks an editorial entitled "Murray Challenge," which appeared in the Washington Daily News of June 28, 1957.

The report and editorial follow:

TEXT OF MURRAY'S REPORT TO THE JOINT CONGRESSIONAL COMMITTEE AS HE LEAVES AEC

I think you will understand when I say that I consider it my public duty not to leave the Atomic Energy Commission without a final word to your committee on our common concerns.

There is, however, the prior personal duty of expressing my appreciation for the unfailingly courteous attention which you have always given me whenever I have come before you to discuss matters of policy or of fact. I shall retain, with gratitude, the memory of our association.

Our common concerns are far more urgent today than they were 7 years ago when I was first initiated into them. Revolutionary changes have swept over the world, and the United States has been involved in all of them. The complexity and rapidity of the changes have often confused our counsels. But two basic facts have emerged with all clarity.

The first fact is that a new international mandate has been inescapably thrust upon the American people and upon their Government. In its contents it is the same mandate which the American people laid upon their Government in 1789 for fulfillment in the United States: "To form a more perfect union, to establish justice * * * to provide for the common defense, and to insure the blessings of liberty * * *." This is the mandate that history has now laid on America for fulfillment in the world at large.

The second fact is that the execution of this mandate is challenged by another great state, which heads a spreading empire. It has rocketed to a height of power that threatens to rival our own. It too has a mandate, given in its philosophy. And it has enlisted all the resources of its growing power to further its inhuman purposes and to defeat the purposes for which we stand, which are inherently the purposes of civilized mankind.

At the heart of this conflict of power, there stand the illimitable inner energies of the atom. Our problem is to know how we may harness these gigantic energies in such a way that they may enforce our own international mandate and thwart the success of the Communist mandate, which presently clashes with our own.

SEES A TWOFOLD PROBLEM

The problem is twofold. In the military sphere, the problem is to avoid the risk of total annihilation without incurring the risk of gradual defeat. In the area of peaceful uses of the atom, the problem is to bring into being an international atomic-energy economy without disrupting the pattern of our own economy or accentuating conditions of disorder in the world economy.

Each of these two major dilemmas gives rise to a highly complex sea of problems. They are of diverse but interrelated orders—problems of moral principle, military doctrine, economic theory, technological possibilities, budgetary policy. I shall select a few that have been in the forefront of my concern.

NUCLEAR WEAPONS

For several years you have heard me urge the need for rationality in our armament program. By rational nuclear armament I have consistently meant the creation of the whole spectrum of weapons capabilities that, under the control of sound military doctrine, will enable us successfully to meet the whole range of possible or likely Soviet military action. Essentially, the problem is to achieve in our production programs and in our resultant nuclear stockpile the right balance—a balance that will give us appropriate weapons strength both to support the rigid strategy of deterrence and also to give substance to a flexible doctrine of limited war.

As you well know, one of my major preoccupations has been with the small end of the weapons spectrum. You will recall, for instance, that on February 23, 1956, I testified to your committee about our urgent need of small weapons and recommended a program that would look to their production in the tens of thousands.

Even a balanced stockpile will not provide us with total security. But only a balanced stockpile will protect us against impalement on one or other horn of the nuclear dilemma—sudden destruction or slow defeat. Of the two alternatives, the latter presents the more likely danger. And it was against this danger that I have urged the imperative necessity of moving the small-weapons program out of the development phase into the phase of large-scale production.

The validity of the argument for a national armament policy is one thing; the actual installation of the policy itself is quite another. On the first score I am confident; the argument I have repeatedly made is valid in every military and moral sense. But on the second score I am profoundly concerned. There is little evidence that a policy of rational nuclear armament is in operation. On the contrary, there is considerable evidence that the structure of our policies is still upside down.

Reason would require that technology and the budget should stand in the service both of sound strategic doctrine and of the weapons-production policy required to support this doctrine. The actual fact is that technology and the budget are still in control of our weapons program, and the weapons program itself is still in control of military doctrine.

This inversion of values is irrational. If continued, it may well prove fatal. The chief fatality, of course, will be the small-weapons program; for it is the more costly, in fissionable materials as well as in dollars. Our continued falling short in this area is, I have insisted, a major threat to our military security.

The test of the matter would be to stand, as it were, at the end of our weapons production lines and count what is coming of them. You would see an immediate need to move the small-weapons program into the phase of large-scale production.

THE PROBLEM OF IGNORANCE

What are the reasons for this irrational situation? Undoubtedly there are many. But at the root of them all there lies the widespread ignorance of the realities of the nuclear age which still strangely exists on all the strata of American opinion, from the highest to the lowest. This ignorance extends both to matters of military doctrine and also to matters of weapons strength. The results are sometimes curious, as one example will show.

In February 1956, I made a calculation of the total megatonnage that would be in our stockpile as of certain dates. The information was submitted in a memorandum to high military and civilian authorities who had the proper clearance to receive it. The figures in the memorandum were not questioned by anybody. Some weeks later I discovered that my figures were badly in error, by as much as 60 percent. I had assumed that the figures submitted to me, stating the annual increments in our megatonnage, were to be added to give a total. In fact, however, the figures were not incremental but cumulative; the last figures were the total. My own error is at least explicable. What I find inexplicable is the fact that no one pointed out my error. One would expect that by this time there would exist, in minds more expert than my own, the kind of curbstone knowledge that would instantly spot a mistake of such magnitude.

Moreover, the purpose of the memorandum was to raise the issue of whether or not our production policy in the field of megaton weapons was going beyond reason. Only limited megatonnage is required to support the policy of deterrence; furthermore, a limited megatonnage is sufficient seriously to contaminate the world. It seemed to me unreasonable to go beyond the limits of this requirement and of this sufficiency. In view of this purpose of the memorandum it was all the more extraordinary that no one was at pains to point out the mistake in numbers.

Naturally, upon discovering the error, I immediately sent a set of corrected figures to the recipients of the original memorandum. No comments on the correction were made. And I was left to ponder the question, does there exist any concern about the limits of the megatonnage required to deter the enemy and sufficient seriously to contaminate the world.

Another problem in mathematics, in which error would be portentous in its consequences, has more recently come up. Writing in the issue of Life for May 6, 1957, I undertook to show that an all-out nuclear war of survival is inherently absurd. To demonstrate its absurity, I postulated the explosion in ground bursts of 3,500 megatons of fission energy. I then calculated the radioactive consequences. In the belligerent countries, I said, the radioactive strontium level in human bones would be of the order of 50 times the maximum considered acceptable; and over all the world the strontium concentrations would be between 2 and 6 times the maximum permissible for the general population.

My hypothetical calculations were seriously meant; and my figures were not arrived at by haphazard guess. I presumed that my hypothesis would be taken seriously; that my figures would be carefully checked; and that I would be advised if they required revision. No one has contradicted my assertion that a war involving the explosion of 3,500 megatons would be absurd; no one has ruled out my unspoken inference that a stockpile which would be ample for the purpose of deterring an all-out war should bear a direct relation to these 3,500 megatons. I may have been right or wrong in my figures. The point is that a few have seemed to care much whether I was either. Is it not high time that someone found out?

HOUSE TESTIMONY CITED

The question assumes added point in view of recent testimony by Dr. Frank Shelton, Technical Director, Armed Forces Special Weapons Project, before a House subcommittee on appropriations. He indicated that 30,000 megatons of fission from large-yield weapons would result, in addition to the other damage done, merely in reaching a rather safe tolerance for strontium 90. If he is right, I am wrong; but the world is in less danger from destruction. However, if I am right, he is wrong—most dreadfully; and the peril to the world is vastly greater. It will not do to say that the difference between 3,500 megatons and 30,000 megatons is only about a factor of 10. This is mathematically correct. It is also irrelevant. We are here concerned with a problem of weapons policy. And a policy based on calculations that could be in error by a factor of 10 might well be unpardonably reckless.

Obviously, in the area of nuclear policy we are still condemned to travel on a margin of ignorance. But in these circumstances we have a twofold duty. The rest is to reduce the margin of ignorance. Certainly we are not excused from this duty by reason of its financial cost (say in the form of a greatly increased budget for biology and medicine). Our second duty is to reduce the measure of risk that attaches to any policy in consequence of our present relative ignorance. This would not be difficult to do, if we kept our minds fixed on the military usefulness of weapons within the context of sound strategic doctrine, instead of fixing them on technology and on the budget. My knowledge of the destructive capacity of several thousand negatons leads me to assert that the explosion of more than this amount would make no military or moral sense.

The problem of ignorance in the atomic age has another aspect. I mean the ignorance that prevails in the popular mind. The major ignorance here centers on the notion of limited nuclear war. There are, I know, complex technical problems involved in the notion. These are not matters for popular understanding; they are difficult enough even for the expert. What bothers me, however, is that the American people do not understand the simple fact that limited war is the more prominent likelihood of the nuclear age. They have not yet faced the consequent fact that, if they reject limited war as a possible necessary instrument of policy, they will fail in the fulfillment of their international mandate. In moments of crisis, they will have nothing to fall back upon except a policy of emotional utterance. The alternative to limited war is moral indignation. But, whatever its value, moral indignation is not an adequate instrument with which to insure the success of the American mandate over the Communist counter-mandate.

There has been to date no serious effort to educate the public mind in the nature, meaning and possible necessity of limited nuclear war. Popular misconceptions abound.

For instance, it is widely supposed that the first use of a small tactical nuclear weapon means stepping on an escalator that will lead inexorably down to the depths of total nuclear war. This crude belief is simply not warranted; and if it stays fixed in the public mind, it will play havoc with public morale in moments of crisis, just as it will damage the freedom of governmental decision in meeting crises.

Fortunately, an important means of public education, hitherto neglected, lies to hand, namely, an expanded program of small-weapons tests.

At the moment the whole question of tests is badly embroiled, not least because of public ignorance about the nature and possible necessity of limited war, I have, as you know, opposed the continuance of tests of weapons in the multimegaton range. But I have strongly urged a greatly increased emphasis on weapons suitable to the strategy of limited war. I would like to see two or more test organizations put in permanent being to accelerate the tests of small weapons. The Pacific test site should be kept in operational status so as to give a continuous testing capability. The Nevada site should also be available on a continuous basis for special tests of the smallest weapons.

ADDED PRODUCTION CURBED

An expanded production program of weapons for limited use in limited war is an objective necessity in order to give substance to sound military and political doctrine fashioned to meet the realities of the world power situation. I have said this often enough before. Now I suggest that constructive use should be made of this necessity. The requisite test programs, publicly explained in their premises and purposes, could be turned to good account as a means of informing the public mind, calming its unwarranted fears, correcting the climate of opinion in which the risks of limited war could be realistically grasped, faced without undue fear, and accepted as an inherent part of our responsibility to carry out our international mandate of justice, freedom, and the more perfect union. In this connection I might add that the Atomic Energy Commission should begin to make a more effective effort than it has made in the past toward instructing the public mind with adequate information about its weapons testing. Has not the day of the laconic communique now passed?

Three particular misapprehensions, widespread among the public, call for immediate and official correction.

First, the impression has been created that widespread hazard from fallout is not a necessary complement to the employment of large bombs today. As a consequence it is believed that the radiation hazards of nuclear war have already been substantially lessened. This belief is not supported by the facts.

A second misapprehension concerns the possibility of satisfying our need of small weapons by making the big ones into small ones. In point of fact, a policy of making big ones into small ones is not practical. A thermonuclear bomb is not a sort of thousand-dollar bill that can be cashed into smaller denominations in any way one wishes.

The third misapprehension concerns the fallout dangers from small nuclear weapons. These dangers have been greatly exaggerated in the public mind. The crude misconception prevails, stimulated by certain statements that have been made, that a limited war fought with tactical nuclear weapons would result in radioactive hazards that would be pretty much as intolerable as the hazards resultant from the use of large weapons in a more or less allout war. There is the further misconception that testing small weapons is pretty much as dangerous, from the standpoint of fallout hazards, as testing large weapons. (Therefore—the people conclude—all kinds of tests ought to be stopped, for the same reasons.) Behind both of these misconceptions lies the strangely persistent failure to grasp the central fact that an essential difference obtains between the fallout from a kiloton bomb and the fallout from a giant megaton bomb.

The difference is really twofold. The first difference is easily illustrated. Nuclear tests thus far have released radioactive products from about 50 megatons of fission energy. You could explode 50,000 ground bursts of one kiloton each, and you would not have released more than this same amount of radioactive products. Note that 50,000 one-kiloton bombs would be enough to fight a fair fistful of limited wars, given the fact that this kilotonnage is some 30 times the total bomb tonnage dropped in World War II. In contrast, the explosion of five bombs as ground bursts, each releasing 10 megatons of fission (hardly enough for a total war) would immediately give you about the same amount of radioactive products that has been released in tests. The difference in the bombs, and in the wars into which they would fit, is immediately apparent.

Secondly, the fallout from kiloton bombs is far more subject to control than the fallout from multimegation bombs. In a real sense the latter fallout is uncontrollable. Some of the radioactive products are shot into the stratosphere; then the laws of nature and not any human decisions dictate the worldwide coverage of the fallout. In contrast, the fallout from a one-kiloton bomb is far less in quantity and far more localized in extent. This is the reason why tests of kiloton devices can be conducted safely in Nevada; whereas tests of multimegaton devices can only be held in the Pacific proving grounds. Again the difference in the weapons, and their divergent usefulness in war, are apparent.

SECRECY

A further problem is closely connected with the problem of ignorance that exists to a greater or lesser degree in governmental circles and in the general area of public opinion. I refer to the problem of atomic secrecy. It is with some hesitation that I address myself to this problem, since I am aware of its manifold implications.

Secrecy has hitherto been the cornerstone of the vast scientific, political, administrative, and financial structure of management by which the nuclear affairs of the United States are conducted. Secrecy had to be the cornerstone of the edifice at the time when its foundations were first laid. In those days the basic concern was the protection of the United States atomic monopoly, which was then considered to be the most solid guaranty of the security of the free world.

The monopoly has long since come to an end. Today there are few, if any, secrets in nuclear science. And the secrets of nuclear technology are, and increasingly will be, opened to professional knowledge. Today, moreover, atomic secrecy tends to put a sharper edge on the competitive arms race. Here, as in the wider field of industry, successful competition depends on the maintenance of a measure of secrecy about discoveries and operations.

Again, a new dimension has been added to nuclear affairs in the form of an international atomic power economy. Its structure has begun to appear in answer to an urgent need and its future growth will be one of the leading phenomena of the future. In this area the beginnings of a clash of national interests are already apparent (between ourselves and England, for instance, as well as between ourselves and the Soviet Union), at the same time that men everywhere catch a glimpse of a new prospect for international economic order, for a broadening of human welfare, and consequently for a more tranquil international community. In a word the whole nuclear situation has undergone a radical alteration. 1957 is not 1947. And the days of the Manhattan project are now lost in the shadows of history.

The whole problem of secrecy therefore appears in a new and different light. But hardly any new and constructive thought has been given to it. I do not mean that doctrinaire type of thinking which is simply opposed to secrecy on principle, as they say, usually without any satisfactory specification of the principle in question. I mean rather the type of thinking that takes realistic account of present facts at the same time it reckons imaginatively with future prospects. This practical but imaginative type of thinking must now be bent on a new general problem. Should secrecy now be conceded the same place of paramount value that it could validly claim 10 years ago? Is our inherited policy of atomic secrecy, under today's altered conditions, really a policy of security and strength? Or does it on the balance contribute more to insecurity and weakness?

More concretely and constructively, the question is this: Given the facts of today and the prospects of tomorrow, what policies in the matter of atomic secrecy will best serve the range of values and interests to which they are committed? These are various. There is our interest in the military strength of the United States, in some solidly doctrinal sense of nuclear strength (which does not consist simply in staying ahead of the Russians, or in developing the maximum possible nuclear power. There is our interest in the diminution of world tensions, and in the lessening of the burden on our domestic economy, through some slowing down of the competitive arms race. There is our interest in releasing scientific and technological talent increasingly into fields of constructive peacetime endeavor. This interest is also a duty. And there is our duty to human welfare throughout the world, whose service is inherently the primary impulse of nuclear science and technology. This duty is also an interest.

I can do no more at the moment than commend this whole problem of secrecy to the immediate and serious attention of your committee. You have taken a constructive attitude toward the problem in the power field. The whole problem is wider and deeper. The need of new policies, at once prudent and bold, is already urgent; its urgency will be intensified as time goes on. Our present policies of atomic secrecy are antiquated and unsatisfactory. Within the altered conditions of the national and international scene they lack sharply defined purposefulness. Consequently, they are not working efficiently in the proportion of our multiple interests and in support of our manifold duties.

NOT SEEKING SECRECY SHIFT

It is not within my intentions, as it is not within my competence, to be the architect of the new structure of policy in the matter of atomic secrecy. However, I may be permitted a comment on one leading aspect of the matter. It concerns the Congress of the United States.

It is a truism to say that nuclear affairs, in their full import, now form the necessary background of a whole range of congressional deliberations, investigations, advice, and action. This is particularly true of certain congressional committees. Moreover, the Congress as a whole must do its important part in leading this country and the world through the still unmapped forest of the nuclear age in which opportunities abound as well as dangers.

The Congress is the constitutional authority which declares the existence of a state of war; and the old formula, state of war, has assumed a new meaning in the light of the new weapons systems. The Congress has many responsibilities, appropriate to itself, with regard to the conduct of foreign affairs; and today the phrase, nuclear weapons and foreign policy, which is becoming part of our vocabulary, asserts an inseparable relation. The Congress is deeply concerned with military affairs, which are predominately nuclear affairs, and with the whole configuration of our defense establishment, which is increasingly a nuclear establishment. The Congress is obliged to interest itself in particular problems—that of disarmament, for instance, which is basically a problem of rational nuclear armament. The Congress has its own decisive responsibility with regard to budgetary matters; and nuclear affairs stand high among the items on the budget. Finally, the men who sit in the Senate and in the House of Representatives, because they perform a function of popular representation, also perform a function of popular education, through public utterance on all the affairs of state; and there are few affairs of state today which are not somehow affected by nuclear affairs.

You will see the conclusion to which all this leads. I can frame it only in the form of a question: Whether, and to what extent, under existent policies of atomic secrecy, the Congress of the United States, as a whole and in its particular committees, can possess the degree of nuclear information necessary for the wise discharge of its responsibilities in an era over whose destinies nuclear energy presides.

Upon your answer to this question will depend your answer to the consequent question: Whether, and to what extent, our policies of atomic secrecy should be so altered as to permit the members of the Congress to inform themselves, with a certain fullness and accuracy, with regard to the facts about nuclear weapons and nuclear war, about nuclear technology and its possibilities for the world economy. The finding of answers to these questions, and the framing of the answers in appropriate legislation, are a primary challenge to the wisdom of this committee.

DISARMAMENT

Recently the specter of another threat has arisen in the nuclear field, which is already sufficiently peopled with specters. I refer to the threat of irrational disarmament.

This concept is readily defined. Any disarmament plan is irrational if it involves consent to either or both of two propositions: (1) that the United States should, even for a time, stop testing weapons in the kiloton range; (2) that the United States should, at an early date, stop the flow of newly produced fissionable materials into the manufacture of weapons.

Consent to either or both of these two propositions would be worse than irrational. It would be reckless in the extreme. It would be indefensible on any grounds. It would betray an appalling heedlessness of the basic and imperative security interests of the United States. The validity of these harsh judgments should be obvious to anyone who knows the existent weapons situation. The plain fact is that our demonstrable need at the moment is for increased production of fissionable materials for use in small weapons. No less demonstrable is our need for expanded test-programs in this area of scarcity.

In the field of disarmament we encounter again the problem of ignorance, whatever the causes of the ignorance may be—either security regulations or other less definable factors. I think once again of the Congress. For instance, it seems to me to be of the utmost importance that those in Congress who are concerned with disarmament matters should be fully cognizant of the essential facts of atomic energy. I think too of the general public. The idea of disarmament is as popular as the idea of limited war is distasteful. But the sheer popularity of of the idea could easily result in its being carried beyond the bounds of rationality into regions of disaster from which there might be no recovery.

Again the need of leadership in educating public opinion is glaringly obvious. The question is not whether to be for disarmament or against it. The problem of disarmament like the problem of armament, is a problem in rationality. It is a problem for the informed and discriminating reason, military and moral. It is a matter of knowing all the facts, of articulating military doctrine, and of setting the limits, upper and lower, to the production of weapons to fit the doctrine. To go beyond the limits of strategic and tactical requirements, both for deterrence and for limited war, means irrational armament. But even this would be no more offensive to the military and moral reason than irrational disarmament—a consent to restrictions that would cause us to fall below the level of our most stringent requirements, which are for weapons adapted to the purpose of limited war.

INDUSTRIAL NUCLEAR POWER

I must say a few words now about the second aspect of the power problem that is central to the nuclear age. An international economy that will make large use of nuclear power for industrial purposes is not only a possibility but also a necessity of the future. The international mandate of America to promote the general welfare therefore requires that we take the lead in bringing this new kind of economy into being. The problem is to know how we may discharge this responsibility as rapidly and efficiently as possible. The pressure of competition is upon us.

During my first 3 years on the Commission I undertook a thorough study of the whole problem of industrial nuclear power and the means of its development. My own longstanding interest in the power field impelled me to this study; moreover, the Commission itself had charged me with the task. In the spring of 1953, I personally presented a summary of the results of my investigation to the White House in writing. Despite my own initial and well-known bias in favor of free enterprise in the field of industry, the facts of the situation had forced me at that time to the conclusion that governments initiative and financial support would be indispensably necessary, in order to set afoot early development of industrial nuclear power. This was the substance of my statement.

As it happened, other counsels prevailed. It was decided that this new development would be committed to private enterprise. Since then many corporations have undertaken a variety of ventures in the field. They have committed substantial capital sums and considerable resources of manpower. That they should have done so, in an area of great technological difficulty and financial risk, is a tribute to the American industry. Some advances have been made. However, the advances themselves have made one thing clear. The far-ranging possibilities of industrial nuclear power cannot be effectively exploited under continuance of this policy of reliance solely on private capital and initiative. There is presently a disposition within private industry to admit this fact, as a fact. Therefore, a new phase

of the whole process now confronts us. A new policy is needed.

THREE POINTS ON NEW POLICY

The formulation of the new policy will not be easy, but it is entirely possible. I shall be content at the moment to say three things. First, a gigantic new business is taking shape before our eyes; therefore an imaginative new formula for its finance and management is necessary. Second, this new formula can be worked out until full respect for the structure of the specifically American version of capitalism. This structure has undergone a great deal of historical evolution, as everybody knows. It can evolve still further to accommodate itself to the requirements of the new atomic business, while at the same time, remaining substantially itself, true to the inner spirit of private enterprise and public responsibility of which it rightly boasts. To deny the possibility of this evolution is to deny what American business has always affirmed—the possibility of progress in the interests both of private capital and of the public welfare. Third, the new evolution must be guided, as American business progress always has been guided, by pragmatic norms and not by doctrinaire theories. The important thing at the moment is not to let doctrinaire theories stand in the way of progress, and not to let the search for pragmatic norms of development be diverted by irrelevant fears. There should, for instance, be no talk of the socialization of public utilities; that is a false issue. No less false is the issue of private versus public power.

The real issue lies far below the level of these fears. The real issue must be constructed in the terms of the nuclear facts of life, as these facts are frankly reckoned with in the light of the international mandate which rests upon the American people, upon their Government, and upon the immensely powerful industrial complex which the American talent for new enterprise has created on this continent.

Our American mandate extends, as I have insisted, to the promotion of the public welfare of the international community. But industrial atomic power now seems to be an indispensable condition of the future welfare of the world. Our own national interests, therefore, as well as the dictates of the international common good, require that America should take the lead in launching a power-reactor program that will be adequate to the great challenge and opportunity presented to us at this turning point in the economic history of the world.

We in America have learned that the promotion of our own economic welfare is a matter not only of self-interest but of political and moral duty; it is a demand of justice, a condition of freedom, and a sure basis of the domestic tranquillity. This national lesson has international implications, now clearly seen. Freedom, justice, and the more perfect union among the peoples of the world now importantly depend upon the American contribution to worldwide economic well-being. Therefore, as we shoulder the full weight of our international mandate, we have good reason to be grateful to God for the fact that, somehow under His providence, we have in hand the power—the friendly energies of the atom—that can be the most potent material instrument for the fulfillment of the mandate.

[From the Washington Daily News of June 28, 1957]

MURRAY CHALLENGE

President Eisenhower's efforts to negotiate an agreement with Russia to suspend all nuclear tests temporarily and to stop production of nuclear weapons has been challenged not only as irrational disarmament but as disastrous policy.

The challenge comes from the deadly serious and much respected Thomas E. Murray, retiring Atomic Energy Commissioner. He has had access to all atomic secrets for 7 years. He says we need the opposite—an expanded program of tests and increased production of nuclear materials to build a huge stockpile of tens of thousands of small nuclear weapons.

Mr. Murray says we have enough big bombs and need not test them any more. But he fears we are in danger of becoming muscle-bound with megaton bombs, with no alternative except all-out war which means suicide, and thus unable to fight brush-fire or limited wars. He wants "rational armament"—a balanced nuclear stockpile of big and little weapons—not "irrational disarmament." We have the big ones; we need little ones.

To consent to the proposals the President's disarmament expert Harold Stassen is making in London, according to Mr. Murray, would be "worse than irrational * * * it would be reckless in the extreme * * * indefensible on any grounds * * * betray an appalling heedlessness of the basic and imperative security interests of the United States."

Mr. Murray has been preaching these ideas for years. But the President and AEC have ignored him. The Murray proposals are more important today in view of the London disarmament talks, which Mr. Stassen would have us believe are close to first-step agreement.

The layman is unable to judge Mr. Murray's charges. As he says, the public, Congress, and even high American officials, because of a long-outdated policy of nuclear secrecy, are denied essential facts upon which to base intelligent judgment.

If Mr. Murray is right, the American public is being hoodwinked into support of a policy on disarmament that is little short of quackery.

If Mr. Murray is wrong, then it is incumbent upon the President and AEC to give a convincing answer.

In matters as complex as nuclear energy there are bound to be differences of opinion. But when national security is involved there cannot be, must not be, such a gap as Mr. Murray portrays between himself and administration policy.

Progress in Brooklyn's Redevelopment

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Andrew S. Roscoe, president of the Equitable Savings and Loan Association of Brooklyn, N. Y., and president of the Downtown Brooklyn Association, before the Central Brooklyn Midday Club on Thursday, June 27, 1957, at the Bedford Branch YMCA:

Mr. President, Frank A. Savoldy, program chairman, Tom Perry, and gentlemen, you honor me with your invitation to discuss the impact of the modernization of Brooklyn upon its economy. But I must warn you that when I get up steam, I am like a preacher who announces the theme of his sermon then goes off on a tangent and speaks about everything else.

The progress in the redevelopment of Brooklyn is a great subject. It takes in a lot of territory and who knows where it will land?

Allow me, please, to recall that the old towns comprising the Brooklyn that joined the greater city in 1890 were self-contained communities. Each had its own center, its own shopping area, its own downtown. Each of these towns designated a part, the then peripheral area for industries. Then, as now, the importance of industry was recognized. Industries were welcome provided that factories were located on the outskirts of the beautiful residential community.

When the old towns of historic Brooklyn were merged into the greater city, these peripheral commercial and industrial areas became pockets creating esthetic problems for civic leaders, who at times had to choose between the beauty of an area and the ability of the residents of that area to earn a livelihood. We are still seeking an answer to that challenging question; we are still deeply concerned with the propriety of our zoning laws.

The history of shelter in Brooklyn presents an equally clouded picture. The mass migration into Brooklyn after the consolidation of the greater city created a great demand for shelter. Homes were built, multiple dwellings were erected without great regard for city planning. (I digress here to say that a family living in a unit of a multiple dwelling has every right to consider that flat as a home.) This lack of planning and foresight created blight and corrosion. Furthermore, these conditions were aggravated by adverse economic conditions in the thirties. When, in 1940, the United States Department of Commerce analyzed the result of its census, Brooklyn presented a grim picture. Only 17 percent of Brooklyn families lived in owner-occupied homes as against the State average of 23 percent and a national average of 33 percent. Brooklyn, the city of homes and churches, had the lowest percentage of homeowners of all major communities in the United States. Then came the Second World War, presenting challenges, responsibilities, and the requirements of subordinating prime community interests to the great objective of national security. Manpower and materials were dedicated to serve national defense exclusively. Patriotic obligations precluded any diversion of our resources for maintenance, modernization, and home building. An already difficult "brick and mortar situation" became more corroded. The shortage of materials and construction labor after the war and the provisions of rent-control laws added to the grave problem of redeveloping Brooklyn, which as you know, is one of the most populous communities of the Nation.

During the Second World War institutions which owned a very large percentage of Brooklyn residential real estate, and I include the Home Owners' Loan Corporation among these institutions, began to dispose of real estate holdings, and one home after the other acquired a new proud owner. By the time we had reached the end of the 1940's, all institutional real estate was privately owned, acquired at very reasonable prices in the light of then current property values. Many of the financial institutions of Brooklyn renewed their faith in Brooklyn by providing financial assistance to this unplanned, yet gigantic program of modernization and rehabilitation.

While it is not within my province to provide you with exact figures or to quote the number of dwelling units that have been improved since 1940, we do know that a vast amount of modernization was done. In 1960 there will be another Federal census, and

when the result of that census is published and evaluated, the figures, I venture to say, will exceed our fondest hopes. This "town" has never looked so good as it looks today. While we still have many areas showing evidence of blight and corrosion and still find areas which should be cleaned out or completely modernized, you and I can see very palpable evidence of a general cleaning up parade throughout our Brooklyn.

We have built many new homes. The Honorable Benjamin Saltzman, our superintendent in the building department, tells us that since the war thousands of dwelling units have been constructed. For example, as you drive through the Belt Parkway today starting at Bay Ridge you will note mile after mile of new homes. I could mention with pride many projects, such as Golden City Park in Canarsie, the beautiful 1- and 2-family homes in Bergen Beach, Flatbush, Flatlands, and in other parts of Brooklyn.

The impact of this modernization and home-building program upon Brooklyn's economy has been of gigantic proportions. It has served as an anchor in retaining our middle-income families and has provided shelter for those families who progressed into the middle-income class, and, indeed it has attracted other families. The community's family income, if we treat with a healthy community, is made up of the income of all income classes with each contributing in no small measure to the community's economy. The important point is that there must be progress in skills, in family income, and we must realize that the two bring a higher standard of living.

Brooklyn's family income today approximates an average of $6,000. The valuation of our real estate comes close to $5 billion, and the savings of our families in the principal savings media exceeds $5 billion.

To indicate the increase in the standard of living, we might measure the progress in the number of telephones. In 1940 we had 375,000 telephones in Brooklyn. Today we have 982,000 telephones. We are told that during the past 10 years the number of telephones increased by 388,000. While we are also told that the increase in the number of telephones in Brooklyn is not so great as in other communities, the result is encouraging. The purchasing power of our families appears greater than that of many other communities. The shelter charge on the family's disposable income is smaller here than in many municipalities.

During the early part of 1940, when our institutional real estate was liquidated, many families bought their homes at the "low" of the market. These homes were generally financed on a 10/15-year basis. Many of these homes today are free and clear or are subject to a very modest mortgage charge.

Equitable Savings and Loan Association during the past 15 years has financed almost 25,000 homes in Brooklyn, representing a modest, yet impressive percentage of all our one and two family homes. As the mortgages were being paid off, we analyzed the reasons for the liquidation of the mortgage debt. We found that about 70 percent of the mortgages are paid off by owners who are happy and contented in their homes and that only 30 percent of the mortgages are paid off because of a current sale. Our home mortgage position in the adjoining counties may not be indicative, but the trend is just the opposite. Good shelter in Brooklyn has cost less, and the fixed charges of a family in the owner-occupied home are less because of steadily decreasing aggregate mortgage payments, lower taxes, and lower transportation charges. There is also some evidence of families returning to live in Brooklyn from the suburban counties. The wife of one of our returning citizens told me the other day that her family was coming back to Brooklyn because in the event of unemployment, her husband could "look for a job with 15 cents." Obviously, a lower shelter cost provides greater latitude for other expenditures; this is why our retail stores and our department stores have hopes for increasing sales and increasing prosperity. Then there is another bright light on the horizon. We see some evidence of favorable changes in municipal policy.

For many years of the past we could not help but note the development of a vertical municipal policy in Manhattan, a policy which tended to beautify and to develop Manhattan, with little improvement, if any, in the Borough of Brooklyn. The lower East Side and many parts of Manhattan were redeveloped. Midtown Manhattan was completely rebuilt. Manhattan has a United Nations building as well as a Coliseum. Many of the avenues of Manhattan are equipped with street-lighting systems that practically assure 24 hours of daylight. Their subway stations are dolled up and equipped with new lighting systems. The modernization and beautification of Manhattan approaches a fantastic ideal. I do not have to dwell too long on the subject to prove that the result of a pro-Manhattan plan definitely indicates that for a long time a vertical municipal redevelopment policy was followed.

Manhattan has, I repeat, its Coliseum and other title I projects. But when we want a title I project to redevelop the west side of Cadman Plaza, we are told that there are no funds available for that project, a requisite for a great Brooklyn.

However, as I have said, there is some light on the horizon. You and I notice that work is being done on our subway stations. The missing link of the Brooklyn-Queens Connecting Highway will not be missing very long. We have the approval for the Myrtle Parking Garage in the Civic Center and have hopes for similar improvements in Albee Square. Our traffic conditions are improving, and we hope that discussions of these improvements give us valid reason to believe that we may see an era of horizontal muuncipal policy. An important part of Brooklyn's economy is highly integrated with that of Manhattan, and this condition makes it imperative that all units of this economy are equally serviced; otherwise, the entire community economy will suffer. American economy, an economy of stimulated demangs, and New York City's economy, to a large extent, is a highly integrated economy of stimulated demand. When we lose an important economic unit such as Loeser's, Namm's Department Store, the American Safety Razor, the Brooklyn Daily Eagle and others, the volume of business that is thus lost cannot be picked up by other units. While we do not know the lineage figures of our newspapers, I venture to say that even our great metropolitan newspapers are missing the ads of Namm's and Loeser's just as well as they are missing the lineage of the metropolitan department stores that went out of business.

You and I know that the city of New York is confronted with the problem of meeting competition created by those municipal governments in other parts of the United States that attract industry, commerce, and payrolls by offering more advantageous labor markets, tax exemption, bonuses, cheaper power, longer daylight, and better transportation and traffic facilities. When you and I read the New York Times and other great metropolitan papers and note the ads of the various agencies of many States offering generous inducements to commerce and industry, we can realize the magnitude of this competition. Many of these cities have demonstrated that they can solve their complex traffic problems. As an example, Baltimore, which is the leading contender for the position of the most thriving port of the Nation, has solved its traffic problems by strict enforcement of no parking, provision of off-street parking facilities, and other measures. Chicago has almost completed its plans to reap the harvest and retain the benefits of that new great waterway. The story of the Golden Triangle in Pittsburgh is an amazing one. Yet, we have great hopes in New York to meet this competition.

We have built great bridges and great tunnels in the effort to eliminate barriers. There is an indication that if there is a continuation and expansion of the apparent horizontal municipal policy, recognizing the responsibility for the economies of all the five boroughs, we may be able to meet that competition. But it means that city hall must be ready to support projects such as our title I Cadman Plaza project with everything that it has. It means that the leadership of city hall, which honored itself by appointing three of Brooklyn's most distinguished citizens, Chester Allen, Robert Blum, and Charles Mylod to a sport authority created by the State legislature, must provide that sports authority with the means to retain the Dodgers. I know that the problem involved is not an easy one. But the presence of the Dodgers in Brooklyn is very important from an economic and morale point of view. I am wondering if one of these days that the program books at Ebbets Field will not become the same kind of a collectors item as is the last issue of the Brooklyn Daily Eagle, today.

You and I elect a few men to direct the affairs of the city. We vest them with great power and we call them city government. The basic question on the ethical side is what is the moral basis for their power, their authority. The fundamentals of political morality include the maintenance of general welfare. The city of New York is dependent upon the progress and prosperity of all of its components. A vertical policy means the pyramids of the Pharaohs, silhouetting the skylines of Manhattan; but a horizontal municipal policy means a steady, higher plane of progress and prosperity for Manhattan, Queens, Bronx, Richmond, and, last but foremost, for the Borough of Brooklyn and all their citizens, rich and poor, proud and humble.

I strongly feel that our service and trade organizations should accept the responsibility of supporting our borough government in its efforts to bring about this horizontal policy. An allocation of capital expenditures on a basis of borough needs, weighted by a formula of population and taxes collected and such other factors as have been tested by other communities, will indicate the value of planning and foresight and will allow the greater city to compete with the municipalities of the rest of the Nation. With a horizontal plan, a broad, progressive, imaginative plan, New York City will continue to be the No. 1 city of the world, symbol of America's greatness.

Success on the Job

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 2, 1957

Mr. CASE of South Dakota. Mr. President, in the past few weeks many very fine convocation and commencement addresses have been placed in the CONGRESSIONAL RECORD.

Today I offer one given by the Honorable L. Homer Surbeck at the South Dakota School of Mines and Technology. It is one of the most helpful addresses of this nature which has come

to my attention—good for students, good for statesmen.

Possibly a few words about the speaker will add to its presentation here.

Homer Surbeck, a member of the law firm of Hughes, Hubbard, Blair & Reed, New York City, grew up in western South Dakota, the son of a Presbyterian minister. He was graduated from Rapid City High School as valedictorian of his class in 1920.

Four years later he completed the engineering course at the School of Mines with honors. Three years later he completed the law course at Yale with honors. He was editor of the Yale Law Journal and graduated first in his class, magna cum laude.

On the basis of his law-school record, Mr. Surbeck was chosen to be law secretary for Chief Justice Taft in 1927–28. Thereafter he joined the Hughes law firm in New York.

As a colonel in World War II, Mr. Surbeck received a citation from the War Department for having been "instrumental in the creation, organization, and development of a central agency responsible for the production of strategic and tactical economic intelligence. His alma mater, the South Dakota School of Mines and Technology, has now awarded him the honorary degree of doctor of human letters.

With this introduction, I now offer for readers of the RECORD this address by an outstanding American.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SUCCESS ON THE JOB

In casting about for a topic that might be of interest to school of mines students, my thoughts naturally turned back to the school as I knew it about 35 years ago. Dr. O'Hara was then president of the school, George Thompson was superintendent of buildings, and Miss Haft was the librarian.

I was in my third year, and had become a little fed up with calculus, chemistry, metallurgy, mineralogy, and physics. So I went into the library one day and spoke to Miss Haft. I said: "Miss Haft, do you have any regular books around here?" She knew what I meant. "Yes," she said, "we have a few over there"—and so she had.

The title of one of the books caught my eye. The title was: "If I Were Twenty-one." The object of the book was to pass along tips from a business veteran to those about to begin careers in business. The book fascinated me. After all these years, I remember much of that book as though I had read it only yesterday. I wish I could say as much for all of the subjects which I studied at the school of mines.

This thought occurred to me. If that book was of such interest to me then, the chances are that the same general subject might be of interest to students at the mines now—and not too boring I hope for the rest of you. I am afraid that I cannot match the qualifications of the author, William Maxwell, to discuss the subject of success in business. He had been outstandingly successful in business. I am not a businessman. Nor am I an engineer. Instead, I went to law school, and became a Wall Street lawyer. But, first as an employee for 6 years, and then as an employer of professional men for about 25 years, I have learned something about what to do, and what not to do, if you want to succeed in your employment.

Next, a few words of orientation. You spend four long, hard years at the mines, mastering the principles of science, and learning how to put science to work for you, in order that you, in turn, may go to work as engineers. By thus combining your efforts with those of your employer you will be able to produce something of value. But your contribution to that end will be made only through the medium of your employment. It has always seemed to me, therefore, that, in order to open the door to the widest effective use of all the science which you have learned at the mines, you must also master the principles governing success in your employment.

I especially commend, for your analysis and study, three general principles which, when fully mastered and translated into habitual conduct, will guide your footsteps along the pathway to success on the job.

I. THE LAW OF COMPENSATION

The first principle is the law of compensation. That is the law which governs what we get in relation to what we give.

The basic truism are all well known to everybody. Perhaps those most familiar are the ones found in the Scriptures:

"Be not deceived; God is not mocked; for whatsoever a man soweth, that shall he also reap." [1]

"Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom. For with the same measure that ye mete withal it shall be measured to you again." [2]

Emerson, in his great essay on compensation, summed it up this way:

"Men suffer all their life long, under the foolish superstition that they can be cheated. But it is as impossible for a man to be cheated by anyone but himself, as for a thing to be, and not to be, at the same time."

* * * * *

"What will you have? quoth God; pay for it and take it. Nothin venture, nothing have. Thou shalt be paid exactly for what thou hast done, no more, no less."

What is the practical application of the law? What do we give? For what should we be paid?

Let us go back to the physics laboratory for an illustration. I recall the principle about the efficiency of machines which Professor Watson taught us some 30 years ago. You have to put work into a machine in order to get work out of the machine. You always have to put more work into a machine than you can get out of the machine. That is because the machine is never 100 percent efficient.

And mark my word, neither is anything human 100 percent efficient. In your employment, you will be handicapped by a whole series of inefficiencies, one superimposed upon another, each progressively cutting down what you get back from all the effort which you expend. Some of the inefficiencies are yours. Some of the inefficiencies are your employer's.

Now a word about your own efficiency. You have to eat food to put energy into the body. Then you have to convert that energy into productive effort. Then you have to direct your productive effort so as to produce a tangible result which your employer can turn into money. Through each step, just how efficient can you expect to be?—10 or 15 percent, like the steam engine?—50 percent like the screw machine?—80 to 90 percent like some electrical machines? At the outset, I dare say you will not be 50 percent efficient at each step. That is simply another way of saying that to begin with your employer will get very little of tangible worth out of all your efforts.

Your personal efficiency is a matter largely within your own hands. You can do something about it. There are two sure ways to improve it.

First: If you honestly try to make it a pleasure for others to work with you, you, in turn, cannot help but enjoy your own work. By enjoying your own work, you thereby improve your own effectiveness.

Second: If I recall correctly the principles of algebra—such as Guy March used to teach—we can write an equation something like this: $A \times E \times T = K$, a constant, where A is ability, E is effort, T is time, and K is the objective we strive to attain. If A is decreased, we can still get the same constant K by increasing E or T or both, as required.

Now for a bit of applied mathematics. If you find that you are a little short on ability or experience—when you start out on the job—you can make up for it by added effort. And, given time, by sheer industry you can step by step improve your efficiency and enlarge your capacity to produce greater and greater results from your efforts. That is something anyone can do—if he will only try.

Of course, there is the question as to the employer's efficiency in returning to you some part of the profit which you may have helped him to make. But whatever the combined efficiency component—of yourself and of your employer—the part of the profit that comes back to you, through your employer, is in proportion to the contribution which you have made to your employer. Just like the work that comes out of a machine; it is in direct proportion to—although it may never equal—the work which you have put into it.

This is the point: Regardless of the combined efficiency handicap, of yourself and your employer, with which you may start, if you will honestly work as hard as you can, and long enough, the law of compensation will ultimately get you almost anything you want, within reason, if you work effectively enough.

How do you learn to work effectively with others? That brings me to the second principle, the Golden Rule.

II. THE GOLDEN RULE

I have already mentioned the return efficiency of the employer, in returning to you some part of the profit you may help him to make. I do not have to argue the point that, unless this return efficiency is effectively stimulated, much of your work may come to naught.

The return efficiency, however, is something not directly within your own hands. It is a matter largely within the judgment of the employer. To learn how to stimulate a desire on the part of your employer to improve the return efficiency you must look to the second principle—the Golden Rule.

It took centuries to develop that rule, a fact which attests to its soundness. Confucius put it in the negative form:

"What you do not wish done to yourself, do not do to others."

Application of the rule in negative form is easy. It involves no risk. It calls only for restraint. The possibility of error lies only in a failure always to invoke the rule before you act or speak.

Five hundred years after Confucius, the rule appeared in positive form in the Sermon on the Mount:

"Therefore all things whatsoever ye would that men should do to you, do ye even so to them; for this is the law and the prophets." [3]

What do you want men to do for you? You must have their help to succeed. All right. But, under the Golden Rule, you must help the other fellow first. You come second. You must wait for the other fellow to help you. But that is good enough so long as you ultimately get the help you need.

What assurance have you, if you help your employer first, that he in turn will help you? I say you have a double assurance: First, on faith, based on the Golden Rule. Second, on reason, based on the facts.

The reasoning runs something like this: By giving you employment, the employer

Footnotes at end of speech.

Footnotes at end of speech.

has already made a cash investment in your future. He gave you employment because he is trying to help himself by helping you. To avoid loss on his investment, the employer has every incentive to help you to succeed in helping him.

All you have to do is to provide a compelling reason—evident to your employer—for increasing the return efficiency. You can do that by helping him to the point where he is bound to see that, in his own self-interest, he can help himself best by helping you more.

When that point is reached, the incentive problem shifts from you to the employer. The employer is then the one that is trying to do what he can to stimulate even greater help from you to him. He is thus obliged to increase the incentives to you—in order that you will help him more. That results in a sort of help-raise-help-raise spiral which is altogether mutually beneficial.

So much for the simple situation where only two persons are involved—you and the man for whom you work. But whom do you help when you are one of many employees?

First, help your immediate superior. Let me give you a tip. Do not let yourself be resentful of any credit or promotion which your superior may receive as a result of your work and your ideas. The more his promotions are dependent upon your work, the greater your immediate success. At that point you have become indispensable to him. The surest way for him to get to the top is to pull you up the ladder with him, in order that you will continue to help him. Most promotions come about, just that way.

Second, do not overlook the associates with whom you work. Let me give you another tip. By being helpful to your associates, you cement bonds of friendship so that, if the promotion comes your way, you will not be plagued with petty jealousies. Instead, you will enjoy the good will and support of your associates.

But if, perchance, the promotions do not come to you directly, the next best thing is the promotion which comes to that associate whom you have helped. If that associate, rather than yourself, is the one headed for the top, his advancement is to your mutual advantage. For if you have really made it easier for him to progress up the ladder, you have, in a measure, become indispensable to him. And he, too, soon learns that he can help himself best by in turn helping you up the ladder with him. Many promotions come about, just that way.

How do you learn to help others effectively? Frankly, that is one of the hardest things in the world to do. The other fellow has a mind of his own. You cannot know his thoughts or wants. You can only infer them from what you hear or observe. Your quest for a technique therefore takes you back to the Golden Rule in positive form.

The result attained depends upon how well you grasp the great truth embodied in that rule. "Whatsoever ye would that men should do to you * * *." Here is where you can make some mistakes. Superficially read, or thoughtlessly applied, the rule may defeat its own purpose. It may evoke only the conduct which you yourself would want for yourself rather than the conduct which the other fellow may want or need.

For example—to use a simple illustration—it might lead a well-wishing bluebird to blunder into giving a nice fat worm to a squirrel. How often our efforts to help others turn out to be just that foolish.

The Golden Rule is designed to prevent that kind of misdirected effort. What the rule really means is this: Do for the other fellow what you would want done for yourself if you were that other fellow. Thus interpreted, it is the most profound rule ever put together in the field of human relations.

But it will not work for you unless you think of the other fellow's interest first.

The way to learn to think effectively of the other fellow's interest is first to try to put yourself into the other fellow's shoes, and try to look through his eyes from where he stands. You must disregard, for the moment, all your own selfish interests and preferences. In no other way can you help him effectively. In no other way can you become indispensable.

Here is where your thinking must be just as straight, and as honest, and as objective, as you can possibly make it. Otherwise, you may discover—too late—that you have blundered into giving a worm to a squirrel.

This brings me to the third principle, which is intellectual honesty.

III. INTELLECTUAL HONESTY

In the book which I mentioned—If I Were Twenty-one—the author made this point: When you go out into the world you will be confronted with the dishonesty of honest men. He explained that some otherwise honest men—when they think it is important in order to sustain their own selfish interests—will often try to persuade themselves into believing what they know is not true. In polite circles, it is called rationalization, a kind of dishonesty which fools nobody but themselves. We are all more or less guilty of it.

It seems to me that here is where the coin test enables us to check up on the honesty of our own rationalization.

We all know that there are two sides to every coin. But, as long as we refuse to see anything except our side of the coin, and as long as the other fellow refuses to see anything but his side of the coin, we are led into useless controversy which advances the interest of no one. But we can reach that impasse only because we have already deceived ourselves into believing that there is but one side to this particular coin—our side.

Shakespeare gives us the solution:

"This above all: to thine own self be true,
And it must follow, as the night the day,
Thou canst not then be false to any man."[4]

So what should you do? Become honest—first with yourself—and take a good long look at the other side of that coin. Here is what you will find: Just as there are two sides to every coin, so also are there two sides to every controversy. And one side may be just as right as the other, when you understand all the facts on both sides of the coin.

Do not turn away from a pertinent subject, when it is important to discuss it, simply because it may appear to be controversial. But do not, on the other hand, indulge in useless argument. Intelligent men never argue over ascertainable facts. Instead, they honestly probe until they have the whole truth on both sides of the coin. For they know that the whole truth can lead to a fair and equitable adjustment of any controversy or difference.

The coin test will help you to check up on the objective honesty of your own rationalization, so as to enable you to adjust your interests to those of your employer. Self-centered rationalization—if allowed to sway your conduct—will retard, rather than accelerate, the "return efficiency."

One's impulse may be to do as little as he can for the most he can get; to put emphasis upon the paycheck rather than upon his usefulness; to put emphasis upon his wants rather than upon the employer's needs; upon petty dislikes and personal inconveniences rather than upon the adjustments with self which all must make in order to get the job done.

When, as a result, the promotion goes to another, one's impulse may prompt him to indulge in rationalization—to lead himself to believe that he has been unfairly treated—and thereby shields his ego from reality and avoid honestly facing up to the truth as to why he failed to make the most of his opportunity to succeed.

Intellectual honesty, however, would compel him to recognize that the responsibility of management for results is so great that the boss is obliged to ride the best horse available in the stable regardless of petty likes or dislikes.

If the boss picks the other horse, the truth of the matter is that, on the facts as they appear on his side of the coin, the other fellow is the one that helps him more effectively. And if that is not evident to you, you have simply failed to take an honest look at the employer's side of the coin, so as to let the facts speak to you as they speak to others.

The boss may have occasion to criticize your conduct or work. If you were to allow your natural impulse to take over, you would be on the defensive, as if responding to a personal affront, petulantly attempting to justify every mistake or difference of view. This would create something of a personal problem for your employer, and, instead of being helpful, you would actually make it more difficult for the boss to do his own work. This would retard his "return efficiency."

If you were guided by your intellectual honesty, however, you would welcome the criticism as an opportunity to receive the instruction which you need in order to accomplish your main objective, which is not self-vindication but rather to learn how to become indispensable to the man by whom your labor is rewarded. You would then sit in judgment with the boss, as objectively, and with the same honest cooperation, as if you were reviewing the work of a third party not present, cheerfully, decisively, and without any resentment or self-justification whatsoever. Let the chips fall where they may. Join hands with the boss in probing for the objective truth. In short, get the job done, and done right.

But do not indulge in self-effacement. Do not compromise your own individual self in any degree. The boss does not want a "yes man." He can buy a rubber stamp for much less than he is paying you.

The boss wants a helpful man—an intellectually honest man. You are paid to think with your own mind, in order to contribute ideas of your own which you—and you alone—can generate. You are paid to prevent the boss from making mistakes which you can foresee, but which he might overlook.

There is never any conflict between the path to success and the finer instincts within us. Success is based upon objective truth and utter honesty with self and with others. The conflict is between self-centered impulse and our intellectual honesty, which speaks for our better self. Impulse may lead to self deception; but intellectual honesty leads to success.

A tug-of-war, between impulse and intellectual honesty, is ever present within us. If we allow impulse to pull ahead too often, we may be headed for failure. But give full play to relentless intellectual honesty, and reason will win.

As you gain proficiency in this, the boss will put more and more of his own work upon your shoulders, thereby increasing his dependence upon you. The point is soon reached where he is looking at your side of the coin, wondering what would happen to him if you were to accept a better position elsewhere. To help himself, he is thus obliged to help you more.

Thus, you see the only sure road to success on the job. Nothing can give you more pleasure and satisfaction than effectively helping others to help themselves. Nothing can give you greater security than a realiza-

Footnotes at end of speech.

tion by others that they can help themselves best by helping you more.

SUMMARIZING

If you will honestly work on the task at hand as hard as you can—and long enough to get it done right—and if you will apply the Golden Rule with relentless honesty with self—the law of compensation will guarantee your eventual success. That is the wisdom of the ages. Build your career upon it.

Supreme Court and the Communist Threat

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the U. S. News & World Report:

WHAT THE RECORD TELLS—SUPREME COURT AND THE COMMUNIST THREAT

(Attempts to clamp down on suspected Reds are being restricted more and more by the United States Supreme Court. Rulings by the Court, made over a 3-year period, now limit the powers of Congress, Federal agencies, even States. Here is a report on the actual Court holdings, and how each affects Government attempts to deal with subversives.)

Since 1955, the Supreme Court, in a long series of decisions, has acted to limit or deny the powers of the executive branch of the Government and of Congress and the States to deal with subversive activities.

Of these decisions, 16 were handed down in the term the Court now is ending. Four of the most far reaching were delivered in a single day. And a week later, as the Court wound up its regular activities for the term, half a dozen such cases were sent back for reconsideration in the lower courts.

What the Court decided is outlined in the report that follows. This report gives the points at issue, the decisions handed down, the individuals affected and the effects on Government programs designed to limit Communist activities.

LOYALTY RULES

The first important decision in the series was made in 1955. It involved the late Dr. John P. Peters, who lost a Government position after a loyalty review board reversed the findings of a lower court. The Court held that, under loyalty regulations, the review board could not itself undertake to review decisions of other loyalty boards. Dr. Peters, in effect, was cleared.

Meaning: Review boards, under executive regulations, can act only on appeals brought before them.

SEDITION LAWS

In 1956, decisions on Communists and subversive activities stepped up. State anti-sedition laws were held invalid on April 2, 1956, on the ground that the Smith Act, a Federal law dealing with sedition, superseded laws in the States. That had the effect of freeing Steve Nelson, an admitted Communist, from conviction under the Pennsylvania law.

Meaning: When Congress adopted the Smith Act, the Federal Government took exclusive jurisdiction over sedition and attempts to overthrow the Government.

"TAINTED" TESTIMONY

Later in the year, on November 5, 1956, the same Steve Nelson was granted a new trial on a Smith Act charge. The Court held that a new trial was in order because of "tainted" testimony by a Government witness at the original trial.

Meaning: Government evidence in criminal trials must be without blemish.

FIFTH AMENDMENT FIRINGS

A New York law, authorizing automatic dismissal of State and city government employees for taking the fifth amendment against self-incrimination was struck down on April 19, 1956. The case involved Harry Slochower, a New York City schoolteacher.

Meaning: A resort to the fifth amendment cannot be interpreted as any indication of guilt or wrongdoing.

PERJURY?

The Communist Party itself got a new hearing by the Court's order, on April 30, 1956. The party had been designated as a Communist-action group by the Subversive Activities Control Board and ordered to register with the Attorney General. The Court found that some witnesses at the Board hearing may have given perjured testimony.

Meaning: Same as in one of the Nelson cases—Government evidence must not contain the slightest blemish.

CITIZENSHIP

The Court limited denaturalization powers, on April 30, 1956, by deciding that such proceedings could be pressed only after an affidavit, showing good cause to believe that naturalization should be revoked, is filed in a Federal court. The result was to uphold the naturalization of Ettore Zucca, a suspected member of the Communist Party, because no such affidavit had been filed.

Meaning: If naturalized citizens are to be deprived of citizenship, all technical procedures must be carefully followed.

SENSITIVE JOBS

The Government loyalty program again was limited June 11, 1956, when the Court held that only employees in sensitive jobs could be discharged summarily under regulations that superseded ordinary civil-service rules. That decision found that Kendrick M. Cole had been unlawfully discharged as a Federal food and drug inspector.

Meaning: The Court holds the loyalty program is not as broad as some Congressmen thought.

JURY PRIVACY

In the term now ending, the Court took a number of steps to limit inquiries into Communist activity, the powers of congressional committees to conduct investigations and the Federal sedition law itself.

On January 28, Ben Gold, once head of the Fur Workers Union, won a new trial after being found guilty of filing a false non-Communist affidavit under the Taft-Hartley Act. The Court overturned the conviction because, during the trial, an agent of the Federal Bureau of Investigation had questioned a juror about another case, not related to the Gold case. The Court held that this was an intrusion into the privacy of the jury. The Justice Department has since decided to drop the case against Mr. Gold.

Meaning: The Government must take extraordinary precautions to avoid any semblance of interfering with a jury.

DEPORTATION

The Attorney General's power to supervise the activities of aliens who are ordered to be deported, but who cannot be deported because no other country will accept them, was limited by the Court on April 29. This case involved George I. Witkovich, an alien under deportation order who failed to answer questions concerning Communist activity. A Federal district court held that the Immigration and Nationality Act of 1952 gave the Attorney General "power to supervise the alien to make sure he is available for deportation, and no further power." The Supreme Court upheld the lower court.

Meaning: Aliens under deportation orders that cannot be carried out have only to keep authorities informed of their whereabouts. They do not have to give information about other activities.

ADMISSION TO BAR

States had their power over suspected sympathizers with communism trimmed on May 6, when the Court ruled that Rudolph Schware was improperly denied admission to the New Mexico bar and that Raphael Konigsberg was improperly denied admission to the bar of California. Mr. Schware, who admitted he had been a Communist, was refused permission to take the New Mexico bar examination. Mr. Konigsberg was denied admission in California because he refused to answer questions about his beliefs and associations.

The Court held in each case that the applicants were denied their rights of "due process of law."

Meaning: Past Communist connections alone or refusal to answer questions about such matters are not enough to bar an attorney from practice.

SEARCH AND SEIZURE

Power of the FBI to track down and arrest suspected subversives was hit on May 13, when the Supreme Court ordered new trials for Shirley Kremen, Samuel Irving Coleman and Sidney Steinberg. They were charged with harboring a Communist fugitive in a mountain cabin in California. The Court overturned their convictions on the ground that the search of the cabin and the seizure of its contents by FBI agents was invalid.

Meaning: The FBI and other Government police agencies have to be extra careful in the way the conduct searches.

FBI FILES

Then, on June 3, the Supreme Court rendered a decision that has been described as a blockbuster. This case involved Clinton E. Jencks, a New Mexico labor leader. Mr. Jencks was convicted of filing a false non-Communist affidavit under the Taft-Hartley Act. He appealed on the ground that at the trial he should have been allowed to see reports filed with the FBI by two witnesses. The Court upheld Mr. Jencks, told the FBI to open its files.

Meaning: The full significance of this case is not yet known. Lower courts have issued conflicting decisions in trying to apply the Supreme Court ruling. The Justice Department is reexamining pending cases and has dropped prosecutions in some of them. Congress is considering new laws to protect FBI files.

POWER TO INVESTIGATE

On June 17, the Court handed down four decisions that limited the authority of Congress, the Justice Department and the States to proceed against Communist activity and suspected disloyalty.

There was the case of John T. Watkins, who was upheld in his refusal to answer, before a subcommittee of the House Committee on Un-American Activities, questions about former Communist associates. In this case, the Court held that Congress must define the purposes of its investigating committees and that committees must make clear to witnesses that questions are pertinent. There was also the case of Paul M. Sweezy, who denied any Communist connections but refused to answer some questions in an investigation conducted for the New Hampshire Legislature. The Court upheld his refusal, too.

Meaning: The Watkins and Sweezy cases place limits on the power of Congress and the States to conduct investigations. Witnesses have been quick to challenge the right of Congress to ask questions.

SERVICE FIRING

Another of the June 17 rulings was on the case of John S. Service, whose discharge from the State Department by Dean Acheson, then Secretary, was held invalid because Mr. Acheson failed to follow Department regulations. This was another loyalty case.

Meaning: Loyalty regulations take precedence over the discretion given by law to the Secretary.

SMITH ACT

Finally, there was a decision June 17 in a cast involving the Smith Act itself. The Court acquitted 5 California Communists of violating the Federal antisedition law and ordered new trials for 9 others. Here the Court held that people could preach that the Government should be overthrown so long as the preaching was not directly intended to produce action toward overthrowing the Government.

Meaning: Communists now are free to teach their doctrine if only they refrain from advocating action.

NEW TRIALS

The following week, in the light of these decisions, the Court sent back six cases to the lower courts. One case involved new hearings for six persons convicted of Smith Act violations in Michigan.

Harry Sacher, a New York lawyer who has represented defendants in Communist cases, had his conviction of contempt of Congress vacated and a new hearing ordered. He refused to answer questions about Communist connections when before a subcommittee.

A new hearing also was ordered for Abram Flaxer, former president of the United Public Workers. He was tried and convicted of contempt for failure to produce records subpenaed by the Senate Internal Security Subcommittee. Lloyd Barenblatt, former teacher at Vassar, is to get a new hearing on this contempt conviction for refusing to answer questions before a congressional committee.

In returning the contempt cases, the Court cited the Watkins decision.

Under the Sweezy decision, the Court sent back two cases involving contempt convictions for defying the Ohio Commission on Un-American Activities. In one of the cases, convictions against Talmadge Raley, Joseph Stern and Emmett C. Brown were vacated. The other involved Anna Morgan, who resorted to the fifth amendment 37 times in refusing to answer questions.

Meaning: The Court's actions during the last regular session of the term are sure signs these decisions call for a wholesale reappraisal of both Federal and State programs to curtail Communist activity. Congress already is considering a number of bills aimed at restoring some of the authority that Supreme Court decisions have weakened or destroyed.

Speaking of Principle

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. AVERY. Mr. Speaker, the following editorial appeared in the Portland Oregonian and was reprinted in the Topeka Daily Capital, Topeka, Kans. I think the editorial speaks for itself.

SPEAKING OF PRINCIPLE

Senator WAYNE L. MORSE, chief sponsor of the Hells Canyon Federal dam bill, abuses Idaho Power Co. for giving up its accelerated tax amortization certificates for two Snake River dams as intemperately as he abused the company for obtaining them. He calls Idaho Power Co.'s action "deathbed repentance" of "a selfish monopoly" taken "to avoid the consequences of its past improper conduct."

This page, which previously called for repeal of the fast tax-writeoff law—or at a minimum the exclusion from its benefits of projects such as power dams which are amortized in 50 years—is not bleeding for Idaho Power Co. But there was nothing improper in IPCO, which applied for the tax program nearly 4 years ago, seeking the same tax advantage provided in 22,000 certificates granted to other firms, including 927 to electric utilities. In justice to its stockholders, it could do not less. The fault was in the law, and Congress is responsible for the law.

But, speaking of conduct which involves political or business morality, what is one to think of Senator MORSE's conduct in abdicating his long-standing and high-sounding position on civil rights and foreign aid to obtain southern Democratic votes for his Hells Canyon bill?

Senator MORSE has been drumming into our ears for so long his dedication to "principle" that this must come as a shock to some of his supporters. He has been cuddling up to the new isolationists of the South for some time. And his fight with the South to kill the Eisenhower administration's civil-rights bill by sending it to Senator EASTLAND's Judiciary Committee was a flagrant horse-trade for votes for his high Hells Canyon bill.

In our opinion, Senator MORSE is no longer in position to shout about principle—if he ever was.

Lawyer Referral Services Important to Lawyers and the Public

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. PORTER. Mr. Speaker, lawyers are working to make their services more available to the public. My friend, Orison S. Marden, the author of the following article from the June 1957 issue of the American Bar Association Journal, has made important contributions in this field, both for persons who cannot pay any fee at all and for the persons in the middle income group. His words are worth reading:

LAWYER REFERRAL SERVICES IMPORTANT TO LAWYERS AND THE PUBLIC

(By Orison S. Marden, former chairman of the standing committee on lawyer referral service of the American Bar Association)

The American Bar Association, representing our ancient and honorable profession at the national level, is earnestly seeking by all proper means to increase our usefulness to the public we serve. This is both our right and our duty, for the public has granted an exclusive franchise to the legal profession. None but the lawyer can lawfully give legal advice. We therefore owe a corresponding duty, as a matter of professional obligation and simple good faith, to serve all who need our services.

To this end the house of delegates of the American Bar Association several years ago adopted a statement of the six major long-term objectives of our profession. The second of these objectives records our promise to serve all who need legal services at a cost within their means.

Legal aid facilities to handle civil and criminal matters constitute one important segment of the overall plan. These community law offices provide legal service for those who cannot pay a lawyer for the legal representation they need.

People of wealth and experience have never had difficulty in finding legal talent to protect their rights.

But what about the great mass of our citizens, neither poor nor wealthy—who far outnumber the other two groups combined? Many, perhaps most, members of this so-called middle income group do not know when they have a legal problem. Many of these would not know where to turn if they did. They consult a lay friend or the grocer or the bartender or a notary public or real estate agent. Only a small percentage are accustomed to lawyers. Surveys have shown this over and over again.

The plain truth is that the inexperienced are often afraid of lawyers, associating them with times of trouble and death, with automobile accidents and the arrest court.

They do not appreciate the value of having a lawyer's advice before taking important steps rather than after the fat is in the fire. Even when circumstances virtually force the seeking of legal representation, it is done painfully, reluctantly, fearfully. The average family will promptly call in the doctor when young Johnny has a stomach ache, but they will hesitate to consult a lawyer when they buy a house.

How can we educate the general public to let us use our skills and experience to serve their interests? That is a problem which has engaged the attention of many a bar association committee—at national, State and local levels. And it is being solved, I believe—due in large part, to the excellent leadership of the Public Relations Committee of the American Bar Association in recent years.

Much of the educational work, of course, is done through lecture programs, TV, and radio, pamphlet material and advertisements sponsored by the organized bar—all designed to alert the public to the serious problems involved in many day-to-day transactions, and to persuade the inexperienced that lawyers are to be trusted, not feared; that our fees are relatively modest and well worth the amount charged.

But many people do not know how or where to get legal advice even when they come to realize that they need it.

That is where the Lawyer Referral Service comes in. The title may seem formidable, but this is really a simple plan for introducing to lawyers persons who need legal advice but do not know a lawyer or how to find one. The services are sponsored by local bar associations as a public service. They conform to all ethical requirements.

How does the service work? It is really quite simple, although there are eight basic requirements:

1. There must be bar association sponsorship. This is essential to reassure the timid prospect and make him forget his fears and apprehension.

2. There must be a supervising committee to insure that the service is handled correctly and fairly.

3. There must, of course, be a panel of lawyers. This may consist of all the lawyers in the community who volunteer to serve or it may be a screened list.

4. There must be a person to do the referring. He or she may be a court clerk, a lawyer, a secretary of the bar association; in fact, anyone in whom the bar has confidence, and who will give a courteous reception to the confused and sometimes suspicious people who come in.

5. There should be a fixed fee for the initial consultation. This is important. By means of the fixed fee the public is assured that for the first conference with a lawyer the charge will be no more than $3 or $5, or whatever fee is fixed by the local association. This dissipates common fears of a high fee and brings lawyer and client together in an atmosphere favorable to future relations.

6. Agreement by the bar association committee to arbitrate any dispute as to fees is desirable, though not essential. This gives further assurance of fairness to the public.

7. A system of publicity is desirable. This is to let the public know of the service; and

8. Lastly, there should be a system for keeping proper records so that statistics may be maintained both locally and nationally.

In practice, under the most referral plans, applicants are referred to lawyers on a rotation basis. It is preferable to give some discretion to the person who does the referring; but there must be no favoritism and the bar must have confidence in the operator of the plan.

After the referral is made the ordinary relationship of lawyer and client follows. Arrangements as to charges for future services, if any, after the original fixed-fee consultation, are made between lawyer and client just as if the client had been referred by a friend or another client. There is no interference with the relationship by the bar association or the Service unless there should be a dispute concerning the fee. As already stated, it is desirable that the public be advised that if there should be any dispute as to fee it will be resolved by the supervising committee or by arbitration as the association may determine. This gives assurance to the wary and inexperienced.

Essentially, then, the lawyer referral service is nothing more than an information bureau to which 2 or 3 important ornaments have been added. The first is bar association sponsorship, so important to give confidence to the timid. The second is the fixed-fee for the initial consultation, which also helps to get the prospective client into the lawyer's office. And, lastly, the provision for bar association arbitration of any dispute as to fee promises the inexperienced person that he will be fairly treated.

In practice, the service has proved to be excellent public relations for the profession. It is also a good source of business for the local bar, particularly for the younger lawyers.

Three misconceptions about the service are rather common and should be mentioned briefly:

First, the service does not interfere with existing lawyer-client relationships. Instead, it brings to lawyers as clients persons who probably would not otherwise receive the legal advice they need. National statistics show that 80 percent of those who consult Lawyer Referral Services have never consulted a lawyer before. When applicants seeking a referral already have a lawyer, they will usually not be referred.

Second, the service is not a cutrate service and minimum fee schedules are entirely in order. Of course, most of these cases are apt to be small, and the lawyer will sometimes have to adjust his charges to meet conditions, just as he does with clients who come to him from other sources.

Third, the service is not a step toward socialization of the profession. On the contrary, it is an important move forward in educating the public to use the services of lawyers and in making it easier and more convenient for them to do so. It is a public service that will be appreciated by the people of most communities and will bring credit as well as new business to the bar.

The first services were started in the larger cities 27 years or so ago. They are now spreading to many smaller cities and counties. More than a hundred are in operation today in all parts of the country.

In fact, well-operated services in certain smaller cities have produced more business for panel members than in some of the larger cities. The bar is proportionately smaller in these cities, and potential business (of which, as a profession, we have only scratched the surface) is relatively the same.

The Standing Committee on Lawyer Referral Service is anxious to help local bar associations, large and small, to establish these useful services. The committee has handbooks and pamphlets and has accumulated considerable experience. Our hope is that many more bar associations will give the committee an opportunity to use these tools. A letter to the American Bar Center, Chicago 37, or to the chairman, Walter T. Fisher, 135 South La Salle Street, Chicago 3, will receive prompt attention.

Preserving Public Papers

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1957

Mr. AVERY. Mr. Speaker, the following editorial appeared in the El Dorado Times newspaper and was reprinted in the Topeka Daily Capital, Topeka, Kans., concerning the papers of the beloved United States Senator from Kansas, Arthur Capper.

This editorial sets forth a portion of the great work and contributions of Mr. Capper. His great service in the United States Senate will long be remembered by everyone.

The editorial follows:

PRESERVING PUBLIC PAPERS

The papers of Arthur Capper—letters and documents many thousands in number—have been deposited with the Kansas State Historical Society at Topeka for preservation.

Arthur Capper was governor of this State for 4 years and a United States Senator for 30. He participated officially in many of the most important events affecting the welfare of this Nation in his time. The papers he accumulated during his distinguished service assuredly are invested with a significant historical value.

The Pittsburg Headlight, whose editor Fred Brinkerhoff is an outstanding Kansas historian, offers this comment:

"Arthur Capper served 30 years in the United States Senate. In the prime of his tenure he was one of the most conspicuous figures in farm legislation. He was in the Senate when the farm question, as it long has been known, came to the front. The Senator was from a leading farm State. As the publisher of farm papers along with newspapers, Capper had a vital personal interest in the welfare of the American farmer. He added this personal concern to a conscientious acceptance of his responsibility as a legislator. So in Capper's own files of letters and other documents, writers of history will find vital material. And that research will be done in the historical society's collection."

The accumulated papers of many eminent Kansans have been going to the State historical society in recent years. That is exactly the place for them. There they will be collated and preserved, by means of the special intelligence and facilities for this purpose that the society peculiarly possesses. In future years, they will represent high value in a clearer understanding of the causes and events during the period when Kansas rounded out its first century of being.

This tendency toward a more careful consideration for the records of the past comprises one that needs to be accelerated.

Supreme Court Creates Problems

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an editorial entitled "Supreme Court Creates Problems," which appeared in the June 28, 1957, Los Angeles Times:

SUPREME COURT CREATES PROBLEMS

The 1956–57 term of the Supreme Court, now ended but for the Girard case, seems to pose an unusually long list of problems for Congress.

President Eisenhower is not alone in finding some of the decisions announced on recent Mondays difficult to understand. In some matters, especially in its setting aside of the conviction of Southern California Communists, the Court seems to be setting impossible standards.

A VAGUE ANTHORITY

Most people, including most lawyers, conceive of the Supreme Court as a place where the law is settled, so that men may govern themselves accordingly. In recent weeks the Court has appeared to do more unsettling than settling, for example, in the Watkins contempt of Congress case in which it held that the House Un-American Activities Committee had a "vague" grant of authority from Congress and hence could not insist on answers to questions.

Watkins, formerly an official of a Communist-dominated union, told of his own former connections with communism, but refused to name others he had known as Communists. The 6-to-1 decision (with Justice Clark dissenting) has been hailed as putting Congress in its place, not only by pro-Communist liberals but by such anti-Communist liberals as Walter Lippmann. Here we think Lippmann betrays a customary bias; he favors a strong executive and a subservient Congress.

THE PROPER JUDGE

But Congress is not intended to be subservient; the legislative branch is at least as important as any other. We believe the better view to be that the power of Congress to legislate cannot be hampered except by the restrictions of the Constitution itself. It follows that its power to investigate—investigation being a necessary preliminary to legislation—cannot be hampered either, except by plain mandates of the fundamental law, and that when there is no such plain mandate Congress itself is the only proper judge of what it shall investigate and how far.

We believe that in the Watkins case there was no such clear and present danger to his individual rights as to require a judicial rebuke to the committee. The court's remark that exposure of evil is not the true purpose of a congressional investigation appears out of line. Congress should, of course, indulge in no mere scandalmongering; but who can tell what need for legislation may not appear in the course of such a search?

United States District Judge Sirica appears to be of the opinion that the Watkins decision does not cover very much ground. He said he took cognizance of it but still could find teamsters official Frank W. Brewster guilty of 31 counts of contempt of Congress for refusing to produce books and records and answer questions about the union's financial affairs.

The judge said it was plainly within the power of Congress to determine whether its requirement that union financial reports be filed was being complied with; changes in legislation might be found necessary. The judge also refused to hold that Brewster had purged himself of contempt by a subsequent production of records and answering of questions.

The high Court on its last decision day reversed other contempt-of-Congress convictions and ruled again that a State legislature may not delegate its power to investigate. The Brewster case thus becomes something of a challenge to the high court's rulings.

It was in setting aside the Communist convictions that the Court made the most work for Congress; apparently that body must overhaul the Smith Act, which makes teaching and advocating overthrow of the Government a felony.

As matters stand, the lower courts are faced with the necessity, in Smith Act prosecutions, of attempting to distinguish between advocacy of overthrow as an intellectual enterprise, which the Supreme Court says is lawful, and incitement to revolt, which the Court says is not. This seems such a fine-spun distinction as to be impossible to make in the majority of cases, and so in effect makes the Smith Act a dead letter.

CHALLENGE TO CONGRESS

We cannot believe that danger from the Communist conspiracy is at an end in the United States and that the Nation can afford to let the Smith Act expire. Congress is thus challenged to pass an act that can deal with the situation.

Then there is the Jencks case in which the Court several weeks ago held defendants have a right to inspect the files of the FBI, a decision which would make that useful police agency impotent.

Some Members of Congress have been roused to such anger at the Court's attitude that extreme remedies are being proposed. One Congressman wants to impeach and remove the whole Court, and another would make the Justices, in effect, removable every 4 years by requiring reconfirmation as a condition of their tenure.

The situation is not that bad. We think the Court is mistaken, but it is obviously honestly so; the Court has committed no high crimes and misdemeanors such as should subject it to impeachment and removal. And subjecting the Court to political pressure is not a remedy that commends itself.

The remedy, so far as there is a remedy, is legislative and is within the power of Congress. Court decisions are not irrevocable. Particular cases are finally decided, but principles and policies are subject to legislative review.

Employment of the Handicapped—a Community Responsibility

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. WIDNALL. Mr. Speaker, Miss Virginia Davis, of Ridgwood, N. J., recently received a first prize award in the ninth annual New Jersey Employ the Physically Handicapped Essay and Billboard Contest. She was also honored as the fourth-place winner in the national contest sponsored by the President's Committee on Employment of the Physically Handicapped.

Miss Davis is an 11th grade student at St. Luke's High School in Hohokus, N. J. Her very fine essay, Employment of the Handicapped—a Community Responsibility, deserves to be widely read.

Under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, her essay follows:

EMPLOYMENT OF THE HANDICAPPED—A COMMUNITY RESPONSIBILITY

He was always considered the odd fellow in town. No one ever paid much attention to him. Outside of the jeering taunts of children, most people shunned or ignored him. One leg made a difference in those days. One leg couldn't secure a job, gain respect, or most important, find happiness.

Fortunately, we in America today, are not so narrowminded as to evaluate the worth of an individual solely by any physical handicap. But then again—are we? How many employers actually do hire disabled persons? Are there still many faced with a bleak future through lack of employment? Surprisingly little research will bring the answer quickly to light. We find that there are over 2 million disabled persons who could be rehabilitated to take a useful place in society. Bringing this about is a tremendous undertaking but more important than that, it is a grave responsibility to our Nation, to ourselves, and to the handicapped involved.

The average life span of the individual is increasing all the time. Presently it stands at 69.9 years. With this additional rise in age, chronic illness and resulting physical disability can be expected. Therefore, it becomes most necessary to adjust the handicapped now, to work which realizes their limitations and capacities. This instruction will, in turn, be entrusted to each succeeding generation, thereby safeguarding the vital strength of any nation—its people.

Morally, we are under obligation for the welfare of those less fortunate. The physically handicapped are no exception. If we claim democracy—we must prove it; if we shout equality—we must give it. The moral point, sadly enough, will not convince the individual of his obligation so strongly as the economic side of the picture. Whether taxpayers realize it or not, they pay heavily each year for disabled persons, who are not being rehabilitated, and their dependents. If greater efforts were exerted, these people could be trained and suited to jobs, and the enormous outflux of public funds be sharply curtailed. This would make the handicapped no longer a tax consumer but self-supporting. It would better the status of the taxpayer and contribute to a wider dispensing of financial aid to other causes.

Lastly, our responsibility of rehabilitation for the handicapped lies toward the disabled person himself. Everyone likes to feel self-sufficient. It is hard therefore, to be robbed of the chance for complete independence just because one lacks an arm or has a crippled leg. It is then up to us, to do all in our power to procure for these handicapped persons the right to happiness in life. We must provide training and specialists, hope and encouragement, and do all that we can to make the person a useful, productive, and contented citizen.

Where is the starting point of all this responsibility? The Nation is too big, the individual—too small. The answer must lie somewhere in between. By logical deduction, the solution is found in the community. In each community, there live a number of handicapped people, but even greater are the number who are not. Through ignorance or even lack of interest, these citizens know or care little about the urgency of this problem. They do not bother to find out what is being done in the line of rehabilitation; they probably do not realize how their taxes are being used in this regard; and even worse, they fail to look ahead and see the disastrous future, disability could bring to their Nation. These citizens must be made aware of these pressing needs and dangers. They must recognize the part of their community in rehabilitation. Facilities must be made available, physicians and trained personnel obtained, and opportunities in this career increased. Finally, when the individual is ready for placement, he must be given an unprejudiced position and accepted on an equal competitive basis.

If communities refuse to acknowledge rehabilitation and employment for the handicapped as their problem, America will soon be faced with a perilous future. All over the world, peace has been placed in imminent danger. Little wars are continually being fought. Tension over world crises has attained its highest summit. What would America's position really be like if world war finally did strike? The manpower at our disposal, if we had rehabilitated, would be a decidedly helpful factor; the money we could have saved would definitely contribute to a stronger defense; and the people we could have helped would feel their role as citizens more keenly.

This is not imaginative thinking but positive fact. The disabled are now our liabilities. They could be our assets. Isn't it time the communities of America admitted this situation and awakened to their sense of duty? The challenge is there. They have but to meet it. At stake is their nation, their children, and the lives of the disabled.

Handicapped, America is waiting.

Testimonial to Rev. Father Placid Hennessey, of Wilkes-Barre, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of June 29, 1957, on the occasion of the 35th anniversary of Rev. Placid Hennessey,

OFM, as a member of the Franciscan order.

TESTIMONIAL TO PRIEST

A dinner at the Mayfair, Yatesville, on Sunday night will mark the 35th anniversary of Rev. Placid Hennessey, OFM, as a member of the Franciscan Order.

Because of his activities as the priest of St. Joseph's Monastery, Wilkes-Barre Township, and because of his acceptance of leadership in many community affairs, Father Hennessey is widely known and is respected for his zeal and qualities of leadership.

He will have the good wishes of many more than the hundreds of associates and friends expected to attend the testimonial dinner.

Long Beach State College Tour

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. HOSMER. Mr. Speaker, visiting us here today is a group of elementary and high school teachers, as well as a few future teachers, from southern California who are on a 10,000-mile tour of the United States as part of their study for credits at the Long Beach State College, Long Beach, Calif.

One aim of this tour, which is called a field trip in United States history and government, is to acquaint our California teachers with the most important historical places in our country so that they may go back to the classrooms and make the teaching of history more interesting and more meaningful.

It is also the aim of the Long Beach State College through this tour to acquaint our California teachers with the work that goes on in our American political institutions. They go behind the scenes of our Federal, State, and city governments and meet with important government officials in order to learn from these officials about the organization and functions of their respective departments.

This course of study was approved by the Long Beach State College in 1953, and by the Department of Education, State of California, the same year. Each year since 1953, under the guidance of Dr. J. Wesley Bratton, dean of the summer session, and the direction of Mr. Ross A. Sciarrotta, instructor and tour director, a group has visited Washington, and I have had the pleasure of arranging their visit here, which includes briefings by heads of departments and by foreign diplomats, as well as visits to House and Senate committee hearings and sessions of the House and Senate. Because their tour is a study tour—one for which they earn six college credits that may be applied toward higher degrees—may account for the warm reception and fine cooperation they receive from the top Government officials who take time off from their busy days to explain the operations of their agencies and departments.

In addition to Mr. Sciarrotta, the instructor and tour director, the following are in the group visiting us today: Mr. John Feder, Miss Tina Heller, Miss Delia H. Sprauer, Mr. Frank M. Takahashi, Mr. and Mrs. Ervin H. Miller, Miss Kathy Crowther, Mr. Dennis Brown, Miss Peggy Ratcliff, and Miss Kathy Doba from Long Beach; Miss Violet E. Good and Miss Helen Roudebrush from Bellflower; Mrs. B. F. McNamee, Altadena; Mr. G. W. Mercereau from Los Angeles; and Mr. Verne W. Cowan from Visalia, Calif.

Dulles Declares Our Independence

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. DAGUE. Mr. Speaker, nothing could have been more reassuring to Americans who cherish the sacred principles upon which our Nation is built than is Secretary Dulles' declaration that we will have no traffic—commercial or ideological—with the gangster nation which is Communist China. And coming on the eve of our National Day of Independence, it serves to reaffirm our basic renunciation of tyranny and our independence of those other nations of the so-called western bloc who are prepared to sell their birthright for the temporary and nebulous benefit of trade with Peiping.

Our naivete and our unfamiliarity at the time with communistic disregard for truth and honor may explain away our recognition of Communist Russia in 1933. After almost 25 years, however, of lies and equivocation and with thousands of our own boys lying dead, and millions of other free peoples either dead or enslaved, as the result of Communist savagery, we cannot longer plead ignorance of their aims and philosophy.

In the first instance, it was only through connivance on the part of Communist sympthizers in our own Government that the Chinese Reds were elevated to a place of dominance over Chiang Kai-shek. And it was in Korea that we saw the fiendish brutality and utter ruthlessness of a murderous regime that now seeks to do business with honest people and through that avenue worm its way into a place in the United Nations.

We do not have to stretch our memory very far to recall when it was thought to be socially smart to traffic with bootleggers and gangsters during the prohibition era. Today it would appear that there are those who like to think of themselves as internationalists or one-worlders who see nothing immoral in trafficking with a group of international gangsters who deny all Divine authority and whose word is not worth the time it takes to utter it. Indeed, Pope's Essay on Man gives us the best possible summation of the attitude currently displayed by some people who should know better:

Vice is a monster of so frightful mien,
As to be hated needs but to be seen;
Yet seen too oft, familiar with her face,
We first endure, then pity, then embrace.

Secretary Dulles has struck exactly the right note for July 4, 1957. We declared our independence of tyrants in 1776, and it is just as well that we reaffirm our independence of some of our so-called allies and let them know that our honor is not an item that fluctuates with the various winds—I repeat, winds—of international economics.

As a matter of fact, I wish the Secretary had gone one step further and served notice on the world that when Communist China takes her seat in the United Nations she can have the seat which will on that instant be vacated by the United States.

British Plan One-Class Superliners

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. McCORMACK. Mr. Speaker, on June 17, 1957, I inserted in the Appendix of the RECORD an address made by H. B. Cantor, president of the Carter Hotels Operating Corporation of New York City and a very successful businessman, in connection with the construction of superliners that will make possible transatlantic ocean voyages at a fare of $50 by constructing the world's 2 largest and fastest superliners.

In my extension of remarks I include a news item which appeared in the June 21, 1957, issue of Seafarers Log quoting an article which appeared in the London Financial Times indicating that business interests in Great Britain are seriously considering the construction of "a British-built superliner of 90,000 to 95,000 tons, carrying all of its 9,000 passengers in 1 class," and that the purpose of the vessel is substantially as that intended and outlined by Mr. Cantor.

Mr. Cantor has taken this matter up with the Maritime Commission and is still trying to negotiate with the officials of the United States Maritime Commission. I hope that the proper officials of the United States Maritime Commission will quickly enter into further negotiations with Mr. Cantor. It would be most unfortunate if Mr. Cantor, an American, conceived this plan and interests in Great Britain picked it up and put it into operation before action was taken by the American Government or an American interest.

[From the Seafarers Log of June 21, 1957]

BRITISH PLAN ONE-CLASS SUPERLINER

The idea of an American hotelman for a 9,000-passenger, 1-class transatlantic liner—an idea which has been sidetracked here—is apparently being adopted, lock, stock, and barrel by the British, according to the London Financial Times.

That newspaper has reported that plans are afoot for a British-built superliner of 90,000 to 95,000 tons, carrying all of its 9,000 passengers in 1 class. The ship would have a cruising speed of 35½ knots, which would permit it to make a transatlantic crossing inside of 4 days. In combination with airline service (1 way by air, 1 way by ship) such a vessel would permit the average

American with a 2-week vacation to spend 7 or 8 days on the Continent.

THREE HUNDRED THOUSAND HORSEPOWER

As described by the London newspaper, the vessel would be totally air-conditioned and would have its engineroom back aft. The engines would generate the enormous total of 300,000 horsepower.

Some of the American aircraft carriers now afloat generate in excess of 200,000 horsepower.

The New York hotelman, H. B. Cantor, has been proposing a vessel of this size with equivalent passenger capacity for a number of years, but thus far has been unable to interest Government officials in acting on his proposal. Meanwhile, existing American transatlantic operators, such as United States Lines, are proceeding with plans to build conventional three-class passenger vessels, providing for a type of travel which is fast becoming obsolete.

Most foreign operators are already actively involved in the 1-class field, with the Swedish-American Line announcing that it would build a 1-class pullman-style tour ship providing meals in low-cost cafeterias and in restaurants. This, too, was one of the features espoused by Cantor.

The proposed Swedish ship would accommodate 1,300 passengers and would have an auditorium capable of seating 800 people at conventions and other meetings.

Meanwhile, the only potential low-cost operation under the American flag, the Arnold Bernstein group, is making headway in its plans to go into service next spring. Bernstein has announced that his company has joined the North Atlantic Passenger Conference and has gone to Belgium to make arrangements for a passenger terminus in Zeebrugge for his operation.

The Bernstein ship, which will be named the *Atlantic*, will offer a minimum off-season rate of $187.50. It will operate between New York, Zeebrugge, and Amsterdam, taking 7 days for the crossing. The ship, which is the former *Badger Mariner*, is now undergoing conversion at the Ingalls Shipbuilding yard at Pascagoula, Miss. It will accommodate 900 passengers, most of them in tourist class, and will be completely air-conditioned.

The Bernstein group has plans for constructing two new vessels for the transatlantic operation.

The proposed British superliner undoubtedly would be built by the Cunard Line if it should ever come to pass. Cunard offices in New York said they had not received any word of such plans to date.

[From the Glasgow Herald, Glasgow, England, of June 10, 1957]

HOLIDAYS ABROAD

The Government has made a wise and popular move in lifting the financial ban on holidays in the United States and Canada. It will make no practical difference in the immediate future to most people who are in a position to consider taking a holiday abroad, but it will have served a good purpose if it does no more than set people thinking about the possibility of going West another year for a few days or weeks. It is difficult to say how far $280 will go on the other side, but some of the essential do's and don'ts are given in an article elsewhere on this page. If American and Canadian business acumen runs true to form it can be expected that the tourist industries of these countries will do everything in their power to make the trip worth while for visitors from the old country. But the cost of transatlantic travel remains a limiting factor. The cheapest return fare by air from London to New York is more than £150. By sea from Southampton to New York costs £20 or so less. A holiday costing perhaps £250 is possible for some well-to-do people in middle or later life, but few even of them could afford to make a regular habit of it.

Unfortunately and unavoidably the cost of a holiday in America remains prohibitive to nearly all young people of adventurous spirit who are quite prepared to do it on the cheap. But this may not always be so. If the plans of Mr. H. B. Cantor, an American hotel magnate, should materialize it may be possible to provide transatlantic travel at a return fare of about £36 plus the cost of food. But for the present, although a large number of inquiries has been received by travel agents offering holidays in North America, it is not likely that bookings will be heavy.

The number of people taking holidays outside Britain, however, has been steadily increasing since the war. Last year the total was almost 1,500,000. This year it is expected to increase by at least 250,000. France is by far the most popular country with British tourists, but there is an increasing tendency to go farther afield. Even the Iron Curtain is affording more chinks for tourists than in the past. This year it is expected that motorists from the West will be able to visit Berlin and Poland without being held up or turned back. To whatever points of the compass Britain's tourists choose to go there can be no doubt that their increasing numbers represent a valuable contribution to international good will through the friendships which are made and the broadening of the individual's outlook.

JUNE 26, 1957.

Chairman CLARENCE G. MORSE,
Maritime Commission, United States Department of Commerce,
Washington, D. C.

Hon. CLARENCE G. MORSE: Enclosed please find clipping from the SeaFarers Log, June 21, 1957, in which they elaborate on the British plan 1-class superliner, according to the London Financial Times.

If you and I can sit down undisturbed, I am reasonably certain that we can work out a businessman's financial arrangement to satisfy you on the equity.

Please let me know when I can see you.

Respectfully yours,

H. B. CANTOR,
President, Carter Hotels Operating Corp.

Veterans' Administration Benefits Claims May Need Judicial Court or Review Action

---

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. SAYLOR. Mr. Speaker, there is legislation pending before the Committee on Veterans' Affairs on which I have the good fortune to serve as a member, which would provide for the determination through judicial proceedings of claims for compensation resulting from disease or injury incurred in or aggravated while serving in the active military or naval service. I refer to H. R. 1006.

Similar to this bill in purpose is H. R. 834 and H. R. 4746. The first bill would confer jurisdiction upon the Court of Claims to review claims for benefits under laws administered by the Veterans' Administration; the second bill would confer jurisdiction upon the United States Court of Appeals for the District of Columbia to review decisions for veterans' benefits. Both of these proposals are pending before the Judiciary Committee and during the last Congress hearings were held on similar measures.

I fear that unless we can experience better decisions from the Board of Veterans' Appeals, it will be necessary to take action to pass one of these measures and provide judicial court or review of decisions of the Veterans' Administration.

Of course, I realize that this would place quite a burden on the courts and it might be necessary to set up a special court comparable to the Tax Court. I am sure that all Members of Congress realize that such a step might have to be taken if more equitable decisions are not forthcoming from the Veterans' Administration.

A Stout Heart in Manila

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. CARRIGG. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the New York Times of Monday, June 24, 1957:

A STOUT HEART IN MANILA

Ever since the death of Ramon Magsaysay the question has been asked, "Will Philippine President Carlos P. Garcia be able to carry on with the policies of his predecessor?" Mr. Garcia said that he hoped to do so. He has now been put to the test at a critical point, and he has not faltered.

A bill had been adopted by the Philippine Congress that would have greatly relaxed import and exchange controls. The same bill was blocked last year by then President Maysaysay's blunt statement that if it were adopted he would veto it. Mr. Magsaysay felt, and President Garcia has now again stated, that such a measure would undermine the value of the peso and bring profit and advantage to a few at the expense of the many.

President Garcia has been under heavy pressure to sign the measure or to let it become law by withholding his veto. This is an election year in the Philippines and Mr. Garcia is a candidate. Those who backed this bill represent formidable political foes. Mr. Garcia was obliged to take into consideration the political possibilities of their enmity if he exercised his veto.

He chose to act in the best Magsaysay manner. He showed the stoutness of his heart and the eagerness to put the good of the whole people above the advantage of special interests. It may cost him the nomination. If his fellow countrymen believe, on the other hand, that he will hew to the line that was laid down, it may win him an election.

Hawaii's Importance to America's Commercial Role in the Pacific

EXTENSION OF REMARKS
OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. BURNS of Hawaii. Mr. Speaker, Hawaii, a completely American State-to-be, faces the same problems confronting the people of the several present States of the Union. In her efforts to meet these problems, Hawaii uses the American approach of initiative, energy, and vigor.

Knowing the interest of the Members of Congress in the affairs of Americans everywhere and of their particular interest in Hawaii, I am pleased to insert in the RECORD an address by Mr. George Mason, Director, Economic Planning and Coordination Authority, Hawaii, before the 54th annual convention, Advertising Association of the West, at Honolulu, Hawaii, on June 25, 1957.

The address is well worth the time needed to read it:

HAWAII'S IMPORTANCE TO AMERICA'S COMMERCIAL ROLE IN THE PACIFIC

The newcomer doesn't expect it. But it's there the instant he arrives. Hawaii, he discovers, is a land of sharp contrasts.

The sun, the sea, the friendly informality of the people, he expected these. Yet Hawaii—and especially Honolulu—he observes, is not fundamentally much different than any of the 48 States or the hundreds of home towns from which the visitor comes.

It is a commercial, industrial, and agricultural community of 540,000 Americans and more than 50,000 uniformed personnel in all branches of the United States Defense Establishment. Its people have the same desires and buy the same goods and require the same services as their mainland cousins.

But because this doesn't make exciting grist for the copywriter's mill, Hawaii has become linked—in the mind's eye—with the mystery of unpopulated South Sea atolls.

We westerners—and Hawaii is very much a part of the West—have a vision of these romantic but civilized islands that more nearly meshes with fact than do our eastern brothers. Last fall, in New York, a highly placed public relations executive asked me how much real influence Hawaii's royal family still had. Perhaps he was just a bit confused because our Governor's name happens to be King.

A few days later, a Chicago newspaperman, upon learning that the only language I understood was English, wanted to know how I could possibly hold a responsible job.

Almost daily the Governor's office receives letters addressed to the American Embassy, Honolulu.

Instances such as these are solid testimony to the effectiveness of advertising and publicity. Further proof can be seen in the volume of tourists coming to Hawaii * * * up nearly 1,000 percent over 1946.

Advertising has created a picture of Hawaii that has paid off. But it is not a behind-the-scenery picture.

Hawaii's beauty and charm are still intact—as advertised. But these islands are no longer a sleepy, isolated archipelago. We are a bustling State-to-be. Ahead of several States in many ways. Such as per capita income, electric-power consumption, car ownership, telephones in use, retail purchases—way ahead, percentagewise, of many mainland communities and States. In per family buying power, for example, Honolulu ranks ahead of such cities as New York, Boston, Dallas, Los Angeles, Milwaukee, and Minneapolis.

We have a labor force of some 200,000. And half of our population is under 24 years of age.

We have developed a highly efficient distribution system accounting in part for our high level of real income, our ability to meet rather stiff competition and also our ability to pay rather high local taxes.

We have one of the busiest airports in the Nation.

There are more overseas phone calls between Honolulu and San Francisco than between any other overseas-to-mainland point.

In total retail sales, we buy more than seven States.

We have a $1¼ billion economy.

Twenty years ago, the economy of these islands consisted almost exclusively of the sugar and pineapple industries. Fifteen years ago, the Hawaiian economy was in very large measure a war economy with 400,000 to 500,000 troops and some 75,000 civilian employees of the Federal Government. More of a war economy than any other segment of the United States.

Today we have a modern, prosperous—completely American—economy supported by a wide range of diversified economic activity. Here, in 10 years, an American community has experienced massive change. The social, economic, and political explosions in the decade since 1946 would have resulted in civic phychosis almost anywhere else. But today we live in a peacetime condition of booming development.

We have come, unscarred, through the stresses and strains, largely because the Hawaiians have left us a sure-fire ulcer preventive, hoomanawanui, which means patience. And so we are able to take in stride the sudden realization that the Hawaii described by Mark Twain and Robert Louis Stevenson is no more.

This is perhaps Hawaii's greatest charm—that way of life that encounters big problems and big change with ease.

I'm convinced, too, that it is the mode of living, more than the climate or magnificent scenery, that keeps transplanted Californians such as I with both feet on Hawaiian soil.

The Hawaii Visitors Bureau, the carriers, and the hotels have done a magnificent job of selling Hawaii to vacationers.

But the everyday Hawaii, its way of life, its commercial growth, and its new opportunities, this story has not been told. We now know that it must in order to meet three needs:

1. Statehood.
2. New industry.
3. New people.

Hawaii's yearning for statehood has been masked, by certain elements on the mainland, with the argument that we are not ready. This vague contention is only supported by some mythical vision of a people clad in lava-lavas and sarongs cracking coconuts on a sun-drenched beach, and also by gross misstatements to the effect that we are really governed by Moscow.

Nothing could move Hawaii closer to statehood than a vigorous educational campaign telling the world the unvarnished truth about Hawaii as it is. Thus far, efforts in this direction have been limited and they will have little impact until Hawaii's case is projected on a massive scale.

In recent years, we have become aroused over the need for more jobs * * * to support a growing population and to offset displacements resulting from new technology in our basic industries. Also, like Americans anywhere, we want to better our already high standard of living.

We know that we have been too dependent in the past on sugar, pineapple and the defense budget. We have seen ourselves emerging as a most important hub of the Pacific. As the Western States have grown and prospered, so has Hawaii. As the nations of the Pacific have evolved a new importance in the commerce and politics of the world, so has Hawaii.

To keep pace with our growing importance and our growing population, we are seeking a more diversified economic base. We are well on the road to success. Today we have more than 500 manufacturers making a long list of commodities from acetylene to yogurt. In the past 5 years, we have been witness to the establishment of more new manufacturing and service enterprises than in the previous 20. And our established industries have advanced quickly. Garment manufacturing, for example, has doubled its output in 5 years to reach its present $10 million value. Furniture, cement, clay and chemical production, as well as a diversity of food product lines have also shown remarkable expansion.

We are branching out into new lines that were not thought feasible a few years ago. Electronics, construction materials, paper manufacture, oil refining, mattresses and meats, fruit juices and flavoring agents, and many more.

Much of our new productive capacity is for home consumption. We still have many unmet needs. But, like any progressive community, we are looking for new markets—new money.

Our industrial expansion cannot, of course, be entirely home-grown. We must depend also on the money and the know-how we can attract from elsewhere. To attract these two most important elements, we must have a calling card that shows more than Diamond Head and the Beach at Waikiki. Our calling card must unmistakably say, in the words of the editor of the Daily Bond Buyer recently: "The Hawaiian economy is bursting at the seams and the expansion is at a rate that far exceeds the capacity of the capital resources of the islands."

Our needs are great and our message must have the stature to meet those needs.

It is no secret that those areas that have witnessed amazing post-war development are the places that have attracted large numbers of highly skilled and aggressive people to make a new home for themselves. California, Florida, and Arizona are the prime examples. Among their attractions are climate and a more informal way of life. None of the States can compete with Hawaii in those respects. But, naturally, people who are highly skilled and aggressive also want to go where "something is happening." That impression we have not conveyed to the American public.

But events are pushing us in that direction. Our importance to national defense is not diminishing, as some might suspect, but is increasing steadily. Our importance to the transportation network of the Pacific is becoming more pronounced. The State Department has come to realize how advantageous is our highly advanced stage of social harmony.

Americans, Canadians, Australians, and thousands of others from dozens of nations visit or pass through Hawaii, and their numbers are mounting sharply.

People from throughout the Pacific Basin are beginning to come here to observe Hawaii's highly developed agricultural technology, its world-renowned health record, its booming commerce despite geographic isolation, and its truly democratic social environment. The specialists are coming to know us. But this is not enough.

To achieve statehood * * * to build more new industry * * * to attract the new blood that every community needs * * * we must and we will—tell more people of the modern, true-to-everyday-life Hawaii.

There is much to tell. And it can be dramatic and colorful.

We may soon have a sizable mining industry. The discovery of aluminum ore and titanium in recent years particularly intrigues us because until 1953, every statement on the economy of Hawaii stressed that we had no mineral resources.

On the Island of Hawaii, where nature's pyrotechnics have left their mark, hundreds of thousands of acres of lava flows stand ready to be utilized, just as such lava is already being commercially exploited in Italy.

We have a million acres of forest reserves, and we are now looking to them as the basis for a new timber industry.

We have fruits and nuts unique to Hawaii that we are confident can become major exports if backed by adequate promotion.

We have a market big enough to justify the production of many consumer commodities for local consumption only. But they cannot be produced willy-nilly, by just anyone who spots the opportunity. Hawaii is as susceptible to national advertising as Illinois or Colorado or Texas. Thus, should someone attempt to capture the market for Tide with a detergent named "Aloha," the result would almost certainly be total failure. But when Swift set up a million-dollar meat processing plant in Honolulu; when Simmons and Serta switched to local manufacture of bedding; and when Flexalum franchised a local metal shop, the result in these and other cases has been a bigger share of the market.

New opportunities keep cropping up. Two companies have just announced they will manufacture industrial plastics products.

There is considerable interest in the potential for a steel mill. Just a year ago a galvanizing plant opened shop.

We are on the road to replacing a large portion of our imports of livestock feeds. And it may not be too many years before we can supply our total needs—and those of the Armed Services in the Pacific—for beef and pork and poultry.

And as one new business begets another, as our population mushrooms, we will have new problems. Problems of industrial sites, problems of credit, problems of adequate public facilities, lots of problems. But we have an awareness of the future and the capacity to meet it in an intelligent way.

Our new role will be like nothing we have known before. The change in geography has seen to that.

Beyond Hawaii is the Pacific world—Asia and Australia. The dormant natural resources, the huge reservoirs of manpower, the big, untapped market.

Japan, Australia and the Philippines especially are expanding production and developing their economies. They are making use of the best American know-how obtainable. In Burma and Indonesia, in Malaya and in India—the big push for economic development is on. We know because American advisers pass through Honolulu almost weekly. We know because some of those advisers are from Hawaii.

The Pacific world is no longer an inscrutable mystery. It is a community of nations composed of civilized men seeking to better themselves no less than the people of Seattle or Sacramento or Salt Lake City.

Here is America's new opportunity to show the way without showing its strength. This is America's chance to share with, and not shy away from, customers as well as competitors.

If we are to meet this new challenge, it must be in a spirit of cooperation and not superiority. Our words and our deeds must ring true.

This vast Pacific arena of new production and burgeoning commerce offers fresh ground for American business, if it can communicate and commingle—but not commiserate.

For those who will understand the culture of the Pacific, for those who will see the problems and the potentials from the perspective of the Pacific world, for them there is a place in the Pacific's future.

And this is why Hawaii is important. It is totally American, but it understands the Pacific. It is modern and dynamic, but it has only recently emerged from a narrow economic confines. It has seen the sons of coolies—nay, coolies themselves—emerge into tycoons. It has known the plantation laborer from 5,000 miles west who, exposed to American methods and permitted independent initiative, has risen to prosperity and community leadership. It has demonstrated that a man's origins do not alter his aspirations, and that his physical features have no bearing on his capabilities.

Hawaii is part of, and witness to, the new era of the Pacific. We can show the way across the threshold. But first, the rest of America must be told, and must understand, that Hawaii has come of age, that these are, indeed, America's islands of opportunity.

Farmer's 14-Cent-Per-Hour Wage, Chicken Feed

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, the egg and poultry market for farmers in my district is at a very serious low. One farmer from Barnesville, Minn., tells me that his income from one bird was $4.68 and the same bird cost him $4.42 for feed, lights, drayage, taxes, and so forth. If this is the "big-business farmer" administration's idea of a good profit, it certainly is not mine or the farmer's.

I ask permission to insert in the RECORD the letter from this farmer, Mr. Layton O. Ambrose.

The letter follows:

BARNESVILLE, MINN., *July 1, 1957.*
Representative COYA KNUTSON,
Washington, D. C.

DEAR CONGRESSWOMAN: I am enclosing the local egg market for Thursday of last week plus some figures from my own poultry farm.

Eggs, No. 1	0.21
Eggs, medium	.18
Eggs, B	.18
Eggs, No. 2	.15
Heavy hens	.08
Light hens	.08
Springers	.08
Old cocks	.06

Last September 1 I housed 1,000 pullets which to date have laid 221 eggs per bird that brought an average of 23.3 cents per dozen. Adding the market value of the hen gives me an income of $4.68 per bird. The cost of the birds housed plus feed, lights, drayage, taxes, depreciation, and so forth totals $4.42 a bird leaving me a total of 26 cents a hen for labor; 58 cents a day; 14 cents per hour.

I believe that any future egg buying by the United States Department of Agriculture should be limited to grade A eggs, not current receipts as was purchased the last few months. During the month of June current receipts were quoted ½ cent less than top quality grade A large on the Chicago market.

On second thought why not buy hens at the farm level. A million dollars for a million hens, thus eliminating the source of the so-called surplus of both eggs and hens.

Yours truly,

LAYTON O. AMBROSE.

European Shoot Moth Infestation

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. GRIFFIN. Mr. Speaker, an emergency condition now exists in National, State, and private forests of lower Michigan, and particularly in several counties of the Ninth Congressional District.

I bring this situation to the attention of Members of the House not only as a call for assistance, but also as a warning, because the European shoot moth which is threatening the northern Michigan forests also poses a threat, according to the United States Department of Agriculture, throughout the general area from Massachusetts south to Virginia, and west to Illinois and Michigan, and Nova Scotia, southern Ontario, and British Columbia.

Seriousness of the problem in my district is evidenced by the following resolution which I have just received from the board of supervisors of Wexford County:

Whereas the European shoot moth infestation has developed into a serious menace to the pine trees of northern Michigan and has ruined hundreds of acres of plantations; and

Whereas the menace has got beyond the control of counties and individuals: Therefore be it

Resolved, That the Federal share-the-cost programs of ASCC and the soil-bank program in the planting of pine trees plantations be discontinued until such time as there is control of the European shoot moth and that all other possible funds be made available for the control of this menace; further be it

Resolved, That the Federal Government, State government, and State highway department make an all-out effort in the control of said European shoot moth in their respective plantations; and further be it

Resolved, That a copy of this resolution be sent to Hon. ROBERT P. GRIFFIN, United States Representative; Hon. Charles A. Boyer, State representative; Hon. John Minnema, State senator, 27th District; and to the several counties of the State of Michigan, asking that they get behind this movement before it is too late.

At a regular meeting of the Wexford County Board of Supervisors the above resolution was adopted by the following vote: Yes 21; Absent 2.

WALTER H. EDWARDS,
Wexford County Clerk.

Mr. Speaker, I have learned from Dr. Richard E. McArdle, Chief of the Forest Service of the United States Department of Agriculture, that the European pine shoot moth, an insect native to Europe was introduced into the United States accidentally and was first found in dan-

aging numbers affecting Scotch pine plantations on Long Island about 50 years ago.

Unusual habits of this shoot moth make control of the pest very difficult. The larvae are concealed within the tips of the lateral twigs on the trees and are vulnerable to insecticidal sprays only for a short period in any given year. Time of vulnerability in Michigan is right now.

Studies of methods and materials for effective control of the shoot moth have been under way by several of the States and by the Federal Government for the past several years. In recognition of the exceptional severity of the pest infestation in lower Michigan, the Forest Service of the United States Department of Agriculture is at present making a study of the problem in the Cadillac area.

Findings from this study will be utilized in planning for control of the European shoot moth throughout the widespread area which it has infected.

In view of the seriousness of this situation, and the threat to thousands of acres of national, State, and local forest lands, I plan to return home for a personal inspection, with regional officials of National and State forestry departments of the infected area.

Mr. Speaker, I believe that the European shoot moth is so severe a threat to this Nation's great forests that all possible action should be taken to stamp it out immediately.

Radio Station WEJL

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. CARRIGG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Cecil Woodland, general manager of radio station WEJL, Scranton, Pa.:

WEJL,
THE SCRANTON TIMES,
Scranton, Pa., June 17, 1957.

Hon. JOSEPH L. CARRIGG,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN CARRIGG: We are most grateful to you for your many and frequent kindnesses to us in our efforts to serve the public interest in northeastern Pennsylvania.

Radio station WEJL, owned by the Scranton Times, is most grateful also to Senator JOHN MCCLELLAN and his Select Committee for permitting it to broadcast the portions of the recent hearings covering events in Scranton, Pa. WEJL broadcast these sessions, live and in their entirety, and these broadcasts represented the only live, direct coverage by AM radio or television in Scranton. To present these public-interest broadcasts, WEJL canceled a large number of commercial programs and absorbed heavy engineering and line expenses.

WEJL is sincerely appreciative of the cooperation it receives from Congress on occasions like this, cooperation which makes it possible for the station to serve in the public interest in its entire coverage area.

Sincerely,

CECIL WOODLAND,
General Manager.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mrs. KEE. Mr. Speaker, while the rest of the country welcomes vacation time, the only official indications of summer's arrival in Washington are the weekend sunburns decorating distinguished noses at Monday session of the Congress—they have usually faded from view by Wednesday or thereabouts—and the heat and humidity for which the Nation's Capital is noted. Nor does the warmth occasionally generated under the Capitol dome help the outdoor temperature very much, as Members of Congress wrestle with national and international problems in a world grown stranger and stranger.

If that elusive individual, the so-called average citizen—to whom politicians and statisticians are so fond of referring, but whom I have still to meet—begins to feel more and more like Lewis Carroll's famed Alice in Wonderland, in that things keep getting curiouser and curiouser—small wonder.

Today, the business executive and the labor leader are being exhorted—according to the President's latest press conference—to serve as statesmen while Government officials and Members of Congress are called upon to act like business executives and members of the board of directors.

Times are so good, we are told, that inflation has become an alarming threat to the national economy and the individual's pocketbook. Some Government policies, it is acknowledged, are at fault in bringing about this upward flight of price pressures, but this is in part due, the President is quoted, to the "deliberate policy to bring the farmer his own share of the national income."

Mr. Speaker, I am not certain that I care too much for this explanation for it would seem to me that our farmers have enough of their own troubles without having to shoulder any of the blame for our present runaway cost of living. Based upon returns for the first quarter of this year projected at the annual rate, total net farm income will reach $11.7 billion in 1957. This represents a very slight improvement over 1956, when it was $11.6 billion, but is still a far cry from the $16.1 billion reached in 1951 or the $15.1 billion total of 1952.

Moreover, it is to be noted that the Secretary of Agriculture, in a recent speech delivered in Knoxville, Tenn., is quoted as 'still uring low-income farm people to seek income opportunities off the land.

A dollar—

Mr. Benson is quoted as stating—

will buy just as much health, just as much education, just as much good living if it is earned in off-farm employment as if it is earned growing crops or livestock.

This is like the old-fashioned recipe for rabbit stew: "First catch the rabbit." These people have still to earn that dollar in the highly skilled labor market demanded today.

The Secretary should have added: "That is, provided the skills used in making the land produce on a farm can be converted to making a machine produce in a factory."

Entirely aside from the moot question of whether we wish to see the Nation's agriculture turned from the hands of the small and independent farmer and over to big business, General Motors-type commercial propositions, it would seem that either the farmer is being blamed unjustifiably for our price rises, or the administration's efforts to help him are resulting in extremely costly failures for the whole country.

On the other hand, is it not barely possible, as businessmen in the Fifth District of West Virginia have pointed out, and as I duly reported in last week's Keenotes, that, with interest payments on the national debt more than double what they were prior to 1953, and interest rates on short-term Government bonds up from 1 to 3 percent in the same period, it is the administration itself which is doing everything that will tend to promote inflation?

One thing is certain. The average citizen—whoever he is and wherever he may be—and I strongly suspect he is every one of us—is finding it more and more difficult to accept as fact the statement that he is enjoying his rightful share in the general national prosperity.

Mr. Speaker, I have never been one for statistics. Indeed, I have a tendency to regard them with strong suspicion. I know that if my net income is $50 per week, while that of my right-hand neighbor is $100 and my left-hand neighbor is $150, the average net income for all three of us is $100. But this does not give me an extra $50 a week to spend, nor does it stretch the dollars that are in my pocket to meet the higher prices I must pay for the necessities of life my family must have to live.

Consequently, it is very difficult to convince me that because the national personal disposable income has increased more than $32 billion since 1954, this has put an extra dime in my pocket. No more has it benefited the retired worker living on his OASI benefits, the retired civil-service worker struggling along on a pension geared to pre-World War II prices, the white collar employee working on a fixed salary, the factory worker who does not have a cost-of-living escalator clause in his union contract, or the small-business man who has to raise his retail prices to take care of his inflated overhead costs.

America and give the cold shoulder to the dictatorships.

He writes:

Economic measures are not enough. The United States must rekindle the democratic idealism which President Franklin D. Roosevelt seemed to many Latin Americans to have ignited. The United States must show that it is deeply concerned not only with the fight against Communist dictatorship, but also with the fight against the native variety of dictatorship which flourishes so widely in Latin America.

The text continues and concludes his final chapter as follows:

This does not mean overt intervention in the internal affairs of the Latin American countries. Former Assistant Secretary of State John Moors Cabot is correct when he says that democracy cannot be imposed by force on the Latin American countries. However, the United States can bring considerable pressure to bear on behalf of democracy, and there can be much greater activity on the part of the United States Government and the people of this country in defense of Latin American democratic elements.

These democratic elements are numerous. They include the parties which throughout this book we have called the Aprista parties—the Peruvian Apristas, the Venezuelan Accion Democratica, Pepe Figueres' Liberacion Nacional Party in Costa Rica, the Puerto Rican Popular Democrats, to name but a few. They include the democratic Socialists of Uruguay, Argentina, and Peru, and sections of the Socialist parties of Chile and Ecuador. They include the Liberals of Colombia, Ecuador, and Honduras. They include Social Catholics in various countries. They include certain indigenous groups such as the Batllistas of Uruguay, the government's PRI party in Mexico, and others.

These are the groups in Latin America who are able to meet the Communists on their own ground, to promise and in a democratic way to deliver to the humble and ambitious people of the continent the fruits of the Latin American social revolution. The United States must not allow them to turn away from this country in bitterness and frustration, or to be undermined by the Communists as a result of apparent United States support of dictatorship.

So far as the United States Government is concerned, the relighting of the torch of political democracy means that, while maintaining formally "friendly" relations with the dictator countries of Latin America, this Government should never make it appear that it actually supports and approves of dictatorial regimes. Certainly this means that a halt should be called to the policy of handing out medals to the dictators.

But United States policy must be more than merely negative. The President and Secretary of State and other high officials of this Government should make it clear that they support democracy in the Americas as well as in Europe and Asia. Certainly it would not be too much to expect of the leading officials of this country, which claims to be the champion of liberty, that from time to time they take occasion to deplore the prevalence in this hemisphere of imprisonment for political reasons. In receiving Latin American ambassadors, in commemorating Latin American historical occasions, and when other appropriate opportunities present themselves, the President and Secretary of State should make it plain that the United States actively approves of the democratic regimes in Latin America and disapproves of the dictatorships.

Of course, such a policy of encouraging democracy in Latin America involves delicate diplomatic problems. However, so does the policy which has been followed in recent years of showing open support for the dictatorships. An expressed democratic policy would take the hollowness out of the United States exhorting the nations of the world to freedom, a hollowness particularly audible to Latin Americans subject to native tyrannies. Only in this way can our country scotch the Communist propaganda line, which puts the chief onus for the existence of the Latin American dictatorships on the United States. Only thus can the United States Government demonstrate that democracy in America does not mean dictatorship, as the Communists claim.

Responsible groups of United States citizens can also encourage democracy in Latin America, and so cut the ground out from under the Communists. Forward-looking North Americans can express more frequently their support for the Democratic Left in Latin America. The newspapers of the country can open their columns more fully to the democratic leaders of Latin America—both those who can function in their own countries and those who are forced to live in exile.

Only if the United States Government and people throw their support to those elements in Latin America which are working for political democracy and social change can the fight against the Communists be won. Dictatorships in Latin America are at best transitory. They are poor dikes against the Communist flood, and in the long run serve only to insure that once the flood starts to roll it will be stronger than ever before. The only real victors against communism will be those groups which can arouse the imagination of the Latin American peoples.

ICC Decision

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. BARTLETT. Mr. Speaker, the Interstate Commerce Commission handed down a decision the other day which has profoundly disturbed and shocked Alaskans.

Proceedings had been instituted by the General Services Administration the purpose of which was to remove discriminatory practices against Alaska. Long ago the railroads established rate structures for goods moving across the United States by rail and thence to Alaska by water about half again as high as identical goods transported by rail to the west coast and thence on to Hawaii and the Orient. Exactly the same amount of work is involved in transporting freight for Hawaii and the Orient as for Alaska; the distances are the same; there is no sound reason at all why Alaska should thus be penalized. It is not only the consuming public in Alaska that pays exorbitantly on account of an arbitrary determination made by railroad management. The taxpayers are probably the chief sufferers because of the huge amount of freight moving by rail and ship to Alaska for construction of defenses in Alaska. It was to protect the Government's interests that the General Services Administration intervened before the Interstate Commerce Commission and it was the belief of Alaskans who had studied this matter that the Interstate Commerce Commission would be responsive to the public interest as opposed to the desire of the railroads to maintain the unfairly high rates on freight destined for Alaska.

But our hopes were dashed. In a decision made only last month the Interstate Commerce Commission ruled "that the assailed rates were not shown to be unjust and unreasonable or otherwise unlawful. The complaint will be dismissed."

Thus Alaskans who expected relief from a Government regulatory body, and who were entitled to relief, will receive none and the curious and discriminatory situation which has been in effect will continue whereby it costs far less to ship a hundred pounds of a Government commodity clear across the United States by rail and then on to distant Yokohama in Japan than by rail and the much shorter water haul to Alaska ports.

Many Alaskans had been urging that the Interstate Commerce Commission should with statehood have jurisdiction over water as well as other forms of transportation in and to and from Alaska. Since this decision was made I have heard no further support for the Interstate Commerce Commission.

In this connection I should like to call the attention of my colleagues to a front-page editorial which appeared in America's farthest north daily newspaper, the Fairbanks (Alaska) Daily News-Miner for June 26 entitled "Alaska Gets It Again—In the Neck":

ALASKA GETS IT AGAIN—IN THE NECK

The Interstate Commerce Commission yesterday put Alaska in her place again.

It decreed that railroads may continue to charge higher rates on cargo destined for this Territory than for Hawaii, the Philippines, Hong Kong, and Japan.

For many years all of these other places have been recognized by the Commission as overseas points, to which cargo must be exported. Freight moving by rail across the United States to the west coast takes a lower rate when it is to be shipped overseas than it does if it moves in purely domestic traffic.

As far as the railroads are concerned, freight is handled out of Seattle to Alaska in exactly the same way as it is handled out of that port to the Orient. Exactly the same, except that the rate the railroads get is half again as high.

These facts caused Alaskans about 10 years ago to start down the long trail of attempting to get the railroads and the Interstate Commerce Commission to treat us on a basis of equality with Hawaii and the other points.

Through the Alaska Development Board, the transcontinental railroads were asked to put into effect voluntarily a tariff which would assign export rates to carload rail shipments across the Nation when that cargo was to be shipped on to Alaska.

In a series of meetings with the traffic departments of the major railroads at Chicago, St. Paul and Omaha, and in a conference with their joint rate committee in Chicago, we were turned down cold.

The railroads couldn't see any good reason for treating Alaskans like other people. They were polite but they were firm. They said they didn't want to reduce their freight rates on our shipments, didn't have to in the absence of an ICC order, and wouldn't. Period.

The matter lay dormant for several years until the Eisenhower Administration took it

up in 1954. Secretary of the Interior Douglas McKay, many of whose attitudes toward Alaska we think were unfortunate, did the right thing in this matter and prodded the appropriate agency of the Government into action. He was in turn prodded by William Strand, then Director of Territories, who is a former editor of the News-Miner.

Early in 1955, after extensive preparation in which it was assisted by shippers in Alaska, the General Services Administration filed a formal proceeding with the Interstate Commerce Commission. It called for the transcontinental railroads to show cause why they should continue to charge higher rates on traffic moving toward Alaska than on that moving over exactly the same routes, rails and distances toward Hawaii and the Orient.

The Secretary of Defense joined the Secretary of the Interior in the case. Others who intervened included the Governor of Alaska, the Office of Territories, and the Alaska Railroad. The Alaska Resources Development Board helped work up the case in the Territory.

As far as anybody in Alaska could tell up until yesterday, everything was going well. A hearing was held. Facts were presented. Those facts demonstrated the justice of our case. The hearing examiner recommended to the Commission that the railroads should be ordered to apply the lower export-import rates to Alaska-bound freight.

Yesterday, by a vote of 8 to 2, the ICC decided it would not interfere with the practice of the railroads of classifying such freight as domestic business, making it ineligible for the freight rate savings.

Application of the higher domestic rates on Alaska-bound freight, the majority of the Commission said, is a matter of railroad management discretion.

In other words, Alaskans can go on paying high freight rates, as far as the ICC is concerned. It is the shipper who pays, but everybody who lives, works or does business in Alaska will continue to foot the bill.

These excess charges run into many millions of dollars annually. They are among the costs which add up to an enormous price which Alaskans are paying for nothing. That is the price of not having statehood.

We don't mind paying for something we get. But we are going to continue to complain about paying for what we don't get.

Much has been made of the high costs which are supposed to fall on us when Alaska becomes a State. We know that we are already paying much more right now, in numerous, devious ways, because we are not a State.

Can anyone conceive of the Interstate Commerce Commission deciding as it did if Alaska had had two Senators and a voting Representative reminding the ICC of the interests of their constituents? Senators and Representatives hold the purse strings. There would be no ICC, and members of the Commission are well aware of that, if Congress did not appropriate for that body annually.

The ICC decision is one of the worst evidences of "colonialism" that we have seen lately. It is not the only one, and we are sure it is not the last.

Alaska is just a helpless Territory. Government bureaus can do with us as they please.

Even when we make a conclusive case, even when the examiner who hears the evidence recommends in our favor, even when every practical and theoretical consideration is on our side, even then a helpless Territory will always come out second best.

We thank the many people who worked in Alaska's behalf in this case.

We have lost another battle. But we are pitching in with renewed determination to win the war.

The Red Challenge

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. HENDERSON. Mr. Speaker, as we approach the celebration of our Independence Day we must soberly reflect upon the continuing challenges to American freedom. These challenges, internal and external, are principally directed from the Kremlin in Moscow.

It scarcely seems possible that these Russian challenges, based as they are upon cynical, imperialistic designs to enslave mankind, could be a serious threat. Yet, the clever propaganda of world communism has often cloaked its designs, and used as its vehicle, popular national movements. The success of these machinations demonstrates the seriousness of the subtle campaigns—campaigns which are relentlessly continued from Moscow and which we must meet daily.

The Zanesville Signal, of Zanesville, Ohio, has ably reviewed on June 30, the war of ideologies which exists on this American Independence Day. I wish to commend these remarks to the Members of the House:

THE RED CHALLENGE

This Fourth of July finds American world leadership faced with a grave challenge.

Such portents as the outbreak of anti-American rioting in Formosa and the steady undercurrent of anti-Americanism in underdeveloped areas point up the development of a new phase in a fateful battle of ideas.

At stake in the battle is a vast well of good will and influence built up over nearly 2 centuries of American democracy and enhanced by the enormous impact of the United States abroad since World War II.

World communism recently threw out new challenges to the spread of the American idea. Principles embodied in the Declaration of Independence, to which the signers pledged their lives, their fortunes, and their sacred honor, are being brushed aside by the Communists as meaningless.

Communism's chief spokesman, Nikita Khrushchev, has told the world Americans a generation or two hence will cast aside the belief that all men are entitled equally to life, liberty, and the pursuit of happiness, and will voluntarily adopt a Soviet-like system.

The Soviet military machine has crushed a Hungarian revolution sparked by a notion that governments instituted among men derive their just powers from the consent of the governed.

The United States remains a beacon for the yearnings of people in less lucky lands. But in the maze of cold war politics—disappointment, disillusion, and bitterness have provided ammunition for a stepped up attack on the American idea.

That idea took shape 181 years ago, in a square, high-ceilinged room in Philadelphia's Old State House on Chestnut Street. There a group of patriots signed a document which set a world revolution in motion. The revolution is still going on.

The vast power of the American economy saved Europe from Nazism in World War II and from communism after the war. The same power spreads American influence around the globe. Hundreds of thousands of Americans stationed more or less permanently in foreign countries are doing business with Asians, Europeans and Africans, helping them with little publicized programs, bolstering their defenses.

With power and influence came responsibilities and problems. Deep dilemmas plague American policy.

Throughout the world the United States stands for liberty and independence, for self-determination and freedom. But the United States has allies in the cold war. Some of these allies have colonies.

North African upheavals pointed up the dilemma. There and in other areas after World War II, the United States was accused by leaders of newly spawned independence movements of dragging its feet with regard to self-determination.

The cold war had brought cold realities. To build defenses against steady Communist encroachments on free nations, it would be necessary to have the wholehearted support of allies. At the same time, to ward off Red encroachments on former colonial areas, it would be just as necessary to give those people some token of support for their aspirations.

Enemies of the American idea seized eagerly on the dilemma, intent on exploiting it to the full. They may not hope ever to match the extent of the American impact throughout the world. They probably do hope, by playing upon impatience, disappointment, disillusion and envy, to challenge the world leadership of the United States.

Abandoned Iceboxes

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 2, 1957

Mr. SPARKMAN. Mr. President, while a great deal has been done in the last year or so to eliminate the danger of children being suffocated in abandoned iceboxes, there is still much to be accomplished. An editorial which appeared in the June 24, 1957, issue of Trainman News warns of this ever present danger.

Just to show how ever present the danger is, only shortly after I prepared this editorial for insertion in the RECORD, I noticed the following news item in the Washington Post and Times Herald for June 25, 1957. The event described in the following article happened on the same day the editorial appeared in the Trainman News.

I ask unanimous consent to have both articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Trainman News of June 24, 1957]

THEY'RE DANGEROUS

That old discarded refrigerator or icebox in the basement or on the back porch is dangerous.

Children, for some reason or other, are fascinated by them and oftentimes in the course of their play will try to hide from a fellow playmate in the airtight cabinet.

When the door is closed, and the youngster is trapped, tragedy results.

With approximately 50 million refrigerators, iceboxes, freezers and other airtight cabinets being used today, and about one million of them discarded each year, the potential seriousness of the problem is realized.

National Safety Council has four suggestions as to how the discarded cabinets can be made harmless:

Remove the door. Even with a latch removed, many freezer cabinets have lids too heavy for children to lift if they're trapped inside.

Remove latch stops so doors can't lock. This can be done, usually, by removing four screws.

Drill holes in the cabinet and remove the rubber gasket around the door.

Better yet, destroy the box.

To heed the advice from the Council may pay big dividends to you and your loved ones.

[From the Washington Post and Times Herald of June 25, 1957]

TWO SMALL CHILDREN DIE IN REFRIGERATOR

ALBUQUERQUE, N. MEX., June 24.—Two small children missing since yesterday afternoon were found crumpled in a refrigerator today dead apparently of suffocation.

The children, Gary Owens, 2, and his 5-year-old sister, Sue, were found on the floor of an icebox 21 by 29 inches, on the property of Phillip Finley, who lived about a block from the Owens' home. One of the boys, Robert Salas, said he had opened the old refrigerator out of curiosity and found the bodies.

Billy Williams Votes Himself Out of Office

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. WIER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include an article from the Minneapolis Star of June 28, 1957, by Wallace Mitchell, a staff writer, entitled "Billy Williams Votes Himself Out of Office."

Mr. Mitchell writes the story of Mr. Williams' retirement after 53 years of service under 14 governors.

Among his other duties, Mr. Williams was the official greeter in the Governor's office. During his more than half a century in office he has met every State official and legislator of the State of Minnesota—everyone that had business in the Governor's office, be they foreign dignitaries, national celebrities, the proud, the humble, the rich, the poor, the troubled in spirit. Well can the people of Minnesota join in commending him as a good and faithful servant.

The above-mentioned article follows:

AID TO 14 GOVERNORS RETIRES: BILLY WILLIAMS VOTES HIMSELF OUT OF OFFICE

(By Wallace Mitchell)

Billy Williams closes his desk in the Governor's office today for the last time.

He'll light a stogie as he leaves the capitol to walk into retirement from the job as Governor's executive aid that he's had since November 1904.

Thus he'll have kept clear his record of never having smoked in the capitol building, although he's an inveterate cigar smoker.

That was just one of the many marks of discretion that endeared Williams to the 14 governors he served.

Bull-shouldered and erect, he wears his 79 years lightly. His will be no rocking-chair retirement. Or was it forced on him by the administration. He simply declared that "after these long years of service I owe it to myself to retire."

Billy will do a lot of fishing, traveling, and visiting baseball parks. His interest in baseball has never waned from the days of his youth when he was one of the most sought-after first basemen in the Middle West.

He was a big, raw-boned kid. His 6-foot, 3 inches was handy at first base and his near 200 pounds powerful at the bat. He played a lot of semipro ball for a variety of teams.

With one of those that beat the St. Paul Saint, he won the eye of the renowned Miller Huggins.

Huggins reported his find to Ned Hanlon of the Baltimore Orioles. Hanlon scouted Williams, liked what he saw and offered him a contract. Only one-quarter Negro, Williams looked then as he does now—more like an Indian. Hanlon assumed that he was, and the color question didn't enter into the picture.

Williams had come to know John A. Johnson, who was an inveterate baseball fan. A mutual friend suggested to Billy that he talk it over with Johnson, then Governor-elect.

"Governor Johnson told me he thought I should forget about the Baltimore offer," Billy recalls. "He said there might be some prejudice.

"I was just a kid, I didn't know anything about prejudice.

"Johnson asked me why I didn't go to work for him. He said I could play baseball Saturday and Sunday and holidays. So I came here—to this desk—in November, 2 months before Johnson took office in January of 1905."

Billy's held down that desk ever since. For his first 40 years, he was the appointments secretary to the governor. Nobody saw a governor without being screened by Billy.

He continued to play baseball through the administrations of Johnson, Eberhart, Hammond, and some during the Burnquist tenure.

Billy over the years has been known to be a soft touch for anyone needing the loan of a few bucks.

A well-kept secret with Billy, a bachelor, has been his habit of writing little notes of encouragement to people whose misfortune has come to his attention through the newspapers or hearsay.

He didn't have to know them personally. He'd drop them a note and slip a dollar bill or two in the envelope.

Billy was at his best with the troops of children that visit the ornate governor's reception room. He'd lean back in his chair and talk to them about the room and how he wished he could take them in to see the governor.

"He's a busy man, you know," Billy would add. "But would you like an autographed picture?"

In some cases, Billy gave the autographed-picture routine an extra flourish. He'd take a picture from his desk drawer, walk into the governor's office, out the back door through the private secretary's office and into a back-room vault.

There he'd exchange the unautographed picture for one from a stack that carried the governor's signature.

"Here you are," he'd say, "but let me blot this, first."

Then, as though the ink still were wet, he ceremoniously put a blotter across the picture before handing it over to the youngster.

Another trick Billy used was to shoo guests from the Governor's private office when he thought they'd overstayed their visit.

He'd poke his head into the Governor's office.

"Excuse me, Governor, the judge is waiting," he'd say, and retire.

Billy figures he's greeted about a half million visitors to the Governor's office. He's always been proud, too, of his ability to remember faces and names. This has given him as large a statewide acquaintance as any person in Minnesota.

"I greatly appreciate the generous pension that was voted me by the 1955 session of the Minnesota legislature," he wrote Governor Freeman in his letter of resignation.

"I want to accept a few of the many invitations I have received to visit friends in many parts of the country. I haven't had time to do any extensive traveling for more than 50 years."

He added that he would miss his many friends at the capitol and the Governor's office.

Little question existed that Billy would be missed.

Speech by Hon. Joseph P. O'Hara Before Minnesota State Bar Association, Duluth, Minn., June 20, 1957

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SPEECH BY HON. JOSEPH P. O'HARA BEFORE MINNESOTA STATE BAR ASSOCIATION, DULUTH, MINN., JUNE 20, 1957

Mr. Chairman, this has been a privilege and a pleasant incident to me to be invited to speak to you on a subject broad enough to permit all the freedom and latitude that could be hoped for by a speaker. For many years I have had a deep interest in and affection for and have been a member of the Minnesota State Bar and American Bar Associations. My greatest concern is that what I may say to you will be of as much pleasure and interest to you as your gracious invitation has been to me.

In the summer of 1940 I was honored by being elected vice president of this association. In the fall of 1940 I was elected a Member of Congress from the Second Congressional District. It is now 16 years since I was on my way back to attend the State bar convention at Duluth, when I was taken ill on the train and spent the following month in the hospital in Chicago. One of my deep personal regrets is that I, therefore, did not have the opportunity of the honor of being president of your great association.

Permit me to say that nine consecutive terms in Congress have in no manner diminished my first love, that of the law, and I have earnestly tried so far as possible to keep advised not only of the decisions of our State supreme court, but of the success and activities of individual members of the bar and of our State bar association.

I used to think that I worked rather hard as a country lawyer, where the week usually consisted of no limit of hours and sometimes no limitation on days. I frankly confess to you that I did not know what hard work was until I went to Congress and found the demands on one's time exceeded the demands

on a fairly busy country lawyer. In candor I say to you that I know of no harder working group of people anywhere than the Members of Congress. The demands and responsibilities upon them exceed anything that I know of in any walk of life.

You will often hear it said, "Why do not Members of the House initiate action to have their terms lengthened from 2 years to 4 years?" Permit me to say that if any attempt is ever made to attack the wisdom of our forefathers of keeping the House of Representatives responsive to the people, I hope that you will oppose such action. The longer I stay in Congress, the more I am impressed with the fact that the House of Representatives should at all times be the most responsive to the wishes of our people, and those who seek that office should every 2 years face their constituents and their constituency for election.

The demands made upon a Member of Congress are fantastic in their scope and number, and a Congressman who is asked to pull strings to keep his constituents happy sometimes pulls a bucket of cold water down on his head.

Not so long ago one of my colleagues had an experience similar to one which I have had. It seems that a prospective mother-in-law wrote him, saying that the Navy would not let a young man off his ship, anchored in San Diego Harbor, to marry her daughter. It appeared the prospective bride and prospective mother-in-law were waiting at the wharf for him to land and complete the nuptials. The Congressman promptly contacted the captain of the ship to find out why he was so vilely blighting romance. It wasn't long until he had a reply from the captain saying he had contacted the sailor but was told the sailor had not asked for leave. Shortly thereafter the Congressman had a note from the sailor himself, asking the Congressman why he did not mind his own business.

On Tuesday of this week the House of Representatives completed debate upon a bill commonly known as the civil-rights bill, recommended by the Attorney General of the United States and substantially reported by the House Judiciary Committee as recommended by the Attorney General.

Under existing Federal statutes existing civil rights consist of two parts. There is a criminal law by which a person for violation of civil rights may be indicted and tried by jury, and then there is the civil damage suit in a separate statute. Under that the person aggrieved may bring his suit under civil action and the trial is a trial by jury.

The new civil rights bill provides that the same acts as are now subject to civil suit by the person aggrieved may be also brought by the Attorney General in equity for special equitable relief, and further provides that the Attorney General where he under the present law must bring a criminal action, can now invoke equity jurisdiction. On the face of it this seems a rather harmless change in procedure from criminal to equity, but the net result of it was that it eliminated the right of trial by jury under either the civil or criminal provisions of the Federal statutes, and of course in the event of a violation of the criminal statute the defendant would be subject to the same penalties of fine and imprisonment without benefit of a trial by jury.

The long debate upon the bill was filled with both high and low points.

While there were those from the South who violently disagreed with the need for such legislation, the strongest fight was on the amendment to reinstate the jury trial proviso, which cut across party lines, and Runnymede, the Magna Carta and the background of our Anglo-Saxon law versus the right to vote equation was an interesting one. As most of you know, the final result was that the right to trial by jury was denied—which caused many who wanted to vote for the bill to vote against it.

The bill is a perfect example of what can happen to a very fundamental issue under stress of emotionalism and political expediency. Interestingly enough, of the 435 Members of the House, 235 are qualified as lawyers, who are either practicing attorneys now or were practicing attorneys before entering Congress.

I hope the alleged title to my speech will be no presumptuous reflection upon the State of the Union message which the President delivers to the Congress, in which he conveys his views as to world affairs, national affairs, and his recommendations generally for legislation. Recognizing that you are as interested as other citizens in the general conditions of our country, I could perhaps make a very general summation of affairs, but all of which you are perhaps generally as familiar with as am I.

During the time I have been in Congress I have noted that from time to time we have passed legislation setting aside decisions of our Supreme Court. Also, from time to time I have noted that our United States Supreme Court has reversed itself in whole or in part.

1. The effects of *United States* v. *South Eastern Underwriters Association* (1944) 322 U. S. 533)) which held that insurance was subject to Federal control under the commerce clause were for all intents and purposes, abrogated by the McCarran Act of March 9, 1945 (59 Stat. 33), as amended by the act of July 25, 1947 (61 Stat. 448). This act recognizing that the regulation and taxation of insurance by the States are in the public interests subjected such business to State law and provided that after June 30, 1948, the Sherman Act, as amended; the Clayton Act; the Federal Trade Commission Act, as amended; and the Robinson-Patman Antidiscrimination Act; should be applicable to the insurance business to the extent that it was not regulated by State law.

2. The case of *Dobson* v. *Commissioner* ((1943) 320 U. S. 489) which established the principle that no appellate court could reverse a holding of the Tax Court except for a clear-cut error of law was set aside by the act of June 25, 1948 (62 Stat. 991), which provided that the circuit courts of appeals should have exclusive jurisdiction to review Tax Court decisions in the same manner as decisions of the district courts in civil actions tried without a jury.

3. The rule of decision of *Anderson* v. *Mt. Clemens Pottery Co.* ((1946) 328 U. S. 680) holding that an employee was entitled to compensation for the time spent in punching time clocks and walking through the plant to his place of work regardless of contrary custom or contract, was set aside by Congress in the enactment of the Portal-to-Portal Pay Act of May 14, 1947 (61 Stat. 84), on the basis that the Fair Labor Standards Act of 1938, as amended, had been interpreted judicially in disregard of long-established customs and practices and of contracts between employers and employees. The decision was further circumscribed by the act of October 26, 1949 (63 Stat. 910), by amending section 3 of the Fair Labor Standards Act to exclude any time spent in changing clothes or washing at the beginning or ending of each workday, which was excluded from measured working time during the week involved by the express terms of a contract or under the custom or practice of the trade under a bona fide collective bargaining agreement, applicable to the particular employers and employees.

4. The case of the *United States* v. *State of Wyoming and the Ohio Oil Co.* ((1947) 331 U. S. 440) a suit by the United States to establish title to lands leased by Wyoming to the oil company which lands both Wyoming and the oil company in good faith had believed to be vested in Wyoming as a part of the State school land grants, was decided adversely to the State. The decision in effect divesting Wyoming of these school lands after she had exercised and assumed jurisdiction for almost 60 years upon the premise that Congress by the enabling act had granted the lands, was overruled by the act of July 2, 1948 (62 Stat. 1233), which was a directive to the Secretary of the Interior to issue a patent to the State of Wyoming, subject to existing leases, for such land with a proviso that such land should be considered to have vested in the State of Wyoming on July 10, 1890.

5. The case of *Wong Yang Sung* v. *McGrath* ((1950) 339 U. S. 33), which held that deportation proceedings were controlled by the Administrative Procedure Act was overruled in effect by a rider to the Department of Justice appropriations bill dated September 27, 1950 (64 Stat. 1040, 1048), which provided that proceedings on the law relating to the exclusion or expulsion of aliens shall hereafter be without regard to the provision of the Administrative Procedure Act.

6. The case of *Schwegmann* v. *Calvert Distillers Corp.* ((1951) 341 U. S. 384) which held that the exemption from the Sherman Act provided by the Miller-Tydings Act (57 Stat. 643) applied only to parties to contracts or agreements under State Fair Trade Acts for minimum prices for the resale of trademarked commodities and did not apply to resales by nonsigners, was in effect overruled by the McGuire Act, July 14, 1952 (66 Stat. 631) which provided that willfully and knowingly advertising for sale trademarked commodities covered by a Fair Trade Agreement contract at a price less than prescribed by such contract shall constitute actionable unfair competition whether the person is a party to the contract or not.

7. The decisions in the three cases of *United States* v. *California* ((1947) 332 U. S. 19), *United States* v. *Louisiana* ((1950) 339 U. S. 699), and *United States* v. *Texas* ((1950) 339 U. S. 707), upset titles to lands that had up to that time been considered vested in the respective States. Congress considering the long period of time and good faith administration of these lands by the States and the equities involved confirmed and established the titles of the States to these lands beneath navigable waters by the act of May 22, 1953 (67 Stat. 29).

8. The decision in *Federal Power Commission* v. *East Ohio Gas. Co.* ((1950) 338 U. S. 464), held that there was no language in the Natural Gas Act of June 21, 1938 (52 Stat. 821) which indicated that Congress meant to create an exception for companies transporting interstate gas in only one State. To make the intention of granting such exemption crystal clear, Congress, by act of March 27, 1954 (68 Stat. 36), added a new subsection to section 1 of the Natural Gas Act, which established exemption from regulation, of persons engaged in transportation in interstate commerce of natural gas, who receive from other persons within the State natural gas which is all ultimately consumed within the State, if there is a State commission regulating the rate of service and facilities of such person.

9. The holding of *United States* v. *Wunderlich* ((1951) 342 U. S. 98), that the finality clause of the standard form of Government contract controlled in the absence of fraud or such gross mistakes as would necessarily imply bad faith was set aside by the act of May 11, 1954, (68 Stat. 81), by prohibiting the pleading of such a clause as a limitation on judicial review and by prohibiting Government contracts containing a provision that an administrative decision should be final on a question of law.

I call your attention to the fact that these 9 cases do not include the so-called Phillips

case, wherein the Supreme Court held that Congress in passing the 1938 Natural Gas Act had intended to include the independent producers and gatherers of natural gas, notwithstanding that Congress in the Act itself and in the debate thereon had specifically said, in as clear and as plain language as could be stated, that it was not the intention of Congress to include the independent producers and gatherers of natural gas.

Twice Congress had passed through the Congress bills correcting this decision which have been vetoed respectively by Presidents Truman and Eisenhower.

B. Since 1941 there have been approximately 30 cases which have overruled previous decisions in whole or part. Fifteen cases covering points of general interest are set forth below.

For a list from 1789 through 1956, of such cases see CONGRESSIONAL RECORD, March 2, 1957, pages 2596–2598.

1. *United States* v. *Darby* ((1941) 312 U. S. 100), predicated upon the plenary power of Congress over interstate commerce, overruled the decision in *Hammer* v. *Dagenhart* ((1918) 247 U. S. 251), which had held that Congress was without power to exclude the products of child labor from interstate commerce on the basis that the congressional power to prohibit articles entering interstate commerce was limited to articles which in themselves possess some harmful or deleterious properties.

2. *Nye* v. *United States* ((1941) 313 U. S. 33), overruled the "reasonable tendency" rule of *Toledo Newspaper Co.* v. *United States* ((1918) 247 U. S. 402), and returned to the thesis that the words "so near thereto" contained in the power granted the Federal courts to punish for contempt set forth in Sec. 268 of the Judicial Code have a geographical connotation.

3. *California* v. *Thompson* ((1941) 313 U. S. 109), grounded on the theory that in the absence of pertinent congressional legislation there is constitutional power in the States to regulate commerce that does not affect the free flow of commerce, overruled *DiSanto* v. *Pennsylvania* ((1927) 273 U. S. 34), which had held that a Pennsylvania statute requiring other than railroad or steamship companies that engage in interstate sales of steamship tickets of orders of transportation to or from foreign countries to procure a license an infringement of the commerce clause.

4. *Olson* v. *Nebraska* ((1941) 313 U. S. 236), overruled *Ribnik* v. *McBride* ((1928) 277 U. S. 350), which had held that the business of an employment agent is not affected by a public interest so as to enable a State to fix the charges made for services rendered, on the ground that the standards of public interest in the Ribnik case were not controlling as to the constitutionality of the economic and social programs of the States.

5. *Alabama* v. *King & Boozer* ((1941) 314 U. S. 1), overruled *Panhandle Oil Co.* v. *Knox* ((1928) 277 U. S. 218), and *Graves* v. *Texas* ((1936 298 U. S. 393), in so far as these cases had held that a State tax imposed on a person doing business with the Government is an economic burden which falls upon the Federal Government and therefore may not constitutionally be imposed.

6. *State Tax Commissioner* v. *Aldrich* ((1942) 316 U. S. 174), overruled *First National Bank* v *Maine* ((1932) 284 U. S. 312), which had read into the 14th amendment a rule of immunity from taxation of intangibles by more than one State, by holding that the power of the tax is an incident of sovereignty and is coextensive with that to which it is incident.

7. *Williams* v. *North Carolina* ((1942) 317 U. S. 287), holding that the full faith and credit clause of the Federal Constitution requires extraterritorial recognition of the validity of a divorce decree obtained in accordance with the requirement of procedural due process in a State by a spouse who under the law of such State had acquired a bona fide domicile, overruled *Haddock* v. *Haddock* ((1906) 201 U. S. 562), which had held that the mere domicile in a State of one party to a marriage does not give the courts of that State jurisdiction to render a decree of divorce enforceable in all the other States by virtue of the full faith and credit clause of the Federal Constitution against a nonresident who did not appear and who was only constructively served with notice of the pendency of the action.

8. *Board of Education* v. *Barnette* ((1943) 319 U. S. 624), holding a West Virginia law requiring public school pupils to salute the flag of the United States while reciting the Pledge of Allegiance unconstitutional, overruled *Minerville School District* v. *Gobitis* ((1940) 310 U. S. 586), which had held that such a State law was constitutional.

9. *Mercoid Corp.* v. *Midcontinent Co.* ((1944) 320 U. S. 661), overruled *Leeds and Catlin Co.* v. *Victor Talking Machine Co.* ((No. 2) (1909) 213 U. S. 325), which had held that a person who had sold an unpatentable part of a combination patent for use in the assembled machine may be guilty of contributory infringement.

10. *Smith* v. *Allwright* ((1944) 321 U. S. 649), overruled *Grovey* v. *Townsend* ((1935) 295 U. S. 45), which had held that the denial of a vote in a primary was a mere refusal of membership to a person by a political party and therefore not unconstitutional.

11. *Girouard* v. *United States* ((1946) 328 U. S. 61), overruled *United States* v. *Schwimmer* ((1929) 279 U. S. 644), *United States* v. *McIntosh* ((1931) 283 U. S. 605), and *United States* v. *Bland* ((1931) 283 U. S. 630), which had established the general rule, that an alien who refuses to bear arms will not be admitted to citizenship.

12. *Commissioner* v. *Church* ((1949) 335 U. S. 632), overruled *May* v. *Heiner* ((1930) 281 U. S. 238), which had held that the corpus of a trust transfer need not be included in the settlor's estate, even though the settlor retained for himself a life income from the corpus.

13. *Oklahoma Tax Commission* v. *Texas Co.* ((1949) 336 U. S. 342), overruled *Choctaw and G. R. Co.* v. *Harrison* ((1914) 235 U. S. 292), *Indian Territorial Illuminating Oil Co.* v. *Oklahoma* ((1916) 240 U. S. 522), *Howard* v. *Gypsy Oil Co.* ((1918) 247 U. S. 503), *Large Oil* v. *Howard* ((1919) 248 U. S. 549), and *Oklahoma* v. *Barnsdall Corp.* ((1936) 296 U. S. 521), cases which had granted tax immunities or exemptions to persons doing business with the Government on the theory that taxation of such business was an interference with governmental functions.

14. *United States* v. *Rabinowitz* ((1950) 339 U. S. 56), holding that reasonableness under all the circumstances of a search is controlling of its legality, thus overruling *Trupiano* v. *United States* ((1948) 334 U. S. 669), which had held that the legality of a search depended upon the practicability of securing a warrant.

15. *Joseph Burstyn Inc.* v. *Wilson* ((1952) 343 U. S. 495), holding that motion pictures are within the aegis of the first amendment, overruled that part of the case of *Mutual Film Corp.* v. *Industrial Commission of Ohio* ((1915) 236 U. S. 230), which had held that the principles of free speech and press did not apply to motion pictures.

NOTE.—The newspapers of June 11, 1957, carried an account of the Supreme Court, upon rehearing of *Kinsella* v. *Krueger* ((1956) 351 U. S. 470) and *Reid* v. *Covert* ((1956) 351 U. S. 487), overruling its decisions that civilian military dependents with the Armed Forces outside the country might be held by military tribunals.

As one who has always entertained the deepest and highest respect for all of the courts of our land, I have always been most guarded and careful in my statements as to any court, including the United States Supreme Court.

I do not think that any supreme court—State or Federal—has any right to legislate in its decisions. Under our check and balance system of the legislative, the executive, and the judiciary, each has its responsibilities. Under the doctrine of stare decisis I do not see how you lawyers can now advise your clients, in matters of important decisions, as to what the decision of the United States Supreme Court is going to be upon any given proposition of law.

It is to be expected that under our form of government of check and balance that at times there will be a clash between the legislative and the executive, but in my lifetime I have never heard so much criticism between the legislative and the judiciary as in the last 20 years.

On Monday of this week a number of decisions were handed down by our United States Supreme Court. I hold in my hand newspaper reports of bitter criticism of several of these decisions and their interpretation of legislative act and the right of investigation by Congress.

The nine instances I have called to your attention, in which Congress has legislated to overcome Supreme Court decisions in the past 16 years, speak for themselves.

It is certainly my opinion that the Justices of our great United States Supreme Court should be judges learned in the law. If we are going to have a disposition on the part of those Justices from time to time to substitute their personal notions for the law, then we should provide that the Supreme Court should consist of nine sociologists in black robes to decide what is fitting in the way of legislation, as well as what should be their final notions as to the supreme law of the land.

I have also noted two additional disturbing decisions, the effects of which are so far reaching that I cannot envision what may follow.

The first of these was the so-called Pennsylvania sedition case wherein Steve Nelson, a Communist convicted under the sedition laws of the State of Pennsylvania was—so our United States Supreme Court held—illegally convicted because the Smith Sedition Act passed by Congress was alleged to have preempted the field of sedition and deprived the States of all jurisdiction in that field. This decision affected 32 States and nullified their laws on sedition.

The other case, also decided this spring by our Supreme Court, was the Girard College case. From your law student days, most of you here will remember the old Girard case as one of the early cases which went to the Supreme Court on the question of wills. As I recall, we usually had the ancient Girard case under "Wills and Trusts." The present Girard case—formerly known as *Pennsylvania* v. *Board of City Trusts of Philadelphia*—involved the terms of the will of Stephen Girard, who died in 1831, leaving about $6 million for the education of "poor white orphan boys." The city of Philadelphia set up a body known as the board of city trusts to administer the fund, which currently amounts to nearly $100 million. The assumption has been that the job of the board of city trusts was to administer the fund as Girard decreed in his will, just as any trust company would be required to do if it had been given charge of the Girard bequest.

The Girard will has in recent years been under fire by Negro politicians who have made the point that the founder of the college had no right to make a will which provided for racial discrimination contrary to the terms of the 14th amendment of which Stephen Girard never heard tell.

This argument got nowhere in Pennsylvania—at any rate in the State's law courts—for the Pennsylvania Supreme Court turned

it down on what most people would describe as the reasonable ground that the late Mr. Girard had a right to will away his money as he chose, and that you couldn't safely go around upsetting wills simply because they didn't suit pressure groups which turned up a hundred years after the wills were made.

That seemed to settle it to the satisfaction of all except a group of ambitious politicians.

This group took the Girard case into the Federal courts and it is painful to record that the mayor of Philadelphia and the Governor of Pennsylvania, far from resisting the efforts to upset a will of which they were supposed to be trustees, actually joined the movement to set it aside.

The real question, of course, was and is—"If a trustee happens to be an official of a city or State, when he acts as a trustee is he acting as the agent of the maker of the trust or is he acting as the agent of the State?" When one considers that no public funds were involved in the Girard College case, but the entire $100 million now in the fund are private funds, it seems that the answer to the question should be obvious.

A few miles down the pike from Girard in Pennsylvania is little Haverford College, a 125-year-old Quaker school. Haverford has been wrestling with the problem of whether or not to accept a grant of Defense Department funds for research in organic chemistry. However, Haverford discriminates. It discriminates on the basis of sex and, to a degree, religion.

So the question is, If Haverford accepts Federal money for research, does the Government—on the theory of public interest similar to the Girard case—have the power to stop any discrimination in favor of male Quaker students?

Such well-known private schools as Harvard, Yale, Princeton, Dartmouth, Notre Dame, California Institute of Technology, Case Institute of Cleveland, and others are further examples of schools outside the Deep South which practice some degree of discrimination based on either sex or religion, and which are apt to have formal relationships with Government from time to time.

Are their scholastic and administrative policies subject to the 14th amendment?

Then there is Tuskegee Institute, founded in 1880 by that great Negro leader, Booker T. Washington, for Negroes, not to mention Hampton Institute, founded in 1868 by the American Missionary Society for Negroes and Indians.

There are hundreds of privately endowed colleges, universities, charitable organizations, and foundations which include public officials on their board of trustees, ex officio; many are wholly or partially exempt from taxation. Would not a home for aged and infirm Baptists ipso facto discriminate against aged and infirm Episcopalians, and on religious grounds to boot?

Here is another facet to the Girard ruling: Could it be extended to private institutions or services other than educational ones? Could it, for example, be extended to cases where the Satte licenses an essential service such as those provided by doctors, lawyers, pharmacists, architects, engineers, etc.?

Maybe this sounds remote. However, in a California lawsuit decided a few weeks ago, a Negro brought a suit against a Los Angeles dentist who had refused to treat him because of his race. The plaintiff had argued that the dentist, as a publicly licensed practitioner of an essential service, was prohibited by constitutional principles from refusing to accept him as a patient.

While the California court ruled for the dentist, it did so at least partly in deference to the traditional reluctance of the courts to interfere with the doctor-patient relationship.

The point is that the question has been raised and has actually gone to court. The argument has been made. In future cases of this kind, the apparent public interest doctrine of the Girard College case might be advanced in an effort to strengthen that argument.

I have no doubt that Girard College will welcome Negro boys since it is required to accept them. But when courts undertake to decide issues which ought to be decided by the people and their elected representatives, confusion and conflict are inevitable.

If it is necessary to imperil the whole institution of inheritance in order to accommodate perhaps two dozen Negro boys in a privately endowed school, why not let the State legislature do it? In such circumstances the citizens would at least have an opportunity to learn what the issue was. If they decided to go ahead with the wrecking anyway, nobody could say, as a good many people are beginning to say, that the threat to our institutions is less from the Communists than from a Supreme Court so dedicated to sociology as to be startlingly indifferent to constitutional tradition.

Under our Constitution, our forefathers most wisely provided in substance that, except as specifically provided, the powers of the sovereignty of the States were reserved to the States.

The question which I would like to leave with you is, "How far, and what is the purpose, of some of these decisions which would destroy the sovereignty of our States and set up in place of our historical system of divided sovereignty a monolithic omnipotent central government?"

Hitler said that his first 2 years in office were consumed in breaking down the power of the separate German States so that Germany could be governed effectively from Berlin to establish national socialism.

There is much justifiable concern that the original American constitutional system has been impaired in three ways:

1. By Executive usurpation of power.
2. By congressional abdictation of power.
3. By decisions of the Supreme Court which alter the meaning of the Constitution.

Day before yesterday I was visiting with a former president of the American Bar Association. Of course I was proud to advise him that I was going to speak to the lawyers of Minnesota today. When I gave him a brief outline of what I was going to talk about, he said, "I hope you will tell the lawyers of Minnesota of my own concern over the trend of the decisions of our United States Supreme Court."

He said further, "I hope you will tell the lawyers of Minnesota that I am fearful of the weakness of lawyers in not standing up for what are important principles, not only of our Constitution but the matter of appointment of judges."

For example, he said, "I will say to a member of the bar 'are you in favor of so-and-so for a Federal judgeship?' The lawyers will say, 'Heavens no.' Then I will say, 'Well, come along with me and oppose the appointment.' The lawyer will usually say, 'Oh, I can't do that, I may have a case before him.' And the man gets the appointment."

It is trite to say that eternal vigilance is the price of liberty.

The right is one which rests with every citizen—it is not just the responsibility of Congress or the executive or the judiciary. It is as inherent in the individual and the collective membership of this bar association. If you are vacillating, indifferent, or without courage, then the greatest Republic in the history of the world will fall, not from its enemies without but from its enemies within.

Resolution on Hungary

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following resolution on Hungary which was passed on June 28, 1957, at the 43d meeting of the Assembly of Captive European Nations, at which I was privileged to be a speaker:

ASSEMBLY OF CAPTIVE EUROPEAN NATIONS

(Resolution on Hungary introduced at the 43d meeting of the plenary assembly on Friday, June 28, 1957)

Noting that the Union of Soviet Socialist Republics, an original member of the United Nations, has assumed the solemn obligation to refrain in her "international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations" (Charter of the United Nations, art. 2, point 4);

Pointing to the wartime and postwar agreements, such as the Atlantic Charter, the Declaration on Liberated Europe, etc., concluded by the western great powers with the Soviet Union, by which Hungary, among other states, was promised undisturbed exercise of her inalienable right to choose by free and unfettered elections a government under which it wanted to live;

Recalling that on November 1, 1956, the Imre Nagy government: (1) Repudiated the Warsaw Treaty, no clause of which provided for or justified "intervention by armed forces of the Soviet Union to dictate political developments within any signatories' frontiers" (report of the U. N. Special Committee); and (2) "declared Hungary's neutrality, turned to the United Nations, and requested the help of the four great powers in defending the country's neutrality" (Mr. Imre Nagy's letter to the U. N.);

Recalling that even after this declaration the U. S. S. R. continued to recognize officially the same Nagy government as a legal government of Hungary, particularly by offering to negotiate with it on the details of withdrawal of Soviet forces;

Stressing that the U. N. Special Committee on Hungary also concluded that "consideration of the Hungarian question by the United Nations was legally proper and moreover it was requested by a legal government of Hungary";

Pointing to the finding of the United Nations' Special Committee that no written text or any other proof could be procured which would confirm that the Soviet armed forces were invited to intervene in Hungary;

Remembering the conclusion of the U. N. Special Committee's Report that the Hungarian freedom fight "was led from start to finish by students, workers, soldiers, and intellectuals, many of whom were Communists or former Communists" and that it was a general and "spontaneous national uprising" backed by the entire Hungarian nation without having been planned and fomented in advance or from abroad;

Quoting the finding of the U. N. Special Committee's report according to which the alleged "counterrevolution consisted in the setting up by Soviet armed forces of Mr. Kadar and his colleagues in opposition to a

government which enjoyed the overwhelming support of the people of Hungary" and that "there has been no evidence of popular support for Mr. Kadar's government";

Stating that for all these reasons the U. S. S. R. is guilty of aggression against the independence of Hungary, as well as of massacre, deportation, mass arrests and various other crimes against the Hungarian nation and that, therefore, since October 25, 1956, there exists an undeclared state of war between the U. S. S. R. and the Hungarian nation, which has been brought about by the Soviet Union's breach of peace within the meaning of the United Nation's Charter;

Considering that the Soviets have not only failed to comply with the United Nations' resolutions but have imposed a new regime of terror, harsher, more cruel and more unabashed than ever before on the Hungarian nation;

Considering that the agreement on the "temporary stationing of Soviet troops in Hungary" of May 27, 1957, has been concluded in defiance of the resolutions of the General Assembly calling for the withdrawal of these armed forces from Hungary, with the Kadar regime which is the local organ of Soviet colonial administration and which rules against the will of the Hungarian nation as expressed by the freedom fight which was tantamount to a plebiscite;

Requests: All governments of the free world to instruct their delegations to the United Nations to ask for the most urgent reconvening of the 11th General Assembly in order to (1) endorse the report and the conclusions of the Special Committee; (2) to decide upon appropriate and effective collective measures against the U. S. S. R. in order to enforce the previous resolutions of the General Assembly, first of all those concerning immediate withdrawal of Soviet armed forces, the ending of persecutions and deportations, and the conduct of free and unfettered elections under international control; (3) to expel the delegates of the spurious Kadar regime from the United Nations.

The Farm Dilemma

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. STEED. Mr. Speaker, I am including with these remarks an article recently published in the Tulsa (Okla.) Daily World, which quotes a recent speech made at Stillwater, Okla., by Dr. Leonard Miller, on the subject of the supply-demand dilemma which faces American agriculture. I feel these remarks from one of the Nation's leading experts will be helpful to all those who are presently concerned with the Nation's agricultural problems. It occurs to me that these remarks can assist those who desire to have a fuller grasp of some of the vital fundamentals facing Congress and I hope prove helpful in future consideration of legislation in this important field.

The article follows:

STILLWATER, June 29.—Adjusting the supply of agricultural products to demand is one of the major problems facing agriculture today, Dr. Leonard Miller, head of the Oklahoma State University agricultural economics department, believes and he said the situation will be important for many years to come.

Research and increased efficiency in agriculture are passed on to the housewife in the form of lower prices simply because agriculture cannot regulate the supply, he said. This is why Government programs have been developed—to give a reasonable return for labor and investment in agriculture.

Dr. Miller, speaking to a farm business training conference group at Oklahoma State University, Saturday, pointed out the situation is aggravated by the fact that each individual producer knows his small amount of production, if discontinued entirely, would not affect the overall production or advance the price of his product.

"Conversely, he knows that even if he doubled production it would not add enough to the supply to reduce the price he receives. In this way the big stream gets flooded," Miller said.

LABOR FORCE DECREASES

A look at the overall agricultural picture reveals the farm labor force has decreased about 50 percent during the past 15 years, but total farm production has increased about 50 percent.

An increase of 100 percent in efficiency of production is recorded, Dr. Miller reported, pointing out that one farmworker provides food for about 20 persons today compared to 11 persons 15 years ago.

On the upward scale in Oklahoma, the income from meat animals has increased from 16 percent to 43 percent over a 20-year period from about 1930. During this time beef-battle numbers have doubled in Oklahoma and are presently estimated at 2.5 million head. The size of farms has doubled to the present average size of 300 acres, and 100,000 tractors have replaced about 850,000 horses and mules.

The contribution of cotton to total agricultural income has dropped from 43 percent to 11 percent during this same era. Total corn and cotton acreage has declined from 20 percent of the total to 5 percent, and hog numbers have decreased about 50 percent to the present estimated 400,000 head. A marked decline in farm population is reported, dropping from 48 percent to 26 percent of the State's total.

DEMAND MORE SERVICES

Consumers are demanding more services for their food products, Miller points out, and marketing costs continue to rise so that farmers' share of the food dollar has declined from well over 50 percent in 1945 to 40 percent at the present. Last year the retail cost of food was $47.5 billion while payments to farmers were $18.5 billion.

The extreme variation in price and income is a major problem in agriculture which cannot be overlooked, he explains. Had a worker's annual salary followed the same trend as hog prices during the past 3 years, it would have started at $4,000 in 1954, dropped to $1,760 in 1955, and in May this year would have been $2,760.

At the same time, the prices of items farmers and workers buy remained steady or have increased.

Supreme Court Going Too Far?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Rock Hill (S. C.) Herald of June 26, 1957:

SUPREME COURT GOING TOO FAR?

A feeling seems to be growing that the Supreme Court of the United States is overstepping its bounds.

What are those bounds? Article 3 of the United States Constitution says "The judicial power (of the Supreme Court) shall extend to all cases in law and equity arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority."

The Supreme Court, in other words, has the power to interpret the Constitution and laws of the United States and treaties made under the authority of the Constitution and laws of the United States.

The Constitution leaves the lawmaking power to Congress. Article 1 of the Constitution says "All legislative powers herein granted shall be vested in a Congress of the United States."

Yet one veteran Washington reporter wrote recently that the Supreme Court has become the lawmaking body in the field of civil rights and civil liberties. He said this is because Congress has passed almost no civil-rights legislation in the 20th century.

Observers say the Supreme Court has read more into the laws, on occasion, than Congress wrote into them. They cite as a recent example the Court's antitrust decision ordering Du Pont to sell its General Motors stock. Bigness alone, not actually monopoly, decided the issue, they say.

Other observers say flatly the Court has taken to writing laws itself. As example, they point to the Phillips case. In this the Court ruled that natural-gas producers are subject to Federal Power Commission regulation, although Congress had exempted them by law.

Some close observers are saying the "Warren Court" seems to look upon the Constitution as an out-of-date instrument which it should modernize. Chief Justice Warren has been quoted as saying that constitutional concepts are 50 years behind the times.

Whether this is true or not, the Supreme Court has the clear responsibility to interpret the laws and the Constitution only as they are written—not as the Court would like them to be written.

In the United States we believe in government by laws, not by men.

Speaking for the Silenced, Tortured, and Enslaved Hungarian Nation

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following declaration regarding the Hungarian problem which has been signed by several leading Hungarian associations in this country:

SPEAKING FOR THE SILENCED, TORTURED, AND ENSLAVED HUNGARIAN NATION

Recalling that on February 10, 1947, the Union of Soviet Socialist Republics, together with the Allied and Associated Powers, "agreed to declare the cessation of the state of war" with Hungary and for this purpose concluded a treaty of peace which was "to form the basis of friendly relations between them," (see preamble of the Hungarian Peace Treaty);

Noting that the Union of Soviet Socialist Republics, an original member of the United

Nations, has assumed the solemn obligation to refrain in her "international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations" (Charter of the United Nations, art. 2, point 4.);

Noting further that it is an expressed purpose of the United Nations "to develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples" (Charter of the U. N., art. 1, point 2), and for these ends "to practice tolerance and live together in peace with one another as good neighbors," (preamble of the U. N. Charter);

Pointing finally to the wartime and postwartime agreements concluded by two Western great powers with the Soviet Union by which Hungary, among other states, was promised undisturbed exercise of her inalienable right to choose by free and unfettered elections a government under which she wanted to live; we herewith solemnly declare:

1. The Soviet Union is guilty of aggression against the independence of Hungary and of armed intervention in her internal affairs, as well as of massacre, hanging, deportation, mass arrest and various other crimes and atrocities committed against the Hungarian civilian population.

2. Since October 25, 1956, there exists a state of war between the Soviet Union and the Hungarian Nation brought about by the Soviet Union's breach of peace within the meaning of article 39 of the United Nations Charter.

3. Peaceful attempts at halting the annihilation of the Hungarian Nation by the Soviets having proved futile, we herewith accept the Soviet challenge. We pledge ourselves to carry on all the duties and claim for Hungary all the rights deriving from the state of war existing between the Soviet Union and the Hungarian Nation. We will continue our fight until the criminal Soviet invaders have been ousted from the soil of Hungary.

We appeal to all free nations and to decent people all over the world to join in this struggle imposed on us by the Soviets for the restoration of peace and decency. Help us to save from extinction the brave Hungarian people who are sacrificing themselves for our common ideals.

Concerning the Hungarian tragedy, the following relevant facts should be noted:

(a) The United States Mission to the United Nations released to the press on May 2, 1957, a letter by Ambassador Lodge to Mr. Hammarskjold transmitting a United States report to the Special United Nations Committee on the problem of Hungary and giving United States observations on developments in Hungary from October 23, 1956, to February 20, 1957. This report qualified the Soviet intervention in Hungary as an outright military attack opposed by the Hungarian people (point 7). The methods used by the Soviet forces to crush the independence of Hungary were those used in war. They included direct military action, with attendant slaughter and physical destruction, mass arrests, deportations of Hungarian citizens to the U. S. S. R. and elaborate efforts to deceive the Hungarians and the world by fraudulent negotiations. * * * This military action involved conflict between the armed forces of one nation—in overwhelming superiority * * * and the people of another nation, people poorly armed and organized, but effectively united against the enemy (point 3). The Soviet intervention was imperialist by definition for a national opposition movement was crushed by foreign armed forces and a puppet government installed which represented the interests of the alien occupying power rather than those of the people (point 8). The present regime was installed by and continues to exist and to function solely because of the continued presence of Soviet armed forces (point 9). In conclusion the report remarks that the methods that Soviet communism used to suppress Hungarian independence were monstrous in the extreme.

The United States' report thus leaves no doubt that the Soviet Union is guilty of armed aggression aginst Hungary, a comparatively small neighbor indeed. The Soviets committed, and are committing, acts of war in order to prevent the Hungarian people from establishing a government of their own choosing and in order to keep the Hungarian people in bondage.

(b) According to the Soviet Union's own legal interpretation, the Soviet armed intervention in Hungary has to be condemned in the same way as has been done by the United States Government. In 1953, the Soviet Union submitted to the United Nations its "definition of aggression," article 1 of which stipulates that the invasion by forces of another State "without the permission of the government of the latter," is aggression. The Soviet definition even goes further for it provides in article 6 that no "revolutionary and counter-revolutionary movement, civil war, disorders or strikes" and no desire "to maintain in a state any political, economic, or social system" can be used as justification for a foreign military intervention.

(c) The Warsaw Pact of May 14, 1955, did not authorize Soviet military intervention in Hungary either, and cannot exonerate the Soviets. Article 4 of the Warsaw Pact allows the stationing of Soviet troops in Hungary, but only "by agreement among the states in accordance with the requirements of their mutual defense." The same pact provides that the term "mutual defense" will only apply to an armed attack by another state. There is no loophole left in the Warsaw Pact which could justify or excuse the Soviet aggression in Hungary.

(d) Since October 25, 1956, a state of war exists between the Union of Soviet Socialist Republics and Hungary. From that day on, Soviet aggression cannot be explained away any more with a request for aid by the previous Hegedus-Gerö government. On October 24, Imre Nagy became the new Premier of Hungary and on October 25 he expressly asked for the withdrawal of Soviet troops. On the same day and for that purpose the Soviet government actually entered into negotiations with Imre Nagy's government. It is also a fact that on October 28 the Soviets agreed to withdraw their troops from Budapest, latest by October 31.

The International Commission of Jurists issued on November 16, 1956, at its headquarters at the Hague a paper on "Hungary and the Soviet Definition of Aggression." The paper states (point 3/f) "that the Soviet government committed and continues to commit clear acts of aggression against the Hungarian government, according to its own definition of aggression." In point 4, the paper adds that "in the illegal detention of the Hungarian representatives sent to negotiate with the Soviet military authorities on November 3, in the forcible overthrow of the Nagy government and in the setting up of the Kadar regime, the Soviet government is self-condemned of 'indirect aggression.'" The final conclusion (point 5) is the following: "The Soviet intervention in Hungary therefore is 'direct' and 'indirect' aggression according to its own definition."

(e) The official record of the United Nations shows that on November 1, and again on November 2, the United Nations received communications from Imre Nagy, at that time Prime Minister of Hungary, which left no doubt concerning the Government's firm stand against the presence of the Red army in Hungary. The first communication stated that the Hungarian Government on that day had demanded of the Soviet Ambassador in Budapest the withdrawal of the Red army from Hungary; that the neutrality of Hungary has been declared; and that the Government asked the United Nations for help in maintaining Hungary's neutrality. The second communication, dated on November 2, informed the United Nations that large new Soviet military units were crossing the border and marching toward Budapest. On November 3, Zoltan Tildy, the newly appointed Minister of State, correctly informed the foreign correspondents in Budapest that the Imre Nagy "Government declared on its very first day that it cancelled the request of the preceding government and asked for the immediate withdrawal of the Soviet troops then involved in our (Hungarian) internal affairs." This request removed all legal and political foundations for the interference of Soviet troops. Without the slightest provocation on the part of the Hungarian troops which had orders not to shoot at the Russians, next morning (November 4) at 4.20 a. m. Premier Imre Nagy pathetically announced over the radio Free Kossuth: "Attention, today at daybreak Soviet troops attacked our capital with the obvious intention of overthrowing the legal democratic Hungarian Government. Our troops are in combat. The Government is at its post. I notify the people of our country and the entire world of this fact." With tanks, paratroops, airplanes, and incendiary bombs the Soviets put into effect the wholesale massacre of a peaceful people.

(f) Although refraining from effective action which could have prevented, or, at least, ended the Soviet war waged against Hungary, the United Nations verbal condemnation of the Soviets expressed in 11 resolutions between November 4, 1956 and January 10, 1957, qualified "the intervention of Soviet military forces in Hungary" as "armed attack on the people of Hungary" and as "armed intervention in the internal affairs of Hungary" (Resolution 1004, ES–II). Another United Nations resolution (1005, ES–II) states that "the repression undertaken by the Soviet forces in Hungary constitutes a violation of the Charter of the United Nations and of the peace treaty between Hungary and the allied and associated powers." Resolution 1006, ES–II "calls upon the Union of Soviet Socialist Republics to cease immediately actions against the Hungarian population which are in violation of the accepted standard and principles of international law, justice and morality." Resolution A/Res/407 referring to received information "that the Soviet army of occupation in Hungary is forcibly deporting Hungarian men, women, and children from their homes to places outside Hungary," recalls "the principles of the Charter of the United Nations, in particular the principle embodied in article 2, paragraph 4, the obligations assumed by all member states under article 55 and 56 of the Charter, the principles of the convention on the prevention and punishment of the crime of genocide, in particular article II (c) and (e), to which Hungary and the Union of Soviet Socialist Republics are parties, and the treaty of peace with Hungary, in particular the provision of article 2."

Resolution A/Res/413 notes "with deep concern that the Government of the Union of Soviet Socialist Republics has failed to comply with the provisions of the United Nations resolutions calling upon it to desist from its intervention in the internal affairs of Hungary, to cease its deportations of Hungarian citizens and to return promptly to their homes those it has already deported, to withdraw its armed forces from Hungary and to cease its repression of the Hungarian people." Resolution A/Res/424 "1. declares that, by using its armed force against the Hungarian people, the Govern-

ment of the Union of Soviet Socialist Republics is violating the political independence of Hungary."

The United Nations in its 11 resolutions has branded the Soviet Union's intervention in Hungary as a breach of the peace and an act of aggression. There exists, in the sense of the United Nations resolutions, an undeclared state of war between the Soviet Union and the Hungarian nation.

Statement of Frank Goldman Re H. R. 7825

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. MULTER. Mr. Speaker, the following is the testimony of Mr. Frank Goldman, honorary president of B'nai B'rith, before the House District Committee, Subcommittee on Fiscal Affairs, on July 2, 1957, in support of my bill, H. R. 7825, to grant exemption from District of Columbia real estate taxes to the new building being erected by B'nai B'rith:

STATEMENT OF FRANK GOLDMAN, HONORARY PRESIDENT OF B'NAI B'RITH BEFORE THE HOUSE DISTRICT SUBCOMMITTEE ON FISCAL AFFAIRS, JULY 2, 1957

My name is Frank Goldman. I am honorary president of B'nai B'rith. I was privileged to serve as president of B'nai B'rith from 1947 to 1953.

I have come here from my home in Lowell, Mass., to speak on behalf of B'nai B'rith in support of H. R. 7825, introduced by Congressman ABRAHAM J. MULTER, the bill to exempt the new B'nai B'rith building from District of Columbia real estate taxes. I want first to express my appreciation to you, Mr. Chairman, and the other members of your subcommittee, for arranging this expeditious hearing.

I should say at the outset that this is an unusual appearance for a B'nai B'rith representative. Our customary posture is that of the giver rather than receiver. For 114 years the history of B'nai B'rith has been a record of service to the Jewish people, the American Nation and, indeed, all humanity. We have asked nothing for ourselves that we did not insist was the right of all men.

B'nai B'rith (Hebrew for Sons of the Covenant) was founded on October 13, 1843, and is America's oldest and largest Jewish organization. Indeed, it is one of America's oldest national organizations of any kind—37 years older than the Salvation Army, 38 years older than the Red Cross, 47 years older than the DAR, 63 years older than the YWCA.

Organized originally as a fraternal organization, it has for many years now been solely a religious, educational, and service organization. It has no membership insurance, death benefits, or secret rituals. The sole reward of membership in this country is the privilege of serving the Jewish faith and the American Nation.

By its constitution, B'nai B'rith undertook the mission of uniting persons of the Jewish faith in the work of promoting their highest interests and those of humanity. In deed, as well as in word, this has always meant three basic programs: (a) Religious, to foster Judaism; (b) educational, to strengthen religious liberty and counteract prejudice and discrimination; (c) charitable, a wide variety of charities, not limited to Jewish beneficiaries, but available to the needy on a nonsectarian basis.

After 114 years of existence, B'nai B'rith is about to move its national headquarters into its own building. Erected at a cost of $1,290,000, the building stands on the southeast corner of Rhode Island Avenue and 17th Street NW. It will contain an outstanding library, museum, and exhibit hall of the history of Jews and Judaism in the United States (e. g., the George Washington letter to the Newport Synagogue), open daily to the people of the District and the Nation without admission charge. It will offer educational facilities in the field of American Jewish history not available elsewhere in the District. Visits to the building will surely become part of the educational program of many students in the District, and the building will be an attraction for tourists.

B'nai B'rith Henry Monsky Foundation (named after Henry Monsky of Omaha, president of B'nai B'rith from 1938 to 1947), a philanthropic agency of B'nai B'rith is the owner of record. The foundation owns no other real property in the District. The building will, of course, not be used for income-producing purposes.

Throughout the country buildings such as the B'nai B'rith building enjoy exemption from local real estate taxes. The spirit and intent of congressional precedents indicate that B'nai B'rith, as a nonprofit religious, charitable, and educational organization, should have such exemption, too. In the District of Columbia, however, a problem arises as a result of the wording of the general exemption statute, which provides property tax exemption for churches, schools, libraries, art galleries and buildings belonging to charitable institutions which are used for public charity principally in the District of Columbia. The B'nai B'rith building, as will be seen later, will be used to serve a composite of all these purposes. B'nai B'rith charities, however, are not confined to the District, and no one, I am sure, would suggest or contend that its works of charity should be so limited.

B'nai B'rith's character as a nonprofit religious, charitable, and educational organization is officially acknowledged by the Federal Internal Revenue Service. B'nai B'rith enjoys tax-exempt status for all of its programs. Indeed, virtually all of B'nai B'rith programs enjoy the additional status of being tax-deductible under section 501, (c) (3) of the Internal Revenue Code as religious, charitable, or educational—96 percent of its funds are spent nationally for such programs. The other 4 percent of national expenditures—also tax-exempt—go for auxiliary administrative operation and other educational and charitable programs, such as adult Jewish education and disaster relief.

The B'nai B'rith programs which are carried on in the District of Columbia and elsewhere comprise, as I have said, three categories—religious, educational, and charitable:

(a) Religious: B'nai B'rith conducts Hillel Foundations on more than 200 college campuses to provide for the religious life and education of Jewish students. In staffing these centers, B'nai B'rith became the largest employer of rabbis in the world. B'nai B'rith also sponsors chairs of Judaic studies at a number of universities. The B'nai B'rith Youth Organization works with Jewish boys and girls of high school age with the objective of promoting understanding of and loyalty to Jewish religious values. The same objective is served by the department of adult Jewish education, headed by ordained rabbis, which conducts seminars and institutes of Judaism around the country as part of B'nai B'rith's year-round program of adult education.

(b) Educational: In addition to direct religious education, B'nai B'rith, through its Anti-Defamation League, conducts extensive educational programs designed to promote respect for religious liberty and to counteract prejudice and discrimination. The League has won commendations from Presidents Eisenhower and Truman. Its educational materials—books, films, pamphlets—are used in leading universities and in thousands of schools and churches in all sections of the country.

The League's programs to counteract Communist propaganda and maneuvers has won the commendation of the FBI and the House Un-American Activities Committee. Thousands upon thousands of its two anti-Communist pamphlets exposing Communist aims and programs have been distributed, and these pamphlets are used as texts in history and civics courses.

A program of vocational guidance makes its research findings available not only to Jewish youth, but to educators and government agencies generally. An active program in Americanism is carried on by B'nai B'rith with a view to helping immigrants obtain a better understanding of the American way of life, so that they may ultimately become better citizens.

(c) Charitable: Even before the great Red Cross came onto the American scene, B'nai B'rith was engaged on a program of aid—on a non-sectarian basis—to the victims of natural disasters. For this purpose, B'nai B'rith maintains a special emergency relief fund to which every male member of B'nai B'rith contributes. To mention only a few early instances of such aid: in 1868 B'nai B'rith raised funds for flood victims in Baltimore; in 1871 it sent $50,000 to the victims of the Chicago fire; and in 1900 $26,000 was raised for the victims of the Galveston flood. To mention a few contemporary instances: in 1953 emergency aid was extended to the victims of tornadoes in Worcester, Mass.; Waco, Tex.; and Flint, Mich., and only last week funds were made available for tornado relief in Fargo, N. Dak.

A significant part of B'nai B'rith's tradition of community service is the establishment and support of orphanages, homes for the aged, and hospitals. An orphans home was founded in New Orleans in 1855; another in Atlanta, Ga., in 1889; a third in San Francisco in 1872. In 1868, an orphans home

was opened in Cleveland—today it is a center for emotionally disturbed children. In 1927, a home for the aged was founded in Memphis.

B'nai B'rith founded and still contributes to the support of a number of nationally famous nonsectarian hospitals; the National Jewish Hospital for Tuberculosis in Denver (1889) with its world-famous motto: "None may enter who can pay; none may pay who enter;" the Leo N. Levi Memorial Hospital at Hot Springs, Ark. (1914) for arthritis.

One of B'nai B'rith's principal activities is its around-the-calendar program of aid to veterans and men and women in our Armed Forces. Thousands of B'nai B'rith men and women each year make personal visits to veterans' hospitals and military installations.

In addition, as part of the B'nai B'rith program, B'nai B'rith men and women make countless gifts of playing cards, books, and cigarettes to servicemen and hospitalized veterans. B'nai B'rith also has furnished television sets, bookmobiles, and musical instruments to hospitals and military installations for the recreational enjoyment of our veterans and servicemen. It has contributed ambulances, money, and clothing to the Red Cross, and has taken a leading role in providing blood donors for the Red Cross blood bank.

Its extensive program of war service earned for B'nai B'rith presidential citations and the first awards given by the Army and Navy to any civilian organization in World War II. The Army award was presented to B'nai B'rith by Gen. Dwight D. Eisenhower, Chief of Staff. In making the award, General Eisenhower spoke of the "unselfish service of the men and women of B'nai B'rith," adding, "no one will ever know how much these services did in keeping high the morale of the Armed Forces during the terrible days of this war."

In 1946, President Truman cited B'nai B'rith in recognition of its war-service record, issuing the following statement: "The fine, patriotic service of B'nai B'rith during the war years has earned a nation's gratitude. Inspiring though this record is, what impresses me most about it is the amazing amount of national service that can be performed by 265,000 men and women when they set their hearts and hands to the work. It is gratifying to know that B'nai B'rith realizes that the job is not yet completed. Its postwar service program on behalf of veterans and men still in the Armed Forces is an encouraging sign that we may count upon B'nai B'rith's service in peace as we counted upon it with such good results during war."

We, of course, take pride in these commendations, but we treasure no less the many letters of appreciation received from veterans and servicemen of other faiths. To quote from a typical letter: From a veteran of Syrian extraction: "During my 3 years' stay in St. Albans Naval Hospital, it seemed as if I was always running into B'nai B'rith in one way or another. Most of the television sets located on the fantail of each ward were donated by B'nai B'rith, and their value in pleasurable hours spent is inestimable. * * * Lying in bed day after day, week after week, and in turn months and years, is a very trying ordeal to say the least. * * * The visits of B'nai B'rith gave something to look forward to."

It is obviously impossible to compress into a few minutes the history of 114 years. But I do hope, Mr. Chairman, that I have been able this afternoon to give you the essence of B'nai B'rith's service to the people of the Jewish faith, to our country, and to humanity. I do hope, too, that the committee will give early and favorable consideration to the bill.

Resolution by Association of Hungarian Students in the United States

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following two resolutions recently passed at the Congress of the Association of Hungarian Students in the United States:

MEMORANDUM

After the revolution in Hungary 18,000 Hungarians took refuge in Yugoslavia to escape the retributions of Bolshevik terror. This number includes 1,600 high school and 500 university and college students. After the hermetic closing of the Austrian border they found no other way to escape and they hoped to find guaranties for their personal freedom through the humanitarian aid of the Yugoslavs. Instead of freedom they found themselves in heavily guarded camps. This following letter will illustrate their present situation and the violation of all civil rights by the Government of Yugoslavia:

"Thanks God, I have only spent 6 days in the death camp of Gerovo. Originally this was a ghetto for Jews with gas chambers and crematorias, later it became a prison for political prisoners. I am one of the few Hungarian refugees who has not been worked over by the clubs of the guard. * * * I am fortunate to be on a transport to leave shortly for Canada. * * * Finally after 5 months a few of us have the freedom of limited movement. It is hard to explain the majestic feeling to have left the prison behind with its fivefold fences. We are permitted to see the doctor in Gerovo but even then we may not use the road and have to walk through the mud. * * * I am not complaining. All I am asking of you is to bring these to the attention of everybody you meet to let them know how mercilessly the Hungarians are being treated. We have written in vain to the Refugee Committee of the United Nations and the International Red Cross. There has been no response. Very probably our letters have not been forwarded, therefore they may not even know the conditions in the refugee camps. I beg you to be spokesman for 15,000 refugees still in Yugoslavia for their situation is very grave. Those who have returned to Hungary were bitter and convinced that the Kadar regime cannot be worse than the conditions here. I think this very fact speaks for itself. Not to mention the corrupt administration of the distribution of the gifts by the Red Cross. Every camp has stores of clothing by wagons. Yet people are walking around in underwear for they have no replacement for their torn clothing. The newly born babies are covered in rags collected from the tattered dresses of merciful people. In the camp of Marusevec we had no drinking water for days. The adult could easier stand it but it was hard on the mother. They could not give a drop to drink to their babies or wash the diapers. * * * The daily cleaning is called a luxury and the bathing a capitalistic habit. In Lovran we organized a hunger strike because the food was inedible. The camp director in answer had shut off the water for 3 days and he recommended the ocean to the mothers for bathing their babies (in February). I can hardly wait to get out of here to be able to do something for those unfortunates left behind."—P. K.

We wish to add nothing to this letter of an eyewitness. The methods are not unknown to us. We have known them in the Hungarian prisons.

The assertion that the refugees went to Yugoslavia because they felt sympathetic toward its regime is not true. They fought as hard as anyone else especially for the defense of the uranium mines on the Hungarian-Yugoslav border. Their flow into Yugoslavia corresponded with the tightening Soviet-Hungarian controls over the frontier between Hungary and Austria. See page 21 of the Report of the Special Study Mission to Europe of the House Committee on Foreign Affairs.

To support the facts and truthfulness of the above letter we would like to point out the following:

(a) Switzerland was not permitted to send medicine to the Hungarian camps in Yugoslavia.

(b) The medicine gift made by Denmark had to be smuggled in.

(c) A well-known Belgian diplomat has recently completed a visit in the Yugoslav camps. After World War II he has investigated conditions in Nazi concentration camps.

"What I have seen in Yugoslav camps, I shall never forget until I die," was his final conclusion.

(d) Photos taken in the camps speak for themselves.

(e) Testimonies by Hungarians brutally beaten up also support the conditions referred to in the mentioned letter.

(f) It is known that the Yugoslav Government regards the Hungarian refugees as a source of income. They collect $5 a day per every refugee and save approximately $4.50. Further the Titoist regime accepts the Soviet version of the Hungarian revolution and would rather welcome the repatriation of refugees than their resettlement in the free West.

(g) In recognition of the above facts the Belgian Student Federation has offered to place 60 Hungarian students in Belgium to establish a precedence for the resettlement of all Hungarians, especially young intellectuals in Western countries.

OUR REQUESTS

1. A basic policy should be adopted for the scholarship support of all Hungarian students who would otherwise be admitted to Western European countries. This would be a guaranty that they would not become a burden on the economy of their respective countries.

2. A special program would be necessary to cover 1-year expenses for every resettled student.

3. A fund of $700 to $1,000 per student should be deposited in advance at the European headquarters of the union.

The western countries have done a great deal to help more than 170,000 refugees who were fortunate enough to cross the Austrian border alive. Unfortunately those who found escape through the Yugoslav border did not come under this great resettlement program. It is very tragic that 600 college students and more than 1,800 high school students under the age of 18 must vanquish in police camps after their heroic stand during the revolution.

The Communists tried to poison the soul of the youth by keeping them under demoralizing conditions to break their revolutionary and idealistic spirit. The Hungarian youth, by choosing the hardship of exile,

has rejected the Soviet approach. They were looking for a world where they can find freedom, love and unlimited human rights. This is why we are turning to you for cooperation and assistance to save the faith of those who are interned by Titoist dictatorship.

Thank you for your understanding.

Most sincerely yours,

ALADAR MERENYI,
President of UFHS.
BELA JANKO,
Former President of UFHS.
LASELO PAPP,
President of Association of Hungarian Students in the United States.

NEW YORK, *June 25, 1957.*

RESOLUTION—DEPORTATIONS

We, the Association of Hungarian students in the United States, charge that the Soviet Union and its puppet government in Hungary have, by mass deportation, virtually destroyed the rising intellectual and cultural leadership of Hungary.

We charge that 46,000 Hungarians between the ages of 12 and 22 years of age have been imprisoned in concentration camps in Vologda, Tchaika, Suda, Krassnoiarsk and Novosibirsk in the Soviet Union; 12,000 young people are imprisoned in Obuda and Nepliget in the suburbs of Budapest awaiting shipment to points outside of Hungary; 1,600 survivors of the siege of Csepel Island, whose age is unknown, have been deported to Communist China.

Roughly 60,000 students attended Hungarian colleges and universities before the revolution. Approximately 7,000 fled to the west when the revolution failed. If, therefore, only one-third of the 58,000 young people known to be in prison are, in fact, students, then over 20,000 young people, or between 30 and 40 percent of Hungary's college and university students have been imprisoned or deported. The Soviet imperialists have dedicated themselves to nothing less than the destruction of our national culture and heritage. We, as a people, are apparently to be destroyed. Stalin's boast that the Hungarian problem was only a matter of boxcars is apparently being put to the test.

The Soviet Union and its puppet regime in Hungary deny that deportation have ever taken place. Yet at least one of the members of our association has sworn under affidavit that he was deported to the Soviet Union, but managed to escape from his captors and escape to freedom. Other members of our organization saw their colleagues put into boxcars in Budapest or, themselves, escaped from railway cars before being moved outside of Hungary.

The Association of Hungarian Students in the United States calls upon students throughout the world to protest the Soviet deportations of Hungarian students and to work for the freedom of those who are now in concentration camps. These students are not criminals. They sought the freedom to study what they wished to study. They have never been tried in courts of law. They have, instead, been taken by Soviet troops, thrust into boxcars and shipped like cattle from their native land.

We ask for the support of the freedom-loving students of the world. We ask them to come to the aid of their colleagues now in prison in the Soviet Union. We ask them to protest to the Kadar regime, to its embassies in their countries and to the government and embassies of the Soviet Union. Let our culture and traditions not be submerged by the Soviet imperialists.

RESOLUTION—THE NATURE OF MEFESZ

We, the Association of Hungarian Students in the United States, wish to make known to the world the brutal and violent means by which the Mefesz, the representative student organization that came into being shortly before the revolution, was taken over by the Soviet puppet regime in Hungary and twisted into an organization which is designed to serve the ends and goals of Soviet imperialism rather than to be representative of Hungarian students and a servant of their aims and aspiration.

The Mefesz organization itself came into being at the colleges and universities of Hungary during the 3 days preceding the revolution. It replaced the Communist youth organization, the Disz, a truly unrepresentative youth organization which was run by the Communist Party in Hungary. Disz membership had been compulsory for young people and expulsion usually meant dismissal from school. Thus, at its very core, Disz was an engine of student repression. So corrupt was this organization that we and our fellows, as the first act of our struggle for academic freedom, formed the new Mefesz.

During the fighting, Mefesz lay dormant, but on January 5, 1957, a meeting of representatives of all the colleges, universities, and high schools in Hungary was convened in Budapest. At this meeting, the 14 points of October 23 were reaffirmed. These 14 points or demands were based on the desire of Hungarian students for measure of academic freedom and university autonomy. It was for these 14 demands that we and our brothers marched in peaceful demonstration on October 23, 1956.

On January 12, Radio Budapest broadcast reports that a second meeting of Mefesz supposedly scheduled for that day, had been postponed for technical reasons. Also in a story dated January 12, Mr. John McCormack, of the New York Times, reported on a Mefesz meeting that occurred between the 5th and the 12th at which many delegates from uninvited and hitherto unknown student organizations demanded representative status and attempted to weaken the resolutions reaffirming the 14 points. A few days later the headquarters of Mefesz were raided by the infamous secret police and the leadership of the organization disappeared. So much for technical reasons.

The regime fearing the spirit of the students, did not open the colleges and universities until February 1. At that time it also created a new Communist youth organization, the Kisz, in an attempt to divide the Mefesz membership. But the mass of students still resisted, and stayed with their Mefesz organization. The Communist answer was to quicken the terror begun in January. Any student who had cooperated with the student revolutionary councils or otherwise taken part in the revolution were thrown into prison. Heavy pressure was applied to weaken, discredit or persuade what little Mefesz leadership remained. Communist self-criticism became the only alternative to the concentration camp, deportation, or worse. Thus was Mefesz, the proud symbol of Hungarian student freedom, turned into a tool of the regime.

We cry out in anger and sadness at what has been done to our once free organization. We call upon the free students of the world to recognize Mefesz for what it now is, the unrepresentative engine of student suppression that Disz once was, an organization without regard for the interests and aspirations of the students of Hungary.

Sweden's Labor Press Shows the American Labor Movement How To Establish a Daily Newspaper

---

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the Federation of Swedish Trade Unions recently purchased two of the best daily newspapers of that country, the morning Stockholm Tidningen and the evening Aftonbladget. The Swedish Federation of Labor, which is quite small compared to the American labor movement, already owned a number of other important publications.

In a recent editorial the New Jersey Labor Herald points out that:

The labor movements of Britain, Norway, and some other European countries publish one or more daily papers in the interest of labor. Their influence is tremendous.

Why our AFL–CIO, the greatest trade union movement in the entire world, has not taken the initiative in this field is difficult to comprehend. During the past decade American organized labor had spent untold millions of dollars in radio and television experimentation; enough money to buy any of the best-established dailies in this country.

Labor needs a daily means of communication, not only for its vast network of union organizations, but to tell the general public the unvarnished and undistorted truth about the labor movement.

Then, the New Jersey Labor Herald goes on to point out that it is important for labor in the United States to have its own daily paper—particularly in educating its vast membership as to practical political organization and action. And, says the publication of the New Jersey State American Federation of Labor:

Labor's Daily, the struggling tabloid published by the International Typographical Union, should be used as a basis for expansion as a nationwide labor journal which workers can purchase on the newsstands.

I include here the editorial from the March issue of the New Jersey Labor Herald, together with an editorial from the publication, the Catering Industry Employee, which was reprinted in the June 29, 1957, issue of Labor's Daily:

[From the New Jersey Labor Herald of March 1957]

SWEDEN'S LABOR PRESS

We Americans have acquired the habit of boasting that our country has outstripped most nations of the Old World, in every modern type of progress, although we've been in business as an independent government less than 400 years. There is no question but that we've made amazing advances in industrial development, science, the arts, and self-government.

Nevertheless, in some respects, we're trailing some of the more progressive countries of Europe. Surprisingly enough, in one of

the fields in which we might be expected to excell, because of our rapid industrial expansion—labor press journalism, as a means of direct communication among the 16 million members of unions and their families—we've been sadly lagging.

The Federation of Swedish Trade Unions, a puny organization numerically and financially when compared with the AFL–CIO, has just purchased 2 of the best daily newspapers of that country, for $5 million. The 2 liberal journals are the morning Stockholm Tidningen and the evening tabloid Aftonbladget, with a circulation of 360,000. The Swedish Federation of Labor already owns a number of other valuable publications.

The labor movements of Britain, Norway, and some other European countries publish one or more daily papers in the interest of labor. Their influence is tremendous.

Why our AFL–CIO, the greatest trade-union movement in the entire world, has not taken the initiative in this field is difficult to comprehend. During the past decade America organized labor had spent untold millions of dollars in radio and television experimentation; enough money to buy any of the best established dailies in this country.

Labor needs a daily means of communication, not only for its vast network of union organizations, but to tell the general public the unvarnished and undistorted truth about the labor movement.

Labor's Daily, the struggling tabloid published by the International Typographical Union should be used as a basis for expansion as a nationwide labor journal which workers can purchase on the newsstands. The typos have the know-how of producing a daily on a shoestring bankroll, which should be of advantage to an AFL–CIO sponsorship.

It is important for labor to have its own daily paper, particularly in educating its vast membership on militant and practical political organization and action.

[From Labor's Daily of June 29, 1957]

PLAIN TALK FROM MEANY

The Wall Street Journal, which deals in facts needed by hardheaded businessmen, gives prominent display to some plain talk from George Meany, a hardheaded labor leader. Key phrase in Meany's talk, some off-the-cuff remarks at a recent conference in Washington, was this:

"The most important thing in the philosophy of the trade union movement is that the unions belong to the members—not to Meany, Reuther, Beck or anyone else—they belong to the members." Thus did Mr. Meany underscore an idea in the officers' report to our recent convention—its call for building a "worker-centered union."

The Journal's emphasis on Meany's message reminds us of Labor's Daily, which could become as important to the trade unions as WSJ is to business, given half a chance.

Labor's Daily is the 5-year-old paper launched by the printers' union. Although its appearance realized the dream of many who have yearned for an independent daily newspaper to tell labor's story, the paper is languishing for want of support.

Not long ago the ITU disclosed that unless support from other unions were forthcoming, the Daily will die. ITU figures it needs 50,000 subscribers at $8 a year to get the response it needs from advertisers.

We'd like to see Labor's Daily kept in business, with the blessing of AFL–CIO and growing support from internationals, local unions and the rank-and-file. It would be a kind of insurance policy proving to the world that the United States labor movement welcomes the stimulating influence of an independent-minded, "worker-centered" labor paper to help publicize the constructive things we do and, from time to time, to needle us when we need reminding that "the unions belong to the members."—The Catering Industry Employee.

Parkinson's Law

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an article that appeared in the April 1957 issue of Advanced Management. This magazine is published by the Society for the Advancement of Management, Inc.

The article follows:

PARKINSON'S LAW

(By John B. Joynt)

The London Economist's November 19, 1955, issue presented some very provocative data to demonstrate that the size of an administrative staff will at least grow at an annual rate of 6 percent even if the basic work demands diminish. The author half humorously called it Parkinson's law (after nobody).

The Economist's article gave two pointed illustrations. A research study of the Royal Navy revealed that 2,000 admiralty officials of 1914 had become 3,569 in 1922, an average increase of 5.6 percent per year. In the meantime, the Navy had diminished by one-third in men and two-thirds in ships.

A similar study of the colonial office between 1935 and 1954 revealed that while the number of British Colonies were steadily shrinking, the number of officials rose from 372 to 1,661, an average increase of 5.8 percent per year.

Similar analyses have been made in commercial, industrial, and financial organizations in this country and have found that Parkinson's law applies to them. Some companies call it empire building. However, one company has labeled it Parkinson's disease for like any disease it dissipates the strength of the organism upon which it is festering.

After reading a reprint in Fortune of the economist's article, the president of one company conducted an analysis and found that Parkinson's law fitted his company perfectly. The organization's administrative staff had grown from 212 to 375 over the last 10 years with only a comparatively modest increase in workload.

A basic cause of this malady is that many people place their own selfish interests above the interests of their organization. Other factors are:

1. Some managers feel that their importance rises in direct proportion to the number of people that they have working for them.

2. Each additional manager, supervisor, organizational unit or function creates additional work for the existing work force (additional reports, memos, conferences, services, etc.).

The location and curing of this disease is easy, if it is discovered in the early stages and people want to do something about it. If not, "surgery" may be necessary at some point. The best condition, however, is one in which "preventive medicine" is all that is required.

These factors have been very effective in keeping the size of staffs in line:

1. Establish tight control over personnel costs.

2. Enlarge existing jobs through training and delegation instead of adding new ones.

3. Place greater emphasis on a high standard of performance and regularly appraise results.

4. Have compensation based on contribution or service rendered, not the number of people supervised.

5. Review functions periodically, weighing costs against benefits.

This is a continuing program requiring constant attention. To reach its maximum effectiveness it must have a proper attitude and full cooperation of every member of the organization.

A Tribute to Juan Terry Trippe

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 25, 1957

Mr. PATTERSON. Mr. Speaker and other distinguished colleagues, I wish to pay tribute to a great pioneer in the field of American aviation.

A pioneer is a man with a dream and a determination to realize that dream. Such a man is Juan Terry Trippe, president of Pan American Airways. Pan American has grown until it now holds rights for its "clipper ships of the air" to encircle the globe in flight. Now the founder and mentor of the company is again pioneering, this time in the realm of jet transport, which seems to offer unlimited horizons for future development of air commerce.

At the age of 26 Juan Trippe founded and managed one of the first going airlines in the United States, a line which is now a division of the American Airlines trunk system. He received the first contract for transporting mail by air issued under the Kelly Act and flew mail from New York to Boston.

With a single plane and a contract to carry mail between Key West and Habana, Juan Trippe launched Pan American Airways, Inc., nearly 30 years ago. The first trip over the 90-mile route on October 10, 1927, was made with a rented plane and later the new 3-motor "giant" Fokker transports were put into service on the run. With this airline, a mail pilot's certificate No. 58, and a firm conviction that air transport was destined to be the mode of the future, he set about the business of creating a worldwide, intercontinental system of air transportation. Today, Pan American serves 80 countries on 6 continents over 65,000 miles of route.

The past 10 years or so have seen improvements in aviation which have resulted in bringing the farthest corners of the earth within 39 hours from any United States port and Pan American has been in the forefront in utilizing the improvements. Impressive as are the accomplishments of the past decades, Pan American is now embarked on a program which will dwarf what has gone before. Juan Trippe has been and continues to be one of the most successful

of leaders in civil aviation in translating new scientific advances into practical application. Under his leadership Pan American is entering the jet transport field. The first jetplanes will be put into service next year and will be the forerunners of other jets which, in a few years' time, will be capable of carrying double the loads at double the speed of the present transports. Larger and faster planes to carry more passengers and greater cargo loads is in line with the belief of Mr. Trippe that air transport has the choice of becoming a luxury service for the well-to-do at high prices or a service for the average man. He and his company, Pan American, have chosen the latter course for future development. Better and less expensive air transport brings many advantages in addition to tangible gains from commerce and tourist expenditures. Mr. Trippe's expressed opinion is that the intangible benefits may be the more precious and of lasting benefit to the United States. He has said that "Travel, like education, is no longer a luxury—a cultural, political, and economic necessity if our country is to fulfill its new responsibility of world leadership," and believes that traffic produces international understanding.

Pan American's executive staff is versatile, exceptionally gifted, and strong in depth and so the company is brilliantly managed. But the organization bears the unmistakable stamp of its founder. We salute this modern pioneer and outstanding genius of intercontinental air transport, Juan Terry Trippe.

Eight Ordered To Pay United States $762,654

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 2, 1957

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Eight Ordered To Pay United States $762,654," which was published on June 29, 1957, in the Washington Post and Times Herald.

The article points out the success the Department of Justice is having in collecting some of the unwarranted windfall profits paid out during the scandalous era of the Federal Housing Administration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EIGHT ORDERED TO PAY UNITED STATES $762,654

Eight stockholders in the Beverley Manor apartment project, Columbia, Ohio, have been ordered to repay the Government $762,654 in windfall profits.

Alexandria Federal Court Judge Albert V. Bryan issued the order which Government attorneys feel will set a precedent for other windfall-profits cases.

The Justice Department is expected to make an early request for similar action in the case involving Shirley-Duke Apartments, Alexandria.

Beverley Manor was built on an $8.8 million FHA-insured loan which exceeded construction costs by the amount of the award. This money was distributed to shareholders out of excess mortgage proceeds in violation of the corporate charter, which restricted dividends to net earnings, Judge Bryan ruled.

The decision was upheld by the fourth circuit court of appeals and the Supreme Court refused to review the case.

Some 30 other windfall cases involving $18 million are pending throughout the country. About 20 involve dividend disbursements similar to the Beverley Manor case.

Judge Bryan's award affected these common-stock holders: Don A. Loftus, Jack F. Chrysler, W. R. Robinson, W. R. Robinson, Jr., Helen C. Robinson, Flossie R. Davis for the estate of Harry C. Davis, Don E. Ryan and representatives for the estate of Cyril J. Ryan.

Abolition of Status of Forces Treaties Would Harm Rather Than Help Both Our Servicemen Overseas and Our Security

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on this much-misunderstood question by Edgar Ansel Mowrer:

ON WORLD AFFAIRS: "SUPER PEOPLE" ATTITUDE WILL DESTROY ALLIANCES

(By Edgar Ansel Mowrer)

One can sympathize with those Americans who feel that Sp3c. William S. Girard, accused of killing a Japanese woman, should get a trial by an American court. For how can they be sure that a Japanese court will do him justice? And anyway, Americans anywhere—some think—should be tried by American courts.

One can also sympathize with the indignation of the Chinese on Formosa when Sgt. Robert R. Reynolds is acquitted by a United States military court after admittedly shooting Liu Tse-jan for looking into an uncurtained window and allegedly threatening the American with a stick. For Formosa is—or claims to be—part of China. (Obviously this is no slightest justification for the organized anti-American riots which followed).

There have been, and presumably will be, other such cases in any of the many places where about a million United States citizens are stationed on foreign territories. For tribalism, often accompanied by more or less conscious xenophobia, is almost universal.

Nonetheless, this writer believes that these are not only part of the price allied peoples must pay for saving their freedom from communism. They are also—he believes—part of the growing pains of a new world order.

HALF-TRUTHS

The first point is obscured by the current American notion that American forces overseas are there to protect those countries. This is a mistake—or a half-truth.

American forces are stationed overseas to protect the American people—and incidentally to save them tens of billions of dollars annually. For overseas bases, close to the periphery of the Communist bloc, constitute our chief military advantage over the Kremlin.

They enable our strategical Air Force to strike back harder—and perhaps quicker—at the Communists than they can strike at us. They constitute our best guaranty that even after a sneak attack on the United States, our retaliation would do far more damage to the U. S. S. R.—and that therefore the U. S. S. R. will refrain from any such sneak attack.

They are the basis for the United States military calculation that even after a Soviet attack, the United States could go on to win a thermonuclear war—with some 40 percent of us still alive as against only 12 percent of the Russians.

These bases do more—they meanwhile justify the administration's desire to save billions of taxpayers' money even if this permits the Soviets to outstrip us in the numbers of available warplanes, not to speak of conventional forces. Without these bases, we should be forced, as "Fortress America," perhaps to double our military expenditures—and obtain less security.

Therefore, while our overseas forces unquestionably do protect (up to a point) the nations concerned, the latter also protect us by letting us use their territory. If they invited us out we should have to go. The arrangement is two-way, with no particular gratitude due from either side.

Since almost no sovereign government would allow us to maintain fully extraterritorial forces on its territory, our choice is between accepting reasonable status of forces agreements with friendly governments—or clearing out. Which is why Congress is making no more fuss over the Girard case than home pressure compels.

BIRTH PANGS

But the incidents are more. They are the part of the birth pangs of a new world—or world order. For once one admits—as the Pentagon admits—that not even the United States can quite insure its safety without outside help, then the old order of fully independent states is passing.

Isolationists may protest and nationalists fume about it. But no alliance can survive if one party claims exceptional rights. Or are our nationalists ready to grant extraterritoriality to those thousands of foreign military men who are studying in our own military schools? To act—or seem to act—as a super people will destroy any alliance.

And the truth is, techniological knowledge and application have made the whole world a single area where no people can successfully go it alone.

Fortunately, the majority of Americans understand this. In a recent Roper poll, two-thirds answered that it is essential that the United States patch up the alliance with Britain and France, frayed by the Suez incident.

The Girard case shows merely that they have not yet drawn the necessary conclusions from their basic understanding. But give us a little time, and we shall.

Aid to American Small Business and Labor

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. PATTERSON. Mr. Speaker and my other distinguished colleagues, today I introduced a bill to amend the Mutual

Security Act which I wish to call to the attention of every Member of this important body. We all know that certain aspects of the mutual-security program are vital in preventing the further spread of international communism, and toward such an end our foreign-aid program serves an entirely worthy purpose.

However, Mr. Speaker, many of our domestic small-business concerns are becoming increasingly alarmed over the fact that millions upon millions of foreign-aid dollars are being spent annually on foreign products that could be purchased from domestic producers. Now during the past decade, Mr. Speaker, we have used foreign-aid dollars to rehabilitate old and even construct new industrial enterprises in foreign countries that today can undersell our domestic industries.

My proposal is that in the interests of labor and industry in this country, overseas procurement for the foreign-aid program will not be allowed until such time as it can be proved conclusively that a demand for a certain type of manufactured commodity cannot be filled in this country. Too often our local suppliers have been bypassed in the interest of foreign producers.

The International Cooperation Administration should be strictly enjoined from placing procurement orders overseas for commodities that can be supplied by our own producers.

My bill provides that the International Cooperation Administration will not be allowed to seek worldwide procurement for commodities in instances where it is established that available plant capacity exists in the United States to produce such commodities. However, my bill does not establish an inflexible rule to "buy American" without regard to other vital factors. If my amendment is adopted, the President will still retain his broad discretionary powers in administering the mutual-security program. Unrestricted Presidential authority is absolutely essential if the foreign-aid program is to achieve its comprehensive purpose in bolstering the economic life of the nations of the free world. We must continue to assist the intended victims of Soviet aggression.

My bill simply prohibits the internationalist clique in the State Department from forgetting American labor and industry when they are doling out billions of dollars of American taxpayers' money in the foreign-aid program. Before the ICA worldwide procurement policy was adopted, the brass mills of the Naugatuck Valley received a fair share of the brass cartridge business. Now it is not even worthwhile to offer a bid in competition against the low-labor cost modern brass mills of West Germany which were built with our foreign-aid dollars. We subsidize our late enemies in order to create unemployment in our home industries. At the very moment that our rubber footwear plants are suffering with a surplus, ICA officials are placing their orders for rubber goods with British manufacturers.

The time has come to call a halt to offshore procurement and reestablish the patriotic and commonsense policy of the buy American program if America is to remain the citadel of economic strength against Soviet penetration.

Since the end of World War II the United States has disbursed approximately $64 billion in gross grants and utilized loans as assistance to foreign countries. This foreign aid is classified broadly as military assistance, defense-support assistance, development assistance, technical cooperation, and other aid funds such as the President's contingency fund.

A very substantial share of the defense expenditures has been given as direct money grants to foreign governments to build up their military potential as well as building factories to produce war material. The results have been very tangible in the building of potential force to resist possible aggression.

Under economic aid, a very large variety of products was shipped overseas from the United States or procured outside the continental United States—in fact, 30 percent of all economic aid was disbursed as a result of offshore procurement. Canada supplied the products for 11 percent of our economic aid, Latin America, 9 percent, and Europe, over 3 percent.

The impact of foreign-aid expenditures in the United States has been felt largely in the high-wage, high-employment manufacturing industries producing machinery, ordnance, motor vehicles, aircraft, and the like. Its effect on employment has been largely in those industries which were fully employed and in many cases were even facing labor-shortage situations, especially in the aircraft industrial centers like Hartford, Conn.

Foreign aid has not, however, provided an important employment prop for those industries undergoing slack employment conditions like the brass mills, metal fabricating, and rubber-footwear plants of the Naugatuck Valley.

In fact, in many areas large-scale foreign-aid expenditures have had very deleterious effect on certain types of industries unable to compete for military or foreign-aid contracts. The effect has been seen mainly in the siphoning off of skilled workers, such as machinists, toolmakers, die sinkers and setters, patternmakers, tinsmiths, coppersmiths, sheet-metal workers, electronics technicians, welders, and flame cutters into other areas with large-scale demands for their services. Once small business has lost these skilled workers to the larger concerns at Hartford and elsewhere, it is practically impossible to get them back.

One effect of foreign aid overseas has been the reconstruction and modernization of industries abroad which compete with similar industries in the United States, especially in the copper and brass products field, electronics, rubber fabricating, watch-clock manufacturing, plumbing and electrical hardware. Mostly the competition falls in the sphere of small business.

It has been estimated that approximately 600,000 workers are employed each year directly and indirectly as a result of the mutual security spending program in the United States. However, the impact on small business has been very slight indeed, except as it acts as subcontractor to some larger concerns.

The point I wish to make is that small business gets such a minute share of foreign-aid business as to be negligible. One has but to study the daily procurement information bulletins issued by the International Cooperation Administration to note that source of supply is mostly worldwide. A small business circular is also issued, but it is very evident that small business does not get an appreciable share of the contracts.

The effect of foreign-aid expenditures may be slight for large concerns, but it has a multiplier effect on small business. The International Cooperation Administration should be strictly enjoined from placing procurement orders with foreign manufacturers for fabricated products that can be supplied here by our smaller concerns.

I have made an intensive study of foreign-aid expenditures beginning with the lend-lease program in 1940 and extending through World War II. The lend-lease program cost the American taxpayers $50 billion. In the postwar era the Marshall plan, aid to Greece and Turkey, and the global mutual security programs amounted to $56.1 billion, plus $3.4 billion United States investment in the World Bank, plus $775 million in surplus farm products, plus a carryover of $9.3 billion last June 30, plus $4.5 billion in new appropriations. This total is more than $74 billion spent or authorized in the postwar era. Calculated on a per capita basis of $864.98, the total foreign-aid expenditures of the United States from 1940 to 1957 have cost the taxpayers of Connecticut's Fifth Congressional District $237,264,014. Foreign aid has cost Litchfield County $85,522,303, Torrington, $4,063,744; Winsted, $7,595,389. In New Haven County, $151,741,711; Ansonia, $16,180,316; Derby, $8,873,830; Naugatuck, $15,098,226; and Waterbury, $90,370,515.

Can Industry Use Our Farm Surpluses?

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 2, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Can Industry Use Our Farm Surpluses?" The article was published in the July-August issue of the Massey-Harris Washington report. I believe industries can use our farm surpluses, Mr. President. Therefore, I have requested that the article be printed in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN INDUSTRY USE OUR FARM SURPLUSES

Congressmen and USDA officials have almost given up hope that we can eat, legislate or export our way out of the farm surplus situation anytime soon. Right now a lot of attention as centered on ways to use more farm products in industry. Corn, wheat, and cotton all have great promise as industrial raw materials.

Optimism is based on the report of the President's bi-partisan Commission on Increased Uses of Agricultural Products. Drawing upon the ideas of 175 of the Nation's top agricultural scientsis, the Commission concluded:

Production per cultivated acre will continue to increase.

Total farm production can be expanded faster than population.

Export markets cannot be expected to take the excess production.

The solution: expanded industrial uses.

Industry now takes about 7 percent of total farm production. If ways can be found to increases that to 15 percent a year, production can be increased and surpluses decreased at the same time. Production now runs around 5 percent more than we are using at home, or can export even with heavy subsidies.

Unless industrial uses are considerably expanded, the numbers of acres in crops and livestock will have to be reduced 10 percent by 1965 to balance production and demand. The commission estimates food grain acres should be cut 5 percent and feed grain 13 percent.

Right now we are spending only $15 million per year researching new industrial uses. Around $350 million is spent to increases production. The Commission recommends spending up to $200 million to find new markets and to develop uses for new crops.

Most promising industrial uses:

Cereal grains: Paper and paper products, industrial starch, insulating board, plastics, synthetic rubber, highway construction, motor fuels.

Vegetable oils: Waterproofing, paper sizing, flooring materials, detergents, asphalt additives, chemicals with antibacterial activity, paints, enamels, other protective coatings.

Cotton: Increase use by developing new, improved, and more economical processing methods, low-cost nonwoven textiles for home and industrial uses, new and more useful cotton varieties.

Animals fats: Expanded use in making plastics and lubricants.

Forage crops: Extraction of chlorophyll, carotone, xanthophyll, vitamins, other medicinal compounds.

New crops, possible uses include:

Bamboo: High grade paper, structural materials, specialty uses. Potential demand: up to 50 million acres.

Castor beans: Industrial oils. Potential need: 1 million acres.

Safflower: Livestock feed, industrial and edible oils. Potential need considerably above the 100,000 acres grown in 1956.

Jojoba: Oil and wax for industrial products. Need up to 150,000 acres.

Candelilla: Wax for polish and other products. Potential market for 7 million pounds a year.

Dioscorea: Cortisone, hormones, and other drugs and chemicals.

Guar: Gum for paper manufacture; protein for feed, forage, green manure. Well above current 100,000 acres.

Canaigre: Tanning material. Potential market for 100,000 acres.

Kenaf: Fiber for cordage and paper; need 200,000 acres.

WHY WE NEED LARGER INDUSTRIAL MARKETS

Present farm markets: Total surplus is only about 5 percent; 7 percent is used by industry; 12 percent is used directly as food; 10 percent is exported; 71 percent is fed to livestock. Stepping up industrial use from 7 percent to 15 percent could absorb the surplus.

New Data Needed To Help Small Farmers

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. DIXON. Mr. Speaker, whenever agricultural legislation is seriously discussed, there is talk about the plight of the small farmer. Many of our farm laws have assisted the large commercial farmers while doing little for the marginal farmers who are in desperate need of rehabilitation. This is like the case of the Swiss cheese having all the ventilation while the Limberger desperately needs it.

A major reason that the small farmer doesn't get the help we would like to see him receive is that we lack the statistical data which would identify his situation and the impact of various farm programs upon it. The real plight of the small farmer is swallowed up by "average" figures which are of little help in diagnosing specific ailments and considering remedies. Therefore, I urge support in the House of Representatives for my bill, H. R. 3828, which would require the Bureau of the Census to develop both money and nonmoney farm income data by economic class of farm.

This bill has already passed the Senate in the form of S. 405 introduced by Senator ARTHUR V. WATKINS. Senator WATKINS recently made an excellent statement on this bill to the House Post Office and Civil Service Committee. I wish to insert his statement at this point.

The statement follows:

Mr. Chairman, S. 405 and the House companion bill before you, H. R. 3828, introduced by Congressman DIXON, would require the Department of Commerce to collect annually money and nonmoney income data by economic class of farm. These bills are identical to S. 3145 which I introduced in the last Congress, and which passed the Senate in June, 1956.

On that occasion, I called the Senate's attention to the fact that: "income statistics which lump all classes of farms together are not adequate guides for the formulation of public agricultural policies. * * *

"The Congress must have at its disposal more meaningful, reliable and current agricultural income data than it now has, if it is to develop programs which effectively meet the problems of different economic classes of farms."

Agricultural economists have long recognized this problem. Consider the following observation by Ernest W. Grove in an article appearing in the April 1956 issue of Economics Research published by the United States Department of Agriculture:

"As the bulk of the farm income, both gross and net, goes to those farms that are classified commercial, the published totals are sometimes used as representative of commercial farms. * * *

"The published averages of income per farm and income per person on farms are for all farms taken together, and they cannot be assumed to represent either the commercial or the noncommercial groups of farms. On many small farms, the farmer and his family are primarily dependent for a livelihood on income from nonagricultural sources rather than on farm income. Most commercial operators, however, not only have larger total incomes but receive the bulk of their income from farming operations. Thus, the overall averages of per farm and per capita income are actually combinations of income averages for more homogeneous subgroups of farms, among which both the absolute size and the relative importance of farm and nonfarm sources of income show wide variations.

"For these reasons, a breakdown by economic class of the overall totals and averages of farm income is badly needed" (p. 51).

Although the farm price and income situation apparently improved somewhat during 1956, agriculture as a whole did not share equally in the unprecedented prosperity which produced a $412 billion gross national product and high incomes in the nonfarm sectors of the economy.

Perhaps one reason for this situation is that we have tried to apply the same farm program to different types of farm enterprises, with the hope that in some miraculous way all farmers would benefit equally. For example, many people have assumed that price-support programs benefit all farmers.

A little reflection, however, I believe will make it clear that there are certain fundamental problems in agriculture relating to size and type of farm, location, etc., which require different solutions and perhaps different types of public assistance than those generally assumed to be beneficial to agriculture as a whole.

The Census Bureau defines a farm as 3 acres or more of land if the value of the products raised on that land amounts to $150 or more; or if it comprises less than 3 acres and the value of the products sold amounts to $150. On the basis of this definition, the 1950 census of agriculture classified farms into (1) six classes of commercial farms, depending upon the market value of produce sold; and (2) several classes of other farms, including part-time and residential.

Based upon the classification of commercial farms, we had in 1949 according to the 1950 agricultural census:

1. 103,231 farms in class I. These are farms which sold produce valued at $25,000 or more.

2. 381,151 class II farms which sold between $10,000 and $24,999 worth of agricultural commodities.

3. 721,211 farms in class III selling produce valued at between $5,000 and $9,999.

4. Class IV farms numbered 882,302 and sold between $2,500 and $4,999 worth of farm and ranch products.

5. Class V farms totaled 901,316 and their owners and operators sold crops, etc., valued at between $1,200 and $2,499.

6. Seven hundred and seventeen thousand two hundred and one farms constituted class VI and sold produce valued at between $250 and $1,199.

It is evident from this breakdown, that two-thirds of our farms contribute very little to total money net income. However, these figures tend to indicate with respect to the owners and operators of farms, especially in classes IV through VI that their total income picture is worse than is really the case. Why? Because this type of data does not include nonmoney income such as farm produce consumed on the farm as well as that from nonfarm sources. Such nonmoney income when added to money income earned from the sale of produce and from nonfarm sources results in a more favorable comparison for the operators of these farms in classes IV through VI with (1) incomes

of farmers operating class I, II, and III commercial farms (which have a very small nonfarm sources component by comparison) and (2) nonfarm incomes, than does only money income comparisons.

So that I might make such comparisons in my supplemental views on the Joint Economic Committee's report 2 years ago, I asked the Department of Commerce to provide me a table showing by economic classes of farm total net farm income on a family and per capita basis. I had naturally assumed that as part of the 1950 census of agriculture, that the Department would be able to supply such data, including money and nonmoney income. To my surprise, I was told that such data did not, in fact, exist. So, I then requested the Department of Commerce to prepare me a table based upon the 1950 census which would show this data on a per capita and family basis. After much negotiating, the Department was able to give me the requested data which actually were a composite of (1) money income based upon the 1950 Agricultural Census, and (2) nonmoney income or value of farm products used by farm households based upon the 1945 census of agriculture (because such data were not collected as part of the 1950 census). I ask, Mr. Chairman, that this table he printed in the hearing record at this point in my remarks.

Analysis of this data by economic class of farm indicate that:

1. One million two hundred thousand of the then existing 3.7 million commercial farms, mostly family type, comprising the first 3 economic clases of such farms, and containing 209.1 million acres of harvested cropland, produced farm products sold for $5,000 or more. Expressed another way, 22 percent of the total number of farms produced 74 percent of the total value of all farm products sold, utilizing 60.5 percent of the total harvested cropland.

The average family income, including both money and nonmoney income, of the 5 million persons living on these 1.2 million farms was $5,143. By comparison, the average family income of all farm families on farms that same year was only $2,650.

The average per capita income, including both money and nonmoney income, was $1,229, nearly twice that of all people on farms, which was only $651.

2. The other 2.5 million farms in the last 3 economic classes of commercial farms, containing 118.8 million acres of harvested cropland, produced crops sold for $4,999 or less. Expressed another way, 47 percent of the total number of farms produced only 24 percent of the total value of all farm products sold, utilizing 34.5 percent of the total harvested cropland.

The average family income including both money and nonmoney income, of the 10.3 million persons living on these 2.5 million commercial family-type farms was only $1,741—$3,352 less than the average of those families operating farms in the first 3 economic classes of farms and $859 less than the average family income of all farm families.

The average per capita income, including both money and nonmoney income, was only $430—$799 less than the average per capita income of persons living on farms in the first 3 economic classes of farms—and $221 less than that of all people living on farms, which was $651.

3. In addition, there were 1.6 million part-time and residential farms. These farms, representing 31 percent of the total number of farms, produced only 2 percent of the total value of all farm products sold.

This analysis clearly indicates, I believe, that income data in agriculture by economic class of farm are essential in evaluating the effectiveness of farm programs as applied to different size and type farms. For example, in evaluating the extent to which price support programs aid farmers by raising prices and, therefore, incomes, the foregoing data makes it quite obvious that two-thirds of our family-type farms produce so very little for sale that they cannot materially benefit from such programs regardless of the level of price supports be it 75, 90, or 100 percent of parity.

No wonder then that average per capita money farm income is but one-half that of nonfarm per capita income, although on the farm side this figure is somewhat lower than the total farm income on a per capita basis, since, as I have suggested, nonmoney income is not included in current published comparisons such as those found in the Economic Indicator prepared by the Council of Economic Advisors.

On the other hand, this analysis makes it evident that within agriculture there exist great ranges of income disparity as measured by economic class of farm, and that average and per capita farm income figures, derived by dividing the number of farms and farm people into a net-income figure, are of questionable value for policy determination.

In December 1956, I again asked the Department of Commerce to furnish me a similar table based upon the more recent 1954 census of agriculture. However, again to my surprise I was informed by letter of January 10, 1957, from the Director, Bureau of the Census that "other information like that furnished you for the 1950 census is not available." Why? Director Burgess explained by saying that "figures on net income of farm operators or on the number of persons in farm operators' households were not collected in connection with the 1954 census of agriculture," and that "we do not have any data more recent than those for 1944 regarding the value of farm products consumed by families of farm operators."

It was concern over the need for finding workable solutions to the diverse problems which confront the owners and operators of different size farms and because of the lack of this type of much-needed farm income data for policy determinations which prompted me to introduce S. 3145 in the 84th Congress and S. 405 in this the 1st session of the 85th Congress. If such data, as that enactment of S. 405 would provide, were available, Congress would be in a better position, in my opinion, depending upon the annual shift in the number of farms in each class, to develop more effective and remedial agricultural programs.

With respect to the owners of the one-third of our commercial farms, 90 percent of which are family owned and operated producing over 85 percent of our annual crop value, data would help the Congress, depending upon the supply of various crops compared to their demand, to decide whether (1) more or less emphasis ought to be put on higher or lower price supports; (2) more or less marketing and production research was needed; and whether (3) more or less conservation assistance should be forthcoming. Concerning the operators of two-thirds of our farms which produce less than 15 percent of our crop value, such data should enable the Congress to better develop for most of the people living on small rural farms a noncommercial family-type farmer's program.

The present rural-development program, although in its embryonic stage, has already made plain that the economic and social solutions to the problems of the low-income farmer require different approaches or combinations of approaches for solution. The following were some which I suggested in my minority views to the 1956 report of the Joint Economic Committee:

"Many owners and operators of fifth- and sixth-class commercial family-type farms in particular can benefit from more liberal long-term credit policies coupled with intensive assistance along technical farming lines from the Federal and State extension services and other Federal and State agencies.

"More easily attainable credit would enable many such farmers to expand their farms to a size which could return to them and their families a decent level of living. For a great many other farms, lack of opportunity to acquire adjoining farmland, rather than lack of capital to purchase such lands, constitutes the 'size of farm' problem. For others the need is for credit on liberal long-time terms to be used for the purchase of equipment, buildings, livestock, and so forth. * * *

"Others will find the solution to their economic problems through a combination of part-time farming and nonfarm employment, as many have done in increasing numbers during the past few years, even if the latter provides most of their income. Evidence of this is found in the fact that the number of part-time farmers increased by 32,008 during the past 5 years, as disclosed by a comparison of the 1950 and 1954 agricultural censuses.

"Whereas in 1940, only $2.7 billion of farm income from all sources was derived from nonfarm sources, $6.1 billion was derived in 1955. In 1946, our first postwar year, 20.5 percent of farm income from all sources was derived from nonfarm sources; by 1955 this had increased to 32.2 percent.

"We have witnessed, as far as this problem is concerned at least, growing industrialization in the Southern States, where 6 of our 9 major low-income farm areas are located. Other things being equal, the South undoubtedly will continue its industrial advancement, since one of the area's most attractive features is the existence of considerable manpower which is now underemployed on small-sized and unproductive farms.

"Still other people will derive better incomes only by leaving agriculture entirely. This voluntary exodus from agriculture will attract many younger people, who because of the lack of adequate capital required to begin a successful farming operation, must look elsewhere for their livelihood. For these, 4–H Club and other educational programs provided by State extension services and other agencies for rural youth need to stress vocational training which can lead to gainful nonfarm employment.

"Older people living on marginal farms will not want to leave, in spite of the low level of living such farms provide them. Here an extension of rural social services may materially contribute to a better level of living for these people.

"And we must not lose sight of the fact that others would rather go on living the kind of lives they are, than trade them for any other, not because they are disturbed by lack of material goods and services—larger incomes, if you please—but because they like their lives as they now are. This, they too should be free to do; 'man is that he might have joy'" (pp. 73–76).

We are indeed making progress in this policy area; it has been slow, but the future for many of these people will be made much brighter the sooner we can develop a real noncommercial family-type farmers' program. However, from what I have said, I believe it is evident that for the purpose of developing public agricultural programs there is a vital need for timely money and nonmoney income data by economic class of farm. Agricultural policies and programs based upon income averages of such diverse economic groupings of farmers as constitute American agriculture will continue to provide some farmers unnecessary financial assistance at the taxpayers' expense; and will provide little or none to those which tax-

payers would be more inclined to provide public assistance.

At present, there are no continuing programs in either the Department of Agriculture or the Department of Commerce's Bureau of the Census which produce current estimates of money or nonmoney income by economic class of farm. Over the past several years, some limited attempts have been made to produce this type of information, but always in connection with other programs.

During fiscal 1956, for example, the USDA and the Department of Commerce in conjunction with a survey of farm income and expenditures, undertaken to improve overall estimates and modernize parity indexes, did obtain some national income aggregates and per-farm averages of off-farm income in 1955 for some 8 economic classes of farms. About $30,000 of the $285,000 total cost of this money might be said to have been for work on income estimates by economic class of farm. A study is now being made to determine, as originally required by S. 3145 which I introduced in the 84th Congress, whether it is feasible to collect information on farm income as part of the Bureau of the Census Annual Current Population Survey. The expenditures in connection with this project will be also in the neighborhood of $30,000.

Considering the importance of the policy implications I have previously discussed, it is to be regretted that so little attention has been given to this statistical program area, although the Congress has given continued attention to the improvement of much needed statistical data in connection with other aspects of vital agricultural as well as nonagricultural programs. This is evidenced by a comparison of (1) direct obligations for principal current Federal statistical programs, which in fiscal 1956 amounted to $27.1 million, and which in fiscal 1957 are estimated at $30.2 million, with (2) the expenditure of $60,000 in the "income by economic class of farm" data area during the same period.

In its report upon S. 405, the USDA indicated that such data as the bill would require the Bureau of the Census to obtain "is definitely needed. At present, information on a regular basis is available only for all farmers as a group ranging from low-production farmers to those with large-scale operations. The impact of developments in agriculture has varying effects on these farmers, and it is important to know on a regular basis the trends in income for the several groups."

The Department of Commerce in its report on S. 405 confirmed the need for such data which was expressed in the USDA report. It stated in part:

"While the Department of Commerce is not directly responsible for the determination of agricultural policy, it recognizes that information about farm income is clearly important in such determination. Since the incomes of commercial and noncommercial farmers and on large and small farms may differ substantially, information about income by economic class of farm would be desirable."

Neither of these executive departments gave adverse reports upon S. 3145 a year ago. However, in its report on S. 405, the USDA indicated that "we are not in a position to make a specific recommendation regarding the bill in view of the current budgetary situation." The Department of Commerce stated likewise that "in view of the overriding budgetary considerations obtaining at this time, the Department is unable to recommend enactment of this legislation, which would make mandatory the collection of such data."

In a subsequent letter to me under date of April 29, 1957, Secretary Weeks, in response to an earlier inquiry of mine stated:

"I gather from your letter you conclude our opposition to the bill is based on a weighing of the estimated cost against the benefits anticipated to be derived from the legislation. We wish to assure you such is not the case. In our letter of May 27 to Senator ELLENDER we stated the reason for our opposition was 'overriding budgetary considerations obtaining at the time.' By this we mean that we are not now in a position to recommend adoption of this new legislation which would have the effect of increasing the immediate budget regardless of any estimated long term savings that might be anticipated therefrom. * * * We wish to make it clear that our objection to the passage of this legislation is based solely on budgetary considerations and that it does not run to the merits of the bill."

Mr. Chairman, I would suggest to the Committee that there can be no doubt but that the budgetary concern expressed by the Department of Commerce was given ample consideration by the Senate Committee on Agriculture and Forestry and the Senate itself. It seems evident that the Senate and its Agriculture Committee clearly visualized long-run program savings from the immediate enactment of S. 405, which outweigh the modest costs involved even in light of the budgetary situation.

This I say for these reasons: (1) In the 84th Congress, the Senate Agriculture Committee reported S. 3145 without holding hearings. S. 3145, which is identical to S. 405, passed the Senate by unanimous consent with the membership clearly appraised of the fact that the initial cost would be in the neighborhood of $500,000 with a lesser amount required in subsequent years; (2) shortly after its introduction in this session of the 85th Congress, S. 405 was favorably reported to the Senate without hearings, and again the Senate passed it by unanimous consent, the Members again being clearly appraised of the probable but moderate costs involved.

In my judgment, passage of S. 405 will materially aid the development of more effective and beneficial farm programs at a more moderate cost to the taxpayer than is the case with respect to many of our present programs.

AFL-CIO President Meany Urges Prompt and Effective Action on U. N. Special Committee Report Establishing Soviet Government's Aggression in Hungary

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following fine statement by Mr. George Meany, president of the AFL-CIO:

AFL-CIO President George Meany today issued the following statement:

"American labor commends the United Nations Special Committee for its comprehensive and courageous report on the Soviet Government's brutal crushing of the revolt of the Hungarian people for national independence and human freedom. This report will serve the cause of human decency and enhance the prestige of the U. N. among the peoples striving for peaceful and honorable relations among the nations of the world.

"The authority and effectiveness of the United Nations as an instrument of world peace demand that the U. N. should not limit itself to the mere issuance of findings. Timely and appropriate action must follow promptly.

"The gravity of the Special Committee's indictment of Soviet aggression and Communist terror against the Hungarian people necessitate the immediate reconvening of the 11th session of the United Nations General Assembly to act on this report.

"There is no reason to oppose the reconvening of the General Assembly on the ground that this might cause the Soviet rulers to break up the present disarmament negotiations. If the Kremlin is negotiating in good faith, it will not engage in such disruption merely because the U. N. meets its responsibility as the world organization for peace and human rights.

"On the other hand, if the Kremlin insists that the U. N. must shun its responsibility and the world must pay such a price for even a very limited disarmament accord, then any agreement reached, under such circumstances, would not be worth the paper on which it is written.

"Any international agreement reached under threats or political duress would be worthless.

"Sincere efforts toward genuine disarmament will be encouraged and aided by the United Nations demonstrating its readiness to promote just and harmonious international relations. The cause of world peace urgently demands timely and effective action by the United Nations on the findings of its Special Committee on Hungary."

Is Force Our Only Weapon?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article that appeared in the Sunday Star by Lt. Gen. Guy Simonds, of Canada, who, at one time, was the former Chief of Staff of the Canadian Army. He was considered one of the most brilliant military strategists in World War II, and in the article that follows, he presents some rather caustic and disturbing comments on the West's military policy today:

CANADIAN VIEW: IS WEST TOO RELIANT ON AIR-ATOMIC FORCE?

(By Lt. Gen. Guy G. Simonds)

Unless some international understanding is reached on the definition and limitation of tactical atomic weapons, Western strategy is resting on a precarious foundation for the Western World may be confronted with the choice of desisting from the use of these tactical weapons, or accepting unrestricted thermonuclear warfare with its devastating consequences.

It is simplest to illustrate the difficulties by a hypothetical example. Let us assume that United States ground forces became involved in tactical operations in the Middle East or eastern Mediterranean and used atomic artillery or atomic air support in a tactical role in these operations.

The United States may declare they will restrict the use of weapons of mass destruction to small tactical atomic weapons, unless the other side uses thermonuclear weapons, in which case they will retaliate in kind.

But an important element of American military power in the Mediterranean is the 6th Fleet. And the 6th Fleet is a big bomb target—much more quickly and effectively dealt with by 1 or 2 of the most powerful superbombs, than by a lot of small bombs of lesser power. It is also a strictly military target.

If the United States forces on land were engaged in fighting against satellite forces and volunteers, the Russians might decide it would be well worthwhile to eliminate the whole area of engagement—including both sides—with super thermonuclear bombs if it could inflict a really shocking reverse upon the United States.

They could carry out both these acts under a declaration that they would not accept any limitation on the size of weapons if the United States resorted to atomic weapons in any form, but would confine their action to strictly military targets, unless the United States resorted to strategic attacks, in which case they would retaliate in kind.

They might well allow the United States the initiative in the use of atomic weapons before delivering a crushing counter against military targets.

STRATEGY FAILURE

The efforts of the United States to cajole the European allies of NATO into providing the maximum possible conventional military strength, on the basis that the United States would back them with thermo-nuclear and atomic weapons, have failed to have the desired effect.

A strategy placing over-emphasis on the use of weapons of mass destruction is a divisive force rather than an influence to cohesive strength among anti-Communist nations. Nor is it of any value in encouraging Communist satellites to break away to freedom, as witness the helplessness of the Western powers in face of the Hungarian tragedy. Nor can it police areas of high friction such as the Middle East at the present juncture. It is only the joker in an international poker game.

A feature of American philosophy is the replacement of the labor of man by machines—automation. A logical outgrowth of this philosophy is to project the same thinking into the military field and to depend more and more on science and machines and less and less upon men.

Up to a point this is no more than commonsense, but the pendulum has swung dangerously too far.

Political leaders in the Western World have surrendered to the temptation to mislead the mass of the people in democratic countries into the comfortable belief they can have guns and butter—wealth and security—for less and less effort. The threat of weapons of mass destruction, goes the argument, would provide security from war. Only a few highly trained experts would be needed to develop and man these weapons and most people could set about their peaceful occupations without worrying about fighting any more.

THE WEST'S MONSTER

The fact is that Russia and China have usable military power, capable of intervening in revolutionary situations and the West has not. The western democracies, led by the United States, have created a Frankenstein monster as terrifying to themselves as to their potential enemies.

It will be argued that present policies, foreign and military, have maintained peace and prevented a major war.

What peace? We have a series of patchwork, precarious "truces" and no solutions to even the minor problems causing local frictions, any one of which could flare to a major crisis with little warning.

What major war? Why should Russia consider the risks of a final showdown at arms, when her present tactics are proving so successful?

The strategic policy of overreliance upon weapons of mass destruction is a proven failure politically. For the pressure of the threat of atomic and thermonuclear war falls more painfully upon allies and potential allies than upon Russia.

It is safe to predict that the policy of overreliance on thermonuclear and atomic weapons will also prove a failure militarily. What fallacious premises have brought the free world to this unpleasant brink?

The basic false premise, is that the free world cannot compete with the "Communist masses" of primitive manpower, and it therefore has no alternative but to rely upon weapons of mass destruction.

This idea has been propagated, partly by genuine believers in the theory that "air-atomic" power provides the final answer to problems involving military force. It has been reinforced by strategical planners who operate on the mathematical formula of "counting noses"—so many millions of Russians, so many millions of Chinese, so many millions of satellite peoples.

The total is distressingly large. But the vital fact is overlooked that these are people who breathe, eat, and think.

MORALE AND SIZE

Throughout history, small forces inspired by a high morale, well led, well equipped, and with a real conviction in their cause, have overwhelmed much larger forces.

We know the large military effort involved in suppressing the Hungarian insurrection, and the heavy drain on military strength of protecting a base and lines of communication where skillful insurgents and guerrillas are active.

We know that within Russia itself there are seeds of dissatisfaction with an oppressive regime, and that in many parts, the German invaders during Korld War II were welcomed with open arms and flowers as liberators, until Hitler's policy of genocide shocked the inhabitants of Russia into partisan resistance.

Present policy fails utterly to exploit these vital moral forces.

We dream up arguments to prove we cannot find the military manpower needed to meet our pledged commitments.

Behind the Iron Curtain they continue working slave hours, employ women in heavy manual tasks, challenge the free world in their development of weapons of mass destruction, and prepare themselves militarily in terms of conventional power.

Our technological advantages can give free people good working conditions reasonable recreation and a secure defense. We will never have the last if public attention is directed almost entirely to the first two, while people are lulled with bland statements that their security is being well assured and not to worry about it. The consequences of such an attitude are writ plain in the history of the fall of past civilizations.

The Fourth of July

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. DORN of New York. Mr. Speaker, in the light of recent events, I should like to call the attention of my colleagues to a very pertinent editorial which appeared in the Tablet, on Saturday, June 29, 1957.

The article follows:

THE FOURTH OF JULY

When so many nations, once free, now are held captive in the prison of Communist tyranny, the Fourth of July is a day for serious thought.

Our country's freedom, which is the heritage of the Declaration of Independence, must be guarded watchfully. Without constant vigilance, this precious freedom could be lost, little by little, or it could be stolen outright. Were we to think or act otherwise, we would be living in a fool's paradise.

Our freedom as a nation must never be destroyed by any warmaking, foreign enemy. No unwise alliance with other nations and no blind defaults to world bodies ever should be permitted to whittle away the independence of America. No abdicating treaties and no secret agreements should be allowed to take away one iota of the freedom of the United States.

The termites of subversion and treason, who would bore from within this free land of ours, must be exposed and punished relentlessly. Surely the law of our self-preservation as a free nation requires that we show commonsense, even on the bench of the Supreme Court. In the interest of our country's freedom, all legalistic loopholes must be plugged and no new avenues of escape opened to the disloyal citizen or alien. While the rights of individuals must be protected, the common good of the entire citizenry also must be protected.

Rights go hand-in-hand with duties. The refusal to accept duties results in the forfeiture of rights. Any tricky play upon words in this regard makes a joke of freedom.

These thoughts on July 4 prompt us to repeat the words of the Declaration of Independence, as "we mutually pledge to each other our lives, our fortunes, and our sacred honor" in safeguarding the freedom of America.

Negro Progress in Chicago

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include two articles from the Chicago Defender of June 29, 1957, that will prove of interest to my colleagues from other sections of the country who may not be familiar with the progress made by the Negro in the large cities of the North. The first article, excerpts from a speech made in 1955 by John H. Sengstacke, editor and publisher of the Defender, pinpoints the tremendous importance of Negro buying to the retailers and manufacturers. The second article, by Edwin C. Berry, executive director of Chicago Urban League, stresses employment phases and the opportunities anticipated with the opening up of many thousand new jobs as a result of the St. Lawrence seaway and the Cal-Sag Channel. The articles follow:

[From the Chicago Defender of June 29, 1957]

NEGRO MARKET IS SENSITIVE BUT PROFITABLE

(By John H. Sengstacke, editor and publisher, Chicago Defender)

Three successive waves of migration have brought the Negro population here to (over) 633,000. At the present rate of increase,

the number will exceed three-quarters of a million in 1960.

This is the audience of the Chicago Defender, drawn to us by a common background of disfranchisement, segregation, and exploitation; dependent on us because for 50 years we have been champion, friend, adviser, and confessor on a scale matched by no other agency. It comprises a billion-dollar-a-year market which cannot be penetrated with more acceptable associations than those represented by the Defender.

Industries, and with them, workers and buyers are gravitating to our city in record numbers. There is no better market in which to concentrate distribution. Urban renewal, planned land use, and improvements in city government are proceeding at a pace that will soon entitle us to say, "There is no better place in which to live."

And what is the role of the Negro in this dynamic city? A peculiar phenomenon of our growth is that the white population of corporate Chicago showed a net decline of 25,000 in the 2 decades 1930–1950. In the same period the nonwhite population trebled.

Negroes are buying homes at an unprecedented rate. Our Second Market Survey indicates home ownership by 19.5 percent of Negro families. Between 1940–1950 Negro school enrollment increased 17.2 percent, while the national increase was 61.1 percent.

The New York Life Insurance Co. recently committed $35 million to the Lake Meadows housing development and shopping center in the heart of the Negro community. Other developers are turning huge stretches of suburban prairie into communities of Negro homeowners.

Far and away the bulk of the Negro population is oriented to the city itself however, and is flowing from a ring around the loop to the Southern and Western city limits.

This is of tremendous importance to the retailer and to the manufacturer. It points to a solution of the dilemma of metropolitan growth. Today, the retailer is on the move. Many are relocating at high cost in newly developed areas as the white population flees to the suburbs.

However, steadily for 40 years and dramatically for the past 10 years, a new market has been growing on his doorstep. It's made made up of people among whom is found the largest reservoir of unskilled and semiskilled manpower—the people who must form the bulk of the industrial working force. It is a market that will be swelled by the people who will man the port and related facilities created by the Cal-Sag project.

In the minds of some businessmen, the Negro is a remote social factor. This carries over into economic thinking, so that they regard the Negro as a remote economic factor. To others he is an object of scorn, and thus his economic power is ignored. He is bypassed by others simply because of misinformation or lack of information.

The Negro buyer is acutely sensitive to the associations accompanying advertising which reaches him. He is responsible to those media-institutions with which he shares historic identity of interest.

The institution of slavery has made the Negro different culturally, but his aspirations and his values are wholly American. He wants the same thing as other Americans from soup to citizenship.

URBAN LEAGUE CITES LOCAL MANPOWER NEEDS

(By Edwin C. Berry, executive director, Chicago Urban League)

There are conflicting opinions among economists and population specialists about the total dimensions of the impact which the St. Lawrence seaway project and the Cal-Sag Channel will have on Chicago. But there is no disagreement that Chicago is experiencing a new and great surge of economic growth and industrial expansion. It is further agreed that Chicago's growth in industry and commerce will create a need for an expanded supply of manpower.

The Chicago Association of Commerce and Industry has estimated that there will be 208,000 new jobs created in Chicago between 1955 and 1960. The association further states that 305,000 existing jobs will be vacated as a result of retirement. These figures, put together, produce a total manpower requirement in the Chicago metropolitan area of 513,000 workers for the period 1955 to 1960.

In regard to the question of where the workers will come from, the association has predicted that 109,000 workers will be obtained from the internal growth in the Chicago area but the remaining 404,000 needed workers will be drawn through inmigration, which is currently set by the association at 27,000 a year, will have to be doubled.

The Chicago Urban League is vitally concerned with assisting Chicago in achieving the objective of an adequate supply of manpower. As a means of relating league effort in a positive way toward both the economic growth and manpower needs, we are engaging our professional staff in a continuous analysis of employment and other patterns of opportunities, especially in relationship to nonwhites.

THREE SOURCES OF MANPOWER

According to Urban League analysis, manpower for the Chicago metropolitan area can presently be expanded from three principal sources:

Considering the three sources of manpower the Chicago Urban League is especially concerned with the labor-market potentials for the nonwhite worker.

Our study of the use of labor has revealed the concentration of nonwhite workers in certain occupations. According to the United States Census in 1950, Negro men comprised 9 percent of all employed male workers in the Chicago metropolitan area and were concentrated primarily in unskilled and semiskilled occupations. Figures from the same source and period relating to the participation of nonwhite workers in industries in the Calumet area, which is expected to lead industrial growth in the city for the next few years, provide an interesting comparison.

For the six largest industries in the Calumet area, Negro males made up 18 percent of the total labor force in the iron and steel industries and 9 percent of the total labor force in the transportation equipment industry (i. e., automobile and railroad manufacturing) but they accounted for only 7 percent of the workers in fabricated metals; 4 percent in petroleum and coal; and only 3 percent in machinery and manufacturing.

Such data suggest that while it is likely that employment of nonwhite workers may be greater in * * * of occupational concentration follows very closely that of the total metropolitan area.

If the increasing pressure of a manpower shortage is coupled with intensified effort for merit employment by management, labor, and Government, there will be an acceleration in the integration of Negroes in the general field of employment in Chicago. If so, there should be increasing opportunity for a noticeable spread by nonwhite workers to upper level occupations in all industries.

However, if the present pattern of forcing the Negro worker into a ghetto, with its obvious implications for bad housing, poor health, and family disorganization continues to be a normal pattern of treatment for Negro workers, then there will be serious limitations placed on the ability of the Negro youth to take advantage of such opportunities.

This point is especially underscored by Eli Ginsberg in his recent study on the Negro potential, where he states that the ability of the young individual Negro worker to take advantage of a new employment possibility will depend largely on the previous incentives which he has developed and prepare himself. The limitation imposed by the ghetto on the incentives of the teenage Negro youngster is even more sharply defined in a recent probe conducted by the League on Chicago's Central Southside.

It is clear that the ghetto has implications for more than just the Negro teen-age youngster who is a potential worker. The worker who lives in such a situation is exploited and crippled to a degree that his general employment efficiency is seriously impaired.

The ghetto, too, has implications in terms of Chicago's ability to attract more manpower through immigration.

In relationship to such potentials and restrictions, it would seem realistic to take cognizance of the fact that the Nation's economy, as a whole, is in a state of expansion and, consequently, has an increased need for manpower. As a matter of fact, within the immediate area, other industrial and commercial centers, such as Detroit, Cleveland, and Toledo, also figure significantly in the St. Lawrence seaway development and are moving to expand their industrial and commercial resources. Against this background, it is clear then that if Chicago is to compete successfully for an adequate supply of labor in a national or regional market, it must do some specific things to place itself in a more favorable position with respect to its competition on a regional and national basis.

Congress Should Take No Action on Status-of-Forces Agreements Until Supreme Court Decides Just What a Soldier's Rights Under Them Are

---

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of June 28, 1957:

STATUS OF FORCES

The House Foreign Affairs Committee chose a peculiarly unfortunate time and manner for its mischievous denunciation of the status-of-forces agreements. A resolution approved by the committee on Thursday provides that the President shall forthwith seek revision of article VII of these agreements regarding foreign trials of American military personnel abroad and, if the revision is refused, that he shall renounce the article. the premptory language of the resolution is offensive. And the timing of it, while the Supreme Court has the Girard case under consideration, seems most improper.

The status-of-forces agreements with this country's NATO allies embody a treaty initiated by the Truman administration, completed by the Eisenhower administration and duly ratified by the Senate. The House Foreign Affairs Committee has no part in the making of treaties and no authority to compel renunciation of them. The House as a whole can, if it wishes, adopt a resolution expressing the view that a treaty ought to be renounced; but it would be acting most unwisely, we think, if it were to do so in this situation.

The status-of-forces agreements provide that American servicemen who violate the laws of foreign countries in which they are stationed shall be subject to trial by the

courts of those countries except in connection with offenses "arising out of any act or omission done in performance of official duty." It is hardly conceivable that any country worth having as an ally—and least of all the countries in NATO—would allow foreign forces on its soil if these forces were not amenable to its laws. And certainly not even Representative FRANK BOW, the most vehement opponent of the status-of-forces agreements, would consent to having foreign troops stationed in the United States if they were not subject to trial in American courts for violation of American laws. The effect of what the House Foreign Affairs Committee has proposed would be nothing less than a complete withdrawal of American forces from Europe—and, indeed, from this country's defense outposts all over the world.

The new drive to renounce the status-of-forces agreements takes its impetus, of course, from the Girard case. It was to be expected that the American waiver of jurisdiction over Army Specialist Girard would be used by Representative Bow as a pretext for attacking the agreements, which provide specifically that either side may waive jurisdiction as to trial. The United States and Japan have not yet completed a status-of-forces treaty, incidents of this kind being governed by an administrative agreement between the two countries modeled on the NATO treaty. The provision permitting the United States to waive jurisdiction in regard to offenses by American servicemen in the course of official duty has raised a constitutional question now being pondered by the Supreme Court. Until that tribunal renders its decision, Congress would do well to leave the issue alone.

German Comment on Relations With Poland

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. FLOOD. Mr. Speaker, the Polish American Congress, representing 7 million Americans of Polish origin, has sent me a deeply penetrating and highly enlightening analysis of the official German pronouncements and press comments on the subject of the Polish-German relations. This analysis, completed by a well-known Polish publicist, Karl Grabowski, augurs an eventual Polish-German understanding upon which European settlement and peace is dependent in a high degree.

Under leave to extend my remarks in the RECORD, I include the analysis, as follows:

GERMAN COMMENT ON RELATIONS WITH POLAND

In July 1953 the veteran Social Democrat and former Reichstag Speaker Paul Loebe warned Silesian refugees meeting in Cologne against illusions about returning to their old homes. In December, Conrad Dieringer published an article in the Frankfurt Neue Presse on the Oder frontier. He argued that so long as we start with the idea that the restoration of the territorial position of 1937 must be the unconditional objective of all German foreign policy, we shall never achieve peace and final tranquillity in Europe. Such a demand is not only unrealistic but also unhistorical. Only he who is willing to surrender something can seriously negotiate. A few weeks later, in January 1954, Helmut Lindemann was writing in similar vein in the columns of the Stuttgarter Zeitung: "That this (detente between East and West) will bring a restoration of the German frontier of 1937 can be believed only by those who shut both eyes to the realities of this world."

Many such opinions, going back even earlier, might be quoted. Bold advocates of understanding with Poland were used to being shouted down and not infrequently charged with treachery or at least with pusillanimity. Since then 3 years have passed without bringing Germany one step nearer to reunification which is already beginning, as a slogan at least, to acquire a pressing urgency in the German mind. It has become a propaganda catchword which even serious politicians will be prepared to repeat during the election campaign. But the more levelheaded among them are also asking themselves often just how this unity is to be achieved.

COMMUNITY OF INTERESTS

The breaking of the ice in the East European Soviet Empire came as a shock and a stimulus to the German opinion. On the one hand, German hopes of reunification were strengthened; on the other, it began to be realized that one unavoidable condition for reunification would be the reconciliation to the loss of the former eastern provinces. It was also noticed that the presence of Russian divisions on Polish soil as well as in Eastern Germany made Poland a potential ally in the common struggle to win freedom from foreign control. The cause of a free Poland and the cause of German reunification found themselves willy-nilly in the same boat. Once this had been recognized, the thaw in German-Polish relations was well underway. On Germany now depends the question whether a community of interests will produce only a temporary lull, for a tactical end, or will prove to be the starting point for a basic change in the German attitude toward Poland, a change beginning with the awareness that Germany's neighbor to the east is the Polish state.

First to recognize the identity of the two nations' interests in this field was the Federal Minister for Foreign Affairs, Heinrich von Brentano. At a press conference in London in May 1956 he spoke of Germany's illusory legal titles to her former eastern territories. Refugee circles attacked this bold expression and obliged the Minister to issue several disclaimers which had the effect of weakening the original formulation. That the idea had germinated in Von Brentano's mind was however an undeniable fact, and the hint dropped by him was soon taken up by others, less hampered by diplomatic considerations. Dr. Heinrich Greve, a Social Democratic deputy, twice spoke on the same lines. Attacks by the revisionist press were answered factually by other organs of public opinion which appealed for commonsense, moderation, and above all realism. In June the well-known journalist Paul Wilhelm Wenger published in the Rheinischer Merkur an article headed "Rather 17 Millions," plainly stressing the community of interests between Germany and Poland and stating unequivocally that in the last resort the fate of 17 million Germans in East Germany should concern the German nation more closely than a chimerical grand reunion with their former eastern provinces.

EFFECT OF POZNAN RISING

The Poznan rising followed and for the first time within living memory the columns of the German press were filled with reports and commentaries on the situation in Poland. Relaxation of visa regulations opened the frontiers of Poland and Western Germany to the journalists of both countries. News and comments on the thaw in Poland began to get out, interspersed with backward glances at the blunders of the past and glimpses of the mutual advantages in drawing closer together. In this way the establishment of diplomatic relations between Warsaw and Bonn, closer trade contacts and cultural exchanges have become permanent topics of public discussion. The thick ice of distrust is melting. And in the half-darkness there are the first distinct glimmerings of a realization that Germany's neighbor to the east is Poland not Russia.

FOR A REASONABLE APPROACH

Poland's October days and the rising in Hungary have increased further German interest in Polish affairs. For 3 months Polish news made almost daily headlines in the German paper. The oldest cannot remember the time when Poland had such a press in Germany. In the first place, Poland's "spring in October" moved into action the great south German humanist and leading Social Democratic politician, Prof. Carlo Schmid, deputy speaker in the Bonn Parliament. During a German-French conference of the European movement in Bad Neuenahr, he made two speeches which attracted much attention in the European and even to some extent the American press. Speaking of the former German provinces, Carlo Schmid declared bluntly: "I shall speak out here, even in the face of danger * * * that at the next election I may be accused of giving away and betraying old German lands. These are lands in which the stones speak German, but no more Germans live there. This painful matter must be dealt with in a reasonable, that is, in a political manner."

BREAKING THE TABOOS

Two days later, on October 7, at the closing session of the conference, Schmid amplified his earlier remarks: "It seems to be an error to assume that the problem of Germany's reunification can * * * be solved without previously reaching an understanding on the fate of the territories east of the Oder and Neisse. If this is not done, then there will simply never be negotiations which have any prospect of bringing about the reunification." Analyzing further the situation which had arisen in the east, Carlo Schmid gave it as his opinion that negotiation was the only possibility open: "And there is only sense in wanting to negotiate if the negotiator is himself prepared to make concessions. Otherwise there is no chance that anything will come out of the negotiations." Schmid concluded with a prophetic appeal to the German nation: "I am of the opinion that it is one of the most honorable duties of political men to break through taboos, and here is a taboo, an evil taboo; and it must be broken through—otherwise it will one day become our master; it will bewitch us all."

BETWEEN AGGRESSION AND POTSDAM

Carlo Schmid gave expression to a thought which was evidently at the back of the minds of many responsible German politicians, but which none had hitherto had the courage to utter so openly. A few days later Dr. Eugen Gerstenmaier, speaker of the Bundestag, came to the help of his deputy. Gerstenmaier not only supported Schmid's attitude in principle, but expressly drew attention to the casual link between Hitler's aggression on Poland and the extortions of the Nazis in Poland on one hand, and the Potsdam resolutions and the deportation of the German population from Poland on the other. Schmid's views were also supported by another prominent Christian Democrat, Dr. Sieveking, the mayor of Hamburg, who this year is acting as chairman of the Federal Council. Sieveking's approach to the Polish problem stresses the trading opportunities opening up between the two countries, al-

though he had also stated that the frontier issue should not prevent a permanent settlement, and in January of this year openly argued the necessity of German concessions.

SENSE OF REALISM

The serious West German press has shown a greater sense of realism in forming public opinion than the managers of the parties. The leading dailies, Die Welt, Frankfurter Allgemeine Zeitung, Sueddeutsche Zeitung, Tagesspiegel, all supported Professor Schmid's initiative. The widely read Rheinischer Merkur carried the argument furthest in an article headed "The Polish Taboo." The writer considered that the "readiness to compromise demanded by Schmid can only surprise those who have not as yet reflected why Germany was so easily divided in 1945. One cannot loudly condemn a partial loss, as crying to heaven, when one has oneself twice allowed the whole of Poland to disappear into one's own pocket. * * * Any German policy toward Poland must reckon with this shameful fact. One cannot—as unfortunately it is commonly done—consider Poland's eastern frontier, which cuts off a third of the country to Russia's benefit, as permanent, and at the same time demand from Poland a total revision of the Oder-Neisse line. Anybody who wants German-Polish talks to open on this basis is driving Poland permanently on to Russia's side, instead of releasing her from the Russian embrace by offering to negotiate on losses for which Hitler was responsible."

GERMANY'S RIGHTS EXAMINED

Among the chorus of statements in favor of normalizing relations with Poland were some from leading representatives of the government in Bonn.

Chancellor Adenauer has often drawn attention to the need for correct neighborly relations with Poland and to a future all-German Government's task of settling disputed issues (i. e., primarily the frontier) "on a humane basis and "Heimatrecht" ("auf dem Boden der Menschlichkeit und Heimatrechtes"). What is this "right"?

Dr. Anton Boehm, political editor of the Rheinischer Merkur, tried to answer the question in a leading article entitled "What Is the Right to a Home?" His explanation is particularly worthy of note, since the paper is regarded as Dr. Adenauer's mouthpiece. Dr. Boehm points out that this right has not been codified in international law, but, nonetheless, has a profound moral justification which should insure it a place in any future international code as one of the basic rights of man. It is, however, a right which it will not be easy to carry out in practice, and which calls for a closer definition:

"It will also be necessary first to ascertain what are the limits of the right to a home, limits which it has like every other human right. A satisfactory conclusion of this task is still far to seek. Meanwhile, today it is already possible to make contributions designed to get rid of misunderstanding which only burden a just claim. The mixing up of the right to a home with frontier problems and territorial demands is such a misunderstanding. Confusion here is so widespread that often one talks of the expellees' right to a home when in reality what is meant is the restoration of the German Reich frontier of 1937, of even 1939."

The "right to a home" has nothing to do with territorial claims, and is limited to the natural, individual right of every man to a dwelling place and to a livelihood in the land of his origin or naturalization. In the light of these arguments, a demand for the normalization of future relations with Poland "on humane basis and native right" would not of itself imply the raising of any claims to frontier changes, but only of the subjective right of a refugee to return, if he so wished, to his place of origin.

That this is no isolated interpretation is clear from utterances by other distinguished German journalists, Hans Zehrer, editor of "Die Welt", for example (in the issue of September 19 last) or Hansjakob Stehle of the "Frankfurter Allgemeine Zeitung" (December 11).

In dealing at length with evidences of a more responsible attitude towards Poland among the well-known German politicians, and more particularly towards the thorny problem of the frontier, it is not intended to imply that German opinion is unanimous, that it has suddenly seen the errors of its past and has grown aware of the harm which Germany herself has suffered and will suffer in consequence of them. Beside the moderate voices, pages could be filled with others condemning them, and with examples of reinforced revisionist propaganda.

This propaganda comes from a wide range of organizations, the extreme nationalists, the "Ostforschung" circles (particularly those under the patronage of the Protestant Stuttgart weekly "Christ und Welt"), the refugee associations, including the notorious Association of Expelled Germans and its latest ally, the ex-Nazi Schneider of the Saar.

The refugee bodies pose as defenseless victims of Polish chauvinism, victims who out of kindness forgive Polish crimes and abandon all idea of revenge, an atitude mercilessly exposed in the "Rheinischer Merkur" article on "The Polish Taboo". Describing a revisionist meeting in Bonn, arranged immediately after Carlo Schmid's speech, by Linus Kather, chairman of the expellee's association, the author commented that it was a manifestation in which "Kather's divine right to restoration on condition that revenge is renounced" acquired the sinister undertone: "We shall not kill you if you hand over everything of your own free will, but if necessary we have power to do otherwise."

Founder and President of a Great Independent Business, the Duncan Coffee Co.

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. PATMAN. Mr. Speaker, on June 14, 1957, my remarks about the passing of a prominent businessman of Houston, Tex., the late Herschel M. Duncan, founder and president of the Duncan Coffee Co., at Houston, were inserted in the RECORD. As a further attestation to the fine characteristics of this self-reliant, successful businessman and the high esteem in which he was held, I would like to insert in the RECORD at this time a copy of the Grounds, which is published by the employees of the Duncan Coffee Co. One will note by their statements that Mr. Duncan's influence will endure for many years in the lives of those he inspired toward great achievements for themselves. He will long be remembered for his warm human qualities and the example he set for them, as well as the high principles by which he lived.

The statement follows:

HERSCHEL MILLS DUNCAN, NOVEMBER 5, 1888-FEBRUARY 15, 1957—FOUNDER AND PRESIDENT, DUNCAN COFFEE CO.

The many friends, business associates and employees of Herschel M. Duncan were shocked and grieved to learn of his tragic death on Friday morning, February 15, 1957. His passing marked the close of a brilliant business career, and a lifetime spent in the service of others.

In 1907, at the age of 18, Mr. Duncan came to Houston and was employed as a laborer at the Cheek-Neal Coffee Co., a firm owned by his uncle, J. Robert Neal. This company was later sold to General Foods Corp. Mr. Duncan commented many times, and it is a well known tale among his employees and friends, that he took his first week's salary check of $9 to a store down the street from the plant, cashed it, bought two pair of overalls, and then went back to work.

By 1918 Mr. Duncan was plant superintendent for Cheek-Neal, and it was at this time that they moved to a new location, leaving behind in the old 1200 Carr Street plant much of their old roasters, grinders, and other coffee-processing equipment. Mr. Duncan saw this as an opportunity to enter the coffee trade in his own right. He resigned his job with Cheek-Neal, leased the old plant, worked out a contract with the Government to use a part of the plant as a warehouse for storing of World War I flour and other foodstuffs. This financed his start and within a few months he was in the coffee business.

It is difficult to realize that Herschel Duncan, as most of us knew and remember him, was the same man who came to work at 5 in the morning, fired his own furnaces, roasted and packed his coffee, and went out in a Model T Ford in the afternoon and sold that coffee—pound by pound—to his first customers. The record indicates that the first day's sales, on August 12, 1918, to have been $2.62. And, this is the same man who became influential in the conduct of community affairs, a man known and respected by prominent businessmen throughout the United States.

The years went by, and sales grew from a few pounds that first day to 50 million pounds annually. While many people speculate on the reasons for the rapid growth of his company, the answer no doubt lies in his rule of maximum quality, a policy of fair business practices, and a high standard of employer-employee relations. This is best proven by the confidence of the buying public, the cooperation of the company's suppliers and outlets, and a loyalty from his employees that is unequaled elsewhere.

The highly competitive nature of the coffee business, coupled with severe price fluctuations in green coffee prices, governmental controls during war years, and the general depression of the 1930's has produced momentary setbacks. This was true not only of the coffee business, but many other businesses as well. However, Mr. Duncan's company prospered and expanded while others less hardy fell by the wayside. His keen foresight, his hard-hitting business acumen, and willingness to hazard the risks inherent to the coffee business have guided his firm to the prominence it now enjoys in the coffee industry.

The home office of Duncan Coffee Co. is still the same building and location where Mr. Duncan started out some 39 years ago. The building, of course, has been expanded to meet production, warehousing, and office requirements. In 1936, Mr. Duncan bought out Magnolia Coffee Co.; 1937 marked the acquisition of the Delicious Coffee Co. in Corpus Christi; 1941, the garage and automobile repair shop were constructed; 1949, a warehouse containing 22,000 square feet was added to the original Duncan plant; 1949, a 3-story addition was constructed at the

Magnolia plant; 1952, Duncan acquired the Sheer Coffee Co. in Waco; and 1953 saw the construction of a new modern office and warehouse in Dallas. For many years it was Mr. Duncan's dream to someday build a new modern office and plant to replace the original Carr Street plant. This would have been the culmination of his many years of endeavor in a business that was his way of life.

No résumé of Mr. Herschel Duncan would be complete without the mention of the three most popular brand names to be born of Duncan Coffee Co. Texas' largest seller and the favorite of thousands in its trade territory, Admiration was the first. Bright and Early, the coffee "with the rooster on the package" was second and the choice of those who prefer a mild, zesty coffee in the lower price range. Mr. Duncan's prize product, Maryland Club, "the coffee you'd drink if you owned all the coffee in the world," was a blend developed by him especially for fine institutional accounts, and it has become the overwhelming choice of coffee connoisseurs in the southwest. These coffees, and many other blends, were all originated by a man regarded in the coffee industry as one of the world's top coffee tasters and coffee experts.

Some 3 years after starting the Duncan Coffee Co., Mr. Duncan was joined by his brother, Charles W. Duncan, Sr., and they were the only stockholders in the company for many years. However, in 1951, a portion of the capital stock was offered to the public for the first time. Controlling interest was vested in Herschel Duncan from the company's inception in July of 1918 until his untimely death on February 15, 1957.

In the days that have gone by since Mr. Duncan's passing, we realize more and more how fortunate we were to have had his wisdom, counsel, and guidance in the conduct of the company's affairs for so many years. For those who knew and loved him, and were fortunate in having worked for and with him, his indomitable spirit, and the knowledge he imparted to each of us during his lifetime, remains to guide and inspire us in the years that lie ahead.

Herschel Mills Duncan was born on November 5, 1888, on a Kentucky plantation, the son of John Green Duncan and Armelia Neal Duncan. Mr. Duncan was educated in Kentucky public schools, and attended Southern Normal College in Bowling Green, Ky.

Mr. Duncan moved to Houston in 1907, and on June 5, 1912, married Miss Linnie Dunn, the daughter of Thomas C. and Tracy Dunn. The Duncans were the parents of 4 children, and the grandparents of 14, all of whom survive Mr. Duncan. From a modest apartment in the early years of their marriage, the Duncans moved into their River Oaks residence in 1929 where they were living at the date of his death. The Duncans also maintained a summer home on the bay.

Herschel Mills Duncan was for many years active in local civic and charitable organizations. He was a member of St. Luke's Methodist Church and had contributed much to its growth and activities; he was a director of the Houston Horse Show Association; a life member of the Houston Fat Stock Show Association; he served on the Board of Managers of Jefferson Davis Hospital; Mr. Duncan was a member of the Honorable Order of Kentucky Colonels; a charter member of River Oaks Country Club, and a member of the Ramada, Tejas, Houston, Tex., Corinthian Yacht and Houston Country Clubs.

Mr. Duncan was for many years interested in the breeding and raising of Tennessee walking horses, and his great love of horses is reflected in the mural and many statues used in the decor of his office. He also for many years was active in local golf circles, however, following the impairment of his vision, he had restricted his outdoor activities to boating and fishing.

Final services for Herschel M. Duncan were held from the residence, 3320 Chevy Chase, on Saturday afternoon, February 16, 1957, Bishop A. Frank Smith, and the Reverend Durwood Fleming officiating. Interment was in Forest Park Cemetery, Houston, Tex.

Mr. Duncan is survived by his wife, Mrs. Linnie Dunn Duncan; his daughters, Mrs. Katherine Duncan Cummings, Mrs. Amelia Duncan White, and Mrs. Harriet Duncan Taft; his son, Herschel Mills Duncan, Jr.; his brother, Charles W. Duncan, Sr., and 14 grandchildren.

[From the Houston Chronicle of February 17, 1957]

DUNCAN DEATH THINS PIONEER RANKS

The death of Herschel M. Duncan thins further the ranks of the pioneer businessmen of this city who helped to build the community into the metropolis it is today. The community will miss his services.

Duncan, a native of Kentucky, came to Houston 50 years ago when he was 18 and went to work for his uncle, J. W. Neal of the Cheek-Neal Coffee Co. He learned the business quickly and in 1918 started his own firm, the Duncan Coffee Co. Through his business acumen and good trade practices he built the company to the large organization it now is.

Throughout his career he was active in civic and welfare work in the community. He was a director of the Jefferson Davis Hospital and the Houston Horse Show Association. He was one of those who helped to make the Houston Fat Stock Show and Rodeo the success it is. He was a patron of the Houston Symphony Orchestra and was known as a generous contributor to many civic and charitable undertakings in Houston.

Physical evidences of his work in behalf of the community will endure for many years.

[From the Houston Post of February 16, 1957]

H. M. DUNCAN SET EXAMPLE OF ENTERPRISE

Herschel M. Duncan was a self-reliant man who believed in climbing the ladder of success by his own efforts, rather than depending on others to boost him. In this course of life he set a striking example of American enterprise and initiative.

First, he gave up an opportunity to succeed his father as owner and operator of a plantation in his native Kentucky. Striking out on his own, he came to Houston as a youth of 18, and went to work for his mother's brother, the late J. W. Neal, at the old Cheek-Neal Coffee Co.

Starting at a salary of $9 per week, young Duncan learned the business from the ground up. He was general superintendent when, in 1918, he brushed aside another opportunity to rise in a kinsman's enterprise, and ventured forth in his own coffee business. It was a struggle, "roasting coffee in the morning and peddling it at night," as he once recalled, with an old second-hand Ford for transportation. But the self-reliance that moved him to leave the security of his uncle's company to go on his own lifted him to the heights of success. He built the Duncan Coffee Co. up into one of the largest in the country.

Herschel Duncan's qualities of character also elevated him to leadership in Houston's community life. His civic consciousness and his active interest in cultural affairs, particularly as a patron of the Houston Symphony Orchestra, contributed substantially to their advancement.

His untimely passing is a great loss to Houston and countless friends share the grief of Mrs. Duncan and members of their family.

EDITOR'S LETTER

In the past few weeks several of you have asked when we were going to have another issue of The Grounds. The interest you have shown has been very encouraging, and I wanted you to know that this issue was purposely delayed.

The weeks following the death of Mr. H. M. Duncan were very busy ones. There were countless matters to be handled, and my working days were long ones, and there was no time to devote to The Grounds.

I felt, as many of you did, that our next issue should appropriately be one that would pay tribute to the man who was the founder and president of our company. I felt, too, that this issue would be one which required much thought and careful consideration in order to make it a tribute of which we could be justly proud, and in keeping with the stature of the man it memorializes.

This, then, is the story of a man who was not only our employer—but a friend to his employees as well. I have put my best efforts into this issue, and I am hopeful it will meet with your approval and be a memento that will be placed with others that you cherish.

It has been said that next to a man's family, his secretary knows him best. Most of his waking hours are spent at his work, and this he shares with his secretary. She often sees a side of his personality, and many character traits, that are never manifested before his family or business associates. While I have been in the company's employ for over 13 years, I had worked directly for Mr. Duncan only during the past 3 years. It was a challenge and a privilege to work for and with him, and an experience that I value highly and will long remember.

Looking back, you remember the little day-to-day happenings—the habits and expressions that were so much a part of his vibrant presonality. The working day usually started with a telephone call: I'm on my way to the office; and in 20 minutes or so, the elevator door would open to his office. I could hear him as he would hang up his hat and coat. He would walk to the door connecting our offices, tell me good morning, and chat for a few minutes. Then he would walk over to the door connecting Mr. C. W. Duncan's office to talk with "Brother." He would usually then start down the hall, stopping to speak with the department heads, secretaries, and one or another of the employees, and would inquire as to how their work was going. He spent many hours in the cupping room checking the blends to be sure that product quality was being maintained. Ofttimes I never saw him again until noontime when he and Mr. Charlie would leave to lunch together.

Mr. Duncan was a man that expected his employees to function effectively, and their efforts were appreciated and rewarded accordingly. He was interested not only in the work they could do—but he was interested in their well-being also. If this man had a fault it was that of being overly generous—not only where his employees were concerned, but also in the welfare of others who, as he said so many times, were less fortunate than you and I.

And so, his passing leaves a void in each of our lives. He had a special place in my heart, and in yours. As the days go by, the first shock of grief and loss is lessened—but the imprint of his having lived remains.

These are but a few of my memories—I wanted to share them with you.

RUTH GRIFFIN.

The Economic Implications of Foreign Aid

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. FULTON. Mr. Speaker, I would like to compliment the Duquesne Review, of Duquesne University, Pittsburgh, Pa., upon the excellent article entitled "The Economic Implications of Foreign Aid," by Thomas P. Melády, director of development of Duquesne University, which appeared in the spring 1957 issue.

The article follows:

THE ECONOMIC IMPLICATIONS OF FOREIGN AID

(By Thomas P. Melady)

The United States is engaged in a basic review of the general principles underlying the foreign-aid program. Since the start of the Marshall plan, up to and including June 30, 1956, the Congress appropriated for all types of aid related to the mutual-security program—$42.4 billion.[1] We have now come to a point in our national life when it is felt that a fundamental analysis of the foreign-aid program should be made.

In reflecting on the economic implications of foreign aid, there are certain basic questions that should be answered. Exactly what are we getting in return for our expenditures that justifies further expenditures along these lines? This question must, of course, be answered in the broader framework: what are the basic security interests of the United States in the world today?

Some of the more interesting factors to be considered are the following: the Soviet Union, Red China, and their satellite states have a population of 800 million living in one enormous contiguous area. This vast strategic geopolitical power is committed to the cardinal principle that communism will one day dominate the globe. Outside this Communist power structure there are approximately 1.7 billion people, of which the United States has only 170 million. Faced with the ever-present challenge of this vast Communist force dedicated to its liquidation, it can be appreciated that the United States is not big enough by itself to stop a really determined outward push of international communism. By working together with the people of the free nations, however, this country has the Communist bloc outnumbered in terms of population better than 2 to 1.

The industrial resources of the Western World give it definite industrial superiority over the Communist bloc. Western Europe and Japan constitute important elements of the western industrial strength. If, on the other hand, the United States were to lose either of these two areas, the Communists would be equal, if not superior to her in industrial strength.

The United States is dependent on sources outside her boundaries for 75 minerals which are vital to our military and industrial strength.[2] Most of these raw materials can be found in the underdeveloped countries of Africa, South America, and Asia. The United States is the largest consumer of all industrial raw materials. For example, this country consumes 63 percent of the world's copper output, 65 percent of the tin, and 43 percent of the natural rubber. The United States and Western Europe are growing increasingly dependent upon the underdeveloped countries for the supply of such critical materials as manganese, chrome, antimony, cobalt, tungsten, and mercury. It would seem that it is in the minimum security interest of this country to keep these industrial and raw-material resources out of Soviet hands.[3]

We have learned from history that a major cause for the rise of demagogs in some areas of the world is the inability of many of the underdeveloped countries to make any significant improvement in their standard of living. The control of governments by these despots never seems to be in the national interest of the United States. We all vividly remember what happened a few years ago in Iran when one such individual was able to cut off that nation's oil resources from the rest of the world. Through the foreign-aid and technical-assistance program, the United States has been able to help underdeveloped countries to create a more favorable socio-economic climate which seems to diminish significantly the possibility of demagogs gaining control of the governments of underdeveloped countries.

In order to maintain the high standard of living in the United States, it is important that she find ever-increasing world markets for her finished products. By helping other countries to raise their standards of living, to create new sources of wealth, to increase productivity, and to expand their purchasing power, the United States seems to forward her own best economic interests.[4]

ASSISTANCE TO LATIN AMERICA

What have been the achievements of the foreign-aid and technical-assistance program, as far as the economic well-being of the United States is concerned? Let us answer this first by looking at a particular part of the world—Latin America.

Today's governmental programs of technical cooperation first took root in the Americas. They sprang from the fertile soil of inter-American agreements. A 1939 law authorized United States Government agencies to carry out cooperative tasks based on these agreements, and an Interdepartmental Committee on Cooperation with American Republics was set up in May of that year.[5]

World War II speeded up the process. As emergency needs arose, the Office of Coordinator of Inter-American Affairs was established. It undertook programs largely to overcome the health hazards that stood in the way of obtaining essential materials, such as rubber and metals, and to meet the food needs of the people. After the war, the Institute of Inter-American Affairs was reincorporated to continue the cooperative programs. In Europe the United States took part in the European recovery programs.

In 1949, the United States established as a national policy the desirability of extending the benefits of our scientific advances and industrial progress[6] to all the underdeveloped areas. The next year the Congress approved the Act for International Development, and a Technical Cooperation Administration was set up in the Department of State. Technical assistance in some countries of the Far East, however, was handled by the Economic Cooperation Administration—later the Mutual Security Agency—which was also handling technical-exchange programs with the industrial countries of Europe.

In 1953, President Eisenhower, for greater efficiency and economy in foreign operations, telescoped all three agencies—the Institute of Inter-American Affairs, Technical Cooperation Administration, and Mutual Security Agency—into the Foreign Operations Administration, later to become the International Cooperation Administration. The International Cooperation Association conducts the cooperative programs with other nations.

Since its establishment by President Eisenhower, the International Cooperation Administration has placed increasing emphasis on expanding the work of technical cooperation. With increased congressional funds, more technicians are in the field than ever before, and more American universities are helping in the exchange of technical knowledge.

The Latin American Republics have made remarkable strides in the last decade in the development of permanent countrywide institutions; in agriculture, to teach the people how to grow more and better food; in health, to introduce new sanitation techniques, improve personal hygiene standards and conquer widespread disease; in education, to carry the impact of practical training not only into the cities but also into the most remote provinces.

Health, agriculture, and education are the three major fields in which technical-cooperation activities are carried on. Other fields receiving increased emphasis are community development, transportation, electric power development, mineral resources, and public administration and industry.

Latin America was, and basically is, an agricultural area, rapid industrial progress notwithstanding. The farm products coming out of this region represent an important source of foreign exchange and contribute greatly to expanding trade. United States agricultural specialists are helping Latin American technicians to establish permanent extension services, improved agricultural conservation and irrigation methods, and organized farm demonstration projects and vocational education.

In the health program, more than 136 United States doctors, nurses, engineers, and technicians are working in Latin America. Over 1,400 Latin American technicians have received training in the United States in medicine, sanitary engineering, nursing, health education, laboratory research, and dentistry. It is estimated that more than 23 million persons have benefited from the joint health programs in 18 countries in Latin America.

In Brazil, for example, a group of 40 United States technicians went into the Amazon Valley region in 1943 to wipe out malaria and dysentery.

In the small shipping port of Cameta in the Amazon Valley, there was an annual death toll of 300 for every 1,000 persons. Today, Brazilian doctors, working with American public experts, have lowered that rate to 70 per thousand. More than 1,000 Brazilian technicians are now carrying on this work and there is not a single United States technician remaining in the area.

Neither the health nor the agriculture programs could be carried on effectively without a sound program in education. Fifteen Latin American countries now have joint education programs with the United States. Approximately 75 United States technicians are helping to organize vocational education programs and to plan curricula for newly developed schools.

Since the beginning of the technical cooperation programs, almost 4,500 Latin Americans have received training in the United States.

In all phases of technical cooperation American technicians and administrative personnel are coordinating their activities with over 12,000 Latin American technicians. The host countries have steadily increased their contributions to these projects. Since 1943, the United States has contributed $126,876,700 to the joint programs and Latin American contributions have been almost twice this amount.

Wherever possible, emphasis is placed on a "people to people" relationship. Even more significant, the work is carried on with substantial help from private organizations, as represented not only by colleges, universities, and other service organizations, but also by private industrial firms who have

pioneered daringly in developing the vast resources of the region.[7]

ETHIOPIA

As another case study, let us consider Ethiopia. The author recently was able to observe personally the American foreign aid and technical-assistance program in this country. This old empire is the gateway to central and southern Africa. It is of strategic geopolitical importance to the Western World. The United States looks to Ethiopia for coffee, hides, some oil, and gold. She is also attempting to find increased markets for her own goods in this country. In 1955, the United States invested around $3 million in Ethiopia. How has this and previous amounts been spent?

Ethiopia is endowed with an abundance of rich natural resources but it does not have the necessary capital and the large number of trained people required to develop these resources in its plans for the country's social and economic advancement. The Imperial Ethiopian Government is, therefore, placing great emphasis on expanding educational opportunities for its people. Other important aspects of the Government's development program include continuing efforts on the reconstruction, repair, and development of highways and telecommunication facilities. Furthermore, in order to foster in Ethiopia the investment of private capital, both local and foreign, a Development Bank was established in 1951.[8]

The technical-assistance program was launched in May 1952. Since then it has been helping with these plans by means of specific projects in those fields where the Ethiopian Government has determined that United States technical assistance would be helpful. These projects are in the fields of agriculture, water resources, education, public health and sanitation, commerce and industry, and public administration. The United States furnishes the specialists and the Ethiopian Government provides the counterpart personnel, land, buildings, and other contributions in kind for each of these projects. In most instances operation costs are shared by the two governments by means of special joint funds, thereby making the program a truly cooperative effort of Americans and Ethiopians.[9]

The main feature of the point 4 program in Ethiopia is training. The training aspects are important because they aim at developing an indigenous corps of trained technical and academic personnel capable of implementing the country's development plans. The Ethiopian program is attempting to achieve this long-term objective by helping to expand and improve the country's existing institutions which will facilitate this training. If facilities for training are not available locally, the program offers opportunities for training abroad, usually in the United States.[10]

The program in Ethiopia has assisted in expanding opportunities for local training by:

1. On-the-job training of counterpart Ethiopian personnel in conducting the cooperative project activities.

2. Establishing institutions under the direction of United States specialists for the training of:

(a) Agriculturalists (Jimma Agricultural Technical School and the Imperial Ethiopian College of Agricultural and Mechanical Arts).

(b) Junior professionals in the field of public health (Gondar Public Health College and Training Center).

(c) Tradesmen (Vocational Trade School at Asmara).

3. Expanding and improving existing institutions by:

(a) Furnishing advisory staff and funds to the ministry of education for the improvement and expansion of elementary and secondary schools.

(b) Furnishing supplies, equipment, and the associate director for the Technical School of Addis Ababa.

(c) Furnishing supplies, equipment, and the associate director for Her Imperial Majesty's Handicraft School.

(d) Furnishing supplies and equipment for the College of Engineering.

The technical assistance program in Ethiopia is also considering further assistance to the Ethiopian Government for expanding local training opportunities through the establishment of a trade school and another teachers training institute.[11]

Furthermore, the existence of the technical assistance program in Ethiopia has stimulated a general climate of interest on the part of the Ethiopians themselves in economic development. In 1954 the Ethiopian Government established a council which has the direct responsibility of formulating, developing, and coordinating a comprehensive national economic policy and of formulating opinions and proposals in all matters relating to this policy and the economic development of Ethiopia.

Although it is too early to analyze the results of the work of the council, the existence of the high-level planning group, may prove to be of great significance in the long run. Most observers of the Ethiopian economic situation believe that there is an acute need for greater coordination of economic activities, especially as regards the nation's investment program, both public and private.

The creation, development, and expansion of this climate of interest in economic development can be regarded as a major accomplishment of the technical assistance program in Ethiopia.[12]

Has this been worth the investment of the several million American dollars? In the final analysis the answer to this question must take into consideration the paramount moral and political principles. But it should be remembered, that the complete cost of the investment in the future of Ethiopia has been far less than the cost of a battleship.

Once again looking at the purely economic aspect, what has the United States received for the expenditure of her funds throughout the free world?

It can be claimed that this country has created sufficient military strength in the free world so that today, for the first time in almost 20 years, there is no major war going on. A few years ago, the Communists controlled 75 percent of Greece; now they have been pushed out. Turkey has been aided in building up its own armed forces and in countering Communist threats against its freedom. Since the fall of Czechoslovakia in 1948, the Communists have not advanced 1 inch in Europe; and they have withdrawn from Austria. Since Korea, the Communists have not started any new wars.

Mainly as a result of the Marshall plan aid, the countries of Western Europe were enabled to restore an economic equilibrium and today, through their own resources, they are maintaining a major source of strength against the Communist threat.

THE FUTURE

How far is the United States going into this foreign-aid matter, and how far should this country go?

In regard to military aid, it would seem that as long as the Communist military threat exists, it will be United States policy to continue the mutual defense assistance program. This country is not in the business of arming the whole world. She does supply friendly nations those weapons, equipment, and other items which they need to meet an agreed level of effective defense, but one which they are unable to make, buy, or otherwise obtain for themselves. In most cases, the other countries do most of the work.

On the other hand, economic aid for defense, for development, and for emergency situations seems to be a sensible way of protecting United States interests. Such aid was used several years ago to keep Iran from going bankrupt and possibly falling into Communist hands. The cost of this emergency aid to Iran in 1953 was around $60 million. Since it seems that this aid was mainly responsible for keeping Iran, with its strategic location and oil reserves, on our side of the world struggle, this investment of American funds could be considered a good bargain. Such aid has been used for similar purposes in Bolivia and Guatemala.

SUMMARY

The United States is now in the process of going through a critical evaluation of her foreign economic policy.[13] In analyzing the economic implications of foreign aid, we have established as a base of reference the best economic interests of the United States. There are those, however, who feel that foreign aid and technical assistance are not in the best interests of this country because it is essentially a giveaway program. Furthermore, those opposed to foreign aid because of its economic implications point out that foreign aid has encouraged underdeveloped countries not to admit foreign private capital on terms of sufficient freedom to make such an investment attractive.[14]

Another rather disturbing problem should be examined. In certain areas of the world where there has been considerable economic and military aid, the United States is rather unpopular. As a matter of fact, in his recent travels in Africa and Europe, the author has found a disturbingly large number of people distrustful of the United States because of foreign aid.

In reviewing the basic concept of foreign aid we must also recognize that several countries benefiting from American aid are leaders of the so-called neutralist group; several of these same countries are even criticizing the American-aid programs. On the other hand, we should also be interested in determining why the Soviet Union, though giving little or no assistance to these same countries, has managed to gain so much of their good will.

In this analysis of the economic implications of foreign aid, the costs in dollars to our country has been noted. There are those who believe that economically speaking a continuation of the foreign aid program is not in the best interests of the United States because of the large sums of money being given away. Others hold that it is responsible for the ill feeling held against this country by some of the recipients of this aid.

On the other hand, other observers feel that the returns from foreign aid in terms of increased allied and friendly strength are far more proportionate to the funds involved. They hold that economic aid "for defense, for development, and for emergency needs" seems to be a reasonable method of promoting the best interests of the United States.

Both the President and the Congress have called for a basic review of foreign aid. While this paper has attempted a review of the economic aspects, a decision based on that consideration alone would not be feasible. All the implications must be consid-

ered, for our goal, as President Eisenhower pointed out, is to come up with a comprehensive plan that fulfills our responsibilities both as Christians and as American citizens.

(AUTHOR'S NOTE.—The author is deeply indebted to Prof. Geza Grosschmid, K. M., department of economics, Duquesne University, for his critical review of this article.)

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Laying of Cornerstone of the Quaker Baptist Church

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. ROBERTSON. Mr. President, last Sunday, June 30, ceremonies were held in Bedford County, Va., at one of the oldest sites of worship in Piedmont Virginia, in connection with the laying of the cornerstone of the Quaker Baptist Church.

The program included reading of messages from Representative BROOKS HAYS, of Arkansas, president of the Southern Baptist Convention, and from Gov. Thomas B. Stanley, of Virginia, and the placing of a cornerstone box containing an interesting collection of mementoes gathered by Kenneth E. Crouch, of the staff of the Bedford Democrat. Participants in the ceremony included the Reverend L. C. Coffman, Raymond J. Dowdy, and Roy Burnette, who placed the cornerstone; Dr. Wesley N. Laing, who gave the invocation; the Reverend A. W. Connelly, who read the scripture lesson; the Reverend Tearle P. Brown, who gave the dedicatory message; and the Reverend L. Preston Brown, who gave the benediction at the morning service; the pastor of the church, John Layton, who gave the invocation at the afternoon service; the Reverend Fred Harcum, who read the Scripture lesson; W. Curtis English, moderator of the Baptist General Association of Virginia; and the Reverend Floy W. Cox, Jr., moderator of the Strawberry Baptist Association, who brought greetings from those organizations; and the Reverend Charlie M. Shelton, who gave the message.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD the texts of the messages of Representative HAYS and Governor Stanley, a list of contents of the cornerstone box, and a brief chronology of the Quaker Baptist Church.

There being no objection, the messages, list of contents, and chronology were ordered to be printed in the RECORD, as follows:

MESSAGE FROM REPRESENTATIVE BROOKS HAYS, OF ARKANSAS, PRESIDENT OF THE SOUTHERN BAPTIST CONVENTION

I am very pleased to extend my best wishes to you on the dedication of your new Quaker Baptist Church building. I think it is wonderful to have continued worship on this same site since 1757, when the Society of Friends held their first service there. The relationship with the Quaker heritage reflects a great sense of brotherhood and a real contribution to the spirit of religious tolerance in America and in Virginia. As president of the Southern Baptist Convention, I wish you and your congregation many years of continued success in preserving this historic landmark and furthering the cause of our great Baptist faith.

MESSAGE FROM GOV. THOMAS B. STANLEY, OF VIRGINIA

I would like to take this opportunity to extend my congratulations to the congregation of the Quaker Baptist Church in Bedford County on its 200th anniversary.

The foundation of this Nation was laid by man and women who believed in God and His influence in human affairs, and from the earliest years these spiritual aspirations have been a vital force in American life.

We give thanks for the religious beliefs of our Founding Fathers for their contribution to the creation of this land of freedom.

The heart of America's greatness still springs from its belief that only through religious faith can men hold firm and uncompromised their spiritual heritages of freedom and the right to live with hope.

CONTENTS OF CORNERSTONE BOX

(Collected by Kenneth E. Crouch)

History of Lower Goose Creek Meeting and Quaker Baptist Church, 1754–1957 with 1880 (earliest on record) and 1957 church membership and all officers since 1757.

Parts of cornerstones from churches built in 1789 and 1957.

Blueprint of church built in 1957.

Church constitution adopted in 1957.

First budget adopted by church in 1955.

Nineteen hundred fifty-seven Strawberry Baptist Association minutes.

"Peeping and spying" law passed by 1956 session of General Assembly of Virginia.

Messages from Gov. Thomas B. Stanley, of Virginia, and Representative BROOKS HAYS, of Arkansas, president of Southern Baptist Convention.

Song, The Old Rugged Cross, autographed by the Reverend George Bennard, author-composer.

Song, Beautiful Bedford.

Folder, What You Should Know About Your Church.

Book, The History of Bedford County, Va.

Bedford County 1954 Bicentennial Program.

Folder of Bedford Chamber of Commerce on Bedford and Bedford County.

Nineteen hundred fifty-four Bedford County bicentennial wooden nickel and 1862 Bedford County paper currency.

Rock and soil from First Baptist Church in Providence, R. I., built in 1638 and oldest Baptist church in America.

Rock and soil from Mill Swamp Baptist Church in Isle of Wight County, in 1714 and oldest Baptist church in Virginia.

Fragments of stones from the birthplace of Christ in Bethlehem, the Garden of Gethsemane, the Cenacle (the upper room in which the Last Supper was eaten), Mount Calvary, and the Church of the Holy Sepulchre at the site of the crucifixion.

Programs of 1953 pastorium dedication, 1955 Easter sunrise service, 1956 groundbreaking service, 1957 first worship service in new church, and 1957 dedication service.

Pictures of 1789 deed, cornerstone of church built in 1789, Dr. J. T. Kincannon, church built in 1899, interior of church built in 1899, pastorium, route 24 marker, artists drawing of church built in 1957, 1956 groundbreaking service, 1899 baptising in Body Camp Creek west of church, 1957 auction sale of church built in 1890, and churches built in 1899 and 1957.

Copies of the Fincastle (Va.) Herald, the Religious Herald (Richmond, Va.), the Bedford (Va.) Democrat, and Ambassador Life (Birmingham, Ala.).

Editorial page of the Roanoke (Va.) Times of March 31, 1957, with column by Dr. Goodridge A. Wilson on oldest churches in southwest Virginia.

CHRONOLOGY OF QUAKER BAPTIST CHURCH

October 9, 1756: Petition presented to have Lower Goose Creek meeting organized by Society of Friends (Quakers).

September 15, 1757: First session of Lower Goose Creek meeting in new house.

1775: Difficult Creek Baptist Church organized.

November 11, 1788: Meeting officially established and named Bedford meeting.

July 27, 1789: Deed recorded for Lower Goose Creek meeting; meetinghouse built same year.

1805: Difficult Creek Baptist Church admitted to Strawberry Baptist Association.

1810: Difficult Creek Baptist Church officially planted by the Reverend Alderson Weeks.

July 1824: Society of Friends release Lower Goose Creek meeting property to Baptists.

1899: New church built.

August 13, 1899: First sermon preached in new church by Dr. J. T. Kincannon.

August 26–27, 1899: Dedication service for new church; Rev. W. S. Royall, speaker.

August 4–6, 1903: Strawberry Baptist Association met at church.

January 7, 1939: Name changed from Difficult Creek Baptist Church to Quaker Baptist Church.

August 1–6, 1949: Historic marker erected by Virginia State Conservation and Development Commission on Route 24.

November 28, 1951: Deed recorded for pastorium at intersection of Routes 24 and 43.

October 25, 1953: Pastorium dedicated; Rev. Wesley N. Laing, speaker.

March 2, 1956: General Assembly of Virginia passed peeping and spying law as a result of case originating at pastorium and in Bedford County courts.

May 27, 1956: Groundbreaking for new church.

October 31, 1956: Actual construction begun on new church.

May 19, 1957: Sunday school and evening worship service held in new church.

May 20, 1957: First sermon preached in new church by the Reverend Floy W. Cox.

June 1, 1957: Old church sold at public auction, purchased by Woodson Tuck for $150.

Labor's New Broom, No. 2

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have the second part of the radio panel discussion on the

program Labor Answers Your Questions printed in the Appendix of the RECORD.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

LABOR ANSWERS YOUR QUESTIONS

(An AFL–CIO public service radio series, program No. 10, Labor's New Broom, No. 2. Guest, Al J. Hayes, chairman of the AFL–CIO ethical practices committee, AFL–CIO, vice president, and president of the International Association of Machinists. Panel, Senator PAUL H. DOUGLAS, of Illinois; Senator WAYNE MORSE, of Oregon. Moderator, Harry W. Flannery.)

Mr. FLANNERY. Labor answers your question.

You have been reading stories about the investigation of improper activities in labor by the select Senate committee whose chairman is Arkansas Senator JOHN MCCLELLAN. You probably have questions in mind. Perhaps you want to know what labor itself is doing to help clean racketeers and other corrupt persons from its ranks.

Last week, we began to take up this subject in a discussion with the chairman of the AFL–CIO ethical practices committee, Al J. Hayes, who is also an AFL–CIO vice president, and president of the International Association of Machinists. Mr. Hayes was heard as he talked with two United States Senators who have been active in congressional investigations and procedures: PAUL DOUGLAS, of Illinois, and WAYNE MORSE, of Oregon.

In this program, Labor's New Broom, we continue the discussion as broadcast from the office of Senator DOUGLAS in the Senate Office Building here in Washington.

Senator DOUGLAS. Now, Mr. Hayes, since I was chairman of the committee which conducted the investigations into health and welfare funds, I wondered if you would say a few words about the standards which you believe to be proper, in connection with these funds?

Mr. HAYES. Well, of course, I think that our code on health and welfare funds actually answer that question. We are in favor of the strictest type of regulation of health and welfare funds.

Senator DOUGLAS. I have your code before me, and that very clearly states as a matter of self-discipline, that no union official is to profit, either directly or indirectly, from the funds; and that, also, he is not to have his relatives profit as insurance agents and so on.

Mr. HAYES. Actually, the code prohibits anyone connected with the union, receiving a salary from the union, from collecting any supplemental salary from a health and welfare fund—even if he performs a service for the fund—as a trustee or an administrator or health and welfare representative.

Senator DOUGLAS. Now, after studying this matter for some time, I came to the conclusion that what the Government should do would be to require full reporting of all the details of these funds to a public agency, and then, disclosure to the beneficiaries and to the public of these facts, so that the white light of publicity would always beat in upon them. And we believe that this would be a great deterrent.

Now, we have found great reinforcement from your movement, in advocating full disclosure. And I want to pay tribute to you for doing this. I wonder if you have any comments that you would like to make on this principle of full reporting and full disclosure?

Mr. HAYES. Well, the only comment I have, Senator Douglas, is that we are in favor of it. We're in full accord with your bill in that regard. However, we feel that this should apply to any type of health and welfare funds.

Senator DOUGLAS. Oh, that is in my bill, not merely to union-managed funds or jointly administered funds, but to employer funds. And I personally have been pained to find that the National Association of Manufacturers, which is urging strict regulations of union and jointly administered funds, are, nevertheless, claiming exemption for employer funds.

Mr. FLANNERS. Senator, I want to ask you in connection with these health and welfare funds, how many of them are union administered?

Senator DOUGLAS. Well, only about 2 percent, Mr. Flannery, 8 percent are jointly administered by the unions and the employers, but 90 percent are employer administered; so that if you merely regulate union or union and jointly administered plans, you are only regulating the tail of the dog. The real dog consists of the employer-administered plans, and these are the plans which have the major resources, amounting now to almost $40 billion.

Mr. FLANNERY. The bill which has been sponsored by yourself, by Senator MORSE and others, would provide for the covering of all of these funds as far as the law is concerned?

Senator DOUGLAS. That is correct. And the NAM would confine the plan to the 8 or 10 percent only.

Senator MORSE. Well, PAUL DOUGLAS, I want to say that I'm proud to be a cosponsor of your bill, because I think you're completely on the right track; you're doing a great service to the American people as well as labor and employers. I, too, regret that we have the opposition of great employer groups to a thorough-going analysis and disclosure of welfare funds. It's interesting also that some of the great insurance companies seem to want to take a hands-off policy when it comes to welfare funds.

Senator DOUGLAS. Mr. Hayes, I wonder if you'd say a word or two about the codes that you've adopted, notably the one on union financial practices and then on union democracy.

Mr. HAYES. It might be well to mention all of the codes, at least identify them, and also other policy statements that are related to the codes. First of all, the federation has adopted a code with regard to local union charters. This code prohibits the granting of local union charters to any individuals that are not qualified to become members of the unions, and are not qualified to be union officials.
